To the report of this remarkable conversation succeed several chapters of the author's impressions of the siege of Paris; and where these are founded on his own observations, they are fresh and interesting in a high degree. Unfortunately General Hazen seems, in narrating them, to keep one eye as constantly directed on his countrymen at home as the other on the German picquets; and so, in the midst of remarks of real value, we are called off to listen to platitudes on the subjects of divine right, princes, patriarchal rule, and individual liberty, which seem to have got by accident into the work out of some Fourth of July oration, being plainly inspired by the sight of the star-spangled banner rather than that of the homely black and white flag of Prussia. Anon we pass from patriotic sentiment and military notes to a bit of Versailles scandal about the Duchess de B—— or the Countess A——, their villas, and the occupants, proper or improper, all which might well have been spared the reader. How sound the General's views are when he sticks to his profession let the following description of the German system of investment prove. There has been a great deal of very silly and needless mystery made about this matter of the works before Paris. General Hazen puts the whole clearly enough in the following passage:—

> The posting of the investing lines is a novelty to an American officer, and yet there is wisdom displayed everywhere. There is, in fact, no investing line anywhere, but a zone of occupation about five miles in depth. . . . This zone of German investment embraces hundreds, and perhaps thousands, of villas, châteaux, farms, and gardens. In France everything of this kind, of however little pretence, is surrounded by a rubble-stone wall about eight feet high and two feet thick. This has simplified the military problem for the German, as a starving siege consists mainly in the defence of the besiegers. Different lines of these walls, occupying commanding positions, have been loopholed for musketry, embrasures have been cut for artillery, banquettes thrown up, and sometimes staging built for two tiers of infantry. These strong positions naturally deflect an assaulting column to the right and left into more open ways, where it is soon enfiladed by a strong fire from infantry, and often taken in reverse by a force securely posted in loopholed houses or garden hedges. The Germans at once saw and availed themselves of the great advantage of these combinations for defensive purposes, and prepared covers and open roads through farms and gardens for artillery and infantry; so that, with their reserves comfortably quartered in the rear, they could at any alarm speedily man these successive positions with their lines and sweep the open roads with their batteries. A combination of defences practically impregnable has thus been formed. The advance positions are given up at the right moment, and the various covers prepared for retreat make it easy and safe. From this statement it will be seen how utterly hopeless and mad a night sortie would be, as it could not overcome even the physical difficulties. None will ever be tried.

Or, again, take the following extract. Would it be possible in few words to explain more lucidly the absurdly conventional and unreal nature of most of the French sorties? It will be seen that General Hazen convicts his own countrymen of a precisely similar error in their war, and shows how he had the wisdom to avoid it in the affair of Fort McAllister, in which he won just distinction for his boldness and judgment:—

> The French, like ourselves in the late war, preface and publish such a movement by a long cannonade, thereby greatly aiding their adversary to make ready to receive them. This use of artillery is one of the absurdities of modern warfare. It seems to owe its existence to the old custom of using artillery in order to make a practicable opening in a permanent fort before sending forward the assaulting party, when musketry fire was effective only at a short range. Since the introduction of long-range rifles with thin lines of troops posted behind slight earthworks, the practice has become vicious, for it hurts no one, and only advertises your intentions. The French collected a large number of field-guns near the assaulting line on the 21st instant, and for two hours fired an average of more than a hundred guns to the minute, many of their shells bursting thousands of feet in the air. At the assault on Fort McAllister, during our war, artillery officers stood aghast when told that I had no use for artillery. By quietly pushing up sharpshooters and driving everybody [on the enemy's side] into the bomb-proofs, and at the same time deploying an assaulting party just out of sight, I was able to send it quietly forward, so that it nearly reached the enemy's lines before they were aware of the presence of a large force. Had they known our intention, our loss would have been doubled.

Once more, as regards Trochu's neglect of the means at hand in preparing for the siege. We say Trochu purposely, believing that an officer who forces himself forward into the tremendous responsibility of the military governor of a great fortress about to be invested has no right whatever to complain that those under him would not obey nor work. Here, too, General Hazen shows very effectively and simply what should have been, and what was not, done:—

> By the remarkable policy of depopulating the environs of Paris, and calling the people within the lines, the French have not only some hundred thousand more mouths to feed, but have left excellent quarters for their enemy. While engaging in impossible attempts to burn the green forests, the French have left thousands of cords of bundles of fagots for fuel, and the extensive forests of St. Cloud, Versailles, and St. Germain are full of small saplings just to the hand of the Germans for making gabions and fascines. The surrounding country, instead of being desolated, is left covered with stacks of grain and barns full of hay; the gardens are full of potatoes, turnips, beets, and vegetables of all kinds, abundantly raised for the Paris market. It seems that everything of a military nature that France ought to have done she has neglected, while she has done all manner of things she ought not to have done.

Again, as regards the more general, but not less interesting, question of the increased power given to the defence by breechloaders, we doubt if the question has anywhere been so happily summarised as by General Hazen in the following lines:—

> This new strength of the defence is mostly due to the late improvements in firearms, by which their range, rapidity, and accuracy of fire are greatly augmented. I think it may be safely said that a single line in two ranks, composed of thoroughly good troops, with the new style of breechloading arms, and protected by some slight work, can defy any sort of attack that can be devised, provided it be made in front, and over ground affording no cover. This comes from the fact that there is a moral limit to the capacity of men to face danger. This limit may be increased by discipline; but one in three put *hors de combat* is about the highest in fair fight. When every third, or even fourth, man is struck, the body of troops of which they are components is neutralized until it is reorganized and recovers its confidence, impaired by the presence of death.

Passing from the war in France to speak of that in America, the vicissitudes of which he shared throughout, the General is no less striking in his remarks. The waste, extravagance, and general loss of power of the American system as compared with the Prussian, are admirably sketched in his eighth chapter. Here is what he has to tell us on the discipline of the volunteers of the North, a subject by no means wholly foreign to the military question among ourselves:—

> I say not a word in disparagement of our men; but we lost incalculably by not employing the means in our hands for bringing our commands to the highest efficiency. There were regiments in one of the divisions of my corps at the close of the war—veterans of '61—in which the enlisted men felt but very slightly, if at all, the spirit of subordination, and manifested few soldierly qualities, except courage. They did not rise in the presence of officials, no matter what their rank, and scarcely knew how or when to salute. These may appear little things, but it is by them all good soldiers are known. The good these troops did us was gratuitous, and not because their officers had the power, as they ought to have had, to compel it. They were earnest, patriotic men, but not soldiers.

And this, be it remembered, is their description after four years' field service in war on a grand scale.

As to the standing peace army of America, those who wish to study its imperfections and to see the vices of our own system of military administration outdone by our cousins, cannot do better than study the same chapter. The story has never been written in this country before, and is well worth the perusal of military reformers, as a patent warning to ourselves.

We could wish to leave General Hazen here at a point where comment cannot but be pleasant. But it is impossible to lay down the volume without a warning to the reader of the manner in which it is made up, when General Hazen leaves the post of witness to turn historiographer. From his lively and instructive reflections on what he saw before Paris we pass on to glance through a survey of the progress of the military power of Prussia. In a single line of a footnote at the close of this he informs us, "In this discussion I have followed Colonel Chesney somewhat closely." He has indeed. So closely that the preceding eight-and-twenty pages are for the most part actually borrowed—not merely in the sense of the matter, but by transferring paragraph after paragraph bodily, without any sign of quotation—from the essays on the Military Resources of Prussia and France by Colonel Chesney and Mr. Reeve. These fragments of a well-known book are interlarded here and there with bits from Captain Hozier's *Seven Weeks' War*, just sufficiently to break the continuity of the narrative, but not enough to disguise the process from any one who has read the original works. In a similar spirit a brief reference in the preface covers the abstraction, for other chapters of the volume, of large quantities of the Blue-book of Reports on Foreign Military Schools prepared by another Captain Hozier for the Commission on Military Education. It must, no doubt, be gratifying to the authors we have mentioned to find their works recognized by an American of distinction as of such standard value. But they probably will agree with us in wishing that General Hazen may soon have the opportunity, in a second edition, of distinguishing their writings from his own, or at least doing his work of literary annexation in a less arbitrary and indefensible manner.

LITTLE KATE KIRBY.*

THOSE people who delight in mysteries, and who are never so happy as when there is a secret which they have a chance of tracking out, will be, we have no doubt, not a little pleased with this story. For ourselves, we must confess that the age has long gone by when the excitement of that kind of a chase was pleasing. Schoolboys, we know, delight in following over hedges and ditches, ploughed fields and bogs, steep hills and long levels, two or three comrades who, with a start of a few minutes, have run on ahead, marking their course by shreds of paper which they scatter as they go. The paper-chase which a novel-writer leads us is, after all, much of the same kind, except perhaps that he often keeps on the same long levels for a much greater time than any schoolboy would care to do. Those, however, who know the game well, both in the one sport and the other, can often make short cuts, and so escape a good deal of uninteresting country. There is a safety in doing this in the literary game which its rival cannot boast of. For a too confident runner may find that

* *Little Kate Kirby.* By F. W. Robinson, Author of "Grandmother's Money," "No Church," &c., &c. 3 vols. London: Hurst & Blackett. 1873.

his short cut has only resulted in giving him a still longer reach of flat country to cross, whereas in a novel it is most improbable that the short cut, or the skip, as it is called, should be so long but that the reader will at once and with the greatest ease gain the track again. Then, too, in the novel, the reader, unless indeed he can only get one volume at a time from the circulating library, can always turn to the end of the course and see how the track ends. And there is this further likeness to be drawn. Neither in the one game nor the other do all who start come in at the end. Among the boys who lead the way there is always one who gets weary and breaks down, just as in every novel there is always some one who gets killed off. And among the pursuers, too, in both cases, there are numbers who soon weary of following the track, and will have nothing more to do with any such sport. The first time, no doubt, one runs up hill and down hill following the long-drawn track of one who steadily keeps ahead, there is a certain excitement in it, just as in the first of these long mysterious stories which one happens to read there is a certain excitement in following up a secret that is not allowed to be revealed till the end of the third volume. But to most people the sport must become, if often repeated, a little tedious, and would scarcely be kept up were it not for the constant succession that there is of youthful runners and youthful readers. It is indeed the case that the literary paper-chase, to not a few ladies, would seem to offer great attractions for a long course of years. It is supposed, however, that they go on joining in it, not so much because they really take great pleasure in it as because it is somewhat less wearisome than doing nothing at all. For even in the case of a fine lady's head it may be seen that, in the words of the old philosophers, nature abhors a vacuum. We do not know but that *Little Kate Kirby* will do very well to fill up that vacuum which artificial people, quite as much as nature, abhor. There is a kind of cleverness about it, which would not be very tiring if only it were presented in a much smaller quantity. Given only the fitting circumstances—a rainy day in a country inn, a long journey in a train, or a bad cold which rendered thinking painful—we should find Mr. Robinson for about one volume a tolerably entertaining companion. For reading the second volume we should not think it necessary to provide a paper-knife, while the third volume we should with pleasure pitch into the fire before we had had it very long in our hands.

Mr. Robinson, it seems to us, has been a very careful reader of Mr. Dickens and of Miss Brontë. The title, indeed, of *Little Kate Kirby* must have been suggested, consciously or unconsciously, by the toast drunk to "Little Kate Nickleby," while the earlier chapters are, as regards style, curiously like Mr. Dickens's later works. The following passage will remind our readers of scores of similar passages in the works of the great novelist:—

> I could hear coughs of various degrees of business echoing from dusky interiors; there was a steam on all the windows, as if the clerks had had their hot dinners brought them, and had taken off the covers simultaneously; there were shadows of humanity darting to and fro from the street that opened right and left, and led to busier thoroughfares; there were two waggons blocking up the street, and their drivers arguing with each other as to right of precedence; and there was a dog which had lost itself, and was sniffing in and out of every open doorway.

While the style is to a great extent founded on that of Mr. Dickens, one or two of the characters remind us too much of those in which Miss Brontë used to delight. Mr. Robinson is daring enough to throw his hook into the form of a woman's autobiography. The writer of it is a governess formed on the model of the heroine of *Jane Eyre* or *Vashtie*, and she marries a man who, like Miss Brontë's heroes, beneath a cold and even rude outside carried a warm and tender heart. There is scarcely any attempt that we can see to imitate a woman's way of thinking, or a woman's way of writing. Unless at every page we were constantly reminded by the course of the story that it was a woman's narrative, we should never have remembered it for ourselves. The supposed writer of the tale is as unlike, in her way of writing, to a pious, timid girl of twenty, who had lived for the last few years with her old uncle, a missionary in Africa, as she well can be. She writes much more like a smart commercial youth who had lived all his life in London, and had studied only the penny papers and novels. In the first page of her story she talks of having only "ten shillings and fourpence-halfpenny still to the good," and in the fifteenth she says "there had been no more Kirbys to the good." Later on—though still in the first volume—in writing of her sister Kate, she says "she was by ninety per cent. the happier woman of the two." In another place she talks of a "flashy semblance of affection," and, in describing Lowestoff, she says "fast men had long since voted it as a place with no 'go' in it, snobs were preternaturally scarce." At times Mr. Robinson, we must admit, puts into her mouth a good sounding word, as when he makes her say, "I wailed forth that truth in answer to the voices thundering in my ears," and, again, "Service even in Abel Westmair's house was neither derogatory nor cowardly." The word "derogatory," by the way, has, we have remarked, peculiar attractions for both novelists and vestrymen. We rarely read a novel or a report of a vestry meeting in a local paper without coming across it. But our author is not able to keep his heroine often at such a height as this, and so, to refresh himself for the effort he has made, he comes down exhausted to a whole page or so like the following:—

> "Yes, it's a stunning good song," said Pounce, in assent, but he said not a word about excluding the Manchester from the benefit of it.
>
> "I'd stand another quid if you'd keep the Manchester out, Tommy," said Mr. Baxter, on whose mind the song had evidently made a deep impression.
>
> "I should like to oblige you, Baxter, my boy," said Pounce, in a plaintive tone, "but I can't sing hexclusive songs; it ain't the fair thing on me to do."
>
> "Just as you please. Will you have a glass of wine?"
>
> "I don't mind a B. and S."
>
> "B. and S., if you like—anything," he said, touching the bell.

The plot of the story, as plots nowadays go, is simple enough. The heroine, the writer of the story, while in her quiet home in South Africa, receives a mysterious letter from her father and another from her young sister Kate telling her to come home at once, as they will soon be rolling in wealth. Up to this time he was a clerk, as his father had been before him, in the house of Messrs. Westmair and Son, the makers of a celebrated polish. This polish plays a most important part in the story, and, slightly to change well-known words, may be aptly described "as the chief feature on which the whole story hinges." Its composition is a secret known only to the hero of the story, Abel Westmair. He, wealthy though he is, has twice every month to shut every one out of his manufactory and to turn workman himself, while he puts the last touches to the "great Westmair polish." When the heroine, Faith Kirby, arrives in London from Africa, and goes to see her father at the counting-house, it is only to find that he has been sent to prison for two years for robbing his employers; while from their lodgings her sister, Little Kate Kirby, had disappeared altogether. She utterly disbelieves in her father's guilt, and feels the greatest possible anger towards his employer, "a tall, stiff-backed man," who "was very dark, with black eyes that seemed cold and unsympathetic, and unlike black eyes in general." We need scarcely inform our readers that by the end of the third volume she marries the gentleman who owned the peculiar polish, and the still more peculiar black eyes, and who, we had forgotten to mention, "had shorn himself of all hirsute decoration." But before this takes place there are many secrets to unravel. She goes to their old lodgings and finds that the landlady's son, a drunken fellow just discharged from the gas-works, knows more about her sister than he would tell. His mother, too, accused Kate of being the cause of her son's ruin, who, sot that he now was, had been a short while before a teacher at a Sunday School. The reader is soon, therefore, comfortably provided with two mysteries—three, indeed, if, like the characters in the story, we may regard the polish as one. He is allowed by the author to worry himself as to how the highly respectable Mr. Jonathan Kirby got into Holloway Prison, and as to where Kate Kirby can be, whom Dick Simmonds, the landlady's son, seems to know of. Faith one evening follows Dick to a Hall of Harmony, and there discovers her sister in a Miss Baskerville, the celebrated singer whose entrance "was the signal for a shout of welcome from three thousand voices." Drunken Dick was in love with her, and spent every evening in gazing at her from the pit. So also was Mr. Abel Westmair's nephew, Herbert, who, however, never suspected that she was a Kirby. Faith went to live with Kate, and, if she agreed with her readers, must have found her one of the most unnatural and unpleasant characters that could be imagined. In a pic-nic in Bushy Park given by the manager of the Hall of Harmony to his company, Faith protects a young girl from the rudeness of the actors. The young girl is no other than Mr. Abel Westmair's only daughter, though Faith does not find this out till later on. Novelists have such an abundant store of extraordinary coincidences that, though one would do the work very well, they never hesitate for the credit of their story to employ at least two, just as two footmen may be seen standing by a carriage, though there is only one door to be opened and one lady to come out. Faith seeks for a post as a governess, and is led by the Fates to Mr. Abel Westmair's house, where she recognizes in his daughter the girl she had protected. As one mystery had been by this time explained, so another is brought in to supply its place. There is an old half-witted grandfather in the house, the founder of the great firm. On his first meeting with the two sisters he shows that there is something on his mind and makes them as curious as the reader. He happened to overhear one sister say to the other that she wondered if rich people's money were as honestly come by as her own. "The smile left his cheek and was replaced by an eager inquiring look which chilled one's blood to witness." Later on, learning that Mr. Kirby had been thrown into prison by his son, he gives Faith a cheque for 800*l.*, the sum that had been stolen by her father. It is not till the close of the book that the mystery of this blood-chilling look is explained, when the old gentleman mistakes Faith's missionary uncle, who had just returned from a missionary tour in "the interior of Africa," for her grandfather's ghost, and, in a fit of superstitious terror, owns that it was a Kirby and not a Westmair who had invented the grand polish. He went on to say that he had stolen the secret of the mixture from among old Kirby's papers, as he lay dying. Meanwhile, Herbert Westmair, though in love with Kate, had quarrelled with her, and had lost sight of her altogether, without discovering that she was no Baskerville, but a Kirby. To console himself he falls in love with Faith, and is generously supported in his suit by his stern uncle Abel, the man with the peculiar black eyes, but without the hirsute decoration, though he too nurses in secret a love for her. They get engaged, and are on the point of being married, when at Lowestoff he meets his old love Kate in the presence of her sister, and shows at once that he has not really smothered the old flame. Faith insists on resigning her lover to her sister; but the same evening drunken Dick turns up on the scene, and in a fit of jealous fury, trying to shove Herbert over a cliff, is the cause of Kate's death. She, in her alarm, stepped back and lost her footing. As

she only fell about ninety feet she was not killed on the spot, but is able to spread her dying over some fifty or sixty pages. We feel thankful that drunken Dick only "disappeared," and that "this little history has no further record of him." Nevertheless scant justice is done to him, as he had done quite enough to deserve to have his last dying speech and confession set forth at length. In the end Herbert Westmair gets the polish and the business, and Abel gets the heroine, which was perhaps as fair a conclusion as could have been looked for in what Mr. Robinson calls "the drama of life" that his characters "were playing."

NOTICE.

We beg leave to state that we decline to return rejected communications; and to this rule we can make no exception.

The SATURDAY REVIEW *is duly registered for transmission abroad.*

The publication of the SATURDAY REVIEW *takes place on Saturday Mornings, in time for the early trains, and copies may be obtained in the Country, through any Newsagent, on the day of publication.*

Nearly all the back Numbers of the SATURDAY REVIEW *may be obtained through any Bookseller, or of the Publisher, at the Office, 38 Southampton Street, Strand, W.C., to whom all Communications relating to Advertisements should likewise be addressed.*

THE SATURDAY REVIEW
OF
POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 908, MARCH 22, 1873:

The Ministerial Crisis. Mr. Gladstone's Administration.
The Evacuation of French Territory. Mr. Mill on Landed Property.
Ultramontanism and Liberalism.
Mr. Harcourt on the Income-Tax. The Austrian Reform Bill.
Going to the Country.

Optimism and Pessimism.
Capri. Long Ago. Pius II. and Pius IX. Irish Juries. Life in Cuba.
A Question of Pedigree. The *Vanity Fair* Album.

Lloyd's History of Sicily. John Oldham.
Freeman's Sketch of European History. Paul's *Faust*.
Professor Blackie on Accent and Quantity. Heroines of the French Revolution.
University Oars. General Hazen on the Armies of Germany and France.
Little Kate Kirby.

CONTENTS OF No. 907, MARCH 15, 1873:

The Resignation of the Ministry—The Chancellor's Defence of his Bill—The Irish University Bill and the Irish Vote—Spain—The South Wales Strike—Germany—The Southern States of America—France—The House of Lords and Deceased Wife's Sister.

Political Portraits—Moving Homes—Extinct Journalism—The Ancient Monuments Bill—Rely for Nervous Patients—Marriage in the Fifteenth Century—Ultramontane Criticism—Habitual Drunkards—*The Happy Land*.

Wyville Thomson's Depths of the Sea—Animals and their Masters—Lanfrey's Napoleon I.—Bright Morning—The Receiver of Archbishop Gray—Persia and "the Debatable Lands"—Gregory Hawkshaw—Abbott's Lucian—Pearl and Emerald—German Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

LONDON INTERNATIONAL EXHIBITION, 1873, OPENS on EASTER MONDAY, and Closes October 31.

SEASON TICKETS only will admit to the PRIVATE VIEWS of the PICTURE GALLERIES before the opening.

SEASON TICKETS admit to Mr. BARNBY'S AFTERNOON CONCERTS in the ROYAL ALBERT HALL.

SEASON TICKETS admit to ALL the GALLERIES of the EXHIBITION.

SEASON TICKETS ADMIT to the EXHIBITION TWO HOURS BEFORE the PUBLIC.

SEASON TICKETS, price ONE GUINEA, on Sale at the Royal Albert Hall, the Society of Arts, Messrs. Novello's, 1 Berners Street and 35 Poultry, and all Agents.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS. THIS DAY and NEXT WEEK.

Saturday (March 22)—Twenty-first Saturday Concert, at 3; Special Exhibition of Spring Flowers.
Monday, Wednesday, and Friday—Exposition of "Spiritism," &c., by Messrs. Maskelyne and Cook, at 4.
Tuesday and Thursday—Production of the New Opera by Mr. Charles Dibdin, "The Corsair," at 3.
Saturday—Twenty-second Saturday Concert, at 3.
The Fine Arts Courts and Collections, the Technological and Natural History Collections, all the various Illustrations of Art, Science, and Nature, and the Gardens and Park always open.
Admission, Monday to Friday, 1s.; Saturdays, 2s. 6d.; Guinea Season Ticket, Free.

MR. J. L. HATTON'S BENEFIT CONCERT (given by Mr. SIMS REEVES and Mr. SANTLEY), at St. James's Hall, Wednesday Evening next, at 8 o'clock. Artistes: Miss Edith Wynne, Miss Harriet Roselle, and Madame Patey; Mr. Sims Reeves, Mr. Henry Guy, and Mr. Santley. Pianoforte, Mr. Sydney Smith. Conductors, Mr. Meyer Lutz and Mr. J. L. Hatton. A new Duet will be sung by Mr. Sims Reeves and Mr. Santley, entitled "The Chamois Hunters," and a new Ballad by Mr. Sims Reeves, "If my Mistress hide Her Face," both composed expressly for the occasion by Mr. J. L. Hatton. Mr. Santley will also sing Mr. Hatton's new National Song, "The British Tar."—Tickets, from 1s. to 5s., to be had of Boosey & Co., Holles Street; and Austin, St. James's Hall.

MONDAY MORNING.—LONDON BALLAD CONCERT, St James's Hall under the direction of Mr John Boosey, Monday Morning next, at Two o'clock. Artistes: Miss Edith Wynne, Miss Harriet Roselle, Miss Jessie Craig, and Madame Patey. Mr. Sims Reeves, Mr. Santley, Mr. Pyne, and Mr. Stanley. Pianoforte, Mr. Sydney Smith. Conductors Mr J. L. Hatton and Mr. Lutz. Stalls, 10s. Family Tickets (for Four), £1; Balcony, 5s.; Area, 3s.; Gallery and Orchestra, 1s.—Tickets of Austin, St. James's Hall; and Boosey & Co., Holles Street.

MONDAY MORNING.—Mr. SIMS REEVES and Mr. SANTLEY at the BALLAD CONCERT.

MONDAY MORNING.—Miss EDITH WYNNE and Madame PATEY at the BALLAD CONCERT.

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRAETORIUM," with "Triumph of Christianity," "Christian Martyrs," "Francesca da Rimini," "Neophyte," "Titania," &c., at the DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

ART-UNION of LONDON.—Subscription, One Guinea.—Every Subscriber receives an IMPRESSION of a fine PLATE, "Rebekah," engraved by the late W. HOLL from the Original Picture by F. GOODALL, R.A.; besides a chance of one of the numerous valuable Prizes. Subscription Lists close 31st March instant.
444 West Strand, March 8, 1873. LEWIS POCOCK, EDMD. E. ANTROBUS, } Hon. Secs.

ROYAL POLYTECHNIC INSTITUTION, 309 Regent Street, W.—EXPERIMENTAL LECTURES on CHEMISTRY and PHYSICS, by Professor E. V. GARDNER, J.A.S., M.S.A. To commence on Monday, March 31. Fee, Three Guineas each Course.—For Syllabus apply to Professor GARDNER, at the Institution.

THE LONDON INTERNATIONAL COLLEGE.
Principal—Dr. L. SCHMITZ, F.R.S.E., late Rector of the High School, Edinburgh.
The SUMMER TERM will COMMENCE on Monday, April 28, 1873.
Applications for Admission should be addressed to the PRINCIPAL, at the College, Spring Grove, near Isleworth, Middlesex.

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS, Two, £60; Six, £40; Four, £20. Election, second week in May.—Apply to the SECRETARY, The College, Cheltenham.

RADLEY.—ST. PETER'S COLLEGE, near Abingdon.—There will be an Election to TWO ENTRANCE SCHOLARSHIPS of £50 a year each, on Wednesday, May 7.—Apply to the WARDEN.

BRIGHTON COLLEGE.
President—The Earl of CHICHESTER.
Principal—The Rev. C. BIGG, M.A., late Senior Student and Tutor of Ch. Ch. Oxford.
There are special Modern Forms affording every necessary preparation for the Civil Service, Law, and Woolwich Examinations. The School is well endowed with Scholarships and Exhibitions tenable both in the College and at the Universities. Brighton College is perhaps the healthiest Public School in the kingdom.
The whole necessary charges for Board, &c. are from 80 to 90 Guineas, according to age.
For information apply to the SECRETARY.

TRINITY COLLEGE, Glenalmond, Perth, N.B.
Warden—Rev. R. THORNTON, D.D. Oxon.
A School on the model of the greater Public Schools of England. Terms (including every necessary expense), 80 and 90 Guineas, according to age. There is also a Theological Department, for Candidates for Holy Orders. Particulars may be obtained from THE WARDEN.

THE LADIES' COLLEGE, Grosvenor Square, SOUTHAMPTON. Founded by the Hampshire Association for Promoting Female Education.—*Patrons*—The Bishop of WINCHESTER; Viscount EVERSLEY; Lord NORTHBROOK.—*President*—The Right Hon. W. COWPER-TEMPLE, M.P. The SPRING TERM commences May 1. Applications to the Committee, and for Entries may be addressed to the HONORARY SECRETARY, or to the Lady Principal, Miss DANIELS.

OXFORD DIOCESAN SCHOOL, Cowley, near Oxford.
Visitors,
The Lord Bishop of WINCHESTER.
The Lord Bishop of OXFORD.
Inclusive Terms £42 a year.
A Prospectus and further particulars may be had of the Principal. The next Term begins April 28.

THE ABBEY SCHOOL, Beckenham, Kent.—Careful PREPARATION for the PUBLIC SCHOOLS; age from Eight to Fourteen; number about Forty. Boys above Ten live each in a separate sleeping apartment. Large playground and detached infirmary. Beckenham is half an hour by rail (London, Chatham, and Dover) from London, seven minutes from Crystal Palace, and on gravel. Boys met at the rail, at any London station. Summer Term begins May 1.—Address, Rev. T. LLOYD PHILLIPS, M.A.

THE GRANGE SCHOOL, Ewell, Surrey.—*Principal*—Dr. BEHR, M.A. *Head-Master*—W. SELLS, M.A., formerly Scholar of Queen's College, Oxford, assisted by University Graduates in Honours. The SUMMER TERM will commence on Thursday, May 1, and will end on Thursday, July 31. Special preparation for Public Schools, Competitive Examinations, Universities, &c. Honour Lists and further particulars on application.

HIGHFIELD SCHOOL, Weston-super-Mare.—Conducted by a Wrangler, assisted by a Graduate in Classical Honours. Terms, £80. Specially adapted for delicate Boys.—Address, GEORGE HEPPEL, M.A.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon (formerly Principal of the Elphinstone High School, Bombay), will continue, with the Assistance of a Cambridge Honours-Man, to prepare PUPILS for the Universities, Indian Civil Service, Woolwich, and all Competitive Examinations.—Terms and References on application.

WOOLWICH, COOPER'S HILL, The LINE, CIVIL SERVICE.—Rev. Dr HUGHES (Wrang. 5th, Cal. Cam.), who has passed over 200, receives TWELVE YOUNG MEN directly for these Examinations, and in an entirely separate wing of his House TEN BOYS, who have the advantage of the same Tutors.—Ealing, W.

A GENTLEMAN (formerly in the Army), Married, living on his own Estate, in one of the best parts of Hants, assisted by a Militia Officer of great Experience in Tuition, wishes to receive SIX PUPILS to prepare them for the University, Civil Service, and Competitive Examinations. Both Gentlemen well versed in Modern Languages acquired abroad. Church of England. The Advertiser, from his position, can offer exceptional Advantages. Highest references given and required.—Address, C. C., King's Liberty, Alton, Hants.

A GENTLEMAN would be greatly obliged to any one who would recommend him a SCHOOL for TWO BOYS, aged respectively Ten and Eight, in which the study of Modern Languages, Mathematics, and the Natural Sciences is cultivated, in preference to the usual routine of Latin and Greek, and where the principles of Christian Morality are unrelated to the exclusion of Dogmatic Theology.—Address, F. S., care of Mr. Alexander, 21 Old Cavendish Street, London, W.

TRAVELLING TUTORSHIP WANTED, by an OXFORD FIRST CLASSMAN (Classics), with a fair knowledge of French and German, and some experience in Travelling. Highest references.—Address, D. E. H., Oxford Union Society.

SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

No. 909, Vol. 35. March 29, 1873. [Registered for Transmission abroad.] Price 6d.

MINISTERS AT THE MANSION HOUSE.

THE occasion of the banquet at the Mansion House was very interesting to those principally concerned, but not calculated to incite the Ministers present to very stirring or inspiring orations. The LORD MAYOR had asked all the other Mayors to dinner, and had asked the Ministers to meet them. As many of the Ministers as were able to be present attended, and as Mr. GLADSTONE and Mr. LOWE were among them, and both spoke, the Mayors could not have wished for anything more. There could scarcely be much novelty or variety in what was said. With two hundred Mayors around them, the LORD CHANCELLOR and Mr. GLADSTONE could do little else than sing the praises of municipal institutions and local self-government. Lord SELBORNE told the Mayors that local Corporations were very like the House of Lords, and Mr. GLADSTONE told them that Mayors were actuated in their desire for office by a keen sense of public duty. Lord SELBORNE had to return thanks for the House he has recently entered, and he had to address the heads of Corporations. He joined his two duties by saying that the local Corporations were almost as much of an hereditary institution as the House of Lords, because they went on and on without intermission. So also do the Sovereigns of England, and the House of Commons, and the Bluecoat School; so that in this fortunate country all our institutions are very like one another, especially the House of Lords. The Mayors could not possibly have expected anything kinder to be said to them, and the LORD MAYOR was very justly complimented on the liberality and enterprise with which he had arranged the great meeting of the heads of English borough government, as well as on his own personal career, and the efforts he has made to mitigate the misery of the poor of London. But, grateful as the Mayors no doubt were for the attentions bestowed on them, they remembered that gratitude ought always to include the anticipation of favours to come. The LORD MAYOR having, therefore, got the principal Ministers before him, and got them in a good humour, thought that he might profitably take the opportunity of asking for something. He suggested that the time was now come when municipal Corporations might be allowed greater liberty. So vague but comprehensive a suggestion was answered by Mr. GLADSTONE with equal vagueness, and he entreated all Mayors to believe that he personally would be heartily disposed to accord all that they could properly ask. Mr. LOWE, however, who loves to ask himself what other people really mean, and who, as he spoke later, had had more time to think over the suggestion, arrived at the conclusion that what the LORD MAYOR and his colleagues really meant was that they should be allowed to spend more money. Nothing could have better hit off Mr. LOWE'S fancy. He is always suggesting to one set of people after another that they should spend as much more money as they please, provided only that it is their own money that they spend. He was quite in favour of increasing the powers of boroughs to spend money, so long as the money they spent was exclusively raised in the borough, and they never came to the State for assistance. Probably none of the heads of boroughs that want to spend more money have at present any notion of troubling the State to help them, for they must be rich and enterprising boroughs to feel this craving for easier and larger expenditure; but little boroughs might long to imitate their example, and then the fatal thought might spring up in the breast of the provincial ratepayer, that it would be above all things delightful to throw off a portion of his burden and place it on the Consolidated Fund.

As, perhaps, this is the only practical direction in which the happy conjunction of Mayors and Ministers is likely to operate, it may be worth while to think what it would come to. There was indeed a subject which might have seemed especially appropriate to the occasion, but which was carefully and scrupulously avoided. Some of the assembled Mayors might have been surprised to learn that in the close vicinity of the spot where they were dining there was an English town population equal to that of half-a-dozen counties which is without any municipal government whatever. Londoners outside the City have no Mayors to show them an example of public spirit, and no indestructible Town Council to counterfeit the House of Lords in their midst. Either Mayors and Town Councils are precious possessions of which an enormous urban population ought not to be deprived, or they are possessions which such a population can get on without, and this is a possibility which must hurt the feelings and damp the enthusiasm of Mayors. Either way the subject was not one to be referred to without interfering with the harmony of the meeting, and it was no doubt pleasanter to think of spending money freely. What is intended is apparently that borough Corporations should be allowed to set on foot works of public utility in their area, and tax the ratepayers to pay for them without the necessity of getting a Private Act of Parliament for the purpose. It is possible that before long a movement may be made in this direction, for Home Rule will be a subject of discussion; and the only basis on which the cry for Home Rule can be legitimately rested by those who resolutely decline to break up the Empire and abandon any part of the United Kingdom to its own perversity, is the alleged grievance of questions which might be properly treated as matters of local administration being compulsorily referred to the decision of a very expensive and uncertain, though highly impartial, tribunal at Westminster. But when borough Corporations ask to be relieved from the necessity of coming to Parliament to sanction their schemes, it is right that they should reflect on the cost at which they would purchase their gain. It is not a cost perhaps sufficient to deter them, but it is one well worth considering. In the first place, Committees of the House of Commons, although they make the carrying out of wise schemes more expensive than it otherwise would be, and although they occasionally, if rarely, allow too much weight to unimportant objections, yet also snuff out many silly schemes and prevent much money being wasted. The LORD MAYOR allowed that, if Corporations had the powers he asked for, they would at first make many mistakes; but then, he argued, it is only by making mistakes and smarting for them that men learn wisdom. This is true in the main, but unfortunately in boroughs it is generally found that those who make such mistakes and those who smart for them are different sets of people. It is the wealthy and the enterprising who start ambitious schemes, and the poor and humble who groan under the rates which those schemes make necessary. If indeed such schemes were all started in perfect honesty, the result, although involving much suffering to individuals, would cure itself, for sympathy with the victims of mistakes might check similar attempts for the future. But it is impossible to be sure that honesty would always reign in boroughs. There is a perpetual danger of jobbery. The LORD MAYOR was quite alive to this objection, but then he replied that jobbery would be made impossible by the censure and criticism of an independent local press. Probably it is not too much to say that the English local press is at present independent and averse to jobbery. But when we think of the recent history of the United States, we are not quite comfortable as to the certainty of its remaining so under a reign of lavish expenditure in boroughs. Nothing would be easier, as New Yorkers know, than for energetic and unscrupulous schemers to start a local paper of

their own. At present there is no temptation to do this, for no local paper would produce the slightest effect on a Committee of either House of Parliament. But money might be very profitably expended on newspapers if the expenditure of large sums by local jobbers was to be made possible by local intrigues and local election manœuvres. The result of the concession of new powers to municipalities might be, not that jobbery would be controlled by the independent local press, but that the local press would lose its independence under the influence of jobbery.

Mr. GLADSTONE and Mr. LOWE, however, did not confine themselves to municipal affairs. They had a word or two to say about their own affairs and the position of the Government. It was the first public occasion on which they have appeared since the late Ministerial crisis, and it was indispensable that they should refer to it. They both spoke in a vein of extraordinary despondency. Mr. GLADSTONE had just had a majority of 63 on the Burials Bill, and yet he was not happy. By one of the odd accidents of English politics, the vote on this Bill had been made a strictly party one, and the Government had shown that on a strictly party vote it could command a majority such as it is given to few Governments to command. Yet Mr. GLADSTONE was not in the least encouraged. He cheered himself a little by an obvious misdescription of the Irish University Bill and its history, and flattered himself that among the two hundred Mayors none would fail to believe that the cause of his defeat had been that the House of Commons would not agree that the University of Dublin should have an independent and honourable existence. But if he showed that he still loved his Bill, he also showed that he did not by any means love his present position. He did not know whether his Ministry was now young or old, whether it united the folly of youth with the imbecility of age, or the energy of youth with the wisdom of age. He hoped the latter, but he was not sure; and if the country thought the former description more accurate, he had not the slightest wish to contest the point, and only asked to be relieved from the burden of office. Mr. LOWE speculated on the chances that the existence of the present Parliament would be prolonged, and his views were certainly not such as to cheer those who think that a dissolution may be conveniently postponed. He hoped that the existing House might live on to die a natural death, for it is a very good House, and likely to be replaced by a worse. But he could not think that its prospects were very good. The fiat had gone forth, he said, that it must perish, and the author of this fiat was Mr. DISRAELI. It was hard on the House that Mr. DISRAELI should have determined on its destruction, for it had done nothing else to him than offer him office. But, as he had resolved that it should cease to exist, Mr. LOWE thought it was almost sure to succumb. Mr. LOWE may be right, but it is impossible not to see that when a leading Minister says that the duration of the House will be found to be at the mercy of the chief of the Opposition, his prophecy is likely to ensure its own fulfilment. Waverers will fall away, and the constant expectation of a dissolution will make a dissolution necessary. The business of the country cannot be satisfactorily conducted by a Ministry that has no confidence in itself, and by a House of Commons the continued existence of which is allowed by a Ministry to be in the discretion of the leader of the Opposition. Party politicians and journals on the Liberal side may prove to demonstration that there is no reason whatever why the Government and the House should not go on exactly as before the last crisis; but if the speeches of Mr. GLADSTONE and Mr. LOWE are to be taken as indicative of the real facts, it is evident that the Ministry has lost heart and hope; and then we may expect that the spirit of despondency will soon infect their followers.

SPAIN

BY far the most alarming symptom of the condition of Spain is the progress of dissolution in the army. Before the fall of the BOURBON Monarchy and during the continuance of the Provisional Government the risk of military insurrections was a pressing and constant danger. NARVAEZ, O'DONNELL, and PRIM all rose to supreme power by the aid of conspiracies among the troops; and it was probable that their example would be followed as opportunity offered by successive adventurers. As it is believed that a great majority of generals and officers are hostile to the Republic, it seemed not unlikely that the existing Government would be assailed by some military chief who might consider the suppression of anarchy a profitable undertaking. It now appears that the promoters of the latest revolution had already taken precautions against a danger which might otherwise have been imminent. The officers may be sufficiently willing to resist the civil authority, but the agitators have reduced them to helplessness by cultivating disaffection among their men. For some time past the conscription, which has been long established in Spain as in other Continental countries, has been denounced by Republican demagogues. The institution is undoubtedly obnoxious and oppressive; but there is no reason to believe that a regular army could be raised or maintained in Spain by voluntary enlistment. Popular declaimers contrasted the existing system with the famous military organization of Prussia, without informing discontented recruits that German military service is both compulsory and universal. The present Government cannot view without uneasiness the prospect of being left without an army at its disposal, but some of its principal supporters were pledged to abolish the conscription as soon as they obtained the control of the administration. The patriotic enthusiasm which is vaguely excited by democratic revolutions soon demands for its satisfaction some tangible advantage. The rank and file of the army could not hope to be all promoted to the rank of corporals and sergeants; and the only boon which they could expect from the Republic was immediate release from their contract of service. In the meantime the men have in some districts threatened and insulted their officers; and in Barcelona violation of discipline seems to have been encouraged by the local authorities. The Carlists naturally hoped in the general confusion to detach some of the troops from their allegiance; but soldiers who are beat on escaping from military service will not often be inclined to re-enlist for an arduous and perilous campaign. Among the officers Carlist intrigues are likely to be more successful. Well founded disgust at the present condition of affairs may readily take the form of hostility to the Republic, and for the moment Don CARLOS is the only Pretender in the field; but the Northern civil war is not perhaps the most pressing risk which threatens the Government. The volunteers and the other sections of the rabble have been armed with lavish imprudence; and if the regular army is disbanded, the lowest class of the community may at any moment assume supreme authority.

If the disorganization of the army implied the predominance of the civil power, the relaxation of the bonds of discipline might be regarded with comparative equanimity; but in the absence of the ordinary securities of order, force will decide all political controversies. It may well be believed that the PRIME MINISTER is disappointed with the result of his visit to Barcelona, and he will derive little comfort on his return from the state of Madrid. Twice already since the proclamation of the Republic an armed mob has compelled the Legislature to revoke its decisions; and the smallest pretext seems sufficient to produce a riot. When the mob of a large town is excited and armed, it can only be restrained from violence by the presence of regular troops; and it would seem that the Republican Government has no disciplined force on which it can rely. The volunteers were at the first outbreak of the revolution supplied with arms in the belief that it might be necessary to hold the army in check; and since the spread of a mutinous spirit among the soldiery, peaceable citizens are at the mercy of Republican ruffians. It is possible that the leaders of the mob may for the present not wish to disturb the Government; but they will soon be tired of the respectability of FIGUERAS and of the eloquence of CASTELLAR. In the civil struggles which are too probable, the law of natural selection will secure the final victory to the combatants who approach most nearly to the discipline of regular troops; and ultimately a new army, under some capable chiefs, may perhaps re-establish order.

According to one of the latest rumours, some Provincial Deputations had proposed to raise a general levy of armed men to overwhelm the Carlists by superior numbers. The regular troops were, by an inversion of ordinary practice, to support the volunteers; and perhaps the demagogues of the towns may have seriously thought it possible to conduct a campaign without generals or officers who could exercise any authority over the mass of the troops. If attempts of the kind are made in Catalonia or elsewhere, there can be no doubt that the armed Republican bands will, like their predecessors in the French Revolution, direct their first efforts, not against the enemy in the field, but against that part of the neighbouring population which may be justly suspected of feeling but a lukewarm sympathy with their enterprise. To this day Jacobin apologists excuse the September massacres and the atrocities committed by ROBESPIERRE and his associates by the alleged necessity of terrifying traitors and domestic enemies,

while armed patriots were engaged in the defence of their country against the foreign enemy. As there is happily no risk of any invasion of Spanish territory, the Carlists will represent the hostile force which is not likely to be checked by the efforts of the volunteers. If the Legitimists really possessed a hold upon the nation, any impediment which may prevent Don CARLOS from marching on Madrid is likely soon to be removed. According to one account, the men of a mutinous regiment shouted on parade for Don ALFONSO; but it is added that there were no means of knowing whether they applauded ALFONSO the brother of CARLOS or ALFONSO the son of ISABELLA. At present it would seem that the Carlists are powerless beyond the limits of the Northern provinces which have always supported their cause. The clergy, who for the most part favour the pretences of Don CARLOS, seem to have little influence even in the rural districts; and in the great towns they are the objects of popular animosity.

Only two months ago, in the midst of intrigues and factious disputes, the country beyond the range of the Carlist insurrection was tranquil, and the army was still obedient to the constituted authorities. The mere announcement that a Republic had been substituted for a Monarchy has been sufficient to produce general anarchy and military mutiny. The Republicans had for many years taught the populace to regard all legal authorities as hostile, and agitators promised a general division of property as a consequence of a change in the form of the government. The Spanish theory that a Republic ought to be federal or local has aggravated the universal disorder. It is intelligible that some of the great provinces should enjoy a local government, while central affairs were administered under the direction of a national Assembly; but the federalism which is demanded by the rabble means the exercise of independent authority by the demagogues of every town or village which can muster a few armed patriots to overawe the respectable part of the community. FIGUERAS and his principal colleagues, though they are professedly Federalists, never intended to countenance the general disruption of government and society. It is generally believed that CASTELAR, disappointed with the brief realization of the dreams of a lifetime, is about to resign his place in the Government. He has perhaps discovered, too late, that mobs are not governed by the fine phrases which may incite them to disaffection against established institutions. In France it has often been said with much show of plausibility that the Republic is the form of government which divides parties the least. In Spain it appears to operate in a precisely opposite direction; nor is it disputed that the Republicans of all colours form but a small minority of the whole population. The Constituent Cortes which assembled after the overthrow of Queen ISABELLA probably represented more faithfully than any previous or subsequent Assembly the real feeling and opinion of the nation. At that time an overwhelming majority determined to maintain a Monarchy in the most unfavourable circumstances, inasmuch as PRIM had at that time failed to find a candidate for the throne. Later elections have, in accordance with Continental custom, been largely influenced by the Minister who was at the time in office, but the Republicans, if they had really represented the popular wish, could scarcely fail to have held a stronger position in the Cortes. They had the advantage of including in their ranks the greatest orator in Spain; and some of his allies possessed cultivation and ability; yet in the long and factious struggles between Moderates and Progressists the Republicans were never strong enough to turn the scale. On the resignation of King AMADEO, which had, according to the statement of FIGUERAS, been accelerated by Republican intrigues, the only faction which had courage to profit by the occasion succeeded in surprising the Cortes and the country into a ruinous decision. There was no reason why the Provisional Government which had ruled Spain for two years before the arrival of AMADEO should not be re-established at his departure. The Cortes was fully justified in assuming the administration of affairs, but not in repudiating the Constitution under which it had been summoned. From that moment real power passed into the hands of the mob of Madrid, and of the armed rabble in Barcelona and other provincial towns.

THE DEBATE ON THE NEW RULES.

THE discussion which was raised by Mr. HARDY on some of the obligations arising out of the Treaty of Washington was useful, and on the whole satisfactory. With the exceptions of Mr. RATHBONE and Mr. LAING, whose arguments deserve consideration, all the speakers on both sides of the House were substantially of the same opinion. The Government promises to append to the formal communication of the Rules to other Powers a statement that England declines to be bound by the reasons assigned for the Geneva Award. It was evident that before the discussion of the matter on the first night of the Session Mr. GLADSTONE had overlooked the difficulty, inasmuch as he then thought that the Rules had been communicated in the terms of the Treaty. He has since explained his oversight by stating that he had confused certain despatches on the subject with the formal proceedings prescribed by the Treaty; and it is impossible that he can have thought that the reservation to which the Government has now pledged itself had accompanied the communication. Mr. LOWE in the same debate expressed his opinion that the Rules ought to be simply presented to foreign Governments without any explanation; but, as Mr. FORSTER, the ATTORNEY-GENERAL, and Mr. GLADSTONE himself have since assented to the expediency of a protest against the mistaken doctrines of the Arbitrators, it is unnecessary to recur to the hasty expressions of some of the Ministers on a previous occasion. It was not desirable that the House of Commons should record in a Resolution its dissent from the recitals of the Award; and there was some force in Mr. FORSTER'S objection to a vote which might have implied a censure on the Arbitrators. If those personages have, since their return into private life, had access to translations of English and American newspapers, they have probably derived little gratification from the criticisms on their decision. According to Mr. FORSTER, Mr. HARDY'S motion would, if it had been carried, have been equivalent to a vote of censure on their legal qualifications; and the Congress of the United States has, with greater freedom from scruple, intimated a belief that the damages awarded were not supported by the evidence. The American Senate and House of Representatives may be supposed to be the best judges of the claims of their citizens; and by separate Bills, which have however not become law, they have reduced by one-half the amount which the clever agents of their Government had persuaded the Arbitrators to allow. The modest remuneration which the members of the Tribunal will receive for their services will scarcely compensate for the mortification of finding that their judgment commends itself neither to plaintiff nor to defendant; but the charge of incapacity which is involved in the proceeding of the American Senate and House has not been adopted by the English Parliament.

Although the blunders of the Arbitrators found no apologist in the House of Commons, Mr. RATHBONE and Mr. LAING contended that their decisions might be advantageously accepted as providing for the security of England against unfriendly neutrals in the event of a war. As Mr. RATHBONE clearly explained, the benefit resulting from maritime supremacy was almost entirely destroyed by the Treaty of Paris. In the great war at the beginning of the century, English merchantmen carried on trade under the protection of convoys with all parts of the world, while the goods of the enemy were liable to capture and condemnation although they might be covered by a neutral flag. The adhesion of England to the new rule which secures immunity to hostile goods in neutral bottoms would in time of war operate to the detriment or ruin of the commercial marine of a belligerent. The injury would, as Mr. RATHBONE urged, not be measured by actual loss, but by the risk incurred, and by the consequent rise in the rate of insurance; nor is it certain that the loss inflicted on the English carrying trade would be repaired on the restoration of peace. Mr. RATHBONE shares the opinion so obstinately held by Lord PALMERSTON, that the Suez Canal will injuriously affect the competition of London and Liverpool with the ports of the Mediterranean and the Black Sea. For the present, English skill and capital have prevailed against the rivalry which is aided by a better position; but Mr. RATHBONE fears that trade once transferred to Marseilles and Odessa might not be afterwards recovered. On these grounds he considers that the disabilities imposed on neutrals by the Geneva Award would be useful in diminishing as far as possible the risks of the belligerent; and if it is thought probable that England will be more often a party to a war than a neutral, it is impossible to dispute Mr. RATHBONE'S conclusions. On the other hand, recent experience has illustrated the risks which beset a neutral, especially when one or both of the belligerents are litigious and grasping. The risk is not merely of pecuniary loss, or of humiliation; for it is not unlikely that arrogant demands might provoke resentment and refusal, and that the result might

be war. It must also be remembered that the question is not whether a rule would be beneficial to England, but whether it is tenable and just. If Mr. RATHBONE is right, foreign Powers could not fail to see that a doctrine exceptionally advantageous to England might be proportionally detrimental to nations which have a smaller commercial marine. The concessions of Paris were, as Mr. RATHBONE admitted, unavoidable, because the future enforcement of the maritime claims of England would necessarily have provoked a rupture with neutral Powers. In 1780 and again in 1800 nearly all the neutral States had combined to resist the right of search; and although the resolute energy of England on both occasions overbore resistance, the balance of power is now so far altered that it would no longer be possible to set the pretensions of neutrals at defiance. It might perhaps be scarcely less difficult to enforce against a State of the first rank the interpretation attached to the Washington Rules by the Geneva Tribunal.

The Treaty of Washington, although it contains no express provision for the concerted action of England and the United States, seems to indicate the propriety of a joint communication to other Powers. As Mr. GLADSTONE suggested, it would be useless to prepare a separate demand for adhesion, especially when the English Government would simultaneously attach their own meaning to the Rules which they proposed for acceptance. Any Government which had not special and urgent motives for adopting the Rules would, as a matter of course, wait for a similar communication from the United States; and, in default of a previous understanding, the American Government would certainly not concur in the English interpretation. Mr. GLADSTONE and Mr. FORSTER were perfectly justified in holding that the present time was not favourable to any overtures to the American Government. The stipulations of the Treaty are not yet fully executed; and, although some of the doctrines propounded by the Arbitrators are inconsistent with the permanent policy of the United States, their Government will be for the present disinclined to repudiate any portion of a judgment which was strictly accordant with the contention of the American counsel. Mr. FORSTER stated that the discussion of the matter was interrupted by the sudden promulgation of the Indirect Claims at the end of 1871. The last despatch came from the English Government, so that it is the turn of the United States to proceed with a negotiation which requires no hurry on either side.

It is not improbable that the whole clause in the Treaty may become inoperative by the tacit consent of both parties. The ambiguity of the Second Rule has been for the moment corrected by an informal understanding between the English and American Governments; but, if the Rules were formally tendered to the acceptance of the German Government, they might perhaps be accepted without any reference to the gloss which was affixed by the authors of the Treaty. The Rule is so awkwardly drawn that it might be understood to prohibit the sale of arms by the subjects or citizens of a neutral Power to a belligerent Government. As both England and the United States had recently supplied arms to France, while English traders had during the Civil War dealt largely with the Federal Government, both parties found it convenient to correct the obscure language of the Rule. Mr. LOWE's proposal of the exclusion of note or comment might involve considerable risk of misunderstanding; but no foreign Power will be bound to accept the commentary as an authoritative interpretation of the Rule. If it is true that the German Government has resolved to reject the Rule unless the sale of arms to a belligerent is prohibited, there will be little use in commencing a negotiation on the subject. It is also reported that the Austrian Government intends to affix unacceptable conditions to the acceptance of the Rules, and it would be highly inconvenient that different European Powers should be bound by varying rules of international law. The kind of danger which is apprehended in case of war by Mr. LAING and Mr. RATHBONE would probably be inflicted, if at all, by the United States, which are already bound by the Rules, whatever the Rules may mean. It is improbable that cruisers under a hostile flag would issue from the neutral ports of France, of Russia, of Germany, or of Austria. The Americans are pledged, as far as the Treaty of Washington has any effect, to abstain as neutrals from all similar operations; and if they think fit to adopt the Geneva interpretation of due diligence, they will be still more strictly bound to restrain the enterprises of their adventurous citizens. The debate in the House of Commons proved that the Treaty, the Arbitration, and the Award have so far not been useless that they have attracted general attention to the subject of international rights and obligations. Mr. HARDY, Mr. HARCOURT, and the ATTORNEY-GENERAL throw a valuable light on the whole controversy between belligerents and neutrals.

M. THIERS'S DIFFICULTIES.

THE Conservatives of Paris have up to this time been prominent among those French electors who hold that a vote is a dangerous tool to handle. They have again and again allowed themselves to be represented by Radical deputies without taking the trouble to find out whether a candidate of their own would have any chance of success. For once, however, they seem disposed to bestir themselves a little on behalf of their own interests. It is possible that if M. DE RÉMUSAT consents to stand, and if there is a fair probability of his being returned whether the Conservatives vote or not, they will for once show themselves at the poll. It will not be a case of Heaven helping those that help themselves, so much as of those whom Heaven helps a great deal consenting to help themselves a very little. M. DE RÉMUSAT was asked to stand by the Mayors of Paris, and as the Mayors of Paris are appointed by the Government, their nominee has something of the character of an official candidate. The title is very dear to the Party of Order in Paris, for it seems to carry with it an unexpressed assurance of good things reserved for the voter. An official candidate is a candidate in favour with the powers that be, and some part of this countenance may be extended to those who support him. Where there is no indication of this sort the Paris shopkeeper only feels that by voting against a Radical he will earn the hostility of the powers that may be. He is ready to show his devotion to the Republic of M. THIERS if M. THIERS will show him unmistakably how to testify his piety. The appearance of an official candidate gives him the direction he wants. He understands the Government to say, Love me, love my candidate; and now that he knows his affection will not be wasted, he is willing to give it full play. But support gained in this way is by no means an unalloyed advantage. If M. DE RÉMUSAT receives some votes because he is supposed to be an official candidate, he will lose others for the same reason. A system which was so abused under the Empire is naturally not held in much esteem by the Republican party. Those Republicans who wish to see Paris represented by a Cabinet Minister get over the difficulty by denying that M. DE RÉMUSAT is an official candidate. It is true, they say, that the Mayors of Paris are appointed by the Government, but they do not for that reason lose their power of divining what the Parisians really wish for. In asking M. DE RÉMUSAT to stand, they did but give voice to the spontaneous feeling of the city that some return was due to the Government for the great services it has rendered to France. Paris cannot make that return more suitably than by choosing the Minister who, next to M. THIERS, has been the chief author of the Evacuation Treaty to be its representative in the National Assembly. At present it is not clear which of these two theories will find most favour among the Paris Republicans, and in the absence of some certainty upon this head M. DE RÉMUSAT finds himself in a dilemma. Indeed, if the Right had shown any evidence of political cleverness, they might almost have been suspected of having suborned a Mayor to suggest M. DE RÉMUSAT's name to his colleagues. If the Radicals would consent not to put forward a candidate, and if the FOREIGN MINISTER were returned by a unanimous vote, the Government would no doubt be a gainer by the election. Such an expression of confidence offered by all parties in the capital would supply M. THIERS with a convenient text whenever he next chooses to draw a distinction between the country which trusts him and the Assembly which distrusts him. But, if there is a contest, it will be difficult for the Radicals to support so moderate a candidate as M. DE RÉMUSAT; and if they set up a rival candidate of their own, they will become the open antagonists of the Government, which is not at all what either they or M. THIERS desire. It is hardly possible that such an antagonism should be only nominal, for it will be of great importance to each party that its candidate should win, and a hotly contested election is sure to bring out all the bitter things that can be said on each side. Yet if M. DE RÉMUSAT finally declines to stand, he will give occasion to the Left to say that Paris will have no one for its representative who is not a Radical, and to the Right to say that the Conservative party even in Paris have not confidence enough in M. THIERS to make it wise for one of his Ministers to ask for Conservative votes. Perhaps the inconvenience which this suggestion of the Mayors is likely to cause the Government may make M. THIERS hesitate before venturing on any consider-

able change in the municipal arrangements at Lyons. If there are advantages in having the nomination of the officials of a great city in your own hands, there are disadvantages also.

The Assembly will shortly adjourn for five or six weeks—the holidays being made unusually long in order to give the Government time to prepare the Bills which it has undertaken to produce before the end of the Session. It is probable that the task does not grow easier as it comes to be looked at more closely. The law as to the continuance of the Executive after the dissolution may not cause much trouble, since, whatever may be the nature of its provisions, their effect will equally be to leave the power in the hands of M. THIERS. But the two other subjects are surrounded with difficulties on all sides. The electoral law openly demanded by the Right—and secretly desired, perhaps, by a majority of the Assembly—is a law which shall put some effective obstacles in the way of the return of Radical candidates at the next election. M. THIERS knows perfectly well that to attempt this in good earnest would be to alienate the whole Republican party, to run great risk of an immediate insurrection, and to put a dangerous weapon into the hands of any adventurer who might try to win popularity by restoring universal suffrage. He has pledged himself, however, to make some move in this direction, and his aim will be to construct a measure which shall admit of being presented in different lights according as the spectator belongs to the Right or the Left. As one party demands that universal suffrage shall be maintained in its integrity, while the other insists that it shall be subjected to restrictions which will make it no longer mischievous, it is not easy to see how M. THIERS is to invent a neutral theory which shall not dissatisfy either. He is understood to be opposed to the postponement of the age of political majority to five-and-twenty, and to the requirement of a three years' residence. Either of these plans would make a very large reduction in the list of electors, and would have the further merit in the eyes of the Right of making the reduction just in the right place. From one-and-twenty to five-and-twenty is ordinarily the period in which men are most likely to be Radicals, or at all events in which Radicals are likely to be most radical. After that they settle down to the serious business of making a livelihood, and politics become insensibly less important to them. A few hot spirits there will always be whom no lapse of years can effectually tame, but under a well-administered Government there is always a chance that these will have been shot before their twenty-fifth birthday, or at worst will keep it in the colonies. The extension to three years of the residence necessary to confer a vote would be equivalent to the disfranchisement of a large proportion of the working classes. Many of the artisans employed in Paris and in some of the other great cities spend only a part of the year there, and return during the winter to their country homes. In this way they would never, under any but the easiest conditions of residence, get on the register anywhere. But, if M. THIERS sets his face against these alterations, what can he propose in their room that will not be either open to similar objections on the part of the Left, or so transparently delusive as to ensure the hostility of the Right?

As regards the creation of a Second Chamber, there are two obvious difficulties in M. THIERS's path. In the first place, how is it to be constituted? in the second place, what is it to do? M. THIERS seems to contemplate a legislative, not an administrative, body; and it may therefore be assumed that he means the members to be elected. But in a country where universal suffrage governs the election to the First Chamber, what else can be devised to govern the elections to a Second Chamber? To vest the election of the Senate in the hands of a limited constituency would be to proclaim that it did not represent the national will with the same completeness as the Chamber elected by the larger constituency. The plan of making the departmental Councils the electors is not open to this objection, inasmuch as those Councils are themselves the product of universal suffrage. But it would certainly be urged, whenever a disagreement arose between the two Chambers, that a Chamber which represented the nation directly had a better claim to be listened to than one which only represented it indirectly. Besides which, a plan which gives the election of a political Assembly to bodies which have been primarily chosen on other grounds is far from satisfactory. A member of a Council-General may be an authority on matters of agriculture or commerce, and yet be no more fit than one of his own labourers to have a voice in the election of a Senator. If the constituency is the same as that which returns the popular Chamber, and a property or official qualification is required from the candidates, every surrender made by the Second Chamber—and it is likely to have to make many surrenders—becomes a triumph of numbers over capital and station, and so paves the way for further contests of the same kind, ending in a similar result. If M. THIERS can invent a scheme which involves none of those drawbacks, he will prove even greater as a political philosopher than he has shown himself to be in practical administration.

THE BURIALS BILL.

MR. O. MORGAN'S Burials Bill is another example of that class of insidious and dangerous measures by which attempts are occasionally made to unsettle a great subject, under pretext of touching only a little corner of it. The question which is immediately and directly raised by the Bill is in itself a very simple one. A parishioner, as everybody knows, has a right to a seat in the parish church, and to a grave in the churchyard attached to it, and this right is not in the least affected by his own religious opinions. He may, if he chooses, renounce the Church, but the Church is not at liberty to retaliate by renouncing him. It is the national Church, and its services are open to all and sundry, to Nonconformists and Churchmen alike. It is known that, in point of fact, a large number of Nonconformists are married according to the rites of the Established Church, and it does not appear that the voluntary acceptance of the offices of the Church in this respect has yet been discovered to be a grievance. Complaint is made, however, that nobody can be buried in a parish churchyard without having the burial service of the Church read over the body, and this is represented as a very serious and intolerable grievance on the part of Nonconformists. It happens that this burial service is part of the prescribed offices of the Church of England; but, if a committee of members of all Christian denominations were to meet together for the purpose of composing a form of prayer which they could all use in common without coming across anything that would wound sectarian susceptibilities, it is scarcely possible that they could hit upon anything more suitable for the purpose than the Burial Service of the Prayer Book which is supposed to be so painful and exasperating to the Nonconformists. According to Lord BEAUCHAMP's compromise, Nonconformists would have been at liberty to dispense with the service altogether if they felt any objection to it, but this is not enough for them. They insist upon freedom to hold any kind of services they choose in the churchyards without limit or restraint; and the object of Mr. MORGAN's Bill is to confer this freedom upon them. It is proposed that any minister or member of any religious body or congregation having a registered place of worship may conduct the service or "other "religious act" at the grave. It is provided that all burials under this law "shall be conducted in a decent and solemn "manner"; that "no service, or any part thereof, shall be "other than of a religious character"; and that the service, if not according to a published ritual, shall consist only of prayers, hymns, or extracts from Holy Scripture. It will be observed, however, that these provisions are only in the nature of general directions or suggestions. No authority, as far as we can see, is given to any person to enforce the observance of the rules, nor, except in the case of "riotous, violent, and "indecent behaviour," is any penalty attached to their infringement. Indeed we are not sure that, if any person attempted to interfere for the purpose of calling attention to the requirements of the law, he might not find himself exposed to the penalties of the next section, which provides that any one wilfully obstructing a burial, or any prayer or service thereat, shall be placed in the same category as those who are guilty of riotous, violent, or indecent behaviour, and held to be guilty of a misdemeanour. If a member or minister of any so-called religious body chose to introduce a performance which went beyond prayers or hymns or extracts from Holy Scripture, he would certainly be disobeying the law, but he could disobey it with perfect impunity. Nobody would be able to prevent him, and there would be no means of punishing him afterwards; on the contrary, he would be entitled to prosecute the incumbent or any one else who ventured to remonstrate with him. It is obvious moreover that it is impossible to say what might not be passed off as a prayer or hymn.

Supposing that the Nonconformists had a grievance, it would of course be necessary to take care that, in redressing it, offence should not be given to other people. The Nonconformists occasionally require to be reminded, like some other sections of the community, that they are not the people of England. As it happens, they are only part of the people

of England—a very respectable, important, and influential part, no doubt, but still only a part. It is quite right that the feelings of Nonconformists should be treated with consideration, but some consideration would seem to be also due to the feelings of Churchmen. Any desecration of the churchyards by the introduction of eccentric ceremonies, or provocative and distempered addresses, would certainly be painful not only to Churchmen, but, we should hope, to a good many Dissenters also; and Mr. MORGAN's Bill provides no check or restraint whatever on scandals of this kind. There are no means of enforcing the general directions as to the decency and solemnity of the services, and even if there were, it is scarcely possible to define what might or might not come within the meaning of "prayer," "hymns," or "services of a "religious character." A Presbyterian clergyman in the North of Scotland the other day took it into his head to pray at a local editor; the editor replied, and for anything we know the clergyman may be still going on with his comminatory orisons. It also occurred to the POPE a few years since to pray in a very significant manner for the bodily and spiritual welfare of the Emperor of the FRENCH; and we recollect reading not long ago in one of the American papers a vigorous party prayer delivered by the Chaplain of the House of Representatives, in which the "sorcheads" certainly got it very hot. We are indebted to Mr. GLADSTONE for some acquaintance with Mr. BRADLAUGH's Hymnal, and a very pretty selection might no doubt be made from it for use at the funerals of ardent atheists and revolutionists. Mr. BRADLAUGH would of course contend that, according to his notions, this was a strictly religious service, though it may be questioned how far other people would agree with him. The Shakers, who have a registered place of worship in a railway arch in the South of London, would also be entitled under the Bill to give a lively entertainment in the churchyard. Possibly the great body of clergymen who are known as Nonconformists might be trusted not to prostitute their office to the purposes of partisan malice or political demonstrations, though there is no saying what might not be the influence of example if the fashion were once started; but Mr. MORGAN forgets the vast number of different sects and congregations which are all classed under the head of Nonconformists. According to Mr. MORGAN, the Bill "bristles with safe- "guards," but in point of fact such safeguards as there are are utterly unreal and unsubstantial. The penalties of the Bill scarcely go beyond threatening an incumbent with two months' imprisonment if he dares to suggest to the Jumpers that jumping is not for edification when it is practised over tombstones. In the public cemeteries there are rules and regulations, and a staff of officers to see that order is preserved, and that nothing indecent or outrageous takes place. The old churchyards of the country, the churchyards which have become part of the national and family history of the people, and with which so many tender and pious associations are connected, are alone to be thrown open, without restraint or supervision, to the antics, mummeries, and indecent and scandalous profanities of every class of fanatics and agitators. It has been said very truly that, if the question had now arisen for the first time, it would without any difficulty or hesitation have been settled by prescribing one common form of worship, such as the Burial Service, in which all sects of Christians could join without embarrassment. It is simply impossible to define what is decent, solemn, and religious in an Act of Parliament, except by setting out the form of the service in the schedule of the Act.

The course of the agitation on this question has been an amazing, if not amusing, history of inconsistencies and self contradictions. The *Times*, which formerly approved Lord BEAUCHAMP's compromise as fair and reasonable, is now satisfied that nothing will serve except throwing open the churchyards to every form of religion—or rather irreligion, for the *Times* has been seized with doubts as to the propriety of religion in a churchyard. When people die, it seems, they should give up all that sort of thing, or at least the survivors should. Mr. DISRAELI summed up in his pithy way the inconsistencies of the Dissenters. They revolted against consecrated ground as a grovelling superstition, and went in for cemeteries. Now they are eager to get themselves, or at least their relatives and friends, covered over with superstitious sods. They carried on a thirty years' war against having to bear any part of the charge of maintaining the churches and churchyards, and now they insist on their right to treat the churchyards as common property, as a step towards getting a similar footing in the churches. We shall not trouble our readers by going into the statistics of burial-grounds. Where Mr. MORGAN comes from at any rate, there seems to be plenty of choice. But the plain, and indeed notorious, fact is that it is the political Dissenters of the towns, where there are ample cemeteries, who are trying to get up an agitation based on the circumstance of rural parishes, where the Dissenters, so far from having any objection to the rites of the Church, would certainly resent the idea of their being withheld from themselves or their friends. It is the greatest mistake in the world to confound the town and the country Dissenters. They are two utterly opposite types. The town Dissenter hates the Church for its supposed social superiority, and with the characteristic venom of democratic jealousy—the sort of childish, petty jealousy, for example, which has just led a member of the School Board at Staplehurst to protest against the choice of a steeple for the device of the official seal, as being "a distinctive ecclesiastical emblem, which could only be "regarded as a gratuitous insult to Nonconformists." The rural Dissenter has a taste for strong preaching, and goes where he can get it; but he clings to the rites and ordinances of the Church as part of his inheritance, and he would feel very uncomfortable at the thought of being either married or buried except by the parish clergyman. The experts in "blazing principles" who work behind Mr. MORGAN's back are quite aware that the way into the church is through the churchyard; that a casual shower would be an excellent pretext for transferring the "religious act" of the churchyard to the shelter of an adjacent roof; and that the freedom of the stump by the side of the grave would supply a plausible argument for claiming similar freedom in the use of the pulpit. It will be observed that this goes a step beyond disestablishment. It is simply a proposal to turn the churches and churchyards into a sort of lawless No Man's Land, and to reduce the clergymen of the Church to the position of acolytes and candle-snuffers to every form of religious or irreligious Nonconformity.

FRENCH WORKMEN AND THE FRENCH ASSEMBLY.

A DISCUSSION has taken place this week in the French Assembly which is worth noticing on account of the light it throws on some features of the social condition of France. A proposal was made by some advanced members of the Left that 4,000*l.* should be voted to defray the expenses of a body of workmen who should go to Vienna and see the Exhibition at the public expense. A Committee reported against the project, but its authors appealed to the Assembly. The notion is borrowed from the precedents of the Empire, as workmen were so sent to London in 1862 and to Paris in 1867. Such a mode of petting a class which the EMPEROR always strove to flatter while he repressed it was quite in keeping with the traditions of Imperialism, but the present Assembly was all the less likely on that account to regard it with favour, and no one could deny the awkward fact that, from the mission of French workmen to London in 1862 sprang the first beginning of the International. M. TOLAIN, who was the main supporter of the proposal, attempted to get over this difficulty by saying that in the first place the International was no longer dangerous, and that in the second place the workmen had not been chosen on former occasions in the right way. His scheme was that elections should be held under the control of the Municipal Councils, so that on the one hand the workmen might not fear to offend the Government by voting, and on the other they might understand they were fulfilling a public duty. M. TOLAIN complacently assumed that, if workmen did but vote under these guarantees, they would be sure to elect the most moderate, sensible, and competent men to be found. The main object of the grant was, of course, to let the best French workmen profit by a personal examination of products in their own line of industry coming from all parts of the world; but then the grant would carry with it subsidiary advantages of great importance. In the first place, it would create a kindly feeling towards the Assembly on the part of French workmen generally, and mitigate the spirit of hostility which divides the lowest class from those above it. In the next place, it would in some measure compensate French workmen for not being able to arrange strikes with the happy facility known in other countries. The French law sternly represses combinations of workmen, but M. TOLAIN thought it hard that Frenchmen alone of all people should not sometimes meet the workmen of other countries, confer with them, and possess themselves of all the information as to wages and duration of labour in different countries which is so interesting to workmen. Lastly, he thought that the reports which French workmen would bring home from Vienna would tend to make the

whole class contented. For there are no workmen better off, he said, than the French, and their representatives would find this out at Vienna, and would spread the comforting news when they got back home. The framer of the Report of the Committee, who was enthusiastically supported by the majority of the Assembly, had naturally much to urge in answer to these suggestions. He observed that the International, although kept down in France by rigorous laws, was as noisy, as mischievous, and as fanatical as ever when it dared to show itself; that enough competent workmen would in the natural course of things be taken to Vienna by their employers, who would be the best possible judges as to which of their men would be likely to learn anything profitable from foreign specimens and processes; and that, as to the charge that the Assembly was hostile to the workmen, it was out of the question to make any grant founded on the assumption that such a charge need be specially disproved. This was exactly what a moderate French Conservative was sure to say, and it calls for no remark; but the speaker gave one detail which is interesting as showing to what a large extent the ranks of the French *bourgeoisie* are recruited from the ranks of the workmen. In his native town, he said, out of fifty employers of labour, twenty-five were workmen twenty years ago. In Paris he had discovered that out of many hundred master builders, seventy-five are entirely self-made men, twenty are the sons of men who made their fortunes, and only five have had a grandfather with money. Finally, this zealous inquirer had personally called on fifty manufacturers of *articles de Paris* and found that thirty-five out of the number had started as common workmen.

We often hear in England of a wish that there should be some members in the House of Commons who should be working-men themselves, and able to speak for their fellows; and we may be quite sure that, if they were genuine specimens, and not agitating adventurers, they would be sincerely welcomed by a body which is always lenient and just to those who speak of what they know. In France they have some such members in the Assembly, and two of them spoke on M. TOLAIN'S motion. A French workman speaking about French workmen in the Assembly is worth listening to, and what these two members had to say was instructive, as showing modes of looking at such a subject that might not have occurred to men in a higher social position. One was for the motion, and the other against it. M. CORBON, who supported the grant, dwelt chiefly on the mortifications which the workman has to undergo. He is not duly considered and honoured in modern society. In old days he was in one way better off. For industry was carried on upon a much smaller scale, and he lived with his employer, and formed part of his family. Now he is one of a herd, not badly treated, but unthought of and unhonoured. One bad consequence of this is that workmen who make money are above all things anxious that their sons shall not be workmen, and at great exertion give them enough education to make it possible for them to hope for some sort of employment that is thought gentlemanly; and so they flood the streets of great towns, wasting their time in idleness. If this grant were made, the Assembly would show that it honoured manual labour, and then perhaps fathers would not wish that their sons should rise above them. Nothing could mark the difference between English and French ideas more strongly than that a working-man, who spoke with sober sadness of the social hardships of his rank, should think that the State, by spending 4,000*l.*, could so mark its respect for workmen that working fathers would henceforth strip off the black coats from their sons' backs and make them wear blouses. Nor is it less surprising to find that M. CORBON insisted that the danger of the elected workmen aiding the International at Vienna was chimerical, because of course the French Government would have its police agents there, who would watch the workmen night and day, and see that they kept no improper company. That people who might possibly compromise or hurt the State should live, even in a foreign country, under the incessant supervision of the spies of the French Government, seemed to M. CORBON so natural that it did not in his eyes in the least diminish the incitement to virtuous endeavours which the tribute to the claims of honest labour involved in making the grant would produce. That the State could glorify labour by spending a trifling sum of money on the visit of a few delegates from the working classes to a foreign Exhibition, while it protected itself from all injury by watching them during their outing as if they were criminals, does not seem a very enlightened or philosophical or practical notion; but then it was the genuine notion of a working-class member, as to whose deep feeling of the mortifications which he and his fellows had to submit to there could be no mistake. And it may be added that he remarked that nothing brought home the feeling of dissatisfaction more keenly to workmen than the occasions when they are called on to exercise the privileges of universal suffrage, as then for a moment they are the equals of every one, while, directly they have voted, they sink again into obscurity, if not dishonour. There are many political lessons to be learnt from the revelations of a man on whom, as on his fellows, modern society and democracy inflict so many sharp pangs, and who can see no ray of comfort unless the State will throw a little coat of cheap, temporary, and mock gilding over the sombre framework of his existence.

The other spokesman of the workmen, M. MALARTRE, opposed the motion on grounds which, if not exactly peculiar to one of his class, had probably a force to him which few but one of his class would appreciate. He altogether disapproved of the election of workmen by workmen. Far from thinking with M. TOLAIN that such an election would ensure the appointment of moderate and competent men, he thought that it would ensure the appointment of incompetent men. The men who would make themselves prominent would be good-looking, voluble, noisy fellows, who would make speeches, and canvass and captivate the workmen by vulgar arts of pleasing. They would go to Vienna, look about there, and string together a mass of sham philosophical platitudes and superficial criticism by way of a Report. The men who really know a special branch of industry, said M. MALARTRE, are as a rule silent, thoughtful men, living a life apart, and not very popular with their fellows. These are the men who, if the object of the grant were to foster French industry, ought to be sent to Vienna, but they are exactly the men whom workmen electors would overlook. But even if it were assumed that men would be sent to Vienna who knew something of the mysteries of their craft, there would be a danger to France from such men. They would have nothing to do at Vienna, and they would not have much money to spend, for the grant was not large enough to do more than give them a maintenance. They would roam about Vienna idle and needy, and nothing could be more probable than that they would be got at by unscrupulous foreigners, and bribed to tell the secrets of their respective trades. French industry depends largely for its success on the possession by employers of many little ingenious arts by concealing which they thrive. Foreigners would be delighted to rival France by imitating these arts, and yet, said M. MALARTRE, France, under pretence of fostering French industry, would be putting a number of poor Frenchmen under a very strong temptation to sell information that would be ruinous to France. This, again, may not be a very enlightened or philosophical way of looking at things, but it showed a knowledge of what in real life might be the position of French workmen under the circumstances that came from the personal experience of the speaker. Only one other point in the debate needs notice. The Government naturally opposed the motion, and the MINISTER of AGRICULTURE and COMMERCE made objections to it that were almost a matter of course. But one of his objections must have reminded his hearers in a very striking manner of the peculiar political position that France holds at present. He advised the Assembly not to forget that to get to Vienna these workmen would have to pass through Germany, and that at Vienna they would be in the midst of a German population. If a body of French workmen, having the official recognition of the French Government, and yet suspected of being agents or friends of the International, and deeply imbued with the feelings which the late war has evoked, were in their folly, or in the ardour of their patriotism, to give offence to the German Government, the French Government would be placed in a most awkward position, and serious embarrassment might ensue. The Assembly entreated the Minister not to dwell on this point, as it was perfectly understood, and he replied that, as it was understood, he would not dwell on it. It was a painful subject, and after the hint which had been given there was no use in pursuing it, but many of those present must have looked back in memory to 1867, and have asked themselves who could then have expected that France would not venture to send workmen to the next great Exhibition lest Germany might take offence.

CURRENCY AND THE BANK ACT.

THE currency debate of last Tuesday may have reminded a few veteran members of the discussions which were periodically raised by the late Mr. MUNTZ in a former generation. Sir ROBERT PEEL often enjoyed the opportunity of puzzling his pertinacious assailant by the famous question,

"What is a pound?" but he must have known human and controversial nature too well to imagine that a disputant was necessarily convinced because he was silenced. The dry and abstruse theory of currency, like vexed questions of theological metaphysics, tends to produce in certain minds a kind of fanatical indignation. The truth seems so clear to the unconsciously mystified student that he can scarcely comprehend the persistent refusal of his opponents to adopt his views. Mr. ANDERSON has failed to understand why the price of gold should be fixed, although the precious metals, like all other commodities, vary from day to day in value. As Sir ROBERT PEEL said, in answer to his own question, a pound is such a quantity of gold of a certain fineness that 3*l.* 17*s.* 10½*d.* represents an ounce. The proposition may be inverted without impairing its accuracy, for an ounce of gold is worth 3*l.* 17*s.* 10½*d.* What the Legislature has fixed is not the fluctuating value of gold, but the meaning of all contracts which involve pecuniary consideration. An undertaking to pay any sum is a promise to deliver a given amount of gold or its equivalent; and it has been found necessary by all civilized nations to establish some kind of monetary standard. If, as Mr. ANDERSON proposed, an ounce of gold were, according to the supply and demand, to be sometimes worth 3*l.* and sometimes worth 4*l.*, it would be utterly impossible to conduct business until some other kind of currency was invented. This indeed is probably the object of the currency reformers; but they have never succeeded in providing any intelligible substitute for gold. It is undoubtedly a grave inconvenience that, in consequence of modern gold discoveries and of other causes, gold no longer retains its former fixity of value. In the Tithe Commutation Act, and in some agricultural leases, contracts are regulated by the price of corn instead of the price of gold; but no commodity has yet been found which would serve the same purpose in the ordinary operations of trade. It fortunately happens that the dates of the majority of contracts are not so distant as to leave time for any great variation in the value of money; but even if the process of depreciation were more rapid, it would be more convenient to refer to a variable standard than to have no standard of any kind. If the nominal value of gold or of any other medium of currency were not positively fixed, neither debtor nor creditor would be able to estimate the magnitude of their obligations and rights.

Mr. ANDERSON'S crotchet would scarcely deserve examination if it were not shared by a certain number of more or less ingenious reasoners. His project of a general license to issue notes, limited only by the possession of a certain amount of Government securities, has often been suggested before; and it may be presumed that fallacies which reappear from time to time are recommended by some plausible arguments. Some humourist in the days of the Bank Restriction Act defined banknotes which were only exchangeable for other banknotes as an interminable series of broken promises. Mr. ANDERSON would refer the holder of a note to the security of the deposit of Consols or of other stock, which might certainly be preferable to reliance on the personal credit of the banker. It is nevertheless difficult to understand how the ordinary holder would, on Mr. ANDERSON'S plan, obtain the conversion of notes into a safer or more convenient currency. It would seldom suit his purpose to distrain upon the banker's reserve, even if it were large enough to meet his demands. The nominal sum to which he would be entitled would always be an uncertain quantity, unless the entire issue were strictly limited by law. The paper currency of the United States derives its value from the undertaking of the Government to exchange the greenbacks at some future period for gold. As the volume of the paper currency has been reduced, the premium on gold has become smaller and smaller; and if the finances of the Republic are prudently administered, gold payments may be renewed at no distant period. The liability of a paper currency to artificial derangement has been illustrated by the caprices of the late Secretary of the Treasury. Mr. BOUTWELL, on his own authority, and, as it afterwards appeared, in violation of the law, re-issued, for the purpose, as he alleged in a phrase which has become a standing joke, of "moving the crops" in the autumn, a considerable number of greenbacks which had been withdrawn from circulation. An English Chancellor of the Exchequer would not venture to break a plain Act of Parliament; but the mischief might in some instances be perpetrated in strict conformity with the law. If any discretion is reposed in the Government, it must sometimes be abused; nor indeed is it possible for any Minister to judge of the quantity of currency which is required for the public use. It would be utterly absurd to make the amount, and consequently the prices of all commodities, depend either on the magnitude of the National Debt or on the value of the securities which might from time to time be held by the banker. As long as paper money is compulsorily and instantly convertible into gold, bullion will be bought at the market price to any extent which may be required. The existing law only interferes with supply and demand by providing as far as possible for the certain performance of the contract made by the issuing bank. For thirty years it has been impossible that the issue department of the Bank of England should become insolvent, as long as the State which owes the Bank fourteen millions was able to discharge its obligations. The existence of private banks of issue results exclusively from the habitual regard of Parliament for vested interests. Since 1844 no fresh right of issue has been conceded, and when any of the privileged banks cease for any reason to issue notes, the power of issue is finally lost.

The only advantage of Mr. ANDERSON'S motion consisted in the exposure of his misapprehensions by some of the best authorities on the theory and practice of banking. Sir JOHN LUBBOCK, after giving a clear explanation of the purposes and operation of the Bank Act, concluded his speech with a somewhat paradoxical motion for inquiry by a Select Committee. Fifteen years had, as he said, elapsed since the last investigation of the kind, and much valuable experience had been accumulated in the interval. It is remarkable that after the disasters of 1866 there was no Parliamentary Committee on the currency, nor is it easy to understand why inquiry has since become more necessary. The frequent changes in the rate of discount have, in the opinion of the most competent judges, no connexion with the Act of 1844, and they are in part caused, or rather rendered visible, by the increased vigilance of the Bank Directors. Every speaker except Mr. ANDERSON approved the principle of the Act, and the appointment of a Committee to re-open the whole question of currency would have implied the existence of an imaginary doubt. It is perfectly true that since the establishment of the great Joint Stock banks the Bank of England no longer controls as formerly the London trade in money; but the Act of 1844 was not intended to determine the supply of capital or the rate of interest, but merely to secure the convertibility of banknotes. Sir JOHN LUBBOCK contrasted the enormous balances which are exchanged at the Clearing House with the comparatively trifling amount of the paper currency. The transactions of the Clearing House will in the present year reach six thousand millions; and in the daily adjustment of accounts neither a sovereign nor a banknote changes hands.

Mr. LOWE concluded a forcible argument against the appointment of a monetary Commission or Committee by a promise to consider Mr. W. FOWLER'S plausible suggestion for investing the Government with a discretionary power to relax the conditions of the Act. It is well known that during each of the three great panics of 1847, 1857, and 1866 the Treasury offered to procure for the Bank Directors an Act of indemnity for any excess of issue which they might deem expedient. On all three occasions the question was not whether the Bank could redeem its notes in gold, but whether it might not be compelled to refuse further accommodation to traders. In 1847 the Bank availed itself of the official permission; but in 1857 and 1866 the intimation that the power of exceeding the limited issue had been granted was sufficient to render the actual increase of the paper currency unnecessary. Mr. FOWLER not unnaturally thinks that, if administrative interference is periodically necessary, it ought to be authorised and regulated by law; and perhaps the anomaly which is implied in an Act of Indemnity may be avoided for the future without inconvenience. It may be conjectured that Mr. LOWE, as he gave the proposal favourable consideration, approves of the various suspensions of the Act of 1844; but some economic theorists of great practical experience have entertained the contrary opinion. It is perhaps scarcely to be expected that any Chancellor of the Exchequer should firmly refuse to follow the example of his predecessors when he can check a ruinous panic at the cost of a letter to the Governor of the Bank; but there is some reason to fear that Governments may be more pliable when they are relieved from the necessity of adopting a palpably irregular proceeding. In times of commercial difficulty traders may perhaps place a pressure upon Government, and the adoption of Mr. W. FOWLER'S plan will to a certain extent weaken the power of resistance. The whole question is only of secondary importance; and the general tenor of the debate was highly satisfactory. The doctrines which seem to have migrated from Birmingham to Glasgow appear to have only one articulate supporter in the House of Commons.

THE NAVY.

THE English are supposed to be a particularly practical and business-like people, and Mr. GOSCHEN is held to possess those qualities in an eminent degree. Yet Mr. GOSCHEN can think of no better way of submitting the Estimates of his department to the House of Commons than to publish a vast mass of incoherent and bewildering figures—213 closely printed pages of Navy Estimates, 121 pages of Appropriation Accounts, with various odds and ends of minor returns—and then to waste three hours of valuable time in the House of Commons by delivering a speech which ought never to have been delivered at all, but should have been written out and printed along with the Estimates, so as to make them intelligible to ordinary minds. If this had been done, the discussion on the Estimates would have been begun in earnest on Monday, whereas the whole night was wasted and the real discussion postponed until members had studied Mr. GOSCHEN'S speech in the *Times*. No doubt there is a great deal of information in the Estimates and other Parliamentary papers, but why should not members of the House of Commons be furnished with the key to the puzzle when the puzzle itself is first put into their hands? Mr. GOSCHEN'S speech in itself was candid and instructive. What strikes us most on the face of it is the significant change of front which has been effected by the Government since they came into office in regard to reductions of expenditure. At the last election Mr. GLADSTONE was in opposition, and stumping Lancashire with impassioned denunciations of the bloated Estimates of the Government. Mr. GOSCHEN now explains very clearly and conclusively that, as far as one great department is concerned, the chief part of the expenditure is fixed and inelastic, and that reductions are apt to be at the expense of efficiency. It will be remembered that when the present Government came into office, the Army Estimates were cut down in a great hurry, and the savings at once distributed in the shape of relief from indirect taxation. It was found, however, that the army could not very well be carried on without stores, and, as stores could not be bought without money, the reduced taxation was restored—this time in the shape of an addition to the Income-tax. It appears that the Navy Estimates have also been subjected to a similar process. There is an increase of 300,000*l.* in the Estimates of the present year. This is in some degree due to the rise of prices, but at the same time there are fewer men, and dockyard and other work is very backward. And as regards prices it must be remembered that, with a provident supply of stores on hand, the Admiralty would have been less at the mercy of a high market. We learn from the Appropriation Account, which explains how sums voted for one purpose have been applied to another, that the savings effected by keeping down the personal strength of the fleet and deferring shipbuilding have been chiefly spent in the purchase of victuals, clothes, and stores. Nothing of course can be easier than to contrive fictitious economies by deferring purchases and allowing stores to be exhausted, but it is a policy which is open to some objection on the score of safety. In the case of the *Megæra*, the reluctance of dockyard officials to incur expenditure of any kind if it could possibly be avoided, for fear of offending their Parliamentary superiors, cost the country 80,000*l.*, and very nearly the loss of the ship and all on board. Tested by results, it can hardly be doubted that the sort of economy which was set up as an idol at the last elections—economy for its own sake, as a mere matter of saving, and without regard to what might be got by spending a little more—has not been remarkable for its cheapness. Of course we are far from denying that the Government has introduced some sound economies, especially in the reduction of an overgrown establishment of clerks. It would be as absurd to say that economies are always bad as to say that they are always good. They are good or bad according to circumstances; but hasty and indiscriminate reductions can hardly fail to be disastrous. It is to the credit of the Government that they have had the courage to abandon the policy of right retrenchment with which they started on their official career; but it may also be suspected that they found it impracticable to go on with it.

Mr. GOSCHEN sees very little hope of reducing the number of ships on active service. There are police duties, transport services, the slave-trade and kidnapping to be watched, and so on, and the work of the navy in peace tends continually to increase. Even if there were less work to be done, it would still be necessary to keep ships on active service for the sake of training. If there were to be a reduction of expenditure, it could only come out of stores and dockyards; and this, Mr. GOSCHEN showed, was impracticable, not only on account of higher prices, but of arrears to be made up from last year. We must continue to build; for, though we are very strong in ironclads, and have in fact twelve ships of that class stronger than any other twelve that can be mustered by all the nations of the world, there has been a reduction in the number of other kinds of ships. Some have become obsolete; others have been built for one purpose, have been converted to another, and have "quickly vanished." Ships not strong enough to hold the powerful engines put into them have been turned into screw-steamers, and have not been able to endure the wear and tear of the engines—bad economy again. The Admiralty does not intend to bring up the number of unarmoured ships to the old standard, but still it must build some more. As to ironclads there is still plenty of controversy. It seems to be agreed that the vitals of a ship—the machinery in every case—should be protected by iron plates, and also that armour should either be used thick or not at all. Then there is the question of masted and unmasted ships. A masted turret-ship is, on account of its masts, at a disadvantage as a battery, as the masts are in the way of the guns, and it has been decided therefore not to build masted turret-ships. But masted ironclads, it is thought, cannot yet be dispensed with, as it would be dangerous for an ironclad to depend solely on steam; if her coal were exhausted, or anything happened to her machinery, she would be helpless. A good deal of interest naturally attaches to the performances of the mastless sea-going monitors *Devastation* and *Thunderer*. The *Thunderer* has just rounded the Land's End, and is the first monitor of the kind which has done so. Mr. GOSCHEN gave a glowing account of her trip, but it would seem that she met with only smooth water and a not very strong wind off the land. Her stability is well spoken of, and so is that of the *Devastation*, but their safety at sea will have to be further tested. The danger which is apprehended in the case of these mastless monitors is that, being without sails, they may be unable to resist the continued beating of the great waves of the Atlantic on their bows. When the bows plunge, the foremost turrets will be under water, and then—say the prophets of evil—before the hull can recover from this bearing down in front, a second or third wave will follow up the attack, and by sheer weight press the ship down bows foremost. This is an ugly prospect, and, though the Admiralty is sanguine, careful experiments are to be made on the Irish coast in rough weather. A new sea-going ship is to be laid down at Portsmouth, but Mr. GOSCHEN wishes to delay as long as possible before deciding what sort of a ship it is to be. This certainly does not look as if anything like a settled judgment had been come to as to the best type for the ship of the future. The torpedo ship of last year seems to have made little progress, but it is argued that loss of time has been compensated by gain of ideas. Only, after all, a ship ready for sea is worth a good many ideas on the stocks.

The proposal to reduce the number of boys by five hundred is one, we hope, which will be reconsidered. Mr. GOSCHEN says the reduction has been resolved on, not with a view to decrease the number of sailors, but because it has been found that, with the smaller number of boys, we shall be able to keep up the number of sailors at eighteen or nineteen thousand as fixed upon. This may be so, but it is a pity in such a case to decide rashly. The reduction will not save a great deal of money, and a few years hence we may regret the loss of the boys. There is also to be a reduction of five hundred officers, chiefly non-fighting men; but Mr. GOSCHEN had nothing to propose with a view to providing more regular employment and more uniform incomes year by year, for officers. Admiral ERSKINE put the grievances of the officers in a very clear and striking form by detailing his own experiences. Thirty years ago, when he was receiving 180*l.* a year on half-pay, he was suddenly appointed captain of a ship, and received 600*l.* a year for three years, when he again fell back on half-pay. Another time he was drawing 1,500*l.* as Rear-Admiral commanding a division of the Channel Fleet, but he had to haul down his flag at twenty-four hours' notice, and found himself reduced to a professional income of 450*l.* It must strike every one that these vicissitudes are trying to the temper and, under certain circumstances, to the character of officers, and we should think that some means of making their pay more equal and certain ought not to be beyond the ingenuity of statesmen. Efforts to improve the terms of service in the navy have of late years been confined perhaps too exclusively to the lower ranks. All that has been done for the seamen and petty officers has no-

doubt been in the right direction, but it is time that some attention should be paid to the circumstances of the officers. The navy has become a highly scientific profession. A variety of qualities and accomplishments which are by no means too common go to the making of a good officer, and men of this stamp deserve better treatment than irritating and humiliating transitions from competence to poverty.

THE TELEGRAPH SERVICE AND THE TREASURY.

EXCESS of zeal is not the fault which most often calls for criticism in a public servant; but Mr. SCUDAMORE has contrived to bring himself under censure upon this account. It is not difficult to conceive the process by which he has been led into the grave financial irregularities disclosed in the first Report of the Committee on Public Accounts. He is keenly interested in the successful extension of his department, and proportionately irritated at anything which even threatens to interfere with it. One of the most troublesome obstacles with which men of this temper have to deal is the possible parsimony of the House of Commons. They have marked out a whole and perfect scheme, and they want to see it brought into operation with the least possible delay. But the House of Commons is sometimes disposed to be captious as to the need for carrying it all out at once. By and by, says the head of the department, this branch of the service will become self-supporting, and the sooner it is organized on a proper scale the sooner that time will come. Why not go more slowly, asks some economical member, and let the extensions just keep pace with the growing income? To an enthusiastic official there is something almost brutal in this cold and sluggish mode of looking at the question; and in considering what money will be wanted for the ensuing year, he must often be tempted to wish that there were some other source from which to get it than the House of Commons. In the present case there was another source. The peculiar circumstances of the Telegraph Service enabled Mr. SCUDAMORE two years ago to avoid the control of Parliament as regards the expenditure of 644 936*l.* in extensions and improvements, and the peculiar functions of the Post Office have given him a similar advantage as regards a further outlay for the same purposes of nearly 800,000*l.* The "incomplete condition of the telegraph "accounts as to separation of capital from current expendi- "ture" allowed of the former sum being transferred from the Telegraph Vote to the Capital Account, by which expedient the department was relieved from the necessity of submitting estimates for extensions. As an Act of Parliament was subsequently passed granting an additional million on capital account, this irregularity must be taken to have been condoned; and at all events it was of a nature which cannot often recur. The unauthorised expenditure of a second and still larger sum is in every way more serious. Twelve months ago the additional million of capital had all been spent, and apparently no further grant was hoped for from the same quarter. But the need for extensions remained; the dislike to applying to Parliament for a further grant remained; and there happened to be very large balances in the hands of the POSTMASTER-GENERAL. From those balances the means of defraying the desired expenditure were taken, and during the past financial year the expenditure of the Post Office has consequently been not much less than a million in excess, or in anticipation—whichever the department likes to call it—of the Parliamentary vote.

In dealing with this state of things, two important questions naturally suggested themselves to the Committee. How did the Post Office come to have so large a balance, and how did it come to have so uncontrolled a power of dealing with it? The first question was soon answered. The balance was largely made up of Savings Banks' deposits. The second question was answered by distributing the blame over three different departments—the National Debt Commissioners, the Audit Office, and the Treasury. The National Debt Commissioners seem to be responsible for the balance being so large. They are kept constantly informed of the sums due to them on account of Savings Banks' deposits, and it was their duty to have called for them from time to time for the purpose of investing them. The Audit Office is supplied with monthly statements of the sums received by the POSTMASTER-GENERAL, but it apparently has no power to check the expenditure of these sums. The Treasury is supposed to have the control of all the spending departments, but its officers have told the Committee that they had no knowledge that the authorised capital had been exceeded. The excuse appears to be a peculiarly lame one, for they knew that an Act of Parliament had been passed to cover a similar excess in 1871, and the evidence given before the Committee of Public Accounts last year had shown that additional funds would be needed to cover the contemplated extensions of the Telegraph Service. Supposing, however, that the excuse was valid, and that the Treasury had not, and in the ordinary course of things could not have, any knowledge of what was going on, what, as the Committee rightly ask, is the value of its control "if such things "can happen not once, but repeatedly, and if the abstraction of "such enormous sums from their legitimate destination can "continue to be unnoticed throughout the whole of a financial "year, even up to the time when the formal statement of the "year's income is formally submitted to the public?"

The House of Commons will show itself inexcusably blind to the warning conveyed by the scandals which have lately come to light in the United States if it does not take care to make such dealing with public funds impossible for the future. It is of the very essence of an incorrupt public service that no misappropriation can take place without its becoming known to several sets of independent officials. In theory this was the case here. The National Debt Commissioners were supposed to invest the Savings Banks' deposits as they came in. The Audit Office was supposed to know the state of the balances in the hands of the Post Office authorities, and to disallow the appropriation of any part of them to purposes not directed by Parliament. The Treasury was supposed to check each item of expenditure in the Public Departments. Yet every one of these authorities either lacked the powers necessary to meet the case or failed to use such powers as it possessed. It does not affect the question in the least that the misappropriation was made in what Mr. SCUDAMORE conceived to be the interests of the public. No public servant, however zealous or however eminent, ought to have the power of anticipating or overriding the will of Parliament. It might have been an act of reprehensible parsimony in the House of Commons if it had refused to vote the sums necessary for bringing the telegraph system into full action as soon as possible. But on this matter the House of Commons is the supreme and final judge. If it likes to be stingy, it must be stingy; if it likes to be economical, it must be economical. There is probably no department that does not think that it could do its work better if it were allowed to spend money more freely; and if there is nothing to prevent a department from turning to its own purposes any balance it may happen to have in its possession, whether belonging to itself or not, the control of the House of Commons over the public expenditure will in time be reduced to finding the money to meet payments for which the credit of the State had been pledged beforehand. The special character of the balance from which the advances were drawn in this case makes it additionally important that a complete and conspicuous check should be placed on any similar dealings with them for the future. The class which invests its money in the Post Office Savings Banks is easily made suspicious, and there are numbers of semi-insolvent societies which will be ready to use the misappropriation of the deposits as an argument why the poor should entrust their money to persons whom they know and can watch rather than to the Government, about whose proceedings they must necessarily be ignorant, and which they cannot call to account. The extension of one department of the Post Office has been purchased perhaps at the cost of inflicting a serious check upon the operations of another and not less useful department.

There is a more serious consideration still that suggests itself in connexion with this business. The corruption which so often accompanies the development of the democratic element in modern society has commonly been fostered by the gradual abandonment of the checks with which the expenditure of public money was surrounded in days when the purity of the public service was less believed in. The integrity of the officials who hold places of trust under the Crown has long ceased to be suspected, and there is a natural temptation to let precautions originally designed to meet a very different state of things go by degrees out of use. At first either no advantage is taken of this neglect, or at most it is only turned to account, as in the present case, for the supposed benefit of the public. By and by, however, there comes an official who is less conscientious or more tempted. If the old checks had remained in force, the idea of making use of the public money for his own purposes might never have occurred to him, and, if it had done so, it must at once have been put aside by reason of the certainty of detection. But when the course of his work makes a man acquainted with the fact that large sums of money are for a

time in his power, and that the fact of his turning them to his own use is certain not to be discovered until he has had time to replace what he has withdrawn, the danger that he will yield to the temptation becomes very much greater. The public service is reduced in the matter of checks to the level of private service, while experience shows that there are many persons who will rob the community though they might not be prepared to rob an individual employer. There is no more short-sighted policy than to abolish the restrictions which have hitherto protected the public revenue from misappropriation, in the belief that they have served their purpose and are required no longer. They have served their purpose in creating a race of public servants of unimpeachable integrity; but they will not cease to be required until some equally efficacious means of creating public servants of unimpeachable integrity shall be found to take their place. That they will grow up in the future without such aids is highly improbable. As the public service becomes more extensive, and the appointments to it are more and more made the prize of superior intellectual quickness, the social restraints which often supply the place of moral principle will become less operative. The disparity between the salaries paid by the Crown and the incomes that may be made in commercial employments will supply another motive for using the incidental opportunities for growing rich quickly which will occasionally present themselves. If Parliament neglects the warning that has now been given it without a scandal, it may find that the next warning will be vouchsafed to it on harder terms.

DIETETICS OF THE SOUL.

DIETETICS of the Soul is the title of a little book which has recently been translated from the German, and which, whatever the merits or defects of its composition, deserves the praise of good intention. The leading thought is the intimate connexion between bodily and spiritual health. The text is one which has suggested a good many sermons and been illustrated by abundant anecdotes. One story will do as well as another to point the obvious moral. A man, it is said, read in the newspapers an account of a death from the bite of a mad dog. The reader was instantly seized with hydrophobia and taken to a hospital, where he died. Whether this cheerful narrative be true or false—and we certainly do not give it with implicit confidence—there are abundant instances of that reciprocal influence of the imagination and the physical organization which it is supposed to exemplify. Commonplace, however, as is the doctrine, we have perhaps hardly learnt to apply it as systematically as could be wished. One favourite piece of contemporary slang sets forth the advantages of physical education. Our young men interpret this theory after their own fashion by endeavouring to convert themselves into finished athletes. But the misfortune is that they overlook the intimate connexion between the two purposes of education. They argue—assuming, indeed, that they argue at all, which is, we need not add, a very bold assumption—that because the mind and the body are intimately connected, therefore the more you develop your body the more you must improve the mind. The fallacy is obvious enough. Neither the mind nor the body can be in perfect order without a corresponding development of its ally; and any change in one reacts upon the other. But it does not follow that you can stimulate the imagination by improving the digestion, or, reciprocally, that a cultivated imagination is incompatible with dyspepsia. No part of this complex machinery can be touched without some influence being propagated to every other part; but the inference is not that we are at liberty to attend exclusively to one set of functions, but, on the contrary, that a good system of education should regard the harmonious development of all.

Familiar as the observation is in theory, it is strange to observe how completely it is neglected in practice. Mr. W. R. Greg has lately published an interesting essay on the Non-survival of the Fittest. If we examine into the meaning of his rather melancholy forebodings, we find that they rest chiefly on the neglect of which we are speaking. We will take one instance. The "fittest," in one sense of the word, are the men of highly developed brains. Now it is said that in America, for example, the most intelligent and cultivated classes scarcely increase at all; whilst they are being gradually swallowed up by the comparatively brutal and ignorant, but more prolific, masses. If this be true, it is really a case of the evil consequences of one-sided development. One class cultivate brain at the expense of muscle; and the other muscle to the neglect of brain. Now, whatever the value of our higher faculties, it is plain that the lower are in one sense more necessary; they supply the base without which there can be no satisfactory superstructure. A man can manage to live and even to thrive with a very limited allowance of intellect; but nobody, were he a Shakspeare and a Newton combined, could thrive or live without a stomach. If, therefore, society is so organised in any case as to stimulate intellectual activity at the price of the still more essential quality of sheer vitality, we shall have such a phenomenon as that which Mr. Greg laments. With all the advantages of keener intelligence, the weaker race will be gradually worn down by the stronger. The fittest—if by the fittest we mean the cleverest—will not survive; but the true inference will be, that in the case suggested the fittest are really the most vigorous. In short, it is plain enough that, permanently to improve any breed of men, their animal nature must be developed simultaneously with their spiritual faculties. However civilized we may become, that nation will have the best of it in the long run which has the toughest physical fibre, and the problem is how to combine this with the greatest intellectual energy.

If we ask how far our modern methods are favourable to such a result, the answer does not at first sight appear to be encouraging. Granting the general proposition that physical and spiritual health are closely connected, the doctrine scarcely seems to be verified in individual cases. There is an obvious limitation to Mr. Galton's doctrine of hereditary genius. It has been often said since the time of Bacon, though we do not know that any one has collected statistics to prove the fact, that great men seldom leave descendants. If we run over a few of the most eminent names in English literature, it certainly strikes one that the doctrine has at least a *primâ facie* justification. If we take the eminent names that occur at the moment, they almost all give the same result. Nobody now living can boast of a descent from Bacon himself, or from Shakspeare, or Milton, or Hobbes, or Newton, or Locke, or Swift, or Pope, or Addison, or Johnson, or Hume, or Gibbon; and it would be easy to increase the list without mentioning more recent names. If men of exceptional ability are seldom the forefathers of a distant posterity, it is evident that we cannot expect to breed men of genius as we breed racehorses; and, beyond this, it seems to be also true that an abnormal development of certain faculties is generally accompanied by a defect of others. The man of genius is more liable to certain temptations than his commonplace brethren, though the highest results are obtained where the other faculties are too strong to be overpowered, and first-rate intellectual power is consistent with perfect health. For the great bulk, however, of even the most cultivated classes these instances are not quite in point. Few men's minds are so powerful as to upset the balance of their faculties. But it may still be argued that, even in a class far below the great leaders of thought, the tendency is in some degree to sacrifice general constitutional vigour to the development of special talents. The University boat-race is bringing before our minds at this moment the natural tendency of our system. We have a great opinion of the value of bodily health, and therefore we encourage one set of young men to devote themselves exclusively to physical excellence, whilst another set is encouraged to indulge in the opposite excess. Competitive examination brings to the front the young men who have converted themselves into machines for the rapid assimilation of knowledge; whilst competition in athletic pursuits induces the most physically vigorous to starve their brains for the sake of their bodies. Instead of an army of lions commanded by asses, to which profane observers compared one part of our arrangements, the modern ideal would seem to be a set of invalids ruling over a race of strong-bodied persons, to whom it would be uncivil to give a coarser name. There is, indeed, a natural limit to the process. Great lawyers are notoriously men of strong constitution, for the simple reason that men cannot succeed at the bar without great constitutional strength. Until we have applied the competitive system with much greater completeness, the man who has a power of treading on his neighbour's toes with unceasing energy, who is thick-skinned, loud-voiced, and generally capable of thrusting other people to the wall, will always have a vast advantage in the open struggles of life. Indeed competition itself requires physical strength, though it may be that it also tempts a man to exhaust himself at the first entrance into life, and leaves him a comparatively poor creature for the rest of his days. Assuming, however, that we are still distant from the day when such methods will be applied to select our statesmen, our bishops, and our Chancellors, we have to a certain extent a natural guarantee in the fact that bodily vigour is of immense advantage in every profession.

Yet the guarantee, such as it is, acts rather clumsily. If it keeps out the feeble, it weakens the strong. Take, for example, the case of a great Parliamentary leader. Nobody can go through the labour of such a career, the sitting up in a bad atmosphere, the incessant excitement of recurring contests, the labours of office, and the worryings of constituents and the whole race of interviewers and wirepullers, without a considerable fund of strength to draw upon. Unless, therefore, he is a man of unusual placidity of temperament or of amazing energy, the chances are that his temper will be ruined and his brain enfeebled by his unhealthy course of life. When the "dietetics of the soul," or whatever the science may be called, are properly understood, statesmen will begin to appreciate the advantages of bodily training a little more completely. At present a man generally works on till his physician informs him that he is in danger of softening of the brain, and then he retires to recruit himself for another series of excessive exertions. Now, if matters were better arranged, this alternative would be avoided. The Ministry would be put through a course of training at least as carefully as the University crew. They would be seen every day taking their morning's run round St. James's Park, the newspapers would inform us which of them had showed symptoms of thickness of the wind, and which was pulled up at the end without a hair turned. Their diet would be carefully regulated,

and their hours of rising and going to bed prescribed on sanitary grounds. Of course every man of ordinary sense attends more or less to such considerations, and keeps himself in tolerable order by exercise and moderation in food. But individual efforts at a rational system are not allowed for in the public regulations. We work our Ministers to death without considering that they require as much care as cab-horses. Whatever care they manage to take of themselves is in spite of, and not in accordance with, the recognized system. Instead of a proper course of physical training being provided by public regulations, it has to be attained, if attained at all, by the spontaneous exertions of the sufferers. The state of a Minister's digestion is at least as important as the state of his brain. A good governor should be in that perfect state of health described in Walker's *Original*, when dirt actually refuses to stick to him. But, in the absence of a most exceptional power of self-command, nobody could even aim at such a result under the ordinary conditions of public life. And yet who can count up the evils which are produced by our stupid disregard of all such considerations? Voltaire remarks that the massacre of St. Bartholomew was primarily due to the utter incapacity of the King to digest his food. How much of the distracted state of recent legislation has been produced by the work of law-making being carried on when the brains of the law-makers are obscured by fumes of dinner, and their lungs disordered by an impure atmosphere? The evil is one which everybody recognizes in general terms; but the recognition is of that imperfect kind which produces no corresponding fruit in action. The most important part of all public business is probably performed by men whose state of health is below par, and at hours of unusual fatigue and obfuscation. Everybody who is accustomed to intellectual work knows the importance of seizing the few hours during which his faculties are perfectly fresh, and he is unconscious of the load of heavy matter which he is compelled to drag about with him. But in practice, legislation of all kinds frequently consists in first reducing some hundreds of gentlemen to a condition in which their brains are working with diminished energy, and then inducing them to catch at the first compromise which allows them to escape from a dilemma which they are too dull to solve logically. "If you want to hang him, hang him; and if you want to let him go, let him go; but, for God's sake, let's get out of this!" were the emphatic last words of the celebrated Cornish juryman; and they pretty well represent the state of mind in which decisions are taken by a distracted meeting of any kind. Now a genuine appreciation of the vast importance of thorough physical health would lead to the conclusion that you should no more set people to decide difficult points of legislation when they are necessarily in a state of muddle than you should set a man to row a race just after a heavy dinner. The work which is done well is that which is done with a fresh brain and a system not overloaded. Our present system seems to go on the hypothesis that the digestion is far too contemptible a thing to be taken into consideration at all. Perhaps the consequences are about what we might expect from the premisses with which we start.

CONTINENTAL MARRIAGE.

THANKS to repeated discussions, and in particular to Lord Selborne's relentless dissection of the Common Serjeant's Bill, that large majority of English people who wish to keep their sisters-in-law are beginning to superadd to that natural and laudable desire a more definite appreciation of the ulterior mischiefs to which the acceptance of the measure would leave them liable. The patent equality of the claims of the brother's widow, and the superiority of those of the wife's niece, to share and cheer the mourning widower's bed and board, can only be met by the impudence of blunt denial; but the allegation that the passing of the Bill will at no distant day lead uncles to want their nieces, and melt aunts into tender love for their nephews, requires the evidence of facts to make it clear to minds brought up under the imperceptible influence of the better traditions of England. The task is not pleasant, but we feel it our duty to show that there is no country in Europe where marriages between one or other class of brothers in-law and sisters-in-law is permitted in which the almost parental relations of uncle and aunt to nephew and niece are an insuperable bar to the closer ties of matrimony. Where these particular marriages of affinity are free to all by their own leave, so are those particular marriages of consanguinity; where some one else's leave has first to be asked in one case, the same dispensation is equally potent in the other. In Russia, as in Great Britain, there is a definite code of prohibition which does not admit of any dispensations.

The authority to which we shall primarily appeal is one above suspicion for our purpose, from the evident bias which charactorizes it in favour of the particular relaxation against which we contend. It is the Report of that Royal Commission which was appointed in June 1847 to inquire into the state and operation of the law of marriage as relating to the prohibited degrees of affinity, and to another distinct object—a Commission composed of Bishop Lonsdale, Mr. Stuart Wortley, Dr. Lushington, Mr. Blake, Mr. Justice Vaughan Williams, and Mr. Rutherford, which reported in the following year on the first branch of its inquiry. It will be seen from the very words of the appointment of this Commission how unsatisfactory and untrustworthy its conclusions must be, from the scope of the inquiry having, either from design or carelessness, been limited to prohibited marriages of affinity, when it is manifest, even from the grudging acknowledgments which we are able to extract from its pages, that the prohibited degrees of affinity are so interwoven with those of consanguinity that it is impossible to discuss the one without taking count all along of the others.

It is not surprising that Commissioners brought together for so one-sided an object should have further discredited the value of their conclusions by an interpretation of their functions still more contracted than the original Commission. They say in their Report:—

> We have directed our inquiries to the laws of other countries with respect to marriages within the prohibited degrees of affinity, and more especially to a marriage with a sister of a deceased wife. From the evidence which we have taken there can be no doubt that this last class of marriages is, of all those within the prohibited degrees, the most frequent; so much so that it necessarily forms the most important consideration in the whole subject. When, therefore, for the future we speak in this Report of marriages within the prohibited degrees, we intend, when it is not otherwise declared, to confine our observations to marriages with the sister of a deceased wife.

In other words, the Commission deliberately chose to bolster up a foregone conclusion by excluding all collateral considerations without which a fair and full investigation was impossible.

In spite, however, of their precautions, information leaks out of the evidence as to those further aspects of the question which we propose as briefly as possible to bring together. One of the witnesses examined was Mr. Adolphus Bach, a German lawyer settled in England. From this gentleman's evidence it appears that in the kingdom of Prussia, by a law dating from 1791—while marriage between "relations on the ascending or descending line," "brothers, or half-brothers and sisters," "step-parents, or parents-in-law, and their step-children or children-in-law, without distinction of degree," are "totally prohibited," even after death or divorce has dissolved the original tie—"in all other degrees of relationship and affinity marriage is permitted and requires no dispensation." These degrees include, as well as wife's sister, brother's widow, aunt, and niece. In other parts of Protestant Germany an antecedent dispensation is requisite, and on this point Mr. Bach's evidence is instructive:—

> 978. Are you aware that in Protestant Germany uncles and nieces are permitted to marry?—Yes; but it is a rare thing. A dispensation is rarely granted for such a marriage. *Respectus parentelæ* is a point taken into consideration in such a case, if existing between an uncle and a niece, or between an aunt and a nephew. I know myself an instance in which a dispensation had been granted; the uncle had been living in one country and the niece in another. She scarcely knew her uncle before; so there was not that *respectus parentelæ* which would be a ground for refusing dispensation; but it is a rare case; it is not often granted.

The next answer places this event at Frankfort. Then comes:—

> 980. Is it permitted generally throughout Germany for an uncle to marry his niece?—Only under dispensation. [In Prussia, as we have seen, it is allowable on the mere motion of the parties.]

Further on Mr. Bach, after stating that the law is very different in different parts of Germany, continues:—

> In the kingdom of Wurtemberg, for instance, an uncle cannot marry his niece by the common law of the land; but even there by a law of 1797–1798 such a marriage is in certain cases indispensable [clearly a misprint for "dispensable," for we shall have further on to quote a marriage of this kind in the present Royal family of that kingdom]. In the kingdom of Hanover an uncle cannot marry his niece.
>
> 982. But in some parts of Germany he can?—In some parts he can. In Prussia such a marriage is permitted; but a marriage with an aunt older in years is only permitted under a dispensation on very special grounds; but it is not easily granted.

Mr. Bach leaves unexplained the discrepancy between this reply and the evidence of a general statute of permission for the Prussian kingdom which he has quoted, but he continues to give his own opinion:—"It is, however, an infringement upon the divine precepts; it is a permissive law bad in its nature, which I would not hold up as an example." He then goes on to state that in those parts of Germany where the Code Napoléon is in force, the prohibition which it contained in its original form of marriage with a wife's sister has been abrogated. As to the value of Protestant dispensations in Germany, Mr. Bach further on makes this remarkable statement:—"A marriage without dispensation would not render the marriage absolutely void; the parties would be fined, but the children would not be considered as illegitimate." So it is after all a pure question of money with the stripling nephew who woos his mature aunt, whether it is cheaper to go in for a dispensation or to run the risk of a fine.

"Neither in Protestant Germany nor in Catholic Germany?" asks the somewhat puzzled Commission, and the reply comes ready, "In neither." Further on the home question is put:—

> 990. Is the marriage of an uncle with a niece considered incestuous?—In a very great part of Germany it is not; in some parts of Germany it is.

It is in vain that, after this statement, Mr. Bach splits hairs between such marriages being exceptional and those between a widower and his sister-in-law being normal. As to Holland, the witness quotes the Dutch code, to the effect that (after reciting the absolute prohibition of marriage between persons in the ascending or descending line, and between brothers and sisters)—

> Marriage is also prohibited (1) between brother-in-law and sister-in-law, legitimate or illegitimate; (2) between an uncle or granduncle and niece or granduniece; likewise between an aunt or grandaunt, and nephew and grandnephew, legitimate or illegitimate. The king may, on weighty grounds, remove the prohibition contained in this article by the grant of a dispensation.

Dr. Pusey, who from his intimate acquaintance with Germany

is an authority on questions relating to that country, and who had already appeared as a witness, had anticipated Mr. Bach's evidence as to the most repulsive class of alliances:—

495. Do you say that in Germany the marriage of uncles and nieces is permitted?—Very generally.

496. In Protestant States?—In Protestant States. I have been told so by Germans, and they lament it very much. They have told me that all domestic relations are in consequence broken up; that the uncle's house cannot be the home for the orphan niece, nor the sister-in-law take charge of her deceased sister's children, since marriage is permitted.

So much for Germany and Holland. As to other Protestant countries of the Continent we can find no real information in the Report as to any degree except that of wife's sister, owing to the skill with which the *ex parte* inquiry, so carelessly adopted by the Commission itself, had been framed so as to limit its questions to that one class of affinity, and to exclude any light from being thrown upon other prohibited degrees.

In France, however, the case is very simple. The framers of the Code Napoléon, under a reaction of moral feeling, alike forbade the alliance of brothers-in-law with sisters-in-law and of uncles or nephews with nieces or aunts, which had existed by dispensation under the old *régime*. This state of things proved a little too moral to last, and in 1832 a law was passed on the 16th of April in these words:—"L'Article 164 du Code civil est rectifié ainsi qu'il suit: Néanmoins il est loisible au Roi de lever, pour des causes graves, les prohibitions portées par l'Art. 162 aux mariages entre beaux-pères et belles-sœurs, et par l'Art. 163 aux mariages entre l'oncle et la nièce, la tante et le neveu." In the shape in which the proposal was originally brought before the French Chambers, this licence was suspended in case one of the parties had been divorced. But, for reasons known to himself, Louis-Philippe refused the royal assent to the measure in that modified form, and it eventually became law as we have quoted it. It will not be forgotten that, although the majority of Frenchmen are Roman Catholics, yet, as marriage in that country is a purely civil contract, this law for all practical purposes opens the matrimonial door to every person within the specified degrees. A Papal dispensation, repulsive to non-Romanist minds as the idea may be, at all events contains within itself the theory of its being granted by a person acting upon moral and not merely material considerations. A dispensation from the head of the State is void of any colour of such pretence. As to the custom in general of Roman Catholic countries (inclusive, of course, of Austria, Italy, and Spain, upon which the Commissioners are silent), if we are to believe Cardinal (then Bishop) Wiseman, who was among the witnesses examined, the marriages of uncles and nieces and of nephews and aunts assume the peculiarly offensive character of an aristocratic privilege:—

1196. Does your Church ever grant dispensations in cases of marriage between an uncle and a niece?—Very rarely. I think in general they are confined to cases where great family interests are concerned, or where there exist weighty reasons of State, as in Royal marriages and alliances between great families; but, otherwise, they are granted with very great difficulty.

The "otherwise" will not be overlooked; showing that Dr. Wiseman had not after all exhausted the categories. We refrain from mentioning cases which we know in our time of such marriages, contracted no doubt in the upper ranks, but hardly among "great families." In illustration of the tone of mind created under the system of dispensations, Dr. Pusey in his evidence quotes the great matrimonial authority Sanchez for the opinion that the Pope could give a dispensation for marriage between a father-in-law and daughter-in-law, and between a son-in-law and his mother-in-law, while both he and Soto (another theologian of much weight) incline to the opinion that the impossibility of dispensations between grandparents and grandchildren must be qualified by a *perhaps*; while other authorities are given who indulge in similar speculations as to brothers and sisters. Before we quit the Report of the Commission we must, for the benefit of the Common Serjeant, call attention to the circumstance that, in none of the foreign countries into whose connubial economy we have snatched a glimpse, have the legislators for one instant thought of drawing fine distinctions between wives' sisters and brothers' widows. In every case the two perfectly corresponding degrees are linked together, under the common appellation in France of "beau-frère" and "belle-sœur," in Holland of "schoonbroeder" and "schoonzuster."

In order fairly to test the question in its results, we have waded through the genealogical portion of the *Almanach de Gotha* for 1873, a work which represents, as far as it goes, *Lodge's Peerage* in two respects; the first, that it is not, properly speaking, antiquarian, but stops short generally at persons still living, or at their deceased parents or spouses; and, secondly, that it dares to publish ladies' ages. The first part of the *Almanach* recapitulates the reigning Houses of Europe, thirty in number, of which, for our purpose, we may omit Great Britain, Russia, and Greece, in which such marriages are forbidden, and Turkey. The second is supposed to enumerate the princely Houses of Europe, although it ignores the Duke of Marlborough and Lord Cowper, well known to be Princes of the Holy Roman Empire, and the Duke of Wellington, Prince of Waterloo in the Netherlands—as well as, with two exceptions, families bearing that title in Russia. The remainder are 102 in number. The third part consists of 28 county Houses in Germany which were more or less sovereign under the old *régime*, and whose chiefs may style themselves "Most Illustrious." These of course are a mere fragment of the German nobility.

A deeper investigation of the volume might, we dare say, yield more cases; we are satisfied to offer the result of a single perusal. Among sovereign Houses, a certain Countess, whose name we need not give, has within the last fifteen years married two brothers of that remarkable Lutheran family who are all christened Henry and entitled Princes of Reuss; while a sister of the reigning (Lutheran) King of Wurtemberg is widow of her paternal uncle. There remain among Roman Catholic Houses two instances of the marriage of an uncle with a niece, and one of a widower with a wife's sister, although these three cases only make up two marriages. The original Don Carlos, who battled for the Throne of Spain with Isabella II., took to himself successively two Portuguese Princesses, daughters of his sister and of King John VI. of Portugal, of whom the first was grandmother of the actual Don Carlos. In the princely class we do not find that any brother's widow has won favour with her brother-in-law, but wives' sisters have been more successful; for a scion of the Roman Catholic House of Colonna of Naples married two princesses Doria—while a similar alliance has taken place in that of Waldburg-Waldburg, as well as in the Lutheran one of Schoenburg. On the other hand a lady of the Roman Catholic family of Beaufort Spontin of Vienna joined herself to her mother's brother; and an Austrian prince and princess of a great hereditary diplomatic name are paternal uncle and niece; as were also, amongst the "Most Illustrious" Counts who figure in the third part, the father and mother of the reigning (Lutheran) Count of Stolberg-Stolberg. So the sum total of our researches in the *Almanach de Gotha* yields four patent instances within our own time of marriage between a widower and his wife's sister, one between a widower and his brother's widow, and six between an uncle and a niece; and this is irrespective of the coincidence of one sister-in-law being also a niece. So the last-named and most repulsive alliance stands in a majority over both the others. We have not discovered that any aunt within the cognizance of the current *Almanach* has wedded a nephew; but earlier volumes must have recorded the fact familiar to any reader of Wraxall's Memoirs, or of the various Lives of Pombal, that the Queen of Portugal, who so cruelly persecuted that Minister, enjoyed the society of a nephew husband.

It will be very easy for the Common Serjeant or Lord Houghton to meet these facts with the smug plea that the instances are, after all, not so many, and that England is not as other countries, or even as that Germany or Portugal. Few or many, the numbers show that the impulse which leads a man with whom distinguished birth is a law to itself to seek alliances which are as yet repugnant even to the Marriage Law Reform Association is greater than that which drives such a man to seek companionship where Chambers and Stansbury beckon him on. As for the self-righteous brag that results which have shown themselves inevitable on the Continent are impossible within an island which is known to enjoy the exceptional favour of Providence, all we can say is, that the assertion is either profoundly illogical or nauseously arrogant. Domestic life in England, with all the practical abatements from which the Divorce Court has lifted the veil, does, in theory at all events, stand upon a more satisfactory basis than in countries in which the effects of unrestrained divorce and of an attenuated schedule of prohibited degrees have combined to degrade the ideal of the nuptial union, or in countries where the possibility of dispensation has beaten down the safeguard of impartial and inflexible rule. But if you dig away your basis, it is evident to all but lunatics and supporters of Sir Thomas Chambers's Bill that the superstructure must topple down. Lord Selborne has given a fair challenge. He has proved that the Common Serjeant's Bill is hopelessly illogical, incomplete, and chaotic, whether in the marriages which it proposes retrospectively to validate, or in those which it refuses prospectively to legalize; while he has indicated the measure which that learned Judge must introduce if he prefers the assertion of a principle, in which we suppose he believes, to the selfish interests of those impenitent and anonymous law-breakers whose claims he has so pertinaciously urged. It may be a very short measure, simply embodying for the future in a consistent and harmonious shape the matrimonial customs of those countries of Europe in which marriage with a wife's sister is not at present a prohibited degree, and it might run somewhat in the following form:—

Whereas certain persons desire to contract marriages heretofore declared by the law of this realm to be forbidden and contrary to the law of God; be it therefore enacted by, &c., that henceforward any man not otherwise hindered may lawfully contract marriage with his deceased or divorced wife's sister or niece, his brother's widow or divorced wife, his uncle's widow or divorced wife, his nephew's widow or divorced wife, his aunt or his niece.

Such a Bill would be an harmonious and intelligible *précis* of the marriage code of countries to which Sir Thomas Chambers's *protégés* fly for matrimonial joys forbidden to them within Great Britain. But it would, after all, be only in a less degree than the measure so happily snuffed out on the 13th of March an affront to logical consistency, if tested by the principles upon which it must rely for acceptance. These may be reduced to two—(1) No marriages are plainly repugnant to right natural instinct except those between persons in the direct ascending or descending degrees, or between children of the same parent; (2) The impediment of marriage between children of the same parent does not attach to relationships of affinity created by the marriage of a brother or a sister. Here we are at once confronted by a flagrant anomaly. Parents and children may not marry, brothers and sisters may not marry, brothers-in-law and sisters-in-law may

marry. What are we to say to step-parents and step-children, fathers-in-law and daughters-in-law, sons-in-law and mothers-in-law? They do not seem to have had as yet their claims recognized in any European State, and so we have omitted them in our draft Bill. But their claims for connubial relief are so obviously on the same level as those of brothers-in-law and sisters-in-law, that we cannot conceive that the Common Serjeant will refuse to take a step in legal reform in advance of Continental jurists, and include them in his great future measure of matrimonial reform. To be sure St. Paul is prejudiced enough to talk of the marriage of a man with his father's wife as an offence absolutely unheard of among the Gentiles; but, as the Stansbury ring are never tired of dinning into our ears, the "Scriptural argument" is at an end, while this hasty condemnation of an enlightened legal reformer on the part of the ex-Pharisee Paul is obviously the result of narrow prejudices imbibed in the fanatical schools of Jerusalem.

We make no doubt that the husbands *de facto* or *in posse* of their wives' sisters or of their brothers' widows will meet this plain statement of an irrefragable logical deduction with much gushing declamation regarding the delicate sacredness of the parental and filial tie even where it is factitious, and the consequent monstrosity of permitting persons who have hitherto dealt with each other as mother and son or as father and daughter at once to change parts, and plunge into connexions which would be infamous between blood-parents and children. All this reasoning from any lips but theirs would be incontrovertible. To them, however, there is one plain answer:—"Do you regard the union of own brother and own sister with horror and detestation? If you do, and yet if you allow those who have by affinity been drawn into fraternal relations to shuffle off the tie, and assume instead the closer yoke of matrimony, while you deny the same privilege to quasi-parents and quasi-children, you in effect assert that while there may be an insurmountable natural obstacle to the alliances of parents and offspring, a similar impediment does not exist to that of the common progeny of the same parent." In short, Marriage Law Reformers will sooner or later be driven by stress of argument to reduce their already scanty table of prohibited degrees by the excision of brother and sister.

In either case, whether that which is the only possible Bill, since Lord Selborne's exposure of the scheme hitherto propounded, is to appear in the Continental or in the complete form, it will for the first time place the question before the common sense of the country in its real and full bearings, stripped of the sophistries, disentangled from the limitations, and purged of the condonations with which, for their own selfish ends, the hidden wirepullers of this social revolution have hitherto tricked out their bantling.

SPYRIDÔN TRIKOUPÊS.

WE have received a bundle of Athenian newspapers and one Venetian, containing funeral orations and biographical sketches of a man who, though belonging to a small, and of late a discredited, country, has won for himself a place both in the history and in the literature of Europe. As the native historian of the Greek War of Independence, the name of Spyridôn Trikoupês ought to be well known to our readers. As one who was so long the Minister of Greece in our own country, he must also be well known in certain circles. But his place as himself an actor in the history which he recorded is perhaps less known. Trikoupês was not a soldier, but an orator and statesman. During the time of the war men of warlike action of course came to the front, and since the establishment of Greece as an independent State, its internal politics, except on one or two striking occasions, have been so confused and unintelligible to the world in general that but little European fame can be gained by an actor in them. But Trikoupês, though not a man of the sword, was not the less an actor in the liberation of Greece than the men who fought her battles by land or by sea. In his death, in his eighty-fifth year, one of the links between the present and the past has been snapped asunder. And while we are reading the testimonies of general grief and respect with which Greece has followed to the grave one of her own most illustrious sons, the news comes that another link in the same chain has been snapped also—the news of the death of one of the few survivors of the band of Philhellênes from Western Europe who played so great a part in the struggle which broke the Ottoman yoke. Within less than a month after the death of Trikoupês, the telegraph brings tidings of the death of Sir Richard Church, the Τσώρτσης of his own history. Whatever may be the judgment of history on the success or discretion of some of the English general's military operations—on which Mr. Finlay is characteristically far more severe than Gordon or Trikoupês himself—there can be but one feeling either in Greece or in England, at the loss of a tie between the two countries in the person of an old and true-hearted friend of the land which he had made his own. And Trikoupês and Church have thus much in common, that both alike, the English military officer and the Ætolian civilian, represent the civilized side of the great struggle. Both alike in their several ways had to struggle with the difficulties of dealing with men who, though brave and patriotic after their own fashion, had not learned fully to understand the restraints either of military discipline or of civil life. It is unfair to be hard either upon a people whom long slavery to the barbarian had in some measure barbarized, or upon leaders who found it a hard task to guide them according to the ideas of Western Europe either in peace or in war. Greece has within a short time lost two of the men of the heroic age of her modern history, actors in a struggle which not the less deserves our admiration because its results, as we now see them, have been less successful than men looked for a generation back.

We need not here again go through all that can be said on one side and another about the state of Greece since her revolution. That the bright hopes of the Philhellênes fifty years back have been far from being fulfilled, that their lack of fulfilment has been largely the fault of the Greeks themselves, no honest friend of Greece will deny. But it would be equally unjust to forget that that lack of fulfilment has also been largely owing, partly to the unavoidable difficulties of the case, partly to the injudicious meddling of Western friends or enemies. Still we suppose that none would wish to see the work of the War of Independence undone; none could wish to see Greece again in bondage; none can regret that European Christendom has been enlarged by the addition of a revived nation and a revived language; none can regret a chapter of European history in which the fate of Para and Mesolongi, the deeds of Miaoulês and Kanarês, have been recorded by the pen of Trikoupês.

Spyridôn Trikoupês, whose picture of the two sieges of Mesolongi and of the last heroic scene which has made its name immortal forms the best part of his History, was himself a native of that Ætolian city, a city of comparatively recent origin and whose history belongs wholly to modern times. He was born in 1788, thirty-three years before the beginning of the War of Independence. Like many Greeks of that generation, he sought for knowledge in Western Europe, and spent several years in France and Italy. We do not hear of his having at any time during his youth paid a visit to the island with which he was afterwards so closely connected; and indeed in the days of Trikoupês's youth it was not easy for any one who had much to do with France and Italy to have much to do with England also. But his connexion with England did not at all begin in the days when he appeared there as the representative of the newly created kingdom, the first representative, if we mistake not, which that kingdom sent to any European Court. When Lord Guildford, whose name we are glad to find is spoken of with becoming respect and gratitude by our Greek informants, was Lord High Commissioner of the Ionian Islands, Trikoupês had a share in his great work of founding the Ionian University. In those days it must be remembered that the people of the Ionian Islands were the exceptionally favoured part of the Greek nation. The Septinsular Republic, the United States of the Ionian Islands, might be somewhat of a mockery, still they were at least under English rule, instead of either Turkish or Venetian. As the time for action in Greece itself drew near, we hear of the man who was to be the reviver of Hellenic historical prose-writing beginning his literary career as the author of a popular—our papers do not scruple to say a klephtic—poem, Δῆμος by name, which we only know by report, but which is said to have had much effect at the time. Through the whole course of the revolutionary war Trikoupês was a zealous actor, for we suppose that it is possible to be an actor in a war without doing any fighting with one's own hands. We do not hear of him as personally engaged in any military exploit, and the ancient parallel whom his panegyrists pick out for him is Tyrtaios. But we find him actively serving his country wherever his tongue and his pen could serve it. He is a member of every Assembly, he fills some office under every form of Government, under the irregular republic of the days of the war, under the administration of Capo d'Istria, under the Provisional Government, the Regency, and the Kingdom. After his long diplomatic career in London and Paris, he went back to his own country to act as a member of the National Assembly which followed the driving out of Otho, and there to plead earnestly on behalf of an English prince as the choice of the kingdom which it was then hoped was about to turn over a new leaf. We may doubt the wisdom of the choice, we may doubt the wisdom of any choice; for the great evil of modern Greece has been the imitation of unsuitable Western institutions, and the attempt to transplant bodily those peculiar relations of King, Ministry, and Parliament which answer here because they have grown up here in the course of ages, but which do not answer in a state of things so utterly different. Still we see here a side of Trikoupês's character which we are certainly pleased to find his biographer prominently putting forward and making a subject of special praise. He appears throughout as the champion of constitutional institutions, especially in the Revolution of 1843 which gave the kingdom its first constitution, and as one in whose eyes England was the model of constitutional institutions. The Αἰών, a paper which contains the best sketch, as far as it goes, of Trikoupês's life of any of the papers which we have seen, but of which the first part only has reached us, quotes with some pride a letter written to Trikoupês by Lord Palmerston in 1834, setting forth the necessity of a constitutional system in Greece, and his sympathy with those who were labouring for it. The comment which follows is worth copying:—

Τοιαύτας προεκάλουν ἀπαντήσεις καὶ εἰς τοιαύτας ὑπὲρ Ἑλλάδος ἐκτιμήσεις ἔδιδον ἀφορμὴν εἰς τοὺς μεγάλους πολιτικοὺς ἄνδρας τῆς Εὐρώπης τὰ ὑπομνήματα τῶν Ἑλλήνων ὑπουργῶν καὶ πρεσβέων πρὸ τεσσαρακονταετίας. Ὁποῖα ἡ σήμερον ἀντίθεσις! Ἀλλὰ καὶ ὁποία ἡ διαφορὰ τῶν γάννων τῆς καθ' ἡμᾶς ἐποχῆς πρὸς τοὺς ἀληθῶς μεγαλουργοὺς ἄνδρας τοῦ ὑπὲρ ἀνεξαρτησίας ἀγῶνος τοῦ 1821.

This is indeed the weak point of the whole story. The men of

1821 are, in the natural course of things, dying out, and no one seems to be taking their places. That even the men of 1821 did not do all that was looked for from them, that they did not show as much of skill in laying the political foundations of a new State as they had shown of energy in working its deliverance from barbarian oppressors, is in no way wonderful; it is hardly blameworthy. They had to struggle against all kinds of difficulties, the burden of illustrious forefathers, or at least reputed forefathers, being by no means the least of them. The dreams of a past which could not be called back, the imitation of existing models which could not really be transplanted to so strange a soil, hindered the Greeks from making the most of the most promising elements for a regenerate political life, those rude local institutions which the Turks themselves had spared. A truer following of Western examples would have been, not to attempt to transplant constitutions whole and ready made, but to remember that it was out of such rude local institutions that the great States of Western Europe themselves sprang. But it is idle to say that the Greeks ought to have learnt such a lesson as this when there was no one in Western Europe to teach it them. The men of 1821, hampered by all kinds of difficulties within and without, did, we doubt not, what they could. That their work has come to less than it was once hoped it would come to, is really matter much more for regret than for condemnation. But something might have been done since. Greece has for thirty years been quite free, not only from Turkish tyrants, but from Bavarian regents and Bavarian despots. For thirty years she has been a constitutional State, with her affairs in her own hands as much as any other constitutional State. For ten years she has had a King and a Government wholly of her own choosing. In all this time she ought to have done more. She ought to have raised up a generation of men able to carry on in peace the work which the men of 1821 began with the sword, able to consolidate the free institutions of the land which they delivered. She ought to have reared up men able to work on their foundations, to improve and to complete their work. She ought not to have to speak, as the *Αἰὼν* speaks, of the present generation as dwarfs beside the greater stature of men of so very recent a past. We do not forget that some of the evils of Greece are not peculiar to Greece, but are common to Greece with the rest of Southern Europe. Brigandage is to be found not only in Greece, but in Spain, Sicily, and Southern Italy; still we do not hear in any of those countries of brigandage being mixed up with politics in the wonderful and unintelligible way which it seems to be in Greece. One of the papers before us bears the name of the Θεοφύλαξ. Its heading represents the guardian of the nation with his sword by his side, leaning on his musket in an attitude of thought, with the Acropolis and its ruins rising behind his back. The only moral which we can draw from his posture is, that it is well for the guardian of the nation to cast behind his back, we will not say the memories of the past, but the mistakes to which those memories have led. Yet one would think that an armed defender of public order ought just now to be doing something else than leaning thoughtfully on his musket. One is tempted to say, "Friend, thou hast no business here. Why are you not out at Marathon, or wherever else you may be wanted, eager, in the pithy words of the Master of Stair, 'to extirpate that sect of thieves?'"

All this is sad enough, but it in no way stands in the way of the honour due to a man who has done his work both in making history and in writing it. Trikoupês spoke the funeral oration of Byron and the funeral oration of Karaiskakês—that Karaiskakês who, in words which perhaps Byron also might have used, said that he could at pleasure be either angel or devil. The speaker of their funeral orations had to deal with the best side of each, as the last days of each were the best. The funeral orators of Trikoupês himself had a wider range; they could speak of a career which doubtless had its mistakes like the careers of other people, but which was in the main honourable and consistent throughout. It is pleasant to see a whole nation thus joining to pay honour to one of the men of a greater past. In England we fancy that Trikoupês is less known than he ought to be. A modern Greek writer has difficulties to overcome at the hands both of the learned and of the unlearned. It is said that many years ago, when the work of Trikoupês was still new and when he was still Greek Minister in London, it was proposed at Oxford to give him an honorary degree, a compliment often paid to foreign Ministers who had neither written history nor played any part in it. It was suggested that the place of Trikoupês in one stage of Greek history answered remarkably to that of Polybios at another. This was in the days of the old Hebdomadal Board. Some of the Heads and Governors of Colleges and Halls had never heard of Trikoupês at all; some thought that any Greek must be a dangerous character; in bestowing a degree on the historian of the Greek Revolution, they might be playing into the hands of the Czar, or endangering the integrity and independence of the Ottoman Empire. Perhaps if Polybios himself had been proposed for the honour, there might have been the same questions who he was, the same doubts whether it were expedient to encourage any Greek history later than the sacrifice of Thermopylæ. Trikoupês left England without his degree, we believe without any English honour or acknowledgment of any kind. But we are glad to be able at least to pay such a tribute to his memory as we are now doing. And with his memory we will again couple the memory of the fellow-worker who has so soon followed him. We cannot hear without deep interest of the death so near together of a Greek who loved England, and of an Englishman who loved Greece, and both of whom played their part in a struggle which was great and not the less noble because its final results have been less happy than men once hoped.

ITALY AND THE NEW EDUCATION BILL.

THE indefatigable combatants who are fighting in England over secularism and sectarianism, fees, and gratuitous instruction, compulsion and free attendance, are apt to regard these difficulties of the school question as something peculiarly English. But it hardly needs a glance at such a Bill as that which has lately been laid before the Italian Chambers by Signor Scialoia to remind us that the social and religious problems which education has to solve are much the same everywhere. The mere introduction of this fresh measure by the Italian Ministry in the midst of their present embarrassments proves the sense which they entertain of the pressing importance of the question of education. For Italy, indeed, education is everything. The superstition which gives his dangerous foothold to the priest, the "ignorant impatience of taxation" which makes room for the reactionary and the Republican, the agrarian crime and barbarism of the South, can only be effectively met by the general extension of public instruction. Education is the one point on which all Italian statesmen are agreed, and the rapid creation of schools, of teachers, and of educational machinery since 1859, if it has added much to the financial difficulties of the kingdom, is universally felt to have been a work of strict necessity. The strain, however, has been great, and just now Italy is suffering from a cold fit of disappointment with the results. At first sight, indeed, they are discouraging enough. In 1870 sixty-one Italians in the hundred were unable to sign their names, while in England the proportion was only twenty per cent. The truth is simply that in this, as in most other things, the South hangs like a dead weight on the nation at large. In Piedmont, Lombardy, or Tuscany, the educational progress of the people would compare fairly with our own; but the terrible ignorance of Rome, Naples, Sicily, and Sardinia, weighs down the scale. In Sicily, it must be remembered, there was not a single school under the Bourbons, and only one in a thousand of the population was able to write. From Terracina southwards the commonest machinery of education had to be provided, and the provision has been made ungrudgingly and energetically; but the disproportion between what has been done and what remains to be done is still enormous. In spite of the vigorous exertions which have been made to promote education in Naples itself, where the proportion of children of school age amounts to 75,000, the actual number of scholars in attendance in day and evening schools there hardly exceeds 11,000. But our own familiar difficulties of irregular attendance and early withdrawal are felt universally throughout Italy, and a small proportion of the million and a half of children whose names were in 1870 on the school books are really receiving anything like an efficient education. Though the principle of compulsion has been adopted for the last ten or twelve years, no attempt has been made during that period to provide means for putting it into execution, but the provisions of the new Education Bill prove that, in the opinion of the Italian Ministry, the time has now arrived for a more strenuous effort on the part of the State. A fine ranging from two to ten lire or francs is to be imposed in cases of non-attendance or of wilful irregularity in attendance; and half of the fines levied are in all cases to be applied to the provision of books and educational apparatus for the school itself. More indirect measures are devised in support of the system of compulsion. After a year has passed from the date of the present Bill a knowledge of reading and writing will be required from all persons who are appointed to any office under the State, the Province, or the Commune. After three years have passed the conscript who is uninstructed, whatever number he may have drawn, will be placed in the first category, and at once ordered into active service. The last provision is more educational than penal, for the army has for some time been one of the most efficient of Italian schools. All soldiers are placed under a system of graduated instruction, and holidays or leave of absence are made conditional on their progress in the military schools.

Compulsion has been so long the theory of Italian education that its legal enforcement, however difficult in practice, is not likely to excite any political opposition. But the abandonment of the principle of gratuitous instruction will probably excite warm discussion. The question is in great measure a financial one. The total cost of instruction in Italy amounts to over 1,100,000*l.*, 400,000*l.* of which is devoted to middle-class and University education, and is mainly drawn from general taxation; but the 700,000*l.* which is actually spent on the million and a half of scholars in the elementary schools falls wholly on the resources of the commune or parish, and is raised by communal rates. It has been calculated that the introduction of compulsory attendance would, on the present system of gratuitous instruction, raise the burden thus imposed on the communes to over 2,000,000*l.* a year; and even allowing for a good deal of exaggeration in this estimate, it is plain that the increase of expense would be enormous. The addition of any heavy taxation at the present moment would be a serious political danger, and we can hardly wonder that Signor Scialoia is driven to the expedient of a school fee in all communes which exceed the number of 400 inhabitants. The annual payment is to range between twenty francs and four, at the discretion of the School Board of the district. In actual working, no doubt, this measure is designed to fall, not on the

poor, but on the middle classes. Education in Italy is far from being aided by the abundance of private schools which we find here at home. In 1870 the private schools of Italy were instructing only 150,000 scholars, or but a tenth of those under instruction in the schools of the commune. The private schools which existed have in fact been drained by the gratuitous education of the public schools, and it is a remarkable fact that where the general improvement of education has been attended by an increase of scholars, the increase has come from the middle classes and not from the poor. Much of the irritation expressed by the poorer communes at the increase of the school rate has sprung from a consciousness that they were in this way paying for a class which could well afford to pay for itself. Considerations of this sort may bring about the adoption of such a graduated school fee as Signor Scialoia proposes, but even with this provision the economical difficulty remains a very serious one. The provinces in which education remains most backward and schools are rarest, such as the Basilicata and Calabria, are precisely those which are the poorest and least able to bear the heavy expenditure which a system of compulsory education must necessarily involve.

The gravest defect of the present system, indeed, is one with which it is most difficult to deal. The commune or parish is the paymaster; and in the hands of its council or parish vestry has hitherto been solely placed the government and management of the school. A knot of utterly uneducated peasant farmers, hating instruction and the burden of it, is entrusted with the duty of providing schools and school apparatus, electing the master, and enforcing the law of attendance. Those who are inclined to hand over our rural schools in England to Boards of Guardians might study with some advantage the working of such a system in Italy. The one aim with the communal council is simply to cut down the expenses, and the miserable stipend of the schoolmaster is the first fruit of its exertions. Population is so sparse in many of the rural districts, and attendance so utterly neglected, that each of the existing 30,000 communal schools is attended on an average by only forty scholars. The work looks small, and the farmers think the smallest stipend too large for the work. The law indeed fixes a minimum stipend, but a needy commune finds an easy way of evading the law by a secret arrangement with the new master for the return of a portion of the stipend assigned to him. Instances of this sort are common enough in Southern Italy, and the victims whom the necessity of re-election every three years places wholly in the hands of their persecutors naturally suffer in silence rather than risk the loss of their remaining pittance. Communes yet needier, or sheltered by their local position from observation, simply ignore the law and the obligation of building schools altogether. So far as we understand Signor Scialoia's Bill, he proposes to do away with the control of the communal councils altogether, and to replace them by communal School Boards, grouped round the School Board of the province, and united by a system of Government inspection with a central Education Board which will serve as adviser of the Minister. It is not likely from the social circumstances of Italy that the parish School Board will differ much in composition from the parish vestry, but the grouping of these lower bodies round a central Board, and the visits of official inspectors, will probably infuse a new temper into their administration of the schools. By another provision the Bill does something to raise the stipend, and with it the position, of the schoolmasters in rural schools. They are divided into two grades; the stipend of the first ranging from 28*l.* to 36*l.* per annum, that of the second from 24*l.* to 28*l.* Small as such a payment seems, measured by an English standard, it is practically a considerable advance on the incomes actually enjoyed by the teachers of Italy; and, what is of yet greater importance, the severance of the School Board from the communal council will probably ensure the money being actually paid. An additional payment of four lire on each child above the number of thirty in a school will secure the active co-operation of the masters in securing a good attendance. Great, however, as we may expect the obstacles to be in the way of emancipating the school from the control of the commune, a yet fiercer resistance may be expected to the Minister's proposal to recognize "non-communal" or private schools as institutions for elementary teaching side by side with the communal, and the teaching of "the principles of justice and social morality" as a necessary part of elementary instruction. In English phrase, we may call these clauses proposals to recognize Denominational schools side by side with the older unsectarian State schools, and to give a State sanction, which has hitherto been withheld, to religious teaching as a part of the system of public instruction. As yet the religious character of the education given has been left wholly at the discretion of the communal council, and the results have been correspondingly various. A council where the Republicans predominate prohibits all religious teaching whatever; a council where the priesthood has weight orders the latest Ultramontane catechism to be made a text-book. The last municipal election at Naples turned in great measure on the desire of the rival parties to get hold of the schools, and the example of such a struggle may be expected to spread. But whatever heart-burnings may be caused by the working of the system at present, it is plain that the introduction of compulsion has forced the Government to see the necessity of some decision on the point, and Signor Scialoia's clause may be taken as indicating the wish to steer a middle course between the zealots of both parties. But a vague phrase such as "the principles of justice and social morality" will require official exposition from the new Educational Board before it can do much in the way of pacification.

The recognition of private schools springs partly, no doubt, from the wish to relieve the financial pressure of the project, but still more from the religious difficulty we have noticed above. At present the priest exercises a great, though an indirect, weight on the education of the rural communes. He soon makes it understood that if the new master or mistress do not enjoy his confidence, they will see very few faces in their schools. With the introduction of compulsion this check will cease, but the Government shrink from direct encounter with the religious difficulty. The rise of private schools—for the most part taught by priests and of a directly Catholic character—is evidently regarded by them as a safety-valve which may prevent any direct explosion of the religious sentiment. Whatever may be the merits of a policy of conciliation, which is characteristic of the present Ministry, it will hardly escape a fierce opposition from the anti-ecclesiastical party in Italy, or be regarded with much favour by the mass of cooler politicians who have been looking for a means of escaping from the sway of the priesthood in the very education which is thus in good part handed over to them. The question indeed of a rival system of education conducted by bodies of a directly religious character is a yet more difficult one for Italy than it has been found for France. In the first place, the political belief of the priest, the friar, or the nun, who thus mould the opinions of the youth of Italy, is a belief absolutely adverse to the very existence of Italy itself. Across the Alps the priest may advocate a Legitimist, a Bonapartist, or a Catholic France, but he does not question the right of France to be a country. In Italy he does and he must do this. Then again in France, the Christian Brethren, who are the principal agents in the religious education of the poor, are a body specially trained for educational purposes. They may be badly trained, as their opponents allege, they may shrink from a State examination and require a certificate granted simply by the bishop, but they are trained in some fashion at any rate, and they have some evidence to show for their competency to exercise the office of teachers. In Italy the case is wholly different. Teaching Sisters abound in the Neapolitan province, but they are in many cases without certificates at all; in others they evade the rule which requires one by handing on their certificate from one holder to another, with small risk of detection. In addition to their purely educational defects, these teaching Brothers and teaching Sisters are in many cases foreigners; and when we remember the violence of Catholic antipathy to Italy in countries across the Alps, we can hardly wonder at the demand of Italian friends of education that citizenship shall be regarded as an indispensable qualification for the office of a teacher, even in private schools. If, however, these private schools are not only to exist, but to be formally recognized by the State, a more rigid execution of the law, which already requires from all teachers an official certificate of proficiency, will be imperatively required to reduce the number of Sisters and friars employed in education, and to compel their schools to raise the character of their instruction. With difficulties like these before it, it is impossible to forecast the fate of Signor Scialoia's Bill. To Englishmen its chief interest must lie in the curious parallel which it brings to light between our own educational difficulties and those of Italy. Both countries are taking refuge in compulsion, but Italy is repudiating universal free instruction, while we are clearly drawing nearer to it. Italy is proclaiming the unfitness of parish vestries to act as School Boards, while we are suggesting the employment of Boards of Guardians in that capacity; and while we are edging all religious instruction out of our schools, Italy is finding herself driven to edge it in again. It is curious to watch the likeness and unlikeness of the two educational movements, and in their points of opposition it will be yet more curious to see which proves to be in the right.

MR. PLIMSOLL'S AGITATION.

MR. PLIMSOLL had what is called a very enthusiastic meeting in Exeter Hall on Saturday night. The great hall was filled with people, who rose to their feet and cheered and waved their hats and handkerchiefs when Mr. Plimsoll and his friends came on the platform, and again when Mr. Plimsoll rose to speak, and once more when he sat down; and strong resolutions were passed denouncing the shipowners and pledging the meeting to support Mr. Plimsoll's movement. Lord Shaftesbury was in the chair, and those who are acquainted with Lord Shaftesbury's peculiar style of eloquence will not need to be told that strong language was not wanting. He said that he asked for no restraint of language, hardly for any restraint of manner, and certainly he set the example of relieving himself as far as possible from any restraints of the kind. He drew a striking picture of the "diabolical" shipowner on the one hand, and on the other of the British sailor "as helpless as a child," who did not know his own interest, and could not protect himself, and who must be taken care of by the public. The professional agitators who are always parading themselves as representative working men also turned up on this occasion, and it appears that the organization of the Trade Unions is to be employed in order to excite the working classes on the subject. With every respect for Mr. Plimsoll, and with the deepest sympathy with the enterprise in which he is engaged, we venture to doubt whether the course of agitation in which he has now

embarked is really calculated to promote the permanent success of the objects he has at heart. We are quite aware that this is not a case for soft kid glove touches and a subdued drawing-room tone and polite euphemisms. It is just as well that the sort of things which the shipowners are accused of doing should be called by their right names, and we admit that it is not very easy to speak of such things with perfect calmness. It is not, however, as a question of good taste that we are disposed to argue the matter, but as a question of expediency. In the first instance Mr. Plimsoll found that he could make no head against the interested hostility of the shipowners, the inertia of the Board of Trade, and the indifference of the House of Commons. Year after year he brought forward his motion, but in vain, and at last he resolved to appeal to public opinion. His book is certainly violent and sensational, but its best justification is that it has answered its purpose. Public opinion has been roused, and everybody is now on Mr. Plimsoll's side. He has whistled for a wind, and the wind has come at his call; but what we fear is that, unless he knows how to set his sails and trim his craft, he may possibly find that he has more wind than is good for him. It seems to us that what is wanted now is not frothy declamation, and the pouring out of Shaftesburyian vials of wrath, or the factitious agitation of "representative working-men," but hard facts and clear-headed, sagacious, practical counsels. Mr. Plimsoll wishes he had Dickens to help him with a novel, and he tells us that he proposed to M. Gustave Doré to paint a great picture representing the bottom of the North Sea strewn with wrecks, and drowning seamen who had been sent to their death in rotten ships from certain notorious ports. Mr. Plimsoll, however, has not yet found a novelist, and M. Doré has declined his offer. Mr. Plimsoll does not seem to have realized that there are two stages in a movement such as that with which he has identified himself. There is, first, the stirring up of public opinion, and next there is the question how the force thus raised can best be turned to practical account. And in this instance the second of these stages would appear to have been reached. One of the dangers of trusting too much to mere popular excitement is that its gusty vehemence is subject to equally sudden reactions. At present Mr. Plimsoll is having it all his own way. The shipowners are discreetly silent, but when they come forward with their defence, people will perhaps be surprised to find that there are two sides to the story. There is also some risk of popular enthusiasm being chilled by the discovery that in legislation good intentions are not enough by themselves, and that an impracticable Act of Parliament is worse than useless.

Mr. Plimsoll has certainly exposed himself to the charge of inconsistency by first demanding an inquiry, and then, when an inquiry has been granted, turning round and saying that it is necessary to proceed to legislation at once, without waiting for the result of the inquiry. Mr. Plimsoll might retort the charge of inconsistency; for the Government which now opposes legislation on the ground that inquiry is indispensable, formerly opposed inquiry on the ground that the facts were notorious and the subject ripe for legislation. Questions of personal inconsistency are, however, trivial in themselves. The important question is whether, on the whole, it is expedient to anticipate the report of the Commission by immediate legislation. For our own part, we have before said that we believe sufficient materials are at hand for the purposes of legislation. As, however, there is to be a Commission, and as the Commission can easily finish its inquiries and report before next Session, no great harm can come from postponing legislation for another year. Already Mr. Plimsoll's agitation has had the effect of making shipowners more cautious about sending out doubtful vessels; the sailors feel that, if they have a case, they are pretty sure to be supported; and every disaster that occurs becomes the subject of sharp questioning in the House of Commons. Under these circumstances shipowners must feel that they are living in a sort of glass case, and for their own sake they are pretty sure to be careful what they do. When we turn to Mr. Plimsoll's Bill we find an additional reason for delay. It is not a favourable specimen of draughting. It is wordy and confused, and the sections do not follow each other in logical order. It seems to us that it has also more serious defects. It strikes at the principle of the present law by which an attempt—a feeble and ineffectual attempt, we admit—is made to fasten responsibility on the owner for sending out an unseaworthy ship, and supplies what we are afraid would be found practically to be a substitute of doubtful value. It is proposed that no British ship shall be allowed to leave or enter a British port unless it can produce a certificate from the Board of Trade that it has been passed by a surveyor of the Board of Trade, or by a surveyor either of Lloyd's Register or of the Liverpool Underwriters' Registry. The surveyor is to furnish the owner with a statement of any defects which he may discover in the ship, and these defects must be remedied to his satisfaction before a certificate can be obtained. In the case of surveys by Board of Trade surveyors, there is to be an appeal to the Board; and the Board may at any time cancel or suspend a certificate if it has reason to believe that the certificate was issued upon false or erroneous information, or that anything has happened to injure the soundness of the ship. Deck loads are to be prohibited from January to March inclusive, and from September to December in every year, except under special license from the Board of Trade. It is further provided that a load-line denoting the minimum depth of freeboard of every British ship—the freeboard to be determined by a table in the Bill—shall be painted in white on the hull of the ship amidships in a conspicuous manner. No ship which is so loaded that the depth of the freeboard of such ship is less than the minimum depth of the freeboard as indicated by the load-line will be allowed to sail from any port, and if a ship enters without sufficient freeboard, the owner and master will be liable to heavy penalties. Foreign ships entering our ports are to be subject to similar requirements. At present passenger vessels are obliged to be surveyed, and many owners find it for their own interest to have surveys by the officers of Lloyd's Register or the Liverpool Underwriters' Registry. There is no reason why the rule should not be extended to merchant vessels as well as passenger vessels. The difficulty of marking a load-line is that the depth to which a vessel might safely be loaded would depend in some degree on the nature of the cargo; but this difficulty might be got over if the suggestion of the Institute of Naval Architects were adopted—to mark on the side of each ship amidships the point at which a horizontal plane would cut off one-fourth of her internal capacity. This would supply an indication of the weight of the cargo in proportion to the cubic capacity of the ship, and would be at least important evidence in any inquiry as to alleged overloading. The prohibition of deck loads is certainly justified by experience, but it must not be forgotten that a former statute on the subject had to be repealed as impracticable.

During the week the case of the *Sea Queen* has turned up in the course of discussion in the House of Commons; and as the case is a very good illustration of the sort of questions which occasionally arise in inquiries as to the soundness or overloading of vessels, it may be worth while to give an outline of the evidence. The *Sea Queen*—originally the *Normanby*—was built in 1859. After passing through several hands with various changes of name, we find her finally registered as the *Sea Queen* in 1864. She had then been lengthened, and an upper deck had been built on her. In February 1870 she was loaded at Newcastle for Malaga with coals—in all some 1,117 tons, or about one-third more than her gross tonnage. The firm who then owned her had bought her some years before for 7,500*l.*; she was insured for 10,000*l.* She went to sea on the 12th. On the 14th fragments of the ship were washed up on the North Scroby Sand, and "the inference was that every soul on board perished." The owners were paid the whole of the insurance money. One of them stated in court that he sent 3*l.* to a widow at Sunderland. Before the vessel went to sea her depth in the water attracted attention. The captain's wife remonstrated with the owners about it. The steward said to his wife—this at least is in the wife's evidence—"Look what a shameful state we are going out in, without a mainmast, and so deeply laden." The cook, who had never seen the vessel till he went on board, was startled to find her so deep in the water, and so long and narrow. He was so low-spirited that his wife urged him to come away. He said he would have done so had it not been for her sake and the two children, but he was afraid of two months' imprisonment. One of the crew told his sister he was going in the *Sea Queen* only because, if he did not go, he would get three months' imprisonment, and that would forfeit his certificate. Another man was urged by his father and mother not to sail in her, but he said he had signed articles, and was compelled to go. Joseph Hubbard, who had been twenty-one years a seaman, and was then a river policeman, was struck by the depth of the ship; he had never seen a steamer going to sea so deep before. The mate told him that two of the men were inclined to refuse duty, and the constable then told the men that they must not refuse duty, but if they had anything to complain of they must come ashore and go before the magistrate. The men said they did not care if they were locked up, as the ship was nigh sinking. The constable saw the water at that moment "dabbling over the gunwale in different places." The men went to sea and were drowned with the rest. The depth of the *Sea Queen* in the water seems to have been the common talk of the docks. The examining officer of the Customs who cleared her made a remark about it. The assistant staith-master thought she was "dangerously deep." A ship-chandler observed that the ship as she passed out "looked low in the water, was of great length, and, being without a mainmast, had a ghastly appearance." The dock-master "considered the vessel nothing better than a coffin." The deputy dock-master when he saw her go out said she was in a disgraceful state and would never reach her destination. A shipwright and surveyor under the Board of Trade said she was the deepest ship he ever saw afloat; he thought her "a coffin to some of the poor fellows." The captain of a steam-tug to whom he made the remark agreed with him. The lock-gateman, an old seaman, thought she was in a dangerous state, and said he would not go to sea in her if the owners would give her to him for nothing. The dock-gateman said, "If I had signed articles to go in the ship, I would go six months to gaol rather than go in her." A dock pilot declared he would not have gone to sea in her. On the other hand, the Lloyds' surveyor at Hartlepool who had superintended the original construction and also the lengthening of the ship, a shipbuilder at Hartlepool, a London shipbroker who had superintended the loading of the *Sea Queen* on different occasions, a surveying officer of the Admiralty Transport Service who had surveyed her in 1867, the pilot who took her out of dock, and one of the owners gave evidence as to her seaworthiness; but of these only the pilot and owner had seen her when actually loaded for this voyage. It was suggested that such a long vessel without bulwarks would look very deep and low in the water, and this might mislead a casual

observer. The Court of Inquiry came to the conclusion that the *Sea Queen*, "though deep, was not overladen to that extent as to render her dangerous," but they "respectfully urged on the Government the necessity of instituting some inspection to prevent a system"—that is, overloading—"which has become so notorious in vessels leaving the Tyne." Mr. Galloway, the chief surveyor of steam-vessels, drew up a minute on this case for the Board of Trade. He thought the vessel had sufficient freeboard, but was not strong enough to carry so large a quantity of dead weight in safety. "This case," he added, "shows the absurdity of the proposal that Government should interfere with the stowage or loading of ships. If this ship had been a very strong ship, and without the cargo-ports, I have no doubt she would have carried the dead weight named with safety, but, as it was, such a weight was decidedly a source of danger. If the Board of Trade are to interfere with the loading of ships, they will have to make provision to meet the special case of each ship, for it does not follow that two ships of like tonnage and of the same dimensions can with safety be sent to sea with a like cargo, unless the details of construction are also alike, and the quality of the material and the workmanship are identical." It is obvious that under a system of surveys there would be a better guarantee than at present for the soundness of vessels, and that the painting up of a load-line as suggested by the Institute of Naval Architects—not an absolute limit of loading, but an indication of the weight of cargo in proportion to the cubic measurement of the vessel—would meet the objections raised by Mr. Galloway, and would at the same time supply a trustworthy basis for the judgment of a court of inquiry. It is above all important, however, not to diminish the responsibility of owners for the seaworthiness of their vessels.

ARCHBISHOP MANNING ON UNIVERSITY EDUCATION.

IF the only direct result of the defunct Irish University Bill has been to bring about a Ministerial crisis, it has at least served indirectly to apply a fresh stimulus to the eloquence of Roman Catholic prelates. A discourse of Dr. Vaughan's, the newly appointed Bishop of Salford, is reported from Rome, which ought to fill Mr. Disraeli with shame and compunction at the course he saw fit to adopt on that occasion. Whether or not he was consulting the best interests of the Conservative party or of University Education, we will not now discuss. But he is proved to have been deplorably unmindful of what was due to the traditions of the great Caucasian race. It is true indeed that the Jews are no longer "the chosen" and "peculiar people." Their "missionary work" has been confided to other hands, but the principle remains unchanged. There is still on earth "a peculiar people set apart by Providence to do the missionary work of the Church;" and that people is the Irish nation, which has been trained under the bondage and oppression of England, as Israel was trained of old under Egyptian bondage, for its glorious destiny. It has moreover been endowed by Providence with "the theological virtues of faith, hope, and charity," and "the two great gifts of poverty and chastity." Its apostolic energy has already evangelized "England, Scotland, Germany, and France," and is now engaged in converting America, and is destined to convert the world. To be sure, it has generally been believed that the special distinction of Judaism was to be an exclusive rather than an expansive and missionary power, and that St. Augustine converted England. And we seem to have heard before now bitter lamentations from the most orthodox quarters over the scandal brought on their religion by "the low Irish"—who, according to Dr. Vaughan, are "the greatest moral power in the world"—and their frequent apostasy when removed from the restraints of home. It must have been most gratifying to such of them as are to be found in the Eternal City to learn on such unimpeachable authority that their extensive contributions to the dirt and drunkenness of the chief cities of England and America are in truth the outward signs of a magnificent Christian apostolate, which has for fourteen centuries been conquering the allegiance of mankind, and before which those "legalized bandits," the "hypocritical Kings, and Ministers, and Parliaments," of the present day, will be compelled to bow. Bishop Vaughan, however, is hardly a preacher whose theological—or, we should rather say, ethnological—lucubrations are likely to attract serious attention beyond a very select and very Hibernian circle. The collapse of Mr. Gladstone's measure has inspired a more intelligent, if hardly more intelligible, flow of episcopal eloquence nearer home. Archbishop Manning is so constantly on his legs that it is perhaps hardly to be expected that his utterances should always be quite coherent. The silver stream of his oratory is too seldom interrupted by any golden interludes of silence. But we must confess that his speech at the Liverpool Catholic Club the other day has rather puzzled us on more accounts than one. It was evidently intended as a sort of profession of his political faith in general, and of his particular opinions on the subject of University education. On neither point is it very easy to understand him.

The Archbishop began by disclaiming sympathy with any political party, and assured his hearers that this was the proper attitude for Catholics, and that it was illustrated by his own lifelong example. During forty years he had only once exercised his franchise, and then it was on Mrs. Poyser's principle, not because he liked the candidate for whom he voted best, but because he disliked him least. "I wanted to keep out somebody else." "A more supreme disregard for party politics and party Governments—and a plague, I say, upon both their Houses—no man in that room could possess." Whether Dr. Manning really wishes to see both Houses of the Legislature abolished is not explained. His language, strong as it is, does not go quite so far as that of his colleague, Bishop Vaughan, who spoke, we are told, "with a contempt nothing could exceed of Liberal Governments and Parliaments." But he went on to observe that, when asked some years ago by a distinguished politician what line Catholics would take in the elections, he replied, "We care nothing about you or your politics, but there are two things we do care for, and if you touch either of them every Catholic in Great Britain will vote against you." To these two things we will return directly. But meanwhile the Archbishop's profession of political faith, or rather of political scepticism, which is expressly put forward not as his own theory, but as common to him with all his co-religionists, strikes us as an extremely odd one. If he only means that Roman Catholics, as such, are not bound to be Whigs or Tories, Liberals or Conservatives, nothing can be more obviously reasonable; but just the same thing might be predicated of the members of every other Communion. Circumstances may have often inclined Anglicans to the Conservative and Dissenters to the Liberal side in politics, as circumstances have also established an alliance in former years between the Liberal party and the Roman Catholics. Such connexions are no doubt accidental and variable; and if the Archbishop simply meant that it was open to Catholics as much as to any one else to choose their side in politics according to their personal convictions, he could have been charged with nothing worse than a gratuitous assertion of truisms. But the general drift of his speech, and his pointed reference to his own abstention from voting during the last forty years, point to a different interpretation of his words. What he appears to have really meant was, not that Catholics were free to take their side in politics, but they ought to have no politics at all, except where their own religious interests are concerned, and ought then to vote against any and every Government which refused to do their bidding. If "the Holy See and religious education are touched, every Catholic in Great Britain" must vote against the Government. On all other questions Catholics are wholly indifferent and will not vote at all. That is to say, in other words, not that on all points concerning the social, moral, or political welfare of their country, which have no direct bearing on the interests, real or supposed, of their Church, Catholics may differ in opinion and take opposite sides, but that all such points are really beneath their consideration, and they had better have nothing to do with them. It is difficult to believe that Dr. Manning has really attained to this very unpatriotic state of what the Stoic philosophers would have called ἀπάθεια, still less that he has "possessed" it, as his words would imply, for the last forty years. But that, if he is correctly reported, is certainly the upshot of this portion of his speech.

The two points on which alone Catholics do care to have and express an opinion are alleged to be "the Holy See"—meaning evidently the temporal power—"and religious education." And these two are practically reduced to one, for the somewhat startling reason that "the former point (the Holy See) Divine Providence has taken into His own hands, and we will await the issue." We should ourselves have imagined that to a believer in Divine Providence there were no "points" which did not fall within its scope. And there was a period not very long ago, if our memory serves us truly, when Dr. Manning was by no means disposed "to await the issue" quietly as regards the particular point which Providence has now, it seems, for the first time taken charge of. We have some recollection of being inundated with an endless flood of sermons, speeches, pastorals, and pamphlets from his pen for years, both before and after his appointment to the archbishopric, until the still more "burning question" of Papal infallibility turned up to give a new direction to his thoughts. But a French bishop publicly announced at the beginning of the Italian war in 1859 that "God, with the assistance of France, was writing a magnificent page in the history of the world." And so it appears that Providence, with the assistance of Victor Emmanuel, has for the present, at all events, decided the question of the temporal power—decided it wrongly, we fear, if Archbishop Manning's earlier declarations on the subject may be relied upon. The one remaining point, therefore, which Providence has not yet removed from human guardianship, is that of education, and to the Irish University Bill the rest of the speech is devoted. Dr. Manning "felt it his duty" to hear the whole debate, not because he has itching ears, but because it is impossible to watch the course of a discussion by reading the reports in the newspapers. We hardly see why, but considering how frequently the Archbishop feels it his duty to attend the debates in both Houses—notwithstanding his "plague on them"—we may venture to hope that in this case duty and inclination did not rudely clash. It is perhaps also natural to infer that he is not—to his own credit—so entirely indifferent as he would fain persuade us to the political interests of his country. Be that as it may, some of his comments on the University Bill are sufficiently surprising, and all the more so as he was very generally reported at the time to have expressed his satisfaction with it as a just and reasonable measure, and all that could fairly be expected. He does indeed distinctly repeat to his hearers at Liverpool his conviction of the honest and honourable desire of the Government to do full justice to the Irish Catholics, and he admits that the rejected Bill would have placed them in a much better position as regards University degrees than their English co-religionists. But his account of the position of these last is not very intelligible, according

to the report in the *Times*, of which no contradiction has appeared:—"No Catholic in England can take a degree without either exposing himself to the *pestilential infidelity* of Oxford, or *going to* the London University, and at the London University no Catholic can take a degree without being examined in the ethics and metaphysics which are taught by *the Professors of that University*." As to the latter statement, a graduate of London University wrote to the *Times* next day to point out, what we should have supposed was tolerably notorious, that it is a purely examining body, having no professors at all, and that nobody need "go to it" for the purpose of obtaining a degree, in the sense of residing or attending lectures there, though it is open to those who so desire to attend University College in Gower Street, the great majority of students being in fact prepared for their degree examinations at Denominational Colleges or by private tuition. He also pointed out that the provisions introduced into Mr. Gladstone's Bill against making the examinations a vehicle of imposing or excluding any particular doctrines in theology or philosophy are in practice strictly carried out at London University. The Archbishop's complaint is, therefore, based on a complete ignorance of the facts. As to the "pestilential infidelity of Oxford," he has, of course, a right to his own opinion. It may perhaps help to explain the very curious circumstance that twice within the last ten years, after collecting subscriptions for the purpose and (if we are not misinformed) actually purchasing ground at Oxford for building upon, Dr. Newman has been compelled to relinquish his scheme, not by any opposition of the University authorities, who manifested a friendly disposition, but by the authorities of his own Church. But it is not equally easy to reconcile with this fact, or with the Archbishop's sweeping denunciation of the "pestilential" atmosphere, another circumstance. It was only two years ago that the Jesuits resumed charge of the Roman Catholic mission at Oxford, which they had given up about ten years before, and began making arrangements for building a new and handsome church in a central position—presumably with the object of attracting Catholic undergraduates, for the present chapel abundantly suffices for the wants of the small body of resident members of their Communion. This hardly looks as if they, any more than Dr. Newman, shared the Archbishop's view of the matter.

We need not follow Dr. Manning through his pathetic description of the young Catholic who has had his faith disturbed and "the structure of his brain altered" by the heretical teaching of the metaphysical Professors of London University—meaning, we presume, University College. It is not till nearly the end of his speech that he comes back to the subject which he had all along been professing to deal with, the Irish University Bill. And, having already expressed his conviction that the Government had every desire to act justly, and that their measure would have given far greater advantages to Roman Catholics than any they enjoy in England, he seems to have felt the difficulty of harmonizing these admissions with the suicidal refusal of the Irish bishops to accept a much better offer than is ever likely to be made to them again. He says, however, that he believes the bishops would gladly have accepted the offer, "though there was no endowment," if it had not consolidated and rendered permanent the mixed and godless system of education established in 1845. On which we have only two remarks to make. In the first place, if the bishops refused an offer which "gave the Catholics of Ireland power to obtain degrees on terms consistent with their consciences," and "much better than those on which Catholics can obtain degrees in England"—and that is a very moderate way of stating what was offered them—because it did not also abolish the existing system of "the godless colleges," which none of them need have attended, their manner of reasoning must have been more profoundly Hibernian than we should have ventured to suppose. In the next place, if their meaning be that with which Dr. Manning credits them, their way of expressing it is so purely Hibernian as to recall the fatal ejaculation of the drowning man whom "nobody shall save." In their public declaration against the Bill, the bishops do indeed complain of "mixed and secular education," and of the retention of two of the obnoxious Queen's Colleges; but the main stress is laid on the very objection which the Archbishop thinks they did not really care about, two long paragraphs being devoted to an elaborate protest against the "aggravated injustice" of no endowments being provided for them. And the same point was emphatically dwelt upon by their spokesmen in Parliament. The Archbishop is naturally anxious to make out the best case he can for his episcopal brethren on the other side of the Irish Channel, but his speech suggests a shrewd suspicion that, if he had occupied Cardinal Cullen's post, the Bill would have met with a very different reception at the hands of the hierarchy.

LARCENY IN ADULTERY.

AN important question of woman's rights has arisen in a criminal court. The law of England does not punish a man for abducting another man's wife, but some English lawyers have been disposed to punish the abduction, together with the wife, of that which would commonly be considered as the wife's property. There was a case in which an elopement was planned, and the wife packed her boxes ready to start. The man told her to bring all the money she could, and she had placed money in one of the boxes. The boxes were actually placed in a cart and carried away, but the husband awoke in time to intercept his wife's departure. The man was tried and convicted for stealing this money, and the judge who tried him intimated that he might have been found guilty of larceny even if the boxes which he carried away had contained only wearing apparel of the wife. This, however, was rather alarming doctrine, and it has not been maintained in later cases to its full extent. If a woman elopes, she necessarily takes some clothes on her person, and, according to strictness of law, these clothes are the property of her husband, and the taking of them *invito domino* might be considered felony. But if adultery is to be criminally punished, that result ought to be attained directly, and not by treating it as a sort of constructive larceny. As regards clothes, indeed, the law has been for some time settled, but doubt might still exist in the case of jewelry.

It may of course be urged that, if a woman of the least refinement elopes, she naturally takes her jewel-case along with her. This is indeed what happened in the recent example of Mrs. Brown, whose paramour was tried for stealing the jewels which he had helped to carry away or dispose of. There is in contemplation of law such a unity of interest between husband and wife that ordinarily the wife cannot steal the goods of her husband, nor can an indifferent person steal the goods of the husband by the delivery of the wife. If, therefore, the wife deliver the goods of the husband to an indifferent person for that person to convert them to his own use, this is no larceny. But if the person to whom the goods are delivered by the wife be an adulterer it is otherwise, and an adulterer can be properly convicted of stealing the husband's goods, though they be delivered to him by the wife. If no adultery has been actually committed by the parties, but the goods of the husband are removed from his house by the intended adulterer with intent that the wife should elope with him and live in adultery with him, this taking of the goods is in point of law larceny. Thus the law was correctly enunciated by a learned judge more than thirty years ago; but he went on to say that if a wife eloped with an adulterer who took her clothes with them it was larceny, and this proposition would hardly be supported at the present day. It is true, indeed, that the ancient maxims of the Common Law would still be applicable to the case. That law knows nothing about "separate use," which is an invention of Courts of Equity. All that is the wife's is the husband's; but as husband and wife are one, the wife cannot steal from the husband, nor can another person help her to steal from him unless that person be an adulterer. It seems doubtful whether this exception of an adulterer is not of later date than the rule. The exception was either introduced or recognized in a case decided in 1829, which has been followed in later cases. The judges have, however, been unwilling to carry the principle thus established to its full extent, because the result would have been to make every case of what used to be called *crim. con.* a case of felony. In every case of this kind the man who takes away the wife of another man must necessarily take with him something which is in law the husband's property. They may elope together, or the wife may leave the house alone, and join her paramour at an appointed place. In the one case she perhaps hands her dressing-case to her lover as he helps her to descend a ladder of ropes; in the other case she brings it in her hand. In the former there would be a "joint taking," and in the latter there would not; and if this be, as in some of the reported cases it has been made, the ground of decision, the law would make a distinction between two cases where the moral guilt of both is the same. It was said in the first of the series of modern cases that "this was larceny, for, though the wife consented, it must be considered that it was done *invito domino*." But this observation would apply to all cases that occur, except indeed those in which the husband connives at the wife's departure. In that case money and plate to a considerable amount had been carried away, and it may be that both judges and juries have been insensibly influenced by the value of the property abducted. In a later case the paramour, who was a lodger in the husband's house, went away leaving the husband and wife together; then the husband went out, and then the wife went out and joined her paramour. They were followed, and overtaken on the road in company, and he was found carrying a bandbox containing wearing apparel of the wife, which was of course the husband's property. He was convicted of stealing this property, but the judges held that the conviction could not be sustained. There had been, however, a previous case in which, besides wearing apparel of the wife, a coffee-pot and candlesticks were taken away, and in this case the paramour was convicted, and the conviction was sustained. In that case the wife stated that the paramour assisted in removing the property, whereas in the case previously cited it is probable that the wife carried the bandbox in her hand. It was further stated by the wife that the coffee-pot and candlesticks had been used by her and her paramour during a cohabitation of upwards of a year, and the paramour had pledged some of her wearing apparel, and applied the money to his own purposes. This is an unsatisfactory case, because it can hardly be supposed that the paramour had any *animus furandi* as regards the coffee-pot and candlesticks, and the distinction between a joint taking by the two parties and a taking by the wife alone is not of any moral value. There was another case in which the wife stated that the paramour told her to "bring all the money she could," and it might be thought in such a case that there was an intention to despoil the husband, not only of his wife, but of his property. In another case the property taken did not consist merely of female apparel, or of articles exclusively for female use, but the wife brought this property to the paramour's lodgings, and it was simply found there. Thus there was no joint

taking and no separate possession by the paramour, and the judge who tried the case said that there could be no conviction.

It appears difficult to extract from these cases any principle that can be confidently accepted as conformable either with law or common sense. We know, of course, how an elopement is managed by the heroines of novels. The husband finds that his presents to his wife have not only not been taken by her, but have been scattered on the floor, or otherwise treated with contumely before her departure. But these elopements on the highest principles are not perhaps exactly similar to what occurs ordinarily in the world. In the first place, an actual guilty pair have got to live, and require therefore the means of living, and this is a consideration which novelists sometimes ignore. Then, again, if a wife who goes away intends to stay away, she may consider that some arrangement as to property must at some time be made with her husband, and her instinct may coincide with legal teaching as to the value of possession. Even as regards money, if she took only the income of her own settled estate, and she and her paramour lived upon this money, a jury would probably be unwilling to act upon the law, which would certainly warrant them in finding the paramour guilty of stealing property of the husband. We may be quite sure that if Lady Eustace had married before the celebrated diamonds were stolen from her, and had eloped, she would have taken the diamonds along with her. The extreme advocates of woman's rights in America insist that she ought to be at liberty to leave a husband for another man whenever she is so pleased. In England at present the same party do not go to an equal length, but we may expect that this doctrine of a husband's right to all his wife's property would not be allowed to be applied without question even in a criminal court. We ought not at any rate to feel surprise at finding a jury prepared to hold that when the wife of a hatter at the West-end of London elopes with an actor, she may naturally be expected to carry with her jewelry of the value of 200*l.* or 300*l.* Having these jewels, and wanting money for necessary expenses, she handed some of them to her paramour, and he pawned them. Without complaining of the verdict in this case, we cannot help remarking that the man who became joint possessor of a coffee-pot and candlesticks was rather hardly dealt with; but that was more than twenty years ago, and besides he was apparently a low, vulgar fellow. People who live in elegance and refinement must be allowed to conform to their daily habits even in their vices.

The summing-up of the learned judge in this case shows that lawyers can sometimes be more reasonable than the law. In civil questions the Married Women's Property Act of 1870 has to be taken into account, and it might be expected that that Act would influence the administration of the criminal law, although it does not directly affect it. Sir W. Bodkin told the jury that the broad question for them to consider was "whether, looking to the value of the jewelry, the prisoner must reasonably be supposed to have known that he was dealing with the property of the husband, or whether he could have been led by Mrs. Brown to believe that she had a right to dispose of it as she liked." If this be accepted as a sound exposition of modern law, it follows that a wife who elopes from her husband may take with her such articles as have been considered as her property, and that her paramour may safely assist her in removing them from the husband's house or in disposing of them afterwards. To recur again to the case of Lady Eustace, if her first husband had lived and she had eloped from him, taking with her the diamonds (both which suppositions are very reasonable), and if a jury could have been persuaded that her husband gave them to her, the diamonds might have been dealt with by her paramour without liability to punishment. As regards the case of the coffee-pot and candlesticks, it is highly probable that the wife took them as being in her view her own and not her husband's property. But, although we may think that the adulterer in that case had rather hard measure compared with others, it is probable that he got no more than his deserts, while other defendants under similar circumstances may have got less. But it is a matter of regret that judges in administering criminal law should rely upon distinctions which are not differences, or should apply an ancient legal principle which is manifestly discordant with modern practice. It would now be considered absurd to punish a man for stealing the clothes which a married woman took with her, and which he helped to carry, when she eloped with him; and yet a very learned and able judge declared that such was the law in 1841. If this were the law at that time, it has since been modified, but it would be difficult to say whether this result is due to the influence of common sense or to the prevalence of adultery.

HIGHLAND SHOOTINGS.

AS we cannot hope for anything like perfect happiness in this world, we suppose it is only natural that there should be enmities and heartburnings between the occupants of the Highland shootings on the one hand and the sheep farmers on the other. Otherwise the lot of the sportsman who is blessed with a sound constitution, a good digestion, an equable temperament independent of weather, who makes sport the object of his life, and sets exhilarating exercise above all other earthly joys, would be too enviable. As it is, if he is a man of ordinary sensibilities, if he hates hot water, and likes to keep on pleasant terms with his nearest neighbours, he is by no means likely to lead an unruffled existence. It would be premature to attempt to sum up the evidence that is being laid before the Parliamentary Committee while the examination of conflicting witnesses expressing themselves with equal decision and bitterness is still in progress. But quite enough has come out already to confirm what we have always been constrained to believe of the very disagreeable relations existing between the farmers and the sportsmen. It is the more unfortunate since each must always be very much at the mercy of the other, and both must more or less go to the wall unless they can manage to pull together pleasantly.

Every one may be presumed to be aware that there are two classes of shootings in the Highlands. There are the deer forests, where the pasturage is monopolized for the purposes of sport, and where everything is sacrificed to the preservation of the deer. And there are the grouse-shootings, which are let at the same time for sheep farms, where there are keepers and shepherds in charge of the same ground, and where the two are only too often at feud. The deer love a solitude, and a solitude is indispensable to the stalker if his sport is to be at all successful, so that the forests are made sanctuaries as much as may be. The very grouse are carefully kept down, because nothing is more likely to give the alarm to the wary stag, and to spoil at the last moment a stalk elaborately planned and patiently carried out, than an old outlying grouse cock keeping a bright look-out upon everything from the top of some hillock. Consequently the animals that prey upon the grouse are encouraged—eagles, hawks, ravens, hooded crows, and ground vermin of all kinds. Much more are men and sheep discouraged. The sight of a strange human being—for the deer gets tolerably accustomed to any one he is in the habit of seeing—will clear a wide extent of hill and valley, and may ruin the day's sport on which the occupant of the costly forest has been counting. Most people must remember a question of right of way which created much sensation at the time, when the late Duke of Athole disputed the title of tourists to make a passage from Braemar to Blair Athole through his forest of Glen Tilt. But cases of that kind are comparatively rare, and do not provoke the indignation of the Highland farmers. They have as little sympathy with tourists as his Grace could have, and are no lovers of the picturesque themselves. Their own grievances come of accidents which are necessarily of perpetual occurrence, and which foster continual heartburnings. Where a deer forest "marches" with a sheep farm there is no keeping the sheep within bounds. There are no fences of course, sheep are of very wandering habits, and the temptations to trespass are often irresistible. The charm of a forest is its seductive pasture, the soft green grass that grows in the sheltered nooks and corries. In the very best stocked forests there is always far more herbage than the deer can possibly consume, while the sheep are distributed over the adjacent farm so as to make the very most of the grazing, and something more. Professing plenty to penury, they stray in search of it, guided by their instincts. They break bounds when the shepherds and the dogs are out of the way; the keen-eyed keepers are down upon them forthwith, and proceed to impound them. The shepherds when they take stock of the flock find that so many are missing. Experience tells them where the wanderers are most likely to be found. But the keepers object to parting with the trespassers that are always getting them into trouble with their masters, or at least to letting them be taken home by the nearest way. They have disturbed the ground once already, and their disturbing it again is not to be thought of merely to save the shepherds some trouble. They must be driven round by the road in place of being taken "over the hill," and the road may possibly mean a circuit of a dozen times the distance. A mountain shepherd, although perpetually on his legs, hates above all things straightforward exercise with a purpose, and is proportionately grateful to the keeper who compels him to take it. Nor is he without means of avenging himself. Possibly he keeps an available fowling-piece somewhere about his sod-built hut which serves him sufficiently well at short ranges. He has a scrap of corn land reclaimed from the moor, and his bit of oats, scanty and ill ripened as it is, has irresistible fascinations for the red deer. Every night, as the shepherd has reason to know, the antlered epicures come trying the strength of the frail fences with their horns, while a horde of long-eared sharp-set hinds are hovering about in their rear. He ambushes himself accordingly, a white shirt drawn over his clothing, blending him with the grey mists of the night; as the deer approaches within a few yards of him against the wind, he empties the contents of the ancient single-barrel into his shoulder. Even if he goes out of his way to watch the passes at early dawn, and shoot the deer as they straggle home to the forest from feeding on the sheep farm, he is pretty sure to have the sympathies of his master the farmer. Each blade of grass devoured by marauding deer is so much taken from the sheep. The farmer, in fact, regards as his natural enemy the keeper who protects these poaching and trespassing beasts; he is disposed to believe him capable of every species of meanness and atrocity, and assumes that the occupant of the shootings is the accomplice of his basest actions.

In saying this, we do not exaggerate. The tenant of an extensive farm, in giving his evidence the other day, mentioned as a matter of course that it was the practice of keepers in his neighbourhood to drive the tenants' sheep maliciously with their dogs, so that many of the frightened animals were annually being smothered or drowned in the "mossputs." Closely pressed, he was compelled to confess that he knew nothing of this from personal knowledge, but understood it to be the common impression of the country. Another gentleman had been unfortunate

enough to have had a difficulty with the keeper in the adjacent deer forest, who is said to have revenged himself by driving the farmer's sheep over precipices, thus killing a dozen or fifteen annually. The farmer assumed that the keeper's malevolence, which he never questioned, had been prompted and sanctioned by the man's master; although, on closer examination, he admitted that he had no ground whatever for the fancy, the mortality having stopped when the man was dismissed. The charge broke down altogether on the farmer's own confession; he had merely given currency before a Parliamentary Committee to stories which he had so often told himself and his neighbours that he had come at last firmly to believe them. And the cases are only worth noticing as illustrating the strong and often unreasonable antipathy felt by the sheep farmers towards the occupants of deer forests.

Perhaps on the grouse moors the unfriendly feeling is more apt to originate on the other side, but of course the causes of heart-burning become more frequent and the quarrels grow more envenomed when the farmer and the sportsman are actually joint occupants of the same ground. When it is a deer forest that is in question, it is likely that it is the farmer who has the more substantial grievances. He can do his sporting neighbour comparatively little harm—no more, at least, than comes of his sheep occasionally breaking bounds, which for his own sake he does his best to prevent, or some stray deer being occasionally shot down by his shepherds. On the other hand, he sees the capricious deer continually leaving their own luxurious feeding grounds to browze with his sheep on the scantier pasturage, and yet he has no means of proving damages on which to found a claim for compensation. And those who know the Highland sheep farmers—generally stern Border men who have migrated from the South—know how the injury must rankle when they see the land for which they pay a full rent laid under contribution by the deer that are kept for the enjoyment of their enemies. But if the farmer must suffer sometimes at the hands of the lessee of the forest, and grumbles less perhaps at the loss than at the submission with which he must endure it, it is his turn to command the situation as between himself and the gentleman who rents the shooting over his farm. His shepherds are ranging the hills at all hours of the day from dawn to evening. It is impossible for the keeper whose hut lies in the shelter of some deep valley, and whose beat is many miles in extent, to keep his eyes upon these men. As they go lounging about in the pursuit of their business, the hill and all that is upon it is at their mercy. They find the nests of the grouse in the spring, they train their dogs to seek for them, and they take the eggs. Later, when the young birds are hatched from the nests that have escaped, a wave of the hand sends the sheep-dog open-mouthed and ravening among the broods. They have the satisfaction of knowing that they can pay off their grudges by doing an incalculable amount of injury to all three classes of their enemies. The keepers lose character with their employers when they fail to show a good stock of game; it was their "confounded carelessness," of course, which let the poachers and the vermin come to such a head upon the ground. The tenant loses the sport he counted upon, and has to grumble over an expenditure which has gone for worse than nothing, while in the course of successive seasons the moor loses its reputation, and the landlord has to submit to a terrible reduction in the fancy rent he was wont to demand. On many moors, no doubt, there is nothing of all this, otherwise we should not hear of the bags that are so often made. In many instances the farmer and the sportsman live in amity, as they might always do, seeing that there is no special reason for the sheep farmer and grouse-shooter being anything but friends. Where the game tenant is wise in his generation, he will make himself friends by help of the mammon of unrighteousness with men who, if they please, may easily spoil his sport; and he will insist upon his keepers being on good terms with the shepherds. But where the sportsman is not in the way of being forbearing and something more with the farmer, and generous to the shepherds, where he does not keep a sharp eye on his keepers, and choose them for their tact and their temper as much as for their professional skill, then it is very sure that there will be a succession of bad years on his moors, although probably the grouse disease and the bad breeding seasons will bear the blame of them.

Perhaps the most fruitful cause of contention on grouse moors is the shepherds' dogs. It used to be very irritating to a man who paid a fancy rent for his shooting to see and hear shrill-mouthed curs jumping up on the roof of every hut he passed, baying at him as he went by. He knew they were always ranging the hill, disturbing the breeding birds, and snapping up the cheepers. He knew there was no chance of any deer who might happen to come to his ground remaining on it while that abominable yelping was always being borne to their ears. So his keepers, who shared his detestation, understood that if they laid poison on the sly he would not regard it as a heinous crime. The curs ate and died, and their masters were furious; perhaps some old friend of the shepherd's, who had passed many a year with him on the hill and saved him many a bit of rough labour, some dog whom he had found more affectionate than any woman, and far more intelligent than the minister himself, ate of the accursed thing and died also. The bereaved shepherd could not trace the crime by distinct evidence to any one's door in particular, but he never doubted at whose door it must be laid. He brooded over the vengeance which might have scarcely stopped short of murder had a safe opportunity come to him, and in the meantime the breaking of the grouse eggs went on faster than ever. The dog-tax, we should imagine, must have done away a good deal with the frequency of this sort of thing; it has thinned the number of useless curs, and removed the inducements to have recourse to poisoning. But in its way it is scarcely less of a grievance with the shepherds because it is felt as a universal one. It is the dog that often makes the difference between a good shepherd and an indifferent one; certainly between an easy life and a very hard one. Of course the shepherd likes to have plenty of such useful animals, and a reserve to replace those that may come to grief in the winter. And this matter of the dogs, viewed as it must be from standpoints so antagonistic, is but a type of the many questions that introduce discord into social relations in the Highlands. We do not know what may come of the present inquiry. "As you are" is the watchword on the one side; total abolition is the cry of the extreme advocates on the other. But in the meantime, when each must lie so much at the mercy of the other, it is plain that mutual conciliation is the only sensible policy.

CRIMINAL LAW UNDER DIFFICULTIES.

THE public of New York was occupied, according to the latest advices, in discussing the question whether the perpetrator of what is called "the carhook murder" should be hanged. Probably the question has been by this time decided, and we shall await with curiosity the result. The *New York Herald* "put down its foot" on the 7th March that Foster should be hanged, but nevertheless it seemed to be nearly even betting between Foster and the gallows, or say 5 to 4 against him. Between the abundance of murderers and the difficulty of hanging them in New York, the respectable and law-abiding class of citizens seems likely to disappear. The law's delays are entirely favourable to scoundrelism. After hearings and re-hearings, lasting several months, a criminal either escapes or the atrocity of his crime has been obliterated by other crimes of more recent date. In the meantime the humanitarians take up his case, and he gets preached about in the pulpits, and perhaps the Governor of the State is requested to show mercy, on the ground that the criminal is an Episcopalian churchman like himself; and thus almost the only chance for justice and public security is that, from the unhealthy atmosphere of the Tombs prison, while the question of hanging him is in suspense the prisoner may happen to die. The latest "development" of the Foster case is an allegation that the widow of the murdered man, who had written a touching appeal to the Governor for mercy to the murderer, was bribed to write by the sum of 15,000 dollars. Even the *New York Herald*, which had not then "put down its foot," was moved almost to mercy by the pathetic tone of this appeal. And that gifted journal is now devoting its best energy to the elucidation of the question whether Mrs. Putnam has been bribed. A reporter has been sent to wait upon the lady, and to deliver a written statement for her consideration; and as Mrs. Putnam, after taking a day to think about it, declines to address the reporter either in speech or writing, the reporter draws his own conclusion as to the reason of her silence.

The act which the judges of the State of New York persist in calling murder was committed as long ago as the 26th April, 1871. Thus, supposing Foster to be hanged, the lawyers will have taken nearly two years to get the job done. In the meantime the Tombs is full of murderers of more recent date, and the *Herald* sends a reporter to the Recorder of New York to ask what is to be done. That vigorous administrator of criminal law answers that he would undertake to clear the gaols within thirty days, and the reporter highly approves of a special arrangement for this purpose, thinking that, if only the clear and undeniable murderers could be hanged and the doubtful ones discharged, the security for human life in New York would be considerably enhanced. The Recorder complains of the system of appeals from judges who do understand criminal law to other judges who do not, and he thinks that at any rate there need not be a further appeal to the Governor of the State, who is not a lawyer at all. However, to return to the case of Foster, we learn that on the above-named day Mr. Avery D. Putnam got into a Broadway car accompanied by Madame Duval and her two daughters; shortly afterwards William Foster, much intoxicated, got into the car. He behaved rudely to the ladies, and quarrelled with Putnam, who endeavoured to protect them from his incivility. Presently Putnam got out, and while he was handing out Madame Duval, Foster, in a drunken rage, ran from the front of the car with a "carhook" in his hand, and delivered two powerful blows on the back of Putnam's head, fracturing his skull. Putnam died of these injuries two days afterwards, and Foster was fully identified as his assailant. This is the whole case. It need not have taken long, we should think, to decide to hang this man, or at any rate to decide between hanging him and imprisoning him for life. But the lawyers, preachers, and journalists have had the case in hand ever since. "The greatest excitement and indignation was manifested by the community at the time in regard to the murder," but it is a long time ago, and the community has since been excited and indignant at several other murders, without visible result. Justice took the case in hand at once, as if pretending to be speedy. The trial of Foster began on the 5th May, and ended on the 28th May, 1871, in a verdict of "Guilty of murder in the first degree, with a recommendation to mercy." If the trial of this simple case took twenty-three days, we can only admire the power which American lawyers possess of interminable talk. The execution was appointed for the 14th July, but in the meantime a

judge of the Supreme Court granted a stay of proceedings, and in January 1872 an application for a new trial was heard before three judges. This Court affirmed the former judgment, and Foster was again sentenced to be hanged. The execution was appointed for the 22nd March, 1872, but one more stay of proceedings was obtained. Meanwhile a jury had given a verdict against the Broadway Railway Company in favour of Mrs. Putnam for 5,000 dollars for the loss of her husband's life. The case of Foster was now carried to the Court of Appeals at Albany, and awaited hearing there during the remainder of the year. The judgment of the Court below was affirmed on the 21st January last, and now it was announced for the third time that Foster must die.

There were no more Courts to which it was possible to appeal, so now the friends of Foster set to work upon the Governor of the State. Meanwhile the *Herald*, expecting public interest in the case to revive, sent a reporter to wait upon both Foster and his counsel. But the prisoner declined to be "interviewed" at all, and the only information that the reporter got from the prisoner's counsel was that it was a damp evening. However, in spite of these discouragements, the *Herald* has managed to keep its columns full of the Foster case ever since. "Shall milk-sick sentiment come between justice and one million citizens?" This question was asked by a correspondent of the *Herald*, who declared his satisfaction at the position taken by that journal, and his confidence in the firmness of Governor Dix. The Governor, it appears, is entitled to this confidence by having penned, in time of war, the immortal words, "If any man attempts to haul down the American flag, shoot him on the spot." But there is many a brave soldier who cannot face a woman or a newspaper, and we should doubt the prudence of backing the firmness of General Dix at more than even money against the solicitations of Foster's friends. "Thirty or forty Protestant clergymen have visited the Governor during the past four weeks, and have besieged him night and day with prayers for mercy." Several delegations of citizens have urged a commutation of sentence on the ground that Foster would do them still more service by labouring for the remainder of his life in prison than by being hanged. When these delegations "became explanatory" of their views, the Governor must have had a hard time of it. Madame Duval, like everybody else concerned in the case, has been interviewed by a reporter, who desired her to state whether, from her impression of Foster on the night he fractured Putnam's skull, she believed him to have been an exemplary Sabbath-school pupil. Madame Duval answered, with more force than elegance, that she believed him to have been "a drunken loafer." An impartial correspondent of the *Herald* desires to start the ball rolling, and asks whether there is not some poor devil in the Tombs who has neither money nor religious friends, and who may be hanged without any more delay. Another correspondent deals with the plea that Foster did not intend to kill Putnam. "He made the remark that he would fix him, and he did fix him." This kind of thing will not do, says the correspondent, in a city like New York. He refers to the case of Josh Reynolds, who had no money, friends, or ministers to write for him, so he had to swing. The *Herald* of the 14th instant goes deeply into the question whether Mrs. Putnam was bribed to write to Governor Dix on behalf of Foster, and it prints affidavits of several persons who heard Mr. Allen, a friend of the Putnam family, say that he knew that Mrs. Putnam had received a bribe. At this rate the literature of the subject must reach an enormous size, and we almost wish that Foster may be hanged to make an end of a wearisome discussion. The reporters of the *Herald* seem to have interviewed all the householders of the street in which Mrs. Putnam lives, in order to obtain their opinions as neighbours as to the veracity of her denial. One of them does not believe it, and does not disbelieve it, and knows no more about it than the man in the moon. Another has received the impression that somebody has told a lie, but he can't say who. The reporter also called on a brother of Mr. Putnam, "a tall, stalwart, finely built man," who emphatically declared that Mrs. Putnam's denial was false. He also stated that Mr. Allen had admitted to him that Ellen (Mrs. Putnam) "was pretty well fixed"—meaning, apparently, that she had got 5,000 dollars for losing her husband and 15,000 dollars for trying to save her husband's murderer. The prevailing opinion in the street was that Mr. George Kemp, uncle of Foster, a wholesale druggist and a millionaire, had found the money to bribe Mrs. Putnam, and to him of course the industrious reporter applied. A brother of Mr. Kemp remarked that "these reporters have a nice way of meddling in other people's business"—which is the only incontrovertible statement that we have met with for some time. However, the reporter made his way to Mr. Kemp, and got from him a distinct denial of having paid money to Mrs. Putnam.

The *Herald* of the 15th instant announced that, "in all human probability," Foster would be hanged on the 21st. The military secretary of Governor Dix had called upon the Sheriff and conveyed to him, unofficially, "the crisp intelligence" that the Governor declined to interpose any further clemency. The news soon spread among the public, and the general expression was that of sympathy for Foster, coupled with the belief that his death is a public necessity in order to make street ruffianism as dangerous to the ruffians as it is to decent citizens. The *Herald* closes with an extract from an Episcopalian religious newspaper, which declares that the discussion of this subject has been beneficial "as an education of the community in the great principles of justice." Certainly this education is greatly needed. If Foster had committed his crime in California he would either have been hanged outright or have gone free. We observe that Lynch law still prevails in that remote State, and it is better than the paralysis of all law in New York. Foster might have been hanged amid general execration when his crime was fresh, but now that it is nearly two years old, his death on the gallows would be likely to excite pity. The worst possible kind of criminal law is that which is dilatory and uncertain.

NEWSPAPER HISTORY.

In noticing the two bulky volumes which Mr. James Grant called a *History of the Newspaper Press* we pointed out a number of stupid and ignorant blunders, but we certainly did not suppose that we had by any means exhausted the catalogue of the author's errors and misrepresentations. Mr. Grant was not content with attempting to record the public history of journalism in this country. He also undertook, for the gratification of a vulgar curiosity, to disclose the strictly private and personal affairs of the different newspapers of the day; and here, of course, it was impossible for us to follow him. Even if the statements which Mr. Grant put forth had been correct, it would have afforded no justification for the grave breach of decorum involved in meddling with such matters at all. But we had no means of testing their accuracy, and no desire to do so. It was natural, however, to suppose that a man who blundered egregiously in regard to matters of common literary notoriety was hardly likely to become a more trustworthy guide when he turned aside into the devious ways of scandal and eavesdropping. Since then Mr. Grant has published a supplement to his "History," giving what purports to be an account of the "origin and progress" of the *Saturday Review*. Although we cannot pretend to be an authority as to the private affairs of other people, we happen to know something about our own, and we now say that we quite underrated Mr. Grant's supernatural capacity for blundering and misrepresentation. There is indeed hardly a single statement concerning ourselves which (when it is not a pure invention) is not wildly, and to those who know the facts, ludicrously and incredibly, inaccurate.

Mr. Grant promises to resume in a future publication his offences against the recognized decencies of English journalism. He says, "It is high time that the mask should be torn off the visages of the *Saturday Review* gladiators," and "I feel called on, in justice to myself, as well as in the general interests of literature, to let the world know who are the chief anonymous would-be assassins of the reputations of authors in that journal." Meanwhile he defers the discharge of this duty until he has "obtained the information" of which he is "in quest." We can await with tolerable equanimity the further exhibition of Mr. Grant's talent for ignorant blundering. He has evidently been mercilessly hoaxed—not for the first time in his life—by some person or persons unknown, and he is laying himself out to be hoaxed again. It must be admitted that he is an inviting subject for this sort of cruelty. Of the statements in the present pamphlet it is enough to say that three or four allegations which by their pretended particularity seem to stand out from the dead level of twaddle and abuse—we refer to statements relative to the capital sunk in the establishment of the paper, the conditions of the proprietorship, past and present, and the private history of the successive editors—are simply not the fact.

REVIEWS.

BUCKLE'S POSTHUMOUS WORKS.*

We have broken down in a conscientious attempt to read through these three volumes. But we are comforted by thinking that perhaps even the editor did not expect anybody to read them straight through, while we are quite sure that Mr. Buckle himself would never have laid any such burden upon us. We are sure that no philosopher would ask any one to read his commonplace-book. Out of the contents of these three volumes about half a volume might perhaps have been put together which would have been worth preserving for its own sake, and which would have been a proper tribute to Mr. Buckle's memory. Every author works after a fashion of his own, and every author will commonly do his work the better for working after his own fashion. Mr. Buckle's fashion seems to have been to write a great number of fragmentary passages which were doubtless meant to find their place at the proper points of his great work. Many of these begin and go on for a page or two with great elaboration and in his best manner. But towards the end the finished composition often gradually changes into mere jottings, mere notes to suggest what was to come next. A selection of the best of these fragments would have been quite worth preserving. Even those who differ most widely from Mr. Buckle must allow that anything which shows us his deliberate judgment on any matter is worth having. And there is a certain interest also in seeing how he traced and worked out his materials. The fragments, for instance, about the reign of Elizabeth are in a state perfect enough to enable us to compare Mr. Buckle's views on many matters with those of Mr. Froude. And there are

* *Miscellaneous and Posthumous Works of Henry Thomas Buckle.* Edited, with a Biographical Notice, by Helen Taylor. 3 vols. London: Longmans & Co.

many other pieces, finished or nearly so, which are quite worth keeping. On the other hand, there are other pieces which are mere collections of jottings, mere gatherings of notes which Mr. Buckle must have meant to expand, about which we are doubtful. And about the commonplace-book which fills up so large a part of these volumes we are not doubtful at all. We are sorry to have to say it, but the contents of the commonplace-book have often reminded us of the writings of Mr. Timbs. This is no fault of Mr. Buckle's; anybody's commonplace-book would doubtless have the same look; but then why publish a commonplace-book at all?

To the papers now printed Miss Taylor has prefixed a biographical notice, a good deal of which comes from an outline of Mr. Buckle's life supplied by his sister, from extracts from his own journals and letters, and—what is the most valuable part of it—from "reminiscences" supplied by a lady whose name is not given, but whom from other passages in the notice we infer to be Miss Shirreff. Mr. Buckle's life was not an eventful one, and it comes to little more than the history of his book. His great misfortune was the strange solitude in which his life was spent. An admiring son seems to have had hardly any companion except an admiring mother. The grotesque dedication of the first volume of his book will not easily be forgotten. Mr. Buckle never mixed with the world in any way; he had no knowledge of any form of practical life; he had no regular education; he never went to school or college, or anywhere where he could measure himself with others or learn to understand and tolerate the opinions of others. To us the wonder is that under all these disadvantages he ever did the tenth part of what he did do. Miss Taylor on the other hand strangely looks on all these frightful drawbacks as so many advantages:—

> But Mr. Buckle's good fortune consisted more especially in two other circumstances which fell to his lot. In the first place, his mother, who seems to have early formed a high estimate of her son's abilities, unceasingly stimulated and encouraged him to exertion. And, in the second place, the delicacy of his health, from childhood upwards, shut him out from schools, from the universities, and from the professions—from all those places and pursuits, in short, where boys and men learn to imitate one another; where they learn to accept conventional solutions to the problems which are sure to present themselves to every active intellect; or where they learn to limit their ambition to the acquirement of wealth or of worldly success. For his love of study, as well as for his undoubted ambition to distinguish himself, Mr. Buckle was probably indebted to his mother. But to the weak health which led him to solitary study, must be attributed much, not only of his universally admitted originality of thought, but also of that characteristic vigour of expression which enabled him to bring his thoughts home to the popular mind with such striking success. His standard of expression was formed like that of most other people, by his mental companions; but these companions were, in his case (fortunately for his renown and his readers), composed of the great minds of all ages.

Miss Shirreff, on the other hand, while fully explaining the causes—causes perhaps quite sufficient—which shut him out from the common means of training, certainly does not, like Miss Taylor, look on the great misfortune of his life as an advantage. Her words are:—

> The first obvious step was to acquire instruction; and it was proposed that, after some preliminary study, he should go to college, whence the opening to any liberal profession was secure. But the painful sense of his own ignorance made him most reluctant to adopt this course. His whole acquirements then consisting of little more than reading and writing English and proficiency in chess, it seemed indeed hopeless, within such limits of age as University education commonly embraces, to make up for lost time; and his growing sense of power, and the new ambition beginning to stir within him, would have ill brooked defeat among his contemporaries. He knew that he had not only to acquire knowledge, but to learn to be taught—one of the most difficult things when the mind has attained a certain point of maturity without having followed any groove of teaching; and thus, hopeless of success upon the too-long neglected beaten tracks, he determined on choosing a path for himself.

To us it seems that throughout Mr. Buckle's writings, amid all their strength, there is a marked element of weakness which was largely owing to this ill health and its consequences. It is hard to say what is to be made of a man who could write such a sentence as this:—

> The air here is really so fine, and my mother is so much improving in it, that I am almost beginning to like the country. A frightful and an alarming degeneracy! Pray God that my mind may be preserved to me, and that the degradation of taste does not become permanent.

Again we read in his sister's account:—

> He disliked horse exercise, and though ordered when he was young to ride for his health, would never ride alone, as he said he forgot he was on horseback; and on one occasion, when riding with Mrs. Hutchinson, one of his sisters, at Hastings, he was so entirely absorbed with his own thoughts that he allowed his horse to take him into the library on the Parade.

We really think that a horse who had so delicate a sense of the proper place to which to take his rider as to carry Mr. Buckle straight to a library deserves the special care of Mr. Darwin.

In looking through these volumes we are certainly more and more struck with the real amount of what Mr. Buckle did, notwithstanding those grievous hindrances which Miss Taylor so strangely looks on as advantages. It is not that we are mere zealots for the ancient University system of England, though we certainly are old-fashioned enough to believe that there are few minds so great that they will not be the better for its training. It is not merely that Mr. Buckle was lacking in technical scholarship; it was his isolation from mankind in every way that forms the weak side of all that he wrote. This isolation, combined with a lack of all sense of humour which was remarked by the present Attorney-General in a controversy which it was a pity to rake up again, made Mr. Buckle utterly unable to understand the position of anybody whose view was not the same as his own. This failing affects the whole scope of his work. He writes the *History of Civilization*, but he seems throughout to feel a sort of indignant surprise because long ages and large parts of the world have not always been so civilized as he was himself. He never really understands the people of times and places which are uncongenial to himself. He is pursued throughout by the great fault of despising large parts of his subject. Now it is quite certain that no man can be a real historian of a subject which he despises. The real historian of civilization is one who, like Mr. Tylor, will go with thorough love of his subject through every detail, from the lowest forms of culture to the highest, despising nothing, wondering at nothing, throwing himself into every possible stage of the human mind, and therefore finding the key to the problem which he set before himself. Mr. Buckle, on the other hand, from the height of his philosophy, seems to have looked on all ages and nations as knaves or fools if they did not come up to his own level. Again, Mr. Buckle's reading was certainly very great, but for large periods of history it was very superficial. For the whole classical and mediæval periods, he seems to have taken nearly everything at second hand. His references to original writers are rare, and where there are any they often come from translations. Both the fragments and the commonplace-book are full of extracts, sometimes long extracts, statements of the most obvious things copied from the most obvious books which we could fancy a very young scholar might have set down at the very beginning of his studies, but which it is wonderful that he never got beyond at any later time of his life, and which it is cruel to his memory to publish. We open at a spot at the eighty-ninth page of the second volume. There must be a time in the life of every man when he does not know the "etymology" of "hieroglyphic," "ostracism," "paper," and "Bible"; but most people would find out that "etymology" from a Greek Lexicon at a very early stage of their studies. If, however, Mr. Buckle had not learned such obvious things till he read Massey's *Origin and Progress of Letters*—a book which we must confess we ourselves only know from Mr. Buckle's reference—he certainly did well to write down his newly-gained pieces of knowledge, but it is really cruel to go and publish such things after his death. Conceive anybody, too, reprinting scraps of Hume and Henry by way of English history, or solemnly reprinting such a thing as this:—

> "Wittenagemot imports a Council of wise men, the Saxon word *witte* signifying a wise man, and the British [*sic*] word *gemot* expressing a synod or council. During the Heptarchy each kingdom had its Wittenagemot" (*Lectures on the Constitution and Laws of England.* By the late P. S. Sullivan. Dublin, 8vo. 1790, p. vi.).

We are sorry to say that we are altogether in the dark as to the late P. S. Sullivan, and of course we do not expect him or any one else to spell the mysterious word Witenagemót, but we really should like to know something about the "Saxon" and "British" elements in the word. Now it is no kind of shame to Mr. Buckle if there was a time in his life when he looked on such a piece of confusion of this as a real bit of newly acquired knowledge; the first jottings down of the greatest scholar would most likely contain something as little to the purpose; but surely it is not kind to Mr. Buckle's memory to put such things forth now as specimens of his real work, or as something which can be of the slightest value to anybody else.

In some cases however the fragments and entries in the commonplace-book do give us a distinct key to the weakest side of Mr. Buckle's mind. It is not the way to understand, still less to record, the progress of men's minds in distant times, to sit down with a deliberate contempt for writers in another state of society because they did not reach the highest philosophical level. It does not bode well for what Mr. Buckle's treatment of early English history would have been when we find such a heading as "Absurdities as Specimens of Historians"; when we find in a note "we may pass over the wretched Gildas and Nennius." "Wretched" is Mr. Buckle's favourite epithet for every writer who is not quite up to the mark, and a critic will smile at the notion of putting Gildas and Nennius together; and he goes on to tell us that either Bæda or William of Malmesbury—we cannot make out which—"was usually credulous, bombastic in his style, and *relates nothing of real importance.*" Then comes Geoffrey of Monmouth, of whom Mr. Buckle says he gives a long account "because his work was highly valued and procured for himself great honour, and also because it was the last elaborate historical absurdity." Why "the last" passes our powers of guessing; we should have rather thought it was to be called the first. It is plain that Mr. Buckle, with all his philosophy, looked on Gildas, Bæda, William, and Geoffrey as writers of the same class. But such unphilosophical people as Gildas and Bæda must put up with what they can get, when, under another heading of "Absurdities in Early History," De Thou and Melanchthon are called up for Mr. Buckle's favourite process of contemptuous wonderment. When Mr. Buckle, a few pages on, talks of "the Hebrew, a language the scanty literature of which has always displayed a marked deficiency in historical productions," we cannot help remembering that a little more knowledge of that scanty literature might have saved Mr. Buckle from thinking that the phrase "hell hath enlarged herself" was the invention of a Scotch Presbyterian divine. But when we find (i. 194) *Leibnitz* described as quoting Sir James Mackintosh, we feel sure that there

is some blunder of transcriber or printer, and that for this at least Mr. Buckle is not answerable.

It is here only fair to quote a passage in which Miss Shirreff tries to defend Mr. Buckle from a charge which has certainly been brought still more forcibly home to us by looking through these volumes:—

> He is reproached with never quoting original documents, ranging among well-known authors and neglecting the sources of historical knowledge. I will answer first what my remarks above recalled to my mind, that he confessed he never could have borne the fatigue of studying MSS. The effect upon his sight, and through the eyes on the brain, was such that a short time of such a work would have unfitted him for anything, therefore he doubly rejoiced to feel that no such labour was needful for his purpose. It was not tried and laid aside, but deliberately neglected, because printed matter supplied in abundance all the materials he wanted. It was not his province to examine into the accuracy of this or that particular document, or to search for proofs for or against the received version of individual conduct or national transactions. All he wanted was the great outline of history, which furnished him with the data for some of his speculations, and the proof of others. It was the broad history of nations that he sought to illustrate, and erudite researches would have afforded him no assistance. The accusation has been brought against him as a slight upon his literary industry; but it only proves that those who brought it knew neither the man, nor the scope of his work.

It would seem that Miss Shirreff, if not Mr. Buckle himself, was possessed by the very odd notion that original authorities must needs be in MS. Now we fully allow that there was no kind of need for Mr. Buckle even to look at a MS.; but this was no excuse for "deliberately neglecting" those vast stores both of classical and mediæval literature which certainly come under the head of "printed matter." The charge against him is not that he did not go and grope among MSS., but that he did not master the facts of his own subject, that he "deliberately neglected" the sources of early English history and of other large parts of history. The truth is that Mr. Buckle, with all his philosophy and with his vast reading in particular branches, had no real idea of the progress of the human mind. Anything that was not up to his own standard, whether the early institutions of a nation, or the point of view of an early writer, was at once branded as an absurdity, a superstition, whatever hard word came first. That these absurdities, these superstitions, had their place in the march of things, that something which was neither absurd nor superstitious could some day grow out of them, never came into Mr. Buckle's head. This way of looking at things is certainly shallow and illiberal. But we believe it to have been largely the result of Mr. Buckle's unhappy isolation. His way of looking at past times is very much as if a man should sit down and write a treatise on the absurdities and superstitions of children in a tone of grand contempt, setting forth his wonder that they have not all at once reached the standard of full-grown men. Had Mr. Buckle lived more among his fellow-creatures, had he had the opportunity of measuring himself with his intellectual equals, we feel sure that, with his undoubtedly great powers and unwearying industry, he would have been led to a course of study and thought of a less one-sided kind.

At all events he is not to be blamed because injudicious friends have chosen to publish his commonplace book. The only way in which it could, as it seems to us, have been made of any interest or value would have been by dating the entries, so that they might make a kind of record of Mr. Buckle's studies and progress. But this is not done; they remain in the state of scraps, scraps which unluckily put forward, not the strongest but the weakest, side of their diligent collector. Of course they do not make up the whole of these three volumes. There are, as we said at starting, pieces here which, fragmentary as they are, it was quite right to preserve and publish. But to publish a huge gathering, sometimes of obvious truths, sometimes of obvious blunders, bits from books which are in everybody's hands, bits from books which do not deserve to be in anybody's hands, is no real tribute to Mr. Buckle's memory; it is what we trust he would not himself have wished to be done. It seems to us to spring from a feeling which he would have put under the head of absurdity or superstition, from that blind spirit of relic-worship which might have been just as reasonably spent on Mr. Buckle's old clothes.

THE GERMANS IN BRAZIL.*

THE discouraging reports lately laid before the public from British immigrants in Brazil contrast painfully with the golden visions which had been held out, and are even now being held out, to intending settlers in that part of the South American continent. Contradicted as those sinister rumours have been on official authority, we can but suspend our judgment until more decisive information has thrown light upon the actual state of things and the prospects for the future within those regions. Were the causes of failure, if failure there has been, in the case of these recent immigrants due simply to shortcomings of their own? were they inherent in the design and management of the enterprise? or are they to be sought in the climate, the soil, the political, economical, or other local conditions which rendered the effort futile? It would be deplorable were no better end than this to follow the vigorous impulse to European capital and labour in the far West imparted by the visit of the Emperor, by the floating of Brazilian securities and schemes in the money market, and by the grand plan of opening up an El Dorado of industry and prosperity by sending out 150,000 British emigrants in batches of 10,000 yearly to the virgin plains of Rio Grande, San Paulo, Santa Catalina, &c. So little is known in England of the vast territory of the Empire, that the record of a flying visit paid in the summer of the year before last by Mr. Michael G. Mulhall to the province of Rio Grande may be welcomed by many for the information it imparts as to the condition of the largest and most flourishing of the Federal States of what is in reality a Republic under an Emperor as President. The author has done well to prefix to his narrative of personal experiences some account of the geography, population, and commercial statistics of San Pedro do Rio Grande do Sul, the southernmost and most advanced of the twenty provinces of Brazil; a province which, though one of the least in area, is yet three times the size of England. What strikes the visitor on landing at the city of Rio Grande, and still more at Port Alegre, which has of late years attained the rank of capital, and forms the centre of life in this thriving province, is the evidence everywhere present of English energy and capital. Railways, dredges, gas-works, coal-mines, foundries, which are the order of the day, are all in the hands of English engineers, founded and carried on by English money. Port Alegre, at the northern end of the great littoral Lake of Patos, which with Lake Mirim to the south forms the most characteristic feature of the geography of the province, has already some 40,000 inhabitants, being double the population of the old capital. The new Hamburg Railway, now constructing, is expected to open up an important trade, shortening by half the present route to San Leopoldo, along which even now three distinct lines of steamers are plying, and to form the main trunk from which other lines will branch out towards the Atlantic and the Uruguay. Its immediate object will be attained by bringing the city into direct communication with the German colonies, the most recent wonder of the New World, which have won for the province of Rio Grande the name of the Granary of the Brazilian Empire. It is to this new and remarkable element in the prosperity of the province that Mr. Mulhall's attention was most prominently directed, and to the novel and striking facts elicited by him during his visit the main interest of his little volume is due.

Sixty thousand German settlers have converted virgin forests into waving corn-fields, interspersed with neat farmhouses and all the appliances of agricultural life. Port Alegre itself is in a manner a German settlement, the first colony having been established there in 1825. These Teutons never think of returning to Europe, but, like the Irish in North America or Buenos Ayres, become permanent settlers in their adopted home. Still they preserve, we are told, the warmest recollections of their Fatherland, and in language, sentiments, and traditions are as true to their native country as though they were only temporary denizens of a strange land. From the crowded deck of the steamer as the noble roadstead was opened out went up the hearty refrain of the "Wacht am Rhein." Three newspapers are already issued in German, and German clubs abound. The very negroes often talk German, and the whole city forms a German principality in the heart of the Brazilian Empire. At the foot of Monte Bonito among the Pelotas hills an Irish colony was introduced some twenty years ago, but it proved a failure. Some of the settlers remained only a few months, alleging that they could not eat sawdust, as they called the flour of the country. Most of them returned to Buenos Ayres after a trial of a few months. One of the last survivors of the colony, an old woman, left fifteen years ago with several small children, was met by our author on her way home from market with the proceeds of a load of butter in her ass-cart. Agriculture seems to have been by no means the forte of immigrants from our islands into these fertile plains. Such of the Monte Bonito colonists as tried sheep-farming at Buenos Ayres are reported to have been for the most part more fortunate, and to be now wealthy estancieros. It is the Germans who have turned farming on the widest scale to the most profitable account. Agriculture is almost exclusively left to them, as engineering enterprise has fallen to the share of our countrymen. The favourite occupation with the native inhabitants is raising cattle, the first estancias having been marked out in 1715, when Juan de Magelhaes came hither with a band of adventurers, by order of the Governor of Santa Cattarina. The preparation of hides and jerked beef gives employment to thousands of people in the various charqueadas or saladeros at Pelotas and elsewhere. These form the principal exports, though cereals are largely shipped from the German colonies to other parts of Brazil, the port of Rio Grande shipping annually nearly a million hides, and from 30,000 to 40,000 tons of dried beef. The Imperial revenue derived from the custom-house at Port Alegre averages 350,000*l.* per annum, two-thirds accruing from import duties, one-sixth from export, and the rest from other taxes. Of the shipping one-third is British, and one-tenth Brazilian; the German, Dutch, and Portuguese flags dividing the remaining tonnage.

Of the forty-four German colonies now flourishing in Rio Grande, the oldest, San Leopoldo, was established by the present Emperor's father, Dom Pedro I., in the fertile lands of the old Fábrica Real de Canhamo (Royal flax factory), still called Fábrica Velha, on the banks of the Sinos river, forty-seven years ago. The first batch of settlers, comprising 26 families and 17 unmarried persons, amounted to 126 souls, which were shortly after recruited by 157 more families, and in the four subsequent years by 3,701 arrivals. A check was set to immigration by the civil wars which followed, at the close of which numbers of disbanded German soldiers received free grants of land, rapidly swelling the census, which in 1866 amounted to 25,000 in the

---

* *Rio Grande do Sul, and its German Colonies.* By Michael G. Mulhall. London: Longmans & Co. 1873.

single district of San Leopoldo, the farm lots ranging in value from 10 to 28 contos (1000*l.* to 2,800*l.*). An error is thought to have been made in not restricting the choice of the first colonists to such persons as small peasant farmers; a mixture of shoemakers, coopers, saddlers, charcoal-burners, and others unused to agriculture having been let in. And to the same cause might be plausibly assigned whatever of failure has attended the British experiment at Cananea. On the other hand, to this diversity of qualifications, when subject to efficient direction and control, may have been due the remarkable development which has taken place in industries of the most multifarious kind. It would be impossible, writes Mr. Mulhall, to enumerate the saw-mills, oil-presses, breweries, tan-yards, distilleries, sugar-presses, and manufactories of hats, firearms, iron-works, &c., established at San Leopoldo, Hamburgerberg, Feitoria, Hortensio, and in the country round. All the saddlery for the army, farmers, &c., is made here, as well as the lances, spurs, and accoutrements. Adding to this the hides, butter, pork, fowls, and eggs poured into Port Alegre, the official report estimates the produce of San Leopoldo alone at 10,000 contos per annum. Of late years the colonists have begun to cultivate the vine, and now the yield is over 1,000 pipes of wine yearly. They are also giving their attention to bees for the production of honey and wax. Flax and cotton being easily cultivated, there is an increasing home manufacture of these staples, rude and simple as the mechanical appliances are as yet. To make the tour of the whole forty-four settlements which have sprung up from the seed first sown at San Leopoldo would take, our traveller declares, a full month at least. He deems it sufficient to have made a round of four or five days through the Baumschneitz Valley, New Hamburg, Acht-und-Vierzig, Tea-forest, Coffee Schneitz, and intermediate "picadas." Imagine, he writes, a country nearly as large as Belgium or Holland cut out of these Brazilian forests, where the inhabitants are exclusively German, and speak no other language, where chapels and schools meet the eye at every opening in the wood. Although the Roman Catholic is the established religion, the Bishop of Alegre being diocesan of the province, the religious difficulty seems to have been solved by the complete toleration of Protestant places of worship and schools, the two persuasions being about equally represented, and intermarriage between them being common. Public instruction is almost on a level with that of Prussia, and crime is said to be unknown. Women travel alone through the forests in perfect security, while agricultural and manufacturing industry flourishes undisturbed. The several colonies have been founded from time to time much on the same principle; an agent or a firm bringing out so many families either from the mother-country or from neighbouring settlements at a bounty of from 2*l.* to 5*l.* per head, patches of land being in the first instance granted free, and subsequently sold at moderate prices payable in yearly instalments. The State has laid out a great deal of money on roads and forest clearance. Pomerania is the province which appears to have supplied the largest quota of German immigrants; but a good many Swiss are intermixed, and here and there a Portuguese community has kept itself nearly intact for generations, as in Serra dos Quevedos, near Cannaquan, and Faxinal de Cangussu. The Italians who flood the River Plate countries are seldom met with. Only one, who was playing a hurdy-gurdy, was seen by our traveller. Nor do the Americans seem to fall well into place here. There was a group of seventy-five families to whom the Imperial Government had given a land grant in Santo Angelo, but many of these Americans left the colony in disgust after a short trial. These, it was said, were not suitable people, many being unmarried, unaccustomed to country work, and displeased with everything. A mixed lot, 157 in number, of whom only 13 were native Americans, the others a rabble of English, Irish, Scotch, French, and Germans, engaged in New York in 1867, and brought to Brazil at the expense of the Imperial Government, were reported of badly by the Inspector of Colonies, who insinuates that they were shipped off at the instigation of the New York police. They were charged with repeated robbery, violence, and other misconduct. Many to whom farm lots were given, besides 2*l.* each in cash, took the first opportunity of running away, mostly to the Banda Oriental. Of 85 who were sent to Novo Petropolis, the greater part also deserted—a great relief, reported the Inspector, who speaks in the highest terms of the German settlers, in which he is supported by the personal testimony of our traveller. Whatever danger might be apprehended from the presence of so large and growing a foreign element in the province may be regarded as neutralized by the orderly disposition and the loyalty of the Teutonic race, who, as in the United States and Australia, identify themselves thoroughly with the land of their adoption, and are esteemed among the best and most useful citizens.

Of the future of this fine province Mr. Mulhall speaks in terms of hope which seem to be borne out by the proofs to be adduced of its resources, and of the wholesome spirit at work among the population. If the national debt of Rio Grande, 65,000,000*l.*, seems heavy for a youthful State, there is reassurance in the fact that this load is no more than seven years' income, or 6*l.* per head of the population. The produce of the country has moreover risen within the last four years to nearly double what it was; cotton 150 per cent., sugar 9, coffee 80, india-rubber 44. The total value of exports in 1869 was over 20 millions and that of imports over 16½ millions sterling. Great expectations seem with reason to be founded upon the progress of railway enterprise, strengthened as such hopes must be by the opening of the coal-mines of San Jeronimo, whence it is calculated that 300 tons a day may at once be raised, the seam being 4 ft. 8 in. thick, and estimated at 6,000,000 tons. The contracting Company bind themselves, we are told, to sell this coal, which took a prize at the Paris Exhibition, at Port Alegre at 24*s.*, the cost of English coal being 60*s.*

For climate, scenery, and promise of varied culture this province may vie with the choicest parts of the New World. Nor should we omit to state that for lovers of sport it offers game in variety and abundance, from bandurria (a kind of water-fowl) to ostriches and even tigers. The native Indians have had to be repelled rather smartly now and then of late in the more outlying tracts, but they are rapidly being improved off the face of the land. There is an unpleasant snake or two like the vivora de Cruz, whose bite is not easily cured, and there is a kind of upas-tree, the Arueda, under which the traveller must beware of tying his horse if he would not have the animal's body or his own swell most disagreeably, although the native women are said to have herbs for curing this inconvenience. On the whole the picture drawn of Rio Grande and its colonists has much in common with that of the model schemes of Fourier, St. Simon, Owen, or Hawthorne, while it has the advantage of sober reality in the place of speculative fancy or utopian promise.

THE LAST NEW HORN-BOOKS.*

NOWADAYS, when everything small and great, from a pianoforte down to a dust-pan, must have won a medal, or must at the very least have been approved at some Exhibition or other, we wonder that no inventive genius has as yet started a competition in school books; the prizes to be awarded, after the manner of donkey-races, to the competitors who stand lowest on the list—those who have managed to cram most blunders into the smallest compass. In any such competition we feel confident that the little books which can claim schoolmasters as their authors would bear off the palm. There are two sets of Primers now before us; the *New Code Progressive Readers* and *The Royal Readers*. On turning over the leaves we find that, though both are bad when compared with our own ideal Primer, yet the "New Code Readers" are very much the worse of the two. Yet those "New Code Readers" have been put together by a schoolmaster and the Principal of a Training College, and profess to be specially suited for working up the several standards of scholars to the pitch required by the last revision of the Education Code. The result arrived at by these two officials, thus laying their heads together, is so very dull as to remind one of Sydney Smith's witty suggestion to the Dean and Chapter of St. Paul's, of the best means for deadening the sound without the church.

A great authority on education once wrote, what every wise man has often thought, that "Learning to read is the most difficult of all human attainments." And yet this difficulty must be overcome when the mind is young and tender, and more inclined to shirk any task that is hard to learn than to grapple with it. Indeed it seems to be the young shoots only that have life and elasticity enough to make so tremendous an effort. Not many men who try to learn to read after they are full grown ever make much of it, the Ettrick Shepherd and a few other notable examples only excepted. But, though a child's mind may escape being crushed into utter imbecility by this first learning to read, it runs great risk of being grievously warped and injured by an injudicious teacher or a stupid system. Surely, then, the great aim of all elementary education ought to be to make this terrible first step as easy and as attractive as may be. It stands on record of that terribly superior woman, Susannah Wesley, that as each of her children reached the mature age of five years she made it taste the wormwood draught of toil in all its bitterness. She herself held the cup to its lips on the day that its sixth year began. The education of the wretched little victim was begun by requiring it to master the first verses of the First Book of Moses, through which it was afterwards driven day by day. Had those children been any other than the Wesleys, such an ordeal must either have reduced them to hopeless imbecility, or made them hate not only the Book of Genesis, but all other things bearing the semblance of a book, for the whole term of their natural life. But such strong-minded parents are now few and far between, and any little Primer that aspires to popularity must present itself under some such seductive title as the "Royal Road to Reading," or "Reading without Tears," and must moreover hang out many baits in the way of pictures and gilt covers designed to lure little scholars unawares into the hard path that leads to wisdom.

Every one, from Plato to Mrs. Malaprop, has had his or her say about that much worried subject, education. Nowadays it almost seems as if every one had taken it into his head, or rather his fingers, to write about it too, so constant is the shower of little volumes under the guise of school books which the press rains down upon us. But among them all it is amazing how few can hit on a rational plan of teaching reading. They all seem to be in league together to make the first sight of the Tree of Knowledge unpleasant to the eyes, and the first taste of its fruit as bitter to the taste as may be. Their writers clearly cannot grasp the idea that the threefold aim of all primary education ought to

* *New Code Progressive Readers.* London: Collins, Sons, & Co. 1873.
The Royal Readers. London, Edinburgh, and New York: Nelson & Son. 1873.

be, first, to show the learner how to learn; secondly, to make him so relish what he has learnt that he may long for more; thirdly, to mark every day by teaching something that is new, but nothing but what is true. No knowledge gained in later years ever sticks so fast in the memory as the seed first sown there. The writers of Primers then have it all their own way. The field lies fallow. There are no stumps of error as yet to be rooted out. They may sow in it what they will. But if they will sow tares, from whence can it bear good seed? Alas! that they should chiefly find delight in sowing tares. Our *New Code Progressive Readers* and *Royal Readers* are no whit better than their fellows. They follow the lead of those who have gone astray before them, and, if we had our way, would with them be forthwith borne away into obscurity among "our failures." Their sins begin on the very first page. In No. I. of each series we find the same stumbling-block set in the way of the young beginner. Both start off with that array of signs commonly called the alphabet, bearing names that have no connexion whatever with their sounds when joined together into words. Now to learn the alphabet may be all very right and proper for pupils who aspire only to reaching the standard of learning which Sir Anthony Absolute deemed desirable in woman—to wit, that she should know her letters well enough to mark his linen, but on no account so as to be able to combine them into words. For any one who looks to getting beyond this, it is merely clogging the memory with a quantity of useless stuff.

> Hinter dem U' kommt gleich das Weh,
> Das ist die Ordnung in A B C,

said the Friar, whose ready wit described the misery wrought by Friedland's lawless soldiery. But we are in advance of this, for do we not contrive to make a woe attendant on every single letter of the alphabet? Can anything be more absurd than to tell a child that C A T spells "cat"? If the child has any common sense, it must feel that such a statement is untrue, though it may not have the courage to say so. C A T must remain *see-a-tee* till the end of time, and it would be just as rational to affirm that it spells *puss*, or *hen*, or *dog*, as to insist that it spells *cat*.

The phonetic system of teaching reading is of course the only rational one. Instead of overstraining and overloading the memory with arbitrary decrees that such and such letters spell such and such words, it brings the reasoning powers into play from the very first. By it the child first learns the true sounds of the vowels, and then the force of the consonants when in combination with the vowels. It finds out that some of the consonants are dentals, some gutturals, and so on. At last it begins to put together these sounds which it now knows by sight, and finds that they make some word already familiar to its ear. Thus each renewed effort is rewarded by the delight of a discovery. If the day ever comes when the world shall awake to consciousness of the fact that nothing ought to be taught but what is absolutely true, the first step towards carrying out the reform that must follow will be to sweep remorselessly from our nurseries all the boxes of letters and picture alphabets. A the archer and B the butcher will have to "move on" with their fellows; the children will soon find out that A and B, as they pronounce them, have just as little natural connexion with either of these worthies as one and two have with "buckle my shoe."

Hard as the task of teaching reading is, the little books now on our table are not content with it. They aim higher still. The editor of the *New Code Progressive Readers* tells us in the advertisement to the Third Standard that he has had before his mind "the gradual development of the mind of the child and of its moral faculties":—

> The lessons have been carefully selected with regard to their *subject-matter*. Hence natural history, natural productions, and passages from English history are mingled with others of an amusing character, and of a moral tendency.

For our own part we find the passages from English history so very comic that we think it quite needless to look further in search of anything more amusing. As for their "moral tendency," we cannot say much in its favour when in the first historical passage in the Fourth Standard we find this shameless breach of the Ninth Commandment in dealing with the character of Edward I.:—

> Edward resolved to bring that people (the Welsh) under his dominion, and, raising an army, attacked Llewellyn Prince of Wales. Llewellyn was killed in battle; and from that period Wales became a part of England. Edward sullied the glory of his victory by ordering all the Welsh bards to be massacred.

A little further on, in treating of the trial of the Great Cause at Norham, the writer astonishes us by telling how Edward "astonished the claimants" of the Scottish crown "by declaring himself to be the rightful heir." Of course the much-maligned Governor of Dunbarton comes in for a dab of the blacking-brush which is so liberally used on his master. We read that William Wallace,

> after many glorious efforts, was betrayed by a pretended friend into the hands of Edward, brought to trial, and hanged—a most undeserved punishment for a man whose only political sin was his heroic patriotism.

We believe that under the present regulations all pupil-teachers are required to pass an examination in English History. If so, Mr. Ridgway and his assistant, the schoolmaster, may thank their stars that their school-days did not come under the rigorous sway of the New Code. If the "historical passages" are to be taken as specimens of their knowledge of history, we feel sure that they ought to have come out of any such examination without a feather. Above all, we would entreat them to beware how they thrust into their pupils' hands such broken reeds as the following:—

> Several helps to the memory have been introduced by variations in type, *e.g.*, the Constitutional History is in old English; the termination of the name Rich *ard* will serve to remind the pupil of the *third* Crusade; the four letters in J-o-h-n, and five in H-e-n-r-y, of the *fourth* and *fifth*; so, too, the grouping of events, &c., into triplets, in Edward the Third's reign, are all intended to be *memoriæ technicæ*.

The Royal Readers are great in "historical outlines," and whoever has drawn them up seems to be in a very hopeless state indeed. The light of truth has crossed his path, but it has only made the darkness of his own mind more visible. Our historical outliner has read Mr. Freeman's *Old English History*, but without the power of understanding it. His mind cannot take in the simple fact that "The country in which we live is called England—that is to say, the land of the English." He gravely calls the first six centuries of English history the "Gothic Period," and our forefathers certain "Gothic pirates who had been in the habit of plundering the coasts" of Britain. By some mystery more profound than the Gothic origin of Pinkerton's Piks, we are told that these "Gothic pirates became the founders of the English nation."

Turning to the Angevin Kings, we find them classed as "Plantagenets proper." As they start off with Henry II. and his sons, we fear our outliner must have very odd ideas of propriety. However, we are glad to find that he does not look on Henry the Eighth as the pillar of the Protestant faith, but knows that in those days, when every one's head was shaky on his shoulders, there was as great a risk of getting into trouble for heretical notions about the mass as for orthodox views as to the supremacy of the Pope. We should be glad to know whether there is any portrait still in existence of Oliver Cromwell sitting "on the throne in royal robes," as we are now informed for the first time of his having ever done so. Like their "New Code" fellows, these *Royal Readers* profess to convey information in many branches of science. Geography, chemistry, natural history, all come in for a share of notice. The geographer seems to be as much in the dark as his historical brother as to the connexion between lands and the people who dwell in them. He tells us that "a tribe of busy little people who live in the frozen zone are called Lapps, which is short for Laplander." No doubt, then, Scot is the short for Scotlander; but we might just venture to suggest a doubt whether the dwellers in Greenland are yet generally known as *Greens*, though their winter life is little better than vegetation.

We used to wonder why the compilers of such little books cannot choose pieces from our really good English authors, instead of cramming their pages with ridiculous nonsense by way of science, verses by nameless poets, and flabby little stories filled with the wise saws of sententious schoolmasters, which we are sure the children can find no pleasure in reading. Dull indeed must the boy or girl be who would not rather go on the ramble with honest Sir Roger, or have a hearty laugh at the expense of simple Moses and his green spectacles. But our wonder ceases when we find that the highest aim of the schoolmaster is to turn out scholars who shall be able to read an "ordinary newspaper." Certainly they will not, in the pages of either Addison or Goldsmith, become familiar with the English of the *Daily Telegraph* and some other of our contemporaries. Our only hope is that the inspector who requires a child to read the strange words to be found in the columns of those journals is himself called on to explain them.

Somehow our system of national education, though it looks very well on paper, does not work as well as it ought to do. We have seen it stated that the average number of pupils who leave school able to read and write well and easily is somewhere about one for every teacher employed. And yet the teachers are first examined, and then tried, and finally certified; and the schools are subject to periodical visitations, at which times the little scholars may be seen with scared faces and clean pinafores scampering along to school to be inspected. The inspector himself is a formidable being who scares their little learning well nigh out of their heads altogether. He affects a critical knowledge of "button-holes" and "herring-bone," and shines forth from the midst of that halo of wisdom and learning which the vulgar see encircling the head of every "Oxford man." But the result of all his labours is such as to make one think of the children's gardens which remain bare of flowers because the too curious little gardeners will dig up the seeds to see whether they are really sprouting. Indeed, there are we believe some persons so sceptical as to doubt the efficacy of so much examining, and to hint that, after all, there may be some truth in the old adage about the "watched pot that never boils."

LESSONS OF THE FRENCH REVOLUTION.*

WHAT are the lessons of the French Revolution? A good many different answers to this question have been given since 1789, and a good many more will probably be given as time goes on. Some day or other political science will perhaps be something

* *Lessons of the French Revolution, 1789–1873.* By Lord Ormathwaite. Bentley & Son. 1873.

more than a name, and we shall then be qualified to draw definite inferances, from which we are at present precluded both by the prejudices which blind contemporary observers of so startling a phenomenon, and by the want of any established principles acknowledged on all sides. Lord Ormathwaite has ventured, however, to express some very decided opinions, and has expressed them, as we hasten to acknowledge, with vigour and ability. We find it hard to go much further in commendation of his book. Almost every page includes many assertions from which we dissent as imperfect, or as radically erroneous; but to discuss them fully, we should have to write not an article, but a book, or rather a library. What are the merits and defects of Imperialism? What was the real provocation to the first Revolution? What was the state of French society before that Revolution, and what is it now? These, and other such inquiries, are essential to the appreciation of many of his arguments, and the bare mention of them is enough to show how hopeless would be the attempt to follow him in detail. Lord Ormathwaite, however, has no scruples in announcing the most positive convictions. His point of view is simple and unequivocal. His great authority is Burke, as Burke revealed himself in those tremendous onslaughts upon the regicides which induced Mr. Buckle to doubt his sanity. The writer in later times with whom he would appear to sympathize most closely is Sir A. Alison, who always speaks of the French Revolution as though it were a direct result of diabolical agency. "From its very birth and during its whole course," says Lord Ormathwaite, "the first French Revolution was pregnant with evil, was false in principle, and was disfigured by violence and crime." His favourite metaphor is to compare it to the cholera, and in its later manifestations he says that its animating principle resembles "some poisonous effluvium pent up in some smothered drain, and bursting forth wherever it can find an issue to scatter death and destruction in their ghastliest forms." It is superfluous after this to add that Lord Ormathwaite holds that events have pronounced decisively in favour of Conservatism, or to say that he regards all Liberals of whatever shade as more or less completely the dupes of the detestable agitators who are threatening the ruin of society.

It is really pleasant in these times of faint convictions and half-uttered doubts to find a man pronouncing himself in so unsparing a fashion. Lord Ormathwaite is well qualified to play the part of Abdiel; and we cannot but agree that it is high time for men of his principles to speak out. If we are all going post-haste to utter destruction, it is well that we should be warned of the fate which is in store for us. Without discussing the justice of the various assumptions involved in this vigorous invective, it will be enough if we briefly point out what in our view is the fundamental error of the method. For though few people would accompany Lord Ormathwaite to his conclusions, a good many adopt doctrines which only differ from his in being less explicitly stated and not so logically carried out. Since the Prussian war and the Commune we have been treated to innumerable warnings identical in spirit, if less vehement in tone; and though on many points we are as far as Lord Ormathwaite himself from approving of revolutionary principles, we yet hold it to be eminently desirable to form a sane judgment upon such matters, and not to allow our hostility to error to degenerate into a mere shriek of wrath.

History, as Lord Ormathwaite reminds us, is, or perhaps ought to be, philosophy teaching by example. We may regard it as the record of a number of experiments on human nature, made on a large scale. As disciples of the inductive system of philosophy, we may fully grant that experience, and nothing but experience, can demonstrate the soundness or unsoundness of political theories. So far we fully agree with Lord Ormathwaite, and we may add that the French Revolution was a vast experiment which should be fruitful in results to the judicious inquirer. But we must add that the experimental method is applicable to historical problems under very narrow conditions; and the reason is obvious. The student of the natural sciences can vary his experiments at pleasure so as to isolate the particular force the law of which he wishes to investigate. The student of political science has a comparatively small number of experiments before him, and it is by the rarest possible accident that any two are tried under conditions sufficiently similar to admit of close comparison. If we could find two nations precisely alike in every other respect, but of which one adopted universal suffrage and the other a limited suffrage, we should be able to say with some certainty what were the effects of extending the franchise; though we should still have the difficulty of applying the results thus obtained to nations under a different set of conditions. But this is what we can never do even approximately. Democracy, for example, means one thing in America, another thing in France, and quite different things again in Switzerland or in Athens. And thus it is impossible to say offhand that the experiments which have hitherto been tried condemn or justify the theories of democrats. One conclusion, however, is pretty obvious, and has been expressed very forcibly by Lord Ormathwaite's great idol, Burke. That principle is that it is absurd to lay down any one constitutional theory as universally applicable. A constitution should fit a people as shoes should fit a man; and it would be as silly to demand that all nations should be democratic or aristocratic in their politics as to demand that Tom Thumb and Daniel Lambert should have their boots made on the same last. This is a commonplace, but it is still curiously forgotten in most discussions. Lord Ormathwaite, for example, is a believer in the British Constitution, and for the good old-fashioned reason that it is an admirable mixture of democracy, aristocracy, and monarchy. He regards a Constitution, that is, as a kind of chemical product which should be judiciously compounded by a legislator as a chemist makes gunpowder out of saltpetre, sulphur, and charcoal. From this conception it follows that the Constitution is best which is most permanent. The danger to be avoided is that, by adding too much of one ingredient, the stability of the compound will be endangered. Too much democracy will lead to anarchy, too much monarchy to despotism, and so on. The French, at the time of their first Revolution, had an opportunity, as Lord Ormathwaite thinks, of mixing their materials according to the orthodox prescription; the Italians have had a chance of arriving at the same happy consummation; and, in proportion as any nation approximates to this result, it is likely to be able to preserve itself in a position of permanent equilibrium. The French, however, unfortunately for themselves and the world, inserted the poisonous ingredients known as the principles of 1789; these principles, as summed up by Lord Ormathwaite, are the absolute equality of men, the negation of all religion, and the denial of any right of property; such a process of political chemistry naturally produced what Shakspeare calls a hell-broth, which has been seething ever since, occasionally boiling over, and poisoning all people unlucky enough to come within the sphere of its influence. Now, as we venture to submit, a more satisfactory analogy is to the gradual evolution of an organism, which requires different treatment and develops different symptoms at every stage of its development. If revolutionary principles are to be regarded as germs of a disease, we must still ask how they were generated, why the constitution was susceptible to their action, and how far they must be considered rather as symptoms of a necessary stage of human progress than as an abnormal intrusion of evil influences from outside.

In fact, Lord Ormathwaite seems to think that somebody said one day—There is no God; there ought to be no property; and all men are equal; that the mass of the people immediately agreed with him, and that a whole race of fanatics, whose sincerity he acknowledges with horror and amazement, have been trying to propagate these views ever since, and destroying everything that came in the way of their cheerful sentiments. Still we must ask, Why and whence? How did such notions occur to anybody? Why were they believed? What is the secret of their abiding influence? Any satisfactory answer to such questions would reveal a whole set of considerations which he calmly leaves out of account as non-existent. Thus, for example, Burke ought to have taught him that when a people break out into violent revolution the cause should be sought, not in any spontaneous desire for change, but in some intolerable defects of the government. The Revolution so far justifies itself. The ferocity which was displayed by the Revolutionists, and the violence of the changes introduced, must have been due to the want of adaptation of the system to the conditions of the country. Murder, atheism, and robbery are very bad things, but, to know why they became rampant at a particular period, we must know what made people discontented with the religion and the laws under which they lived. Rousseau might have thrown about as many firebrands as he pleased and have produced no explosion had there not been a store of explosive material ready for ignition. But why, asks Lord Ormathwaite, were not the evils met by the adoption of the British Constitution? Because the British Constitution was the fruit of a long series of political changes, and the development of a set of political instincts which were only possible under the peculiar conditions of English history. It was not adopted in France because the classes which worked it successfully in England were too weak and too cowardly to seize power in France. And why were they too weak and cowardly? Because of the peculiar system which had grown up in France, and dissociated them for many generations from active influence upon the Government. And why had that system grown up? From the French national character, from the geographical position of the country, and from a thousand other causes, which it would require the labours of a lifetime to elucidate. After reviewing the long series of causes and effects, we might be enabled to say with some authority what were the conditions which generated these poisonous principles, how far the principles were founded on a misapplication of facts, and how far they included a legitimate demand for the redress of grievances. Thence we might proceed to discuss the best mode of meeting them, what concessions must be made to the sounder theories involved, and when we can successfully withstand those which involve erroneous assumptions. Lord Ormathwaite is like a physician of the old school, who finds that his patient is making too much blood, and proposes summarily to bleed him till the superfluity is removed. A more reasonable practice would prescribe a careful diagnosis with a view to removing the deeply-seated causes of the constitutional disorder.

Lord Ormathwaite indeed asserts explicitly that these poisonous principles are entirely absurd and wrong; and his method is to state them in their most extravagant form and to argue against them accordingly. He urges, for example, that men neither are nor ever can be absolutely equal. That is a very true and important, though not a very original, remark; but it does not prove that the revolutionary demand for equality does not involve a protest against many real grievances, though, like most protests, it has been pushed beyond all reasonable limits. To meet the revolution it is necessary to understand it, and mere general attacks

on its most extravagant theories are therefore so much labour thrown away. A controversialist should always state his adversary's principles in their strongest form, if he wishes to convince any one who is not convinced already. And, finally, if the principles are utterly false, it still remains to be asked why false principles exercise so much influence and attract so many proselytes. That is a question to which we need not attempt any answer, but which we commend to Lord Ormathwaite's serious consideration; for it will lead him to the root of the problem. The phenomenon which he describes is far too complex to be settled offhand by a few vague propositions about democracy and the British Constitution.

ROBINSON'S MANSIONS AND MANORS OF HEREFORDSHIRE.*

ALTHOUGH a complete county history involves the labour of at least a lifetime, it is unfair to ignore the contributions towards such a *magnum opus* which are made by pioneers and outsiders. Without endorsing the rule that in composing a county history one main ingredient should be abuse of your predecessors in the task, we must admit that, whilst Price and Lodge did little more than begin a History of Herefordshire, the two quartos of Duncomb carry it over but two or three of the hundreds. In the absence, therefore, of a complete history there should be room for volunteers who confine themselves to a district or a speciality. Curiously enough, in Herefordshire the chief contributors in this line have hitherto been "foreignors." Townsend's *Leominster*, an octavo of merit, not only gathers up the *notabilia* of the borough from the time of Leofric and Godiva, but also throws collateral light on the surrounding districts. Yet Mr. Townsend was connected with Leominster only by a brief incumbency, coming and going through a system of exchange of which little good can be said save that in this case it produced an historian for the neighbourhood. Mr. Robinson, too—the author of the "Castles" which we reviewed two or three years ago, and now of the *Mansions and Manors of Herefordshire*—is not, we believe, a native of the county in which he is now beneficed. Bringing to his task quick observation, active research, and a knack of grouping together matters of local interest both of the past and present, he has produced a second volume of considerable merit, and earned the thanks of the county of his adoption by preserving valuable historical matter which might otherwise have become obliterated. In this volume are recorded such facts as he has been able to collect relative to the manor-houses of the county and their owners. As regards literary distinction Herefordshire has less to boast of than most counties. Philips, the author of *Cider* and the *Splendid Shilling*, and William Broome, Pope's ill-requited coadjutor in the translation of the Odyssey, contemporaries at Church Withington and Ewithington, may be fairly claimed as natives. So, too, Richard Payne Knight, the author, as Mr. Robinson notes, of a didactic poem, *The Landscape*—he might have added, of the *Prolegomena to Homer*, the *Principles of Civil Society*, and an *Analytical Enquiry into the Principles of Taste*—and his younger brother, Thomas Andrew Knight, the author of *Pomona*, were undoubtedly Herefordians, born and brought up at Wormesley Grange, one of the most sylvan, but least visited, spots in modern Herefordshire. Mrs. Barrett Browning was born at Hope End in Colwall parish, where her father, Edward Barrett, bought an estate and built a mansion of Moorish character, which he sold in his lifetime. Brinsop Court, curious in an antiquarian point of view, cherishes the remembrance of visits from Wordsworth and Southey to Hutchinson, a former tenant, who was a relative of the first-named laureate. The two bards planted a tree there, still shown, and a Wordsworth window in the church has been projected and is being subscribed for. Southey is more closely connected with Dilwyn in this county, through his aunt Miss Tyler, whose father owned one of its old mansions—the Great House—where the poet spent a portion of his early days. For the rest, there is some reason to suppose that Brewster, the translator of Persius, in 1741, was a member of the family which then owned the old mansion of Burton Court in Eardisland; and Jacob Tonson, the variously estimated bookseller, publisher, and secretary of the Kitcat Club, purchased—Mr. Robinson rhetorically says, "out of the proceeds of poets' brains"—the Hazle, a seat of the Eltons in Ledbury.

It may be questioned, perhaps, whether the infusion of a little more poetry into the composition of the Herefordshire worthies might not have made them more conservative of the grand old timbered houses which told no less of their ancestry than of the great staple of the county. No doubt there are laudable exceptions, due in some cases to the spirit of their inheritors, and in others to the resistance of the materials to the inroads of time. As extreme instances of re-edification which is in no sense restoration, we take from Mr. Robinson's "Mansions" two in the Bromyard district. Brockhampton, the seat of the Barnebys, to whom it came in marriage from the Habingtons, in 1552, was an old timber mansion and moated grange. But the proprietor in 1760 built upon higher ground a modern brick house with a stone entrance, which is "a copy of the East Front of St. Paul's, Covent Garden." At Whitbourne, in the same district, the modern mansion is "an extremely careful reproduction of a pure Greek building—the details of the interior being borrowed from the Temple of Erectheus at Athens, with which the Ionic columns supporting the pediment also correspond" (p. 300). The homely saw—"a place for everything and everything in its place" might have suggested that pure Greek edifices are not exactly adapted to the woodland scenery of rural Herefordshire. But if these are extremes, it has fared scarcely better with other seats of old county families. Modern Moccas, in a park of unequalled timber, is a structure which, as Mr. Robinson notes, recalls too vividly the Adelphi Terrace in London, which was built by the same architects, the brothers Adam. Canon Frome, which stood years of pounding and assaulting in the Civil War, when its owner, Sir Edward Hopton was "Yeoman of the Stirrup" to Charles I., is now a modern brick mansion with no vestige of its antiquity save a trace or two of the moat. Berrington, the seat of the Rodneys, is a modern stone-built mansion on the site of an old castle or mansion; but for character and style it has no pretensions to compete with the old manor house at Eye, in the same parish, which was built in 1680, and is a fine specimen of the architecture of the period. Rotherwas depends for its associations with antiquity upon its "non cuivis homini" proverb, and owes no thanks to the red brick pile which has supplanted the old timbered house. Garnston and Hampton Court are castellated mansions, the former of very recent erection, the latter a fairly happy restoration of primitive characteristics. And yet we cannot compare either with Dingley's drawings, in his *History from Marble*, of the ancient structures which they superseded, without thinking that the "old was better." This is notably the case with Newport, near Almeley, of which also Dingley gives a drawing as it was in 1680. It may be regretted that its many gables and its tokens of old days should have been exchanged either for the later mansion built by the Foleys, or for the more ambitious structure with which the present proprietor has supplemented it. We are old-fashioned enough to think that the old bits of Hom Lacy preserved in a drawing reproduced in p. 136, and belonging to the date of 1545, are far more picturesque than the cold-looking, massive, and inharmonious modern house, though the park and gardens atone for many defaults of later architecture. Hom Lacy as it is, as well as Stoke Edith and Eywood, might easily be paralleled by modern mansions of like date in any county where money was forthcoming to build them. If the sketch which faces page 249 of the old hall at Pengethley is at all faithful, the erection of a new house by the last proprietor in 1826, in place of a curious timber and stone mansion approached by an arched gateway, was nothing less than flat Vandalism. In a great many instances fashion has given the impulse to demolition, as it did at one time in the case of avenues which fell under a ban, and which could not be repaired when the fashion changed.

On the other hand, it will be seen from Mr. Robinson's pages that a fair number of Herefordshire mansions have been preserved or have been restored to their first estate and character. To pass over the fine old timber houses at Orleton, the seat of the Blounts—one of whom we ought to have recorded above as a name not unknown to literature, for he was the author of *Ancient Customs and Jocular Tenures*, a Law Dictionary, and made manuscript Collections towards a History of Herefordshire—at Dilwyn, at Weobley, at Wythall in Walford, at Kingstone, and elsewhere, we have notices of one or two seats of the thirteenth, two or three of the fourteenth, and yet more of the fifteenth century, of which not a few original features remain. At Ludford, a parish of Herefordshire separated by the Teme from the town of Ludlow, is one of the most ancient mansions of the county, parts of it being referable to the thirteenth century. From the roadside it looks gloomy enough, and its Edwardian archway introduces us only to a sombre quadrangle; but the side which faces the garden—the park across the road is, we believe, alienated from the house—preserves its ancient aspect, and parts of the interior bear the same witness. Older still perhaps, and curiously unique in its character of a fortified mansion of the thirteenth century, is Treago in St. Weonards, near Ross, the ancient seat of the Mynors family, which has held the manor for four hundred years, and has had its representatives in Herefordshire since 1150. "It is quadrangular in shape, having at each corner a small tower pierced with eyelet holes for discharge of bows and arrows. The external walls are very massive, that on the south-east side being still seven feet thick, and there are indications in many places of secret passages and chambers. The mansion was at one time surrounded by a second wall, the intervening space being employed to protect sheep and cattle from Border forays. Beyond the outer wall was a wet moat fed by the river Garron." It cannot indeed be said that Kentchurch, the modern castellated seat of the representative of the younger branch of the Scudamores, retains a like antiquity, for in 1824 a new building took the place of the old, which had some characteristics in common with Ludford and Treago. Still it preserves one or two old features—notably the Tower, where John-a-Kent, or Owen Glyndwr, was wont to conceal himself, one of his daughters having married a Scudamore, while the other gave her hand to a Monington. Near Presteign, and close upon the Radnorshire border, is Knill Court, the residence of the Knills, who were probably called after it, at least as far back as Edward II.'s time. Their descendant, who entered his pedigree at the visitation of 1569, was the father of Barbara Knill, who married John Walsham, and whose descendant in the female line is the present Sir J. J. Garbett Walsham. Although it must not be supposed

* *The Mansions and Manors of Herefordshire.* By C. J. Robinson, M.A., Vicar of Norton Canon. London: Longmans & Co. Hereford: Hull. 1872.

that the present mansion is ancient, having in fact been thoroughly restored within the last few years, yet, as may be learnt by a comparison of it with the drawing of the old house, which was Edwardian, with additions of about 1561, it is one of the very rare instances where restoration has not involved the disappearance of any of the old features. The court, the church, and the valley, once seen, are not easily forgotten. Some parts of Croft Castle date back to the fourteenth century, and so does the ancient hall of Brinsop Court, which has a good timber roof. A moat round the court, which is now a farmhouse, is the only other vestige of its antiquity. In connexion with the Danseys or Daunteseys, to whom Brinsop belonged from the fifteenth century till fifty years ago, Mr. Robinson has made a curious discovery by the aid of a flat stone in the neighbouring churchyard—namely, that one of them, the son of the cavalier Roger Dansey, married (perhaps while on foreign service) the Lady Douglas Dudley, granddaughter of Robert Dudley, Elizabeth's Earl of Leicester. The date of this marriage must have been before 1643, and it is a contribution towards the history of the favourite's progeny. In the pedigree of the Danseys, the first John Dansey is given as of Herefordshire and Wiltshire. We believe that a slab in the chancel at Elton, near Wigmore, traces the name Dansey to Dauntsey near Chippenham. So in Herefordshire the Burleys, Bodenhams, and Moningtons get their names from their respective parishes. Bridge Solers preserves the names of the blended lines of "de Brugge" and Solers; and Lenthall Starkes is curious as illustrating both processes. It gave its first name probably to the distinguished family which some time held Wigmore and Hampton Court. It took its second name from an ancient mesne lord, Starkes or Starker.

With the old houses the old names in many instances have perished out of the county. The Moningtons, Audleys, Aubreys, Garnons, Gomonds, Hackluyts, Lochards, Pyes, Rodds, and others are extinct. One or two of them succumbed to the demands on their loyalty in the Civil War: others are indirectly represented in other counties. The rest are totally eclipsed, unless perchance there linger in some out-of-the-way village the humble namesake of a once proud lord of the manor. On the other hand, some families seem to possess amazing vitality. From 1085 until now there has been a long succession of Crofts, who have mingled their blood with the best in the county, as a glance at the pedigree will show. Their ancestral castle was sold in 1746, but the present baronet represents his native county, *more majorum*. The Lingens, too, are not all gone, though the old demesnes which gave them their name know them no more. The Clynors—as old, antiquaries say, as the Roman mines on the forest side of the Wye—have kept their patrimony and added to it; and the Scudamores of Kentchurch, though not so old as these last, stand almost alone in the county as proprietors of the same soil which their fathers held five centuries ago.

With his other matter Mr. Robinson blends happily biographical sketches and opportune gossip and folklore. The accounts of Serjeant Hoskyns, Viscount Scudamore, Thomas Blount, and of that time-serving Jack-on-both-sides, Colonel Birch, leave nothing to be desired. Of the last he tells us that, having enriched himself with the spoils of war as a zealous Cromwellian, "these he contrived to retain when the tide of affairs changed, for with rare foresight he took part in the negotiations for the return of Charles II., and, consistently inconsistent, ended in supporting the Prince of Orange." It is due to Herefordshire consistency to note that this imitator of the Vicar of Bray's tactics was a "packhorse driver" from Lancashire. Of the romance of county history our author has been more sparing in his Mansions than in his Castles, though under the head of Wellington he tells the tragedy of the two sons of Sir Edward Goodeve, the owner of Burhope, in that parish. "The elder inherited Burhope, but having no children, and being on bad terms with his brother, threatened to disinherit him in favour of his nephew, John Foote, of Truro. To prevent the execution of this threat, Captain Samuel Goodeve caused his brother to be kidnapped at Bristol, and then to be strangled by two sailors on board the man-of-war which he commanded. The murder took place 17th January, 1741, and on the 15th of April following the fratricide was executed at Bristol."

More than one good epitaph is rescued from the oblivion of old walls in these pages. Pedigrees must be awkward things to handle, yet, as far as our knowledge serves, Mr. Robinson has dealt with those given in his book without fear or favour. The only slip we have noticed is where through inadvertence in one of them he has made the last heiress of an old name and estate marry her nephew (see p. 8). There are undoubtedly minor inaccuracies as to the precise succession of buyers and sellers of estates in divers parishes; and probably others besides ourselves will detect a few of these in the accounts of the districts in which they are chiefly interested; but these detract little or nothing from the value of the work. As a matter of taste we differ from the author in his estimate of the conservatism of the first Viscount Bateman, in introducing the ruins of the old church of Shobdon into his park to enhance its beauty. It was a twelfth-century church with richly sculptured pillars and arches; and as it was pulled down in the last century, and the first Viscount came into possession in 1725, we suspect that the restoration was only an after-thought when the old structure had been razed to the ground, and a modern structure of no architectural merit, but accommodated with roomy pews and luxurious cushions, had taken its place. With these slight reservations, we tender our thanks to Mr. Robinson for his valuable and entertaining book on county history.

CALENDAR OF THE CLARENDON STATE PAPERS.*

THE great bulk of the State Papers calendared in this volume relate to the reign of Charles I., the majority of them belonging to the last few years of the reign. They are the materials from which Lord Clarendon compiled his celebrated History. The whole number of papers is about three thousand, and they have found their last resting-place at the Bodleian Library at different times—part having been purchased, part presented, and part bequeathed. Many of them have been printed in the three handsome folio volumes published at Oxford in 1786, and entitled *Clarendon State Papers*. There are amongst them three hundred copies of letters of the early years of Elizabeth's reign, which, as the writer of the preface truly observes, are of considerable interest, relating as they do to the mercantile and religious affairs of the kingdom. Considering that some of these papers are copies of letters addressed by Elizabeth to foreign princes, it is somewhat surprising how many of them do not appear in the corresponding volumes of Mr. Stevenson's Calendar of Foreign Papers of that reign. The great majority of them do indeed appear there, especially those of the first year, during which period Mr. Stevenson incorporated with the State Papers in the Record Office those which are to be found in the Cottonian, the Lansdowne, and other collections. We have before now (see *Saturday Review* for March 3, 1866) complained of the restriction which was imposed on Mr. Stevenson when he had reached the middle of his second volume. It seemed to us unreasonable to leave out of a Calendar of State Papers about half the number of documents known to exist in this country which are entitled to that name. All historians know of the valuable collections of papers belonging to the reign which may be found in public libraries, though perhaps few are acquainted with those which are here calendared as Addenda, and occupy a separate volume of the Clarendon Papers. They are headed by the following account:—

> The following papers, Nos. 1—326, form the contents of one volume of official transcripts of letters on foreign affairs during the early part of the reign of Queen Elizabeth.

They are only copies, and of course therefore are of no value to any one who can see the originals; and the question naturally arises as to whether the originals exist, and where they are. And here we think the editors have fallen short of what might have been expected of them. There is no attempt made either to supply this information or to explain where any of the documents have appeared in print. The editors observe that they should be read in conjunction with the Foreign Series of State Papers edited by Mr. Stevenson for the Master of the Rolls. Nothing would have been easier than to add a note to such papers as do not appear calendared in Mr. Stevenson's volumes. As regards the first volume and the first part of the second volume of that work, such notice would have gone a good way towards proving that the originals do not exist at all, though unfortunately the same argument would not hold good with regard to State Papers of a later date than 1559. It is obvious to remark that, if the original has disappeared, the value of a copy such as we find in this volume is considerably enhanced. We have compared the two publications as regards the first two years of the reign, and observe that nearly all of the State Papers calendared here appear in Mr. Stevenson's work, and, we may add, much more fully epitomized than in the volume which we are reviewing. The very first page, however, enables us from the copy to correct a wrong date given by Mr. Stevenson, possibly by a mistake of copying from the original. He assigns October 18 as the date of Albert Duke of Prussia's letter to Mary, which was acknowledged after her sister's death by Elizabeth, on December 28. The date November 13, as given here, is no doubt the correct one. But we have a graver fault to find with the editors in that they have made no attempt to supply a date where it has been inadvertently omitted by the writer, or forgotten by the transcriber of the letter. The second page of these Addenda affords an instance in point. The letters Nos. 11 and 12 are placed between April 25 and June 4, without any other note than the marginal one—"No date." They appear in Mr. Stevenson's volume with the conjectural date "[April 15]". In the very next entry we have the startling intelligence that the Queen, writing to Philip of Spain, acknowledges the receipt of "his letter of May 8, informing her that the Bishop of Aquila is to succeed to the Crown of Feria, speaking highly of the latter." Of course this would mislead no one who is conversant with the history of the period, but if the editors have represented the scribe correctly, they were at least bound to explain what he meant, and not leave the unlearned to search out the meaning of the expression "Crown of Feria," which is of course nothing but a wrong transcript or an error of press (which, we cannot determine) for "the Count of Feria." This letter, again, is without date, but has the probable date of "[May 17]" tentatively assigned to it by Mr. Stevenson. These are specimens of the small amount of trouble bestowed upon these papers. After January 11, 1560,

* *Calendar of the Clarendon State Papers preserved in the Bodleian Library*. Vol. I. to January 1649. Edited by the Rev. O. Ogle, M.A., and W. H. Bliss, B.C.L., under the Direction of the Rev. H. O. Coxe, M.A., Bodley's Librarian. Oxford: at the Clarendon Press. 1872

there is a long series of letters without any break, all copies, the originals of many of which we know nothing about. They are probably in existence, and will perhaps be found some day. They are not of much importance, with the exception of the first two—the one to the Archduke Charles, the other to his father, the Emperor Ferdinand, both of them containing a refusal to entertain the offer of marriage which appears to have been received about the end of the year 1559. The latter is among the Royal MSS. in the British Museum.

The chief interest of the letters of the earlier part of the year centres in religious and educational matters. It is curious to see how persistently Elizabeth says she will carry out the true worship of God after the model of the Augsburg Confession; and in one of these letters to Albert Duke of Prussia, July 2, 1559, she informs him that at his request, as well as for Barlow's own merit, she had promoted that scoundrel to the see of Chichester. And here again we observe this is not a strictly accurate description of what the Queen says. She notices the praise bestowed by Albert Duke of Prussia on William Barlow, and states the fact that she has promoted him to Chichester. She may have wanted the Duke to believe that his recommendation had value with her; but she does not venture on the statement, which would have been a mere falsehood, that the Duke's opinion had anything whatever to do with the appointment. Afterwards, in another letter to Augustus Duke of Saxony, she declares that she will purge religion in her kingdom in spite of the Devil himself. It is not till the summer that the proposals for marriage appear to come in pretty thickly. To the King of Sweden she avows that God has filled her heart with the joys of celibacy. To the Archduke she says she has no inclination to matrimony. There are, however, but few letters referring to the subject in comparison with the number to be found in the Record Office, the next being about the middle of 1561, when she declines, with some vehemence, the renewed proposals of marriage from Eric, who had lately succeeded his father Gustavus on the throne of Sweden; and the last two, bearing date respectively December 14, 1561, and March 27, 1562, in the first of which she begs Eric to cease from taking any further steps in these negociations, and in the last declines again to enter upon the subject at all. The remainder of her letters to the King of Sweden do not allude to the subject, which had been dropped soon afterwards by mutual consent. We have no more to say of this volume, which is calendared apart from the others in the Addenda, except that from the end of the first year of the Queen's reign we are being perpetually reminded by the papers which appear here, and do not appear in the volumes issued in the series of the Master of the Rolls, what an immense loss we have sustained by the restriction placed on Mr. Stevenson and his successor, Mr. Crosby, as to the papers they are allowed to calendar. All this period will have to be gone over again before we shall be in possession of the information which English libraries are able to supply us with regard to the history of this reign.

These Addenda are concluded with the insertion of thirty more articles, which range from 1586 to 1648; but whether they occupy a separate volume, or have been accidentally omitted by the editors and afterwards added, does not appear. The last must contain curious matter. It is calendared as "*State Colors and Complections*, in which are reasons against the proceedings to try the King," signed John Clayton, with a note as follows:—"This I delivered to Ireton about a fortnight before the King's trial."

We have noticed the Addenda first, for they are entitled to this precedence owing to their priority in point of time, nearly all of them having reference to Elizabeth's reign. That they are so briefly epitomized is no great loss, as Mr. Stevenson's Calendar has done this office so abundantly as regards most of them, and the few that are not in that Calendar are of minor importance.

As regards the papers calendared in the body of the work, they are nearly all of the reign of Charles I., with the exception of a few letters of no importance which belong to the reign of Elizabeth, and a few of the reign of James I. Among these latter are some interesting papers relating to the projected marriage of the prince with the Infanta of Spain, and "A discourse written by the Earl of Devonshire in defence of his marriage." This refers to the celebrated marriage of the Earl to Lady Penelope Devereux, the divorced wife of the Earl of Essex, which forms so conspicuous a blot on the reputation of Archbishop Laud. From the year 1621 forwards, many of the documents have been printed in the *Collection of Clarendon State Papers*, and all these are duly entered as printed in that publication, as well as some others which have appeared elsewhere; but here again there is indication of carelessness on the part of the editors, who have not in all cases noted the places where these documents may be seen in print. We may instance No. 1132, of the publication of which in the sixth volume of the edition of Laud's works no notice whatever has been taken, though here again we have another complaint to allege. There is a wholly unnecessary note explaining some of the contents of this letter, an incongruity which is strikingly contrasted with the very meagre analyses which appear of most of the documents.

The first thousand of these are for the most part in the Clarendon Papers, so we need say nothing of them, as they have long been accessible to all readers of history. After the date of 1637 A.D. there is a larger number of papers which have never appeared in print. There are, however, few that we can notice, for the epitome of them is so brief as only to be just sufficient to identify them, and all the more important documents may be seen in the *Clarendon State Papers*. Nevertheless the two editors have not been absolutely consistent as regards this point, some of the letters having been represented more fully, and one appearing at full length, being a letter from Henrietta Maria to the Prince of Wales. It is no doubt a curious specimen, showing how little knowledge of English spelling a French Princess who had lived nearly twenty years in England possessed. But as the document had already been published in the *Clarendon State Papers*, there was no reason for reproducing it at length in a Calendar of State Papers. Several of the papers of the year 1646 have been printed in the collected works of King Charles. But this information, instead of being appended, as it ought to have been, to each of such letters, is conveyed in a note at the foot of page 323, where it is vaguely said, "The above controversy is printed in King Charles's works." The letters referred to form the well-known correspondence which took place between the King and Alexander Henderson, but the note itself does not explain how many, or whether all, of the letters that occupy the three or four preceding pages are alluded to. We need not make any further mention of them, but we may observe that neither the King nor the Scottish divine appear to have had the slightest perception that neither of them could ever satisfy the other on the knotty point of episcopacy, so long as the ultimate reference was to the letter of Scripture, which was sure to be interpreted by a Presbyterian in favour of a presbytery, and by an Episcopalian as equally conclusive in favour of episcopacy.

There is one paper, however, which has an interest of its own, independently of its never having been printed. It belongs to the month of May 1646, and consists of forty-one pages, chiefly treating of military affairs. It is headed:—"Brief memorials of the unfortunate successe of his Majestie's army and affairs in the yeare 1645, being only such as the laps of tyme, want of papers and the sadnesse of the subject have suffered me to retoyne in memory." It is summed up in the following melancholy terms:—

> To conclude this sadd discourse, which is an acumulation of misfortunes, it is observable that if from May 1645 unto that time 1646, his Majestie had beene successefull in any one of his undertakings, or had donne the contrary to what hee did, hee had beene eyther Master of all, or at least had kept himself on foote a much longer time.

No. 2934 contains the papers which passed in the Treaty of the Isle of Wight, at length, down to November 27, 1648, and the few documents of later date than this that are calendared in this volume take us down to the execution of Charles I.

Though we have found fault with some part of the execution of this volume, some allowance must be made for its having had two editors in succession, and for the difficulty of one editor's following exactly in the footsteps of his predecessor; but, taken as a whole, the Calendar has been carefully edited, and has an admirable index.

GOLDEN MEMORIES.*

THE chief characteristic of this novel is exaggeration. Everything is in mental and moral superlatives, and all the butterflies implicated are broken on wheels of the first magnitude. "Effie Leigh," who tells her own story, is a young woman of what old-fashioned people would call an ill-regulated mind. She is as wearisome, too, as such young women usually are, with her pettishness and her pride, her self-consciousness and easily wounded susceptibilities, her vanity and childish tempers, her extravagance in pleasure and in pain, in love and in dislike. Craving for excitement and distinction, at seventeen years of age she has the happy chance presented to her of playing in a public concert at which her father is one of the performers; when she receives a bouquet of lovely roses, and, having been left alone for a few minutes, is addressed by a tall, handsome young man, with "speaking black eyes." Those eyes, by the way, have the faculty of changing their colour, for a little later we find them catalogued as dark brown. She makes a decided success both by her beauty and her music; but even in the supreme moment of her triumph her self-love is such that she can be "chilled" by hearing herself described as with "pink cheeks and blue eyes," and can moralize on the "sting in the wound" of her "beauty" being held to "consist merely of pretty childish colouring." Soon after this she goes to a private party to play, where she meets again her "hero-knight" Gerard Miles, who bites his long moustache, and makes sudden and secret love to her in a way which no really pure-minded girl would have allowed. Of course she falls desperately in love with him. What girl of her stamp could resist the fascinations of a tall and handsome young man who speaks slightingly of his host's daughters and his own cousins, to one of whom he is engaged; who asks her what is her name, and when he hears it is Euphemia, exclaims "with a slight start," "Good heavens! what a mouthful for such a mite!" and then, on her *naïve* invitation to him to call her "Effie," takes her hands, and says "Sweet Effie," by way of improving the occasion? If this kind of thing is really true of our modest English girls, then "Miss Lucy of Bayswater" was no dream of a spiteful fancy, and Azamat Batuk's caustic portrait was only too much like life. For ourselves we do not accept such a person as Effie Leigh as possible among the ranks of the good girls. There may be, and unfortunately there are, too many who, like her, have nothing of the reticence of modesty, nothing of the innate wisdom of purity—for we reject entirely the theory

---

* *Golden Memories.* A Novel, by Effie Leigh. 2 vols. London: Samuel Tinsley. 1873.

of Effie's overwhelming innocence, or that she did not know the accidence of maidenly reserve because she was too pure to understand evil; but we do not hold them up as creatures to be praised and admired; and when we paint them, we give them in their true colours. It is this glozing over evil which does the moral sense of the young so much harm. The false affectation of innocence by which certain girls are represented as doing outrageous things with quite seraphic intentions is a real injury to youthful readers, impressionable and imitative as youth generally is; and "pretty Fanny's way," received with indulgence because pretty Fanny does not choose to know right from wrong, but poses herself as an *ingénue* all roses and lilies, is likely to lead those out of the straight way who think it a fine thing to get pleasure by wrongdoing, and to win immunity from deserved blame by pretence of not knowing it was wrong. From this point of view *Golden Memories* is as mischievous as such a weak bit of work can be; and "Effie Leigh" would have been all the better for passing under some of the wholesome discipline in use among our grandmothers.

The picture of the scrambling, expensive, hospitable artist's family, whereof Effie is the eldest daughter and of course the beauty and the pet, is good in its way, but confused and excessive. The canvas is overcrowded; and as the younger branches of the family count for very little in the subsequent history—indeed are never more than mere names and clothes-horses—the author might have spared herself the trouble of creating them. Her intention, however, was good; and her sketch of the twins, Idalia and Alice, spending all their time at the Kensington Museum, looking at everything as food for crayons, valuing all they see just in proportion to its artistic worth, and getting sallow over their paints, is natural enough. But they are too young; as indeed is Effie; the author evidently belonging to the school which likes its fruit green. Mr. Leigh is a music-master who has married one of his well-born lady pupils, and is discarded by her proud family in consequence. They have seven children—"seven gifts," as they are called—whom he educates according to their respective inclinations, and brings up in the wildest domestic freedom. His wife is a gentle and devoted woman, who works well with her needle, and has no force of character, but enough sweetness to remain the tender lover throughout; and their life may be summed up in music, painting, debts, and duns, open house kept for all friends, no regularity in anything, any amount of money earned running out like water through a sieve, and the idle ones of the family suffered to be idle as much as they would, and to live on those who would work. All this is well schemed. But we feel a certain rawness in the combinations. Too many unlikenesses lead to a sense of discord; and when we see figs and thistles on the same stem we are more inclined to question than admire. The coarseness of the boys goes well enough with the scrambling of that unthrifty life; but the ethereality of the heroine, her "passionate soul" and poetic temperament, would, we fear, have been sadly jarred in such an atmosphere. And surely the children of professional men, who enter on professional life themselves, do so with the ballast of familiarity to steady the romantic aspirations which belong rather to amateur dreamers than to actual workers. They are so much accustomed to the "public" as their possible patron and harvest-field that, when the time comes for them to face the footlights on their own account, in spite of the faintings and failings incident to youth and novelty, the prosaic end in view lifts them out of such fluid romanticism as Effie ascribes to herself. The one all-important thing they think of is to play their piece well, whatever it may be; not to "pour out their soul," as we may suppose true of an improvisatore in a fine frenzy. Inspiration coming on the accurate performance of a nocturne or a sonata which has necessarily been played and practised till every bar is as familiar as the alphabet, and every expression as precisely determined as an actor's points, is not, we imagine, the thing most likely to mark the rendering of a music-master's daughter of seventeen, playing for the first time in public. She might be frightened, but she would not have been ecstatic.

Following immediately on this first outpour of her soul on a platform comes the episode of Gerard Miles, with the sudden familiarity and secret love-making we have indicated; and then Effie's "Golden Memories" get a little tarnished. For she soon after discovers that her hero-knight, as she calls him, has been all the while engaged to his freckled cousin Jane, and that he had been playing traitor as well as lover to both girls at once. This discovery, following on a highly coloured scene where she and Gerard act together in a tableau, she as the Sleeping Beauty, and he as the Prince, and where "passionate kisses" are given and returned in the full light of the gas if not of the sun, of course ends in an illness. This style of heroine always does fall ill when she is disappointed in love. In real life she would probably suffer from a disagreeable form of indigestion, and her family in their turn would suffer from her disagreeable temper. She would cry easily and be cross over trifles; but we question if she would go to bed and stay there in a kind of trance for six days, and then get up again and creep downstairs like a ghost, to smile on a denied lover on the eve of quitting England. For all the lovers flock to Effie—Vincent, Mark Richmond, Bernard Gresham, besides Gerard Miles—all are in love with her, while the poor twins have no one. And in this multiplication of lovers the authoress has made another mistake. Vincent, Mark Richmond, and Bernard Gresham, each in his own way represents a nobler kind of thing than Gerard. He was beauty, fascination, ignobility, and passion; they are all true and pure and good and loyal; one rather more personable than another, one perhaps a little more religious than another, but all built on the heroic plan of unselfishness and chivalrous devotion; and all far too worthy for a vain little girl to trifle with. The author should have been content with one of them. And that one should have been Vincent. It was due to his early love and long time-serving. Or, at all events, if she must have had two, she ought not to have gone further than Mark. It was absolute cruelty to create a triplet of nice young men only to make two out of the three unhappy because a fourth has been a scoundrel.

What shall we say of Effie when she meets Gerard Miles again, as a married man now, and indulges in the dangerous game of confidences in the conservatory, of pseudo-maternal attentions to his children, and emotional references to the fond past? Though warned of her lingering passion by her own face, "from which every morsel of colour flies" when she first sees him, by her "turning hot and cold" at his approach, and by the other stereotyped physical signs of the passion called love, she yet draws near the flame, plays about it as long as she dares, and all but singes herself severely. Had she been a good girl she would have escaped from such a time of temptation; but she stayed and paltered with it; and the odd part of the matter is, that the author does not seem to think she has done anything doubtful in her representation. The fairy scene where Effie refuses to act again the perilous part of the Sleeping Beauty, and Gerard says, in a "low rigid voice," "I swear I will never kiss another Princess," is a rich piece of mock heroics and silly affectation. It leads, however, to nothing after all; for Effie acts as Undine, and the "adoring lover" is Gerard; and there is an immense amount of sentimentality and love-making more or less disguised all through, with no thought of the feelings which Jane with the freckles may be supposed to entertain. All this part of the book is offensive; and if it were not that the "passion" of it is at times so intensely ludicrous, and so oddly mixed up with familiar phrases and bad grammar, that it is more likely to make the reader laugh than blush, we should hold it as extremely pernicious. So indeed it might prove to the very young and very silly; but we trust that mothers and guardians will keep out of the way of such a book which contains a scene of passionate love-making by a married man, with the half confession of the woman that she loves him still. The characteristic conclusion to this scene is that Effie bolts herself in her own room, and then flings herself on the bed, "burying her face in the pillows to stifle the tearless sobs that were shaking her whole frame." We said "characteristic," because there is scarcely a chapter which has not sobs, or "hot tears," from Effie as her contribution to the general liveliness of the story. She seems to imagine that a pretty girl can cry and look none the worse for it, and that crying "like a baby" is no disgrace to a full-grown woman of good understanding. The book is, however, so silly all through that perhaps Effie's author is right in supposing that a little more absurdity here and there is of no great consequence when the whole is so deeply saturated. After we have been made acquainted with finery and vanity, want of self-control, temper, excess, and exaggerated emotions all in their very best clothes, it really does not signify if we have one or two more inanities to make up the full account. *Golden Memories* is high-flown, sentimental, and destitute of true delicacy, while pretending to the most ridiculous refinement. It is a silly example of a bad school, at once repulsive and sickly.

AMERICAN LITERATURE.

MR. DONNELL'S *Chronological and Statistical History of Cotton*[*] is a dull book on a subject whose general interest depends entirely on its mode of treatment. The story of cotton, of its earliest introduction to Europe, of its original manufacture in the East, of the gradual transfer of the main production from India to America and of the manufacture from India to Lancashire; of the gradual growth, on the one hand, of the factory system of England, which began with a few pieces woven in handlooms here and there, and in the course of a century became perhaps the most important industry of the United Kingdom; and, on the other hand, of the plantation system of the Southern States, which began about the middle of the last century on so small a scale that the Liverpool Custom House refused to believe that a score of "bags" could be grown in the whole of the American colonies, and insisted on seizing them as of foreign production fraudulently entered as colonial, and in less than a hundred years became the staple growth of the Gulf States, and the pivot of their social system, their political institutions, and their commercial interests—such a story, told in a lively and connected style, with the more important figures inserted in their proper places, and a clear account of the mechanical inventions which exercised so signal an influence over both the crop and the manufacture, would be one of the most interesting books ever published on a commercial or industrial subject. But a mere chronological list of the chief steps in that wonderful progress, with extensive tables loaded with technical *details*, and bare notices of the great inventors *and inventions* that from time to time gave a new impulse and new possibilities to the

[*] *Chronological and Statistical History of Cotton.* By E. J. Donnell. Published by the Author. New York: Sutton & Co. London: Trübner & Co. 1872.

infant industry, can at the most only be a useful book of reference. It does not even contain the full materials for such a history as we have supposed; in which a principal ingredient would be the description of such inventions as those of Watt, Arkwright, and Whitney, and the manner in which they affected the progress of the cotton trade. In short, though Mr. Donnell's book contains many most curious and interesting facts, and supplies a large part of the matter which a clever writer who knows nothing about cotton might work up into a readable article, it is a book which only such a writer will be likely to read through, and in which, for the reason we have mentioned, even he will be disappointed. It indicates many interesting points, such as the existence of a trade in muslins between India and the Levant in the days of the Roman Empire, the greatness and decadence of the Indian manufacture, and the immense consumption of cotton in local and domestic manufactures by the vast population of China; but it does not show where the facts are to be found. It has little to tell us of the incalculable political influence of the impulse given to the English factories and the American plantations by the invention of the spinning-jenny, the power-loom, and the saw-gin; and it is encumbered with a mass of price lists and the like commercial details which, however great their importance at the time, can hardly be said to have a true historical interest. It is a book useful enough for certain purposes, but even for these incomplete; a curious historical fragment rather than a history.

We can make no such complaint of Mr. F. Hudson's *Journalism in the United States.** It is prolix, overfull of small personal details and trivial incidents, gossipy, often frivolous and often tedious. But the reader is at liberty to skip much that the writer could hardly have omitted respecting the past history of a multitude of local journals, some still living in insignificance, some which have long since died, and to confine his attention to those chapters which are either amusing or interesting, which either relate the adventures of audacious editors and the laughable incidents of newspaper rivalry, or throw light on the character and management of the existing American press. Imbedded in a great mass of necessary dulness, are to be found a multitude of very amusing anecdotes of men and journals; for instance, the races run for European information between the *New York Herald* in its brightest days and its more respectable and scrupulous, but slower and less ingenious, rivals, when pilot-boats raced the Cunard steamers across the Atlantic, and their owners were mortified by receiving the first news of the departure of their express from Cork in a civil message from the victorious and indefatigable Bennett. The chapters which deal with the New York press sufficiently explain the wonderful success achieved by that notorious personage, and show that, like most real success, it was in a sense deserved. It was not by the low scurrility, the impertinent intrusiveness, the vulgarity, and the utter want of political principle and professional decency ascribed to the *Herald* that it won its place as the most widely circulated of American journals. Mr. Bennett may have been a bad man; we incline to think that he was rather a man of average personal character who, for some reason or other, had no scruples in professional matters; but he was very clever, very courageous, and very industrious, and he gave all his ingenuity, daring, and painstaking to make the *Herald* come up to his ideal of a first-rate newspaper. It beat its rivals by the organization, energy, and expenditure which enabled it to give earlier, fuller, and more various news than any of them, and compelled those to read it who were honestly ashamed of it. If no man had a lower idea of the political and moral character of a newspaper than Mr. Bennett, none of his contemporaries so thoroughly understood or so efficiently performed the merely professional functions of an editor and manager. These chapters contain also some lively sketches of the principal editors of the generation which is now passing away—of Bennett himself, Webb, Raymond, and Greeley; of the personal and professional perils of editorial life in New York; of the relations between the press and the great political parties; and of the struggles and vicissitudes through which the leading journals of to-day established their position. The author gives us moreover some valuable information respecting the quality of the American press, the conditions of its existence, the means by which newspapers sold at one cent each, and wholesale at seventy cents a hundred, contrive not only to keep themselves afloat, but to make large profits—particularly in such passages as the extract which gives in full the evidence of Mr. Greeley before a Committee of the British House of Commons on the Newspaper Stamp and Advertisement Duties. There is much in the book that is not agreeable to English notions of literary decorum, much invasion of what we should consider merely private life, and some disgraceful incidents told in a style which suggests the idea that the writer has been demoralized by the tone of American journalism, and lowers himself to the level of his subject: but, on the whole, the volume is at once instructive and readable, allowing, as we have said, for a considerable amount of judicious skipping.

Mr. Kenly's "Memoirs of a Volunteer in the War with Mexico"† is a plain story of camps and campaigns by a soldier who had no particular opportunity of distinction in the field, and has no peculiar gift of narrative writing; but who can tell in simple language what he saw, did, suffered, and felt, and can give a passing interest even to a theme so utterly bygone as the Mexican war. There are wars, of course, whose interest is perennial; and we conceive that the story of the great Confederate struggle will be read and canvassed by Mr. Kenly's great-grandchildren with as much interest as we feel in the story of the Peninsula and of Waterloo. But the war with Mexico was not of this class. In spite of occasional feats of heroic daring, of one or two instances of severe loss, well nigh becoming actual disaster, on the American side, and of the disparity of numbers which gave occasion for no ordinary display of military talent on the part of such chiefs as General Scott and General Taylor, and such subordinates as Lee, the utter inequality of the contending forces was such as to deprive the war of that kind of glory which attaches to more equal struggles, and ensures to their history the attention of future generations; nor was it of a kind to afford important military lessons. It was rather the inherent superiority of the English race over the mongrel races of Mexico, half Aztec and hardly one-quarter Spanish, than any strategy or any tactical arrangements, that rendered every encounter an assured victory for the invaders. The interest that belongs to Mr. Kenly's narrative lies chiefly in the lively idea it gives of the individual share of a single soldier in battles fought on so small a scale that each battalion had really a part of its own to play, and in the frankness with which the officer of Volunteers relates his difficulties in the camp and on the march, and now and then his disasters in the field. The story of Monterey—of which Americans, especially Southerners, are so proud—is a very remarkable illustration both of the style of the author and of the kind of fighting in which he was engaged; the glory, if any, of the actual attempt to storm, being rather of the kind which belongs to the hopeless charge at Balaclava than of that which attaches to desperate adventures guided by intelligent courage to a hopeful end. The whole incident affords an example of the real confusion and local disorder which underlie many of the movements which seem so smooth and regular when related, as historians relate them, from the point of view of the general who ordered and not of the soldiers who participated in them.

Mr. Richardson, Assistant-Secretary of the United States Treasury, has published for the information of bankers, brokers, and the public generally a detailed account of the various stocks which represent the debt of the United States*, the laws by which they were authorised, the legal character given to them by the sanction of Congress, the action of the Government, and the decisions of the Judiciary; the nature of the security they afford for payment in coin and for exemption from taxation, the terms and periods of their redemption, and, in short, all that it concerns a dealer or an investor to know. The volume—not a thick one—also contains a manual of the Banking Laws of the United States, and is, we should think, likely to be serviceable to men whose connexion with the Stock Exchange obliges them to make acquaintance with Federal securities.

In a treatise on the Relation of the Government to the Telegraph†, Mr. Wells, relying much on the statements of Mr. Orton, the President of the chief Telegraph Company of America, the Western Union, argues at great length against two several schemes for the transfer of the telegraphs to the Post Office. His arguments, however, are all or nearly all of a kind peculiarly national, depending upon circumstances in which America differs from England, and therefore are not applicable to our own case. But for this very reason they have a certain political interest, as throwing light on the way in which the American system works, especially since the Civil War has so vastly enhanced the powers of the Federal Government. Mr. Wells objects to transfer the telegraphs to the Post Office, because the Post Office does not pay, and the telegraphs under its management would impose new burdens on the taxpayers of the country; and he shows incidentally that England is almost the only country in which an extensive system of Government telegraphs does pay. He objects to trusting Government with the vast increase of patronage and the acquaintance with people's private affairs which the possession of the telegraphs would involve, and insists as on a notorious fact that that confidence in the honesty and privacy of the telegraph which is accorded to a private company would be refused to a Government department. Incidentally he brings out the one strong argument for a change—that the telegraphic system of the States is rapidly becoming a monopoly in the hands of the Company which already controls more than two-thirds of the whole mileage.

Dr. W. C. Fowler reprints from local periodicals some interesting observations on the Local Law of Massachusetts and Connecticut‡, the object of which is to show, that from the very

first foundation of those colonies they have, at every risk and in spite of all authority, practically asserted the supremacy of their local laws over all other law, Royal or Federal, within their boundaries. He shows that at a time when the Church was supreme at home Massachusetts dared to persecute and expel Episcopalians; that she refused obedience to positive injunctions from the later Stuarts to check the maltreatment of the Quakers; and that she legally incurred the forfeiture of her charters by systematic encroachment on the authority of the Crown and Parliament, and was so conscious of this as to allow judgment to go by default. Under the Constitution of 1787 he traces the perseverance of the two States in a similar course; the limitations on the Federal power originally imposed at their instance; the interpretation placed on the Constitution; the all but treason of the New England States in the war of 1812; the repeated and positive assertion of a right to secede at pleasure; and the systematic violation both of the Constitution and of Congressional law by the "Personal Liberty Laws" of Massachusetts. He proves, in a word, beyond all question (whether he meant to do so or not), that when Massachusetts and Connecticut first raised the cry for war against the South, they were attacking her for imitating their own example—for repudiating a compact which they had constantly, deliberately, and wilfully violated at her expense, and asserting that sovereign right to treat the Union as a treaty terminable at the pleasure of the Powers which made it, which had been maintained by themselves from 1787 down to 1861.

In the *Wonders of the Yellowstone* * Mr. James Richardson has given to the public, in a very small compass and in plain and intelligible language, though with somewhat too much brevity and too little clearness of description, an account of one of the most marvellous regions in America, or indeed in the world. The district immediately about the Yellowstone Lake, on the southern border of Montana, from which the Yellowstone—deriving its name apparently from the colour of the walls of the great cañon through which lies the earlier part of its course—flows to gain the Missouri almost at its commencement, has been lately appropriated as a national park, in order that no private owners may be at liberty to spoil its natural wonders by turning them to commercial account. The same course has been taken by California with equal reason for the protection of the Yosemite Valley and the mammoth trees. But the Yellowstone district is far less beautiful and much more marvellous than the Yosemite. It is a scene which fire and water seem to have done their utmost to render weird and terrible; a land of vast natural walls, shaped as by the hands of giants, of uncouth forms of stone, of stalactites and mineral incrustations; and, above all, of hundreds and thousands of geysers, hot-springs, natural baths, and mud fountains, to which scarcely any parallel is to be found in the known world. Its actual discovery was only effected in 1870, and it remains very difficult of access, and by no means suitable for the habitation of the invalids who might be attracted by a "watering-place" of such unrivalled magnificence. We hope ere long to have a much fuller and better illustrated description of this wonder of the West. Of the volume before us the most telling chapter is that which relates the adventures of one of the exploring party, who was lost in the wild regions for thirty-seven days, without food, and without either gun or compass, guide or defence. His impressions and feelings seem in some places strange and overwrought; but then the situation was unique, and few men have survived with memory intact to describe sufferings so prolonged and a tension of nerve so terrible.

The Minnesinger of Germany †, by A. E. Kroeger, is an elaborate account of the origin, character, life, and poetry of these earliest forerunners of modern lyrical poetry. Their appearance in a time when learning and literature were in most countries at a very low ebb, and Europe was scarcely emerging from mediæval darkness, the peculiar tone of their verse, the romance of life which mingled with and lent a reality to the romance of their writings, such as has been wanting in general to their lyrical successors, and the high, if eccentric, standard of art which they maintained, as well as the entire difference of style and quality, subject and treatment, which separated them from the minstrels of German epics and English ballads, render them and their history a most instructive and important part of the study of literary antiquity; and no one will be disposed to complain that Mr. Kroeger has in this little volume treated the topic at too great a length. The weakest part of his work is the translation of the Minnesongs—a task of extreme difficulty, in which a far abler writer could only have succeeded by emancipating himself summarily from the restraints under which Mr. Kroeger has placed himself in trying to reproduce in a new age and a foreign language all the metrical and structural peculiarities of men who wrote in the German of the twelfth and thirteenth centuries. To reproduce the movements of men who chose to dance in fetters, but in fetters adapted to their own limbs and the conditions of their language, is almost impossible; and we must not complain if, in order to enable us to realize the rhythm and the laws of the Minnesongs, Mr. Kroeger has sacrificed their sense and spirit, and given us in many cases a painfully barbarous and inharmonious medley which is neither verse nor prose. In a few instances of simpler character and less artificial conditions he has succeeded better, and given a faint notion of the style and spirit as well as of the metre. Altogether, the work is one of true German industry and devotion; great labour has been bestowed to make the best of a difficult subject, and to produce, not a large show of accomplished work, but as complete a performance as possible of the unostentatious task undertaken. In these respects the book presents a signal contrast to the generality of American treatises, which, even more than those of our own second-rate writers, endeavour to display the maximum of product with the minimum of actual labour.

Mr. G. Bryant Woods appears, from the memoir prefixed to the collection of his writings which lies before us *, to have been a young man of considerable promise and yet more considerable fluency. Dying before he was twenty-five, he has left behind him a multitude of essays, articles, and stories, out of which this volume has been compiled; and his friends naturally suppose that if he had lived he would have ranked among the first of his countrymen. Perhaps so; perhaps not. Americans above all others are prone to forget that fable of the lioness and the fox which so vigorously rebukes the boast of writers prolific of multitudinous nothings; and one really superior achievement, however rude and unfinished, giving token of decided power, is a better augury of future success than a vast variety of pieces on none of which has anything like real labour been needed or bestowed. These essays bear evidence of unusual facility and industry; hardly, we think, more than that.

An unpretending little practical treatise of advice to men who wish to acquire the blessing of education † without enjoying the ordinary facilities, under the title *How to Educate Yourself*, seems likely to be of considerable service to those for whom it is intended, though we think it might have gone into more detail, and been of all the greater benefit. It is a little too elaborate in language and too general in treatment for men whose education is yet to be begun.

Mr. Isaac M. Wise addresses to the young Israelites of America, under the title of *Judaism* ‡, a small summary of Jewish tenets and principles, as he interprets them. He belongs apparently to the liberalizing rather than to the strictly orthodox school, and insists on the *rational* aspect of his creed. In strange contrast to this simple and practical little manual are the elaborate *Photographic Views* § in which Dr. Weninger, of the Society of Jesus, draws from each of several thousand natural scenes, incidents, or phrases descriptive of nature, a moral or religious sentiment, contrast, or parallel. Our advice to the reader would be to read three pages at a time, and take them in different parts of the volume. To read through such a series of unconnected fragments, related only by their common character of forced or fanciful analogies, is to lose all chance of appreciating them.

Concord Days ‖ is a volume of rambling discourses about things in general, by Mr. A. B. Alcott, best known to English readers by Lowell's kindly sketch of him in the *Fable for Critics*. For once this "lamb among men" has not "gone to sure death in going to his pen." Mr. Hale's *Christmas Eve and Christmas Day* ¶ is a series of stories, all in so far of a Christmas character that their *dénouement* at least belongs to that season, and some of them are very characteristic. *The Lawrences* ** is one of those fictitious family biographies of which the *Daisy Chain* is perhaps the one bearable example.

The Council of the City of Boston has ordered the publication of a memorial to Mr. Edward Everett, in the shape of a collection of speeches, testimonials, and funeral orations called forth by his death, prefaced by a memoir of the statesman himself.†† Such a volume has its place, no doubt, in public libraries and on the tables of private friends; but can it ever hope to find readers in the proper sense of the word?

Of poetry we have this month a larger supply than usual. We have a resplendent edition of Griswold's "Poets of America" ‡‡, which suggests the remark, What a number and what a bulk in two centuries at most! Can they be all swans?—*A Memo-*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRÆTORIUM," with "Triumph of Christianity," "Christian Martyrs," "Faithful in Ruins," "Neophyte," "Andromeda," &c., at the DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

ELIJAH WALTON'S PAINTINGS.—EXHIBITION, including "A Storm on the Sea" and "A Storm in the Desert," &c., and a Number of new and important Drawings in the Bernese Oberland, NOW OPEN at the Gallery, 4 Westminster Chambers, Victoria Street, from Ten to Six.—Admission, with Catalogue, 1s.

THE TWENTIETH ANNUAL EXHIBITION of PICTURES, the Contributions of Artists of the Continental Schools, at the FRENCH GALLERY, 120 Pall Mall, will OPEN on Monday, March 31.

THE NINTH ANNUAL EXHIBITION of PICTURES, by BRITISH and FOREIGN ARTISTS, is now OPEN for One Month, at J. MCLEAN'S NEW GALLERY, 7 Haymarket.—Admission on Presentation of Address Card.

ART-UNION of LONDON.—Subscription, One Guinea.—Every Subscriber receives an IMPRESSION of a fine PLATE, "Rebekah," engraved by the late W. HOLL, from the Original Picture by F. GOODALL, R.A.; besides a chance of one of the numerous valuable Prizes. Subscription Lists close 31st March instant.

444 West Strand, March 8, 1873. LEWIS POCOCK, EDMD. E. ARTHOBUS } *Hon. Secs.*

ROYAL POLYTECHNIC INSTITUTION, 309 Regent Street, W.—EXPERIMENTAL LECTURES on CHEMISTRY and PHYSICS, by Professor E. V. GARDNER, F.A.S., M.S.A. To commence on Monday, March 31. Fee, Three Guineas each Course.—For Syllabus apply to Professor GARDNER, at the Institution.

SHERBORNE SCHOOL.—The ANNUAL EXAMINATION for SCHOLARSHIPS is fixed for June 24 and 25, 1873. Particulars will be furnished upon application to the HEAD-MASTER, Sherborne, Dorset.

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS, Two, £50; Six, £40; Four, £30. Election, Second week in May.—Apply to the SECRETARY, The College, Cheltenham.

TRINITY COLLEGE, EASTBOURNE.
Master—Rev. JAS. R. WOOD, M.A., Cambridge.
The NEXT TERM commences on May 1.
TWO SCHOLARSHIPS are offered for competition to Boys who are not already Pupils in the College; each is worth £20 a year for Two years to a Boarder.

RADLEY.—ST. PETER'S COLLEGE, near Abingdon.—There will be an Election to TWO ENTRANCE SCHOLARSHIPS of £50 a year each, on Wednesday, May 7.—Apply to the WARDEN.

DOVER COLLEGE.
President—The Right Hon. Earl GRANVILLE, K.G.
Head-Master—The Rev. WM. BELL, M.A., late Scholar of Ch. Coll., Cambridge.
A liberal education by Graduates of the Universities.
Tuition Fees, from Ten to Fifteen Guineas per annum. Board in the Head-Master's House, £40 per annum.
Next Term commences on Thursday, May 1.
Apply to the HEAD-MASTER, or the HONORARY SECRETARY.
WOLLASTON KNOCKER, Esq., Town Clerk.

BRIGHTON COLLEGE.
President—The Earl of CHICHESTER.
Principal—The Rev. C. BIGG, M.A., late Senior Student and Tutor of Ch. Ch. Oxford.
There are special Modern Forms affording every necessary preparation for the Civil Service, Line, and Woolwich Examinations. The School is well endowed with Scholarships and Exhibitions tenable both in the College and at the Universities. Brighton College is perhaps the healthiest Public School in the kingdom.
The whole necessary charges for Boarders are from 80 to 90 Guineas, according to age.
For information apply to the SECRETARY.

TRINITY COLLEGE, Glenalmond, Perth, N.B.
Warden—Rev. R. THORNTON, D.D. Oxon.
A School on the model of the greater Public Schools of England. Terms (including every necessary expense), 80 and 90 Guineas, according to age. There is also a Theological Department, for Candidates for Holy Orders. Particulars may be obtained from THE WARDEN.

HYDE PARK COLLEGE for LADIES, 115 Gloucester Terrace, Hyde Park.
The JUNIOR TERM begins April 1.
The SENIOR TERM April 29.
Prospectuses, containing Names of Professors, Terms, &c., may be had on application to the LADY RESIDENT.

THE LADIES' COLLEGE, Grosvenor Square, SOUTHAMPTON. Founded by the Hampshire Association for Promoting Female Education. *Patrons.* The Bishop of WINCHESTER; Viscount EVERSLEY; Lord NORTHBROOK. *President*—The Right Hon. W. COWPER-TEMPLE, M.P. The SPRING TERM commences May 1. Applications for the Prospectus and for Entries may be addressed to the HONORARY SECRETARY, or to the Lady Principal, Miss DANIELS.

OXFORD DIOCESAN SCHOOL, Cowley, near Oxford.
Visitors.
The Lord Bishop of WINCHESTER.
The Lord Bishop of OXFORD.
Inclusive Terms £42 a year.
A Prospectus and further particulars may be had of the Principal. The next Term begins April 28.

THE ABBEY SCHOOL, Beckenham, Kent.—Careful PREPARATION for the PUBLIC SCHOOLS; age from Eight to Fourteen; number about Forty. Boys above Twelve have each a separate sleeping apartment. Large playground and detached infirmary. Beckenham is Half an hour by rail (London, Chatham, and Dover) from London, seven minutes from Crystal Palace, and on gravel. Boys met, if desired, at any London station. Summer Term begins May 1.—Address, Rev. T. LLOYD PHILLIPS, M.A.

HIGHFIELD SCHOOL, Weston-super-Mare.—Conducted by a Wrangler, assisted by a Graduate in Classical Honours. Terms, 80l. Specially adapted for delicate Boys.—Address, GEORGE HAPPEL, M.A.

HOME in PARIS for INDIAN (or other) CHILDREN.—Two ENGLISH LADIES, residing in Paris, desire to have the charge of Two or Three Young Children. Every care and comfort given, and every healthy advantage for a good EDUCATION, both in French and English, when old enough to be taught. Good references.—For particulars, apply to E. W. POLLARD, Esq., 1 Brompton Square, London, S.W.

THE COMING BUDGET.

ALTHOUGH it is always possible that a Chancellor of the Exchequer may effect a surprise, it is probable that the Budget of Monday next will bear an unpretending character. If the receipts of the past year form, as usual, the basis of the estimates, the total prospective surplus of revenue over ordinary expenditure will approach to the large amount of 5,000,000*l*.; but Mr. LOWE some time since announced that the greater part of the balance would be absorbed by the payment of the *Alabama* damages. Of a million and a half which will remain at his disposal, a portion will probably be applied to the redress of special grievances which have been more or less definitely admitted by the Government. No large sum will be required to provide relief to tavernkeepers from the assessed tax on cooks and waiters; but the claim of Railway Companies to a repeal or modification of the passenger duty would involve, if it were conceded, a considerable amount of revenue. The CHANCELLOR of the EXCHEQUER lately allowed that the London underground railways had established a strong case against a tax from which their competitors who carry passengers in steamboats and omnibuses are either wholly or partially exempt. It will be difficult to draw a distinction between urban and rural railways when the question of taxes on locomotion is once reopened. It is almost impossible that the Government should maintain and enforce the decision of the Board of Inland Revenue, which imposes a heavy and distinctive duty on improved accommodation for third-class passengers. Two or three years ago Mr. LOWE made an attempt to remove the anomaly of a tax upon travellers by proposing to substitute an impost on net receipts which would have been equivalent to an additional Income-tax. The immediate effect of the change would have been to relieve the Southern lines, which depend chiefly on passenger traffic, at the expense of the great systems which are in large measure devoted to the conveyance of goods and minerals; and consequently the most powerful Companies vigorously opposed the readjustment of duties. The proposal illustrated the anomaly of imposing a special tax on a kind of income which is less secure than interest or rent. The passenger tax either operates as a discouragement to locomotion, or it amounts to an undue burden on the profits of one particular kind of enterprise. A few years ago Mr. LOWE abolished the duty on post-horses and hired carriages, which are now merely subject to the ordinary rate of assessed taxes. He would probably extend the exemption to railways if it were certain that the passengers would profit by the repeal of the tax; and there is no reason why shareholders should be exceptionally mulcted. Mr. LOWE's laudable faith in the doctrines of political economy induces him as far as possible to apply general principles; and he is constantly in the habit of expressing his conviction that all taxes on commodities are ultimately paid by the consumer. In his answer to Mr. LAING, the CHANCELLOR of the EXCHEQUER was forced to rely on the farfetched excuse that Railway Companies enjoy a monopoly. The House of Commons at the present moment is not inclined to look favourably on railway property; which is nevertheless as innocently possessed as any other kind of investment. The passenger tax is not mitigated in the innumerable cases in which a temporary monopoly is disturbed by the introduction of competitive lines; but it was evidently hopeless to induce the House of Commons to make either Railway Companies or their customers a present of the entire disposable surplus. By extending his proposed exemption to private horses and carriages, Mr. LAING came unnecessarily into collision with the popular prejudice which has been sympathetically expressed in one of the emptiest and most frivolous arguments which have ever been published. The theory that owners of private carriages and first-class passengers on railways are a mysteriously favoured class of mortals is worthy of the least wise among contemporary writers on politics.

The existence of a respectable surplus which is not large enough to provide for the repeal or reduction of the more important taxes would justify some extension of relief to the poorer class of payers of Income-tax. The friends of direct taxation assert the doctrine that all incomes ought to contribute to the public wants; but, in fact, the great multitude which is engaged in labour escapes from the Income-tax, while the humbler members of the middle class find themselves within the clutches of the assessor and collector. Indulgences to the recipients of small incomes could scarcely be defended if the entire revenue were raised by direct taxation; but as long as Excise and Customs duties exist, they must be principally paid by those who form the great bulk of the population. Duties on costly luxuries only discourage the consumption of the articles which are taxed; and at best they produce an insignificant return. Beer and gin and tobacco and tea are never consumed in proportion to their wealth by the richer members of the community. It therefore seems fair, in the arrangement of direct taxation, to make an allowance for the greater proportional burden of Customs and Excise duties on the possessors of incomes below a certain standard. The limit of total exemption is now fixed at 100*l*. a year, and the possessor of 200*l*. a year is allowed to deduct from his taxable income a sum of 60*l*., which is probably supposed to represent his absolutely necessary expenditure. Since the last adjustment of the Income-tax, money has rapidly diminished in value, and some indispensable articles of consumption, including coal, have become extravagantly dear. The policy of former Governments would be consistently maintained if the standard of liability were raised to a moderate amount; nor is it probable that the remaining taxpayers would grudge the additional inequality which would be introduced into the tax. The agitators against the Income-tax, who are almost exclusively retail traders, are not likely to regard the hardships which affect the owners of small fixed incomes; but there might be an advantage in detaching from the body of assailants a considerable number of petty shopkeepers who would be exempted if the lowest liability were fixed at 150*l*. a year. The sacrifice of revenue would not be inconsiderable, but it may be doubted whether any alternative remission of a tax would afford equal relief. It will not be in Mr. LOWE's power to accomplish during the present year any heroic reform such as the repeal of the whole, or even of the half, of the malt duty. There is no urgent necessity for dealing with tea or sugar, and the CHANCELLOR of the EXCHEQUER has frequently expressed his contempt for the demand for a free breakfast-table. It is possible that judicious reductions may be still found possible in nooks and corners of the fiscal system, but the only burdensome taxes which remain are for the present protected by their own bulk and weight.

Some dissatisfaction may perhaps be caused by the determination of the Government to pay the *Alabama* damages out of the revenue of the ensuing year; but, on the whole, their decision may perhaps have been judicious. The demand might have been met either by an application of the surplus of the current year to the discharge of the liability, or by a distribution of the burden over two or three ensuing years. There would have been little practical inconvenience in raising two-thirds of the money by the issue of Exchequer Bonds or Bills; and if the payment had been due at a time when the national income was barely sufficient to meet the expenditure, it would have been better to borrow a part of the money than to increase the burden of taxation. It was a perverse measure, adopted by both parties in the House of Commons,

to increase the rate of Income-tax for two or three years to meet the charges of the Abyssinian war. On the other hand, it will be better to pay the damages out of income than to borrow the money for the purpose of taking off taxes. The present rate of Income-tax is sufficiently moderate, if the tax is to be raised at all, because it would not be worth while to preserve the unpopular machinery of collection, except for the purpose of raising a considerable income. A temporary reduction of the tax would involve a mischievous inequality; and it is not for the interest of the payers of Income-tax that the amount of their contribution should depend on the casual existence of a deficiency or a surplus. The plan of paying the damages from the surplus of the past year might have been easily adopted if the Government had wished to divert the necessary amount from its legal destination. An Act might, if necessary, have been passed for the purpose at the close of the last Session; or probably the CHANCELLOR of the EXCHEQUER might at his own discretion have retained the necessary funds. In the absence of interference, the surplus has been employed as it accrued in the reduction of debt; and it is much more satisfactory to pay off debt out of ready money than to resort to the artificial contrivance of creating Terminable Annuities. A year of usual prosperity affords a suitable opportunity for the reduction of debt, although it is doubtful whether it would be expedient deliberately to provide in every year a surplus revenue for the purpose. Every million of debt which is paid off relieves the country from a charge of more than thirty thousand a year; and the effects of a repetition of the process would soon become sensible and substantial. Mr. LOWE and Mr. GLADSTONE are probably not unwilling to maintain the existing revenue for another year nearly at its present level. A twelvemonth later, if commercial prosperity continues, and unless some untoward contingency arises, the present Ministers or their successors will have great facilities for accomplishing some brilliant financial feat. A decline in the revenue would furnish a still more complete justification for a cautious policy. Experience shows that it is almost impossible to reimpose indirect taxes which have once been removed.

M. THIERS AND M. GRÉVY.

TWO subjects of great importance have been brought forward in the French Assembly during the past week, and, as commonly happens, both have been thrown into insignificance by the party and personal incidents which have risen out of them. On Saturday the expulsion of Prince NAPOLEON was under discussion. In itself, the action of the Government was indefensible, unless M. THIERS possesses evidence of a Bonapartist conspiracy going on at the time of the Prince's visit of a very much stronger kind than any that he has thought fit to produce. The technical plea on which M. DUFAURE rested his case was quite insufficient to sustain it. There is no necessary connexion between the deposition of a dynasty and the banishment of all the collateral members of the dethroned house. If there were, some princely families would have to leave Europe altogether. Upon the inherent merits of the case, therefore, the Government deserved to be defeated. But then it was precisely the sort of case in which inherent merits go for very little. When a Government alleges reasons of State for the expulsion of a Pretender or of a Pretender's relations, it expects, and expects with reason, to have its conduct judged by more general considerations than those which lie within the four corners of a motion. The discussion cannot help resolving itself into one of confidence or no confidence. The safety of the country is the supreme charge with which the Government is invested. If, in administering this great trust, it goes so far wrong as to make a vote of censure inevitable, it is no longer fit to retain its office. In pronouncing, therefore, upon such an issue the Assembly to which the Government is responsible is bound to take the whole situation into account. When M. THIERS maintains that he had good reasons for sending Prince NAPOLEON out of France, to vote, however mildly, that these reasons were inadequate or inapplicable is to deprive the Executive of its full liberty of action in a matter in which full liberty of action is peculiarly essential to successful administration. In the division of Saturday the Government had a majority of fifty-six votes. In point of numbers, therefore, they obtained a substantial victory. But their triumph was dashed by the unexpected defection of the Right Centre. For some time past the whole policy of the Government has been coloured by one paramount desire. The Left Centre always sides with M. THIERS. The Moderate Left, and for the most part the Extreme Left also, sides with him whenever there is a really critical division. The Right is almost always opposed to him. There remains the Right Centre, and, as the attitude of all the other sections of the Chamber is pretty well ascertained beforehand, M. THIERS has of late devoted himself to keeping the Right Centre faithful. This is the explanation of M. DE GOULARD's appointment, and of all the petty concessions to the Conservatives of which M. DE GOULARD is the author. A little time back the end seemed to be gained. After three months of manœuvring the PRESIDENT and the Right Centre had apparently come to understand one another. The hearts of the Right Centre might be far from M. THIERS, but they had agreed to support him with their lips. The division of Saturday is inconsistent with this state of things. It displays the Right Centre voting against the Government upon a question of confidence, and doing this under no pressure of party ties or party traditions. The Orleanist Deputies can have no special love for the BONAPARTES, and the Monarchy of July, to which they look back with peculiar affection, was not characterized by any impracticable reverence for individual liberty. The only explanation of the vote of the Right Centre is that, though their reason bids them support M. THIERS, their instincts and their feelings from time to time get the better of them and carry them away into opposition. But a conversion which is qualified by such frequent outbursts of the natural man is at best a conversion of doubtful value. One lapse in a critical division will outweigh in the eyes of a Government years of straight voting, and when, as in the case of the Right Centre, the falls are extremely frequent, their support is, on the whole, a little less worth having than their hostility. The latter would probably win for the Government a few additional votes on the Left; the former cannot be trusted to give the Government any votes at all.

The debate on the Bill for reorganizing the municipality of Lyons has reduced the debate on the expulsion of Prince NAPOLEON into absolute insignificance. M. THIERS has so thoroughly set the fashion of threatening resignation without meaning it that M. GRÉVY's sudden retirement has taken the Assembly by surprise. The importance of this change is not to be measured by its immediate consequences. These may or may not be serious, according as M. GRÉVY's successor happens or does not happen to be a man of like firmness with M. GRÉVY. The control of the Assembly will of course be more difficult, from the fact that the bounds of decency have once been transgressed; but the Right may be satisfied with the glory of having driven from the Chair the man who by common consent was the best qualified to fill it, and it may not be anxious to prove that M. GRÉVY was right in thinking that he could no longer hold the post with dignity. In that case M. MARTEL's work, if it is M. MARTEL who is to succeed M. GRÉVY, may not be exceptionally difficult. There is another point of view, however, in which the results of M. GRÉVY's resignation are more difficult to forecast. He is said, on the authority of REUTER's telegram, to have told M. THIERS that, in order to remain President, he should require not only a unanimous vote of the Assembly, but also an assurance that the Government will renounce its temporizing policy; and in answer to an assurance from M. GAMBETTA that the Republican party rejoiced to see one of its most eminent chiefs quit a policy of neutrality which patriotism originally induced him to accept, he is further said to have referred to "recent political "changes" as rendering it impossible for him to occupy his post impartially. These two statements taken together seem to indicate that one of the most moderate and self-restrained Republicans in France, a man who in the discharge of a most difficult duty has shown himself absolutely superior to partisanship of any kind, thinks that the time has come for more vigorous action on the part of the Republicans. Whether he has been led to this conclusion by his study of the Assembly, and by a conviction founded on that study that the Right are no longer willing to observe the unexpressed compromise under which alone a Legislature that no longer represents the country can continue in being, or by the motives of personal ambition attributed to him by the Legitimist papers, is not of much moment on this score. By whichever road it has been reached, it is still the conclusion of a very able and cool-headed politician—a politician who is exceedingly unlikely to have taken such a step without having fully counted the cost. M. GRÉVY probably intends it in the first instance as a warning to M. THIERS that he may try the patience of the Republican party too far. They have submitted to see the country governed by an Assembly in which the majority refuses to dissolve because it knows that it has no chance of being returned again. Their reason for this submission has been the fact that though the Assembly itself

is reactionary, it consents to govern through an Executive which is not reactionary. But of late the Government has allowed its antagonism to the dominant temper of the Assembly to become obscured. M. DUFAURE's speeches and M. DE GOULARD's acts have all looked towards the Right. It is one thing to submit to an Assembly which is under the thumb of M. THIERS, and another thing to submit to an Assembly which has M. THIERS under its thumb. In the first case its reactionary leanings are of no importance. They do not influence the action of the Government, and consequently they leave no mark in the country. In the second case, it becomes extremely difficult to say how important they are, because the correctness of the estimate will altogether depend upon the extent to which the Government is influenced by the Assembly. In reality, it may be very slightly influenced; but if the Republican party is constantly examining the question, and trying to regulate its relations with the Government by the result of this examination, observation will more and more tend to become suspicion, and suspicion to become open enmity.

As yet M. GRÉVY's warning has had no effect upon M. THIERS. The debate on the Lyons municipality was resumed on Thursday, and M. DE GOULARD announced that the Government would accept the Bill introduced by M. DE MEAUX. The object of this Bill is to assimilate the government of Lyons to the government of Paris. The Mayor is to be removed and his office is to be abolished. The city will be placed under the control of the Prefect of the Rhône, as Paris is under the control of the Prefect of the Seine, and the Government will nominate the Mayors and Adjoints of the several arrondissements into which Lyons is divided. To apply this system to Lyons in 1873 is a very much stronger measure than to apply it to Paris in 1871. Paris had just been the theatre of an insurrection based on the municipal principle, and the withdrawal of the right of self-government might be regarded as the natural penalty of the sin. But the withdrawal of the right of self government from Lyons has no such obvious justification. Troublesome as the municipality has been, it has never been in arms against the Assembly; and M. THIERS declared not long since that the defeat of the Communists was in part owing to the support which it rendered him at a time when, without that support, it would have been impossible for him to concentrate his troops upon Paris. The attack comes with peculiar ill grace from the Right, because they have constituted themselves in an especial manner the champions of decentralization, and to interpret decentralization so as to exclude the great towns from its operation is avowedly to legislate for purely party purposes. On more than one occasion, however, an unmistakable declaration on the part of a Minister has been merely the overture to an equally unmistakable, but quite opposite, declaration on the part of M. THIERS. It is not impossible that this convenient practice will once more be resorted to.

THE GOVERNMENT AND MR. FAWCETT.

AN indefensible blunder in tactics has apparently been rewarded with undeserved success. There were obvious reasons why the Government should wish to hear no more of Mr. FAWCETT's Bill in the shape which it were down to Wednesday last. It proposed to reorganize the University of Dublin in a manner which the PRIME MINISTER had again and again declared to be inadmissible. The alterations which Mr. FAWCETT had made since the Bill was introduced had done nothing to meet this initial objection. The constitution of the Council of Organization, however good it might be in itself, was vitiated from the Ministerial point of view by the fact that it neither gave Roman Catholics any immediate share in the management of the University, nor provided any means by which they might receive a University education without sacrificing their religious convictions. The elements of which this Council of Organization was to be composed were more various on paper than in reality. In addition to seven Fellows of Trinity College elected by the Fellows, there were to be four Professors elected by the Professors and four graduates of the University elected by the graduates. But inasmuch as the University of Dublin has hitherto had no existence outside Trinity College, its professors and graduates are only fragments of Trinity College under another name. It is part of the alleged grievance of the Roman Catholic laity that the constitution of Trinity College is such that the great majority of them cannot conscientiously send their sons there. If they were already there in numbers sufficient to make Mr. FAWCETT's Council of Organization an adequate governing body for a University comprehending Irishmen of all creeds, the existence of this grievance would be disproved by the very means taken to remedy it. On Mr. FAWCETT's own showing, the object of the constructive parts of his Bill was to make the University of Dublin thus generally available, and if the Bill had been fairly worked, it is quite possible that another generation of the Catholic youth of Ireland would have won their proportionate share both of University and Collegiate honours, and thus commanded the elections to the Council. But what is to happen during the interval which must be allowed for before this other generation has grown up? Trust, says Mr. FAWCETT, to the theological fairness of a governing body mainly composed of Protestants, or at most containing a few Catholics through the operation of the cumulative vote. Mr. GLADSTONE rightly holds that to give this answer to the Roman Catholics of Ireland is only to add insult to injury.

There are good reasons, however, why Mr. GLADSTONE should not care to insist on this aspect of the subject any further just at present. He has been beaten by the Irish themselves in a generous and energetic effort to throw open to Irish Catholics the advantages of a University education. In making this effort he risked a separation from many of his ordinary supporters, and it must always be doubtful whether, if his Irish University Bill had been read a second time, this separation would not have become a fact before the Bill left Committee. This possible schism in the Liberal party was averted by the sudden defection of the Irish vote, and Mr. GLADSTONE naturally did not wish to revive the thought of it by any fresh declaration of principles as regards University education in Ireland. Yet, if Mr. FAWCETT had asked the House to read his Bill a second time in its complete form, it is difficult to see how such a declaration could have been avoided. Ministers could not have absented themselves from the division nor have contented themselves with giving a silent vote. We find no fault, therefore, with Mr. GLADSTONE for wishing that Mr. FAWCETT's Bill should be got rid of for the Session. Indeed the wish must have been shared by every Liberal who did not wish to see the divisions already existing in the Ministerial majority increased for no better purpose than to pass a measure which would not have brought the question any nearer to a definitive settlement. But we find great fault with Mr. GLADSTONE for the means he had recourse to in order to shelve the Bill. The technicality of his plea that Mr. FAWCETT ought to give fresh notice of the first reading of a Bill which had been in every member's hands for nearly a fortnight, and which did not differ in any essential particular—in any particular, that is to say, which involved principles—from the Bill originally introduced, was too transparent to impose upon anybody. The Irish members had not done him such good service that he need have constituted himself their champion or condescended to a quibble to secure them an additional chance of talking the Bill out. However interested he may have been in getting rid of the measure, he ought to have been so much the more on his guard against allowing his personal wishes to lead him into anything like sharp practice. The rules of the House and the watchfulness of the Speaker are sufficient guarantees against any section of the House being really taken by surprise, and considering how remote Mr. FAWCETT's chance of carrying his Bill through this Session appeared a week ago, the plea that the Irish members must not be deprived of their opportunity of voting against the first reading was not one that could be set up except as a scarcely disguised expedient for gaining time at any cost.

As matters turned out, however, Mr. GLADSTONE's error seems to have been more profitable to him than a strict adherence to the paths of virtue could have been. From Mr. FAWCETT's point of view, the sacrifice he has made in abandoning the constructive clauses of his Bill is a very great one. He gives up, for this Session at all events, the chance of associating his name with the settlement of a question which has baffled successive Governments and overturned the most powerful Minister of modern times. He gives up the chance of throwing a formidable obstacle in the way of any future attempt to settle this question on a different basis from that which he advocates. The passing of his Bill in its complete form might in no way have contributed towards satisfying the Irish Catholics; but it would have rendered it very much more difficult to make any further attempt to satisfy them. If the University of Dublin had been provided with the governing body contemplated in his Bill, future Governments would have had an excuse for saying, Let us wait and see how the existing constitution works before we devise another, even though that other may in itself be a better one. All this Mr. FAWCETT has surrendered. Neither his love for Mr. GLADSTONE, nor his dread of causing divisions

in the Liberal party, is likely to have been great enough to induce him to act in this way, unless there had been some other reason behind; and that other reason can hardly have been anything but the conviction that the whole Bill must suffer shipwreck unless he consented to lighten it of one half of its provisions. The amount of necessary business that has to be got through is so great that no Bill which is looked coldly on by the Government has any prospect of becoming law this Session. Mr. GLADSTONE's action on Friday week may have helped to bring home to Mr. FAWCETT's mind the fact that his Bill was looked coldly on by the Government, and, in so far as it did so, it served to get Mr. GLADSTONE out of a dilemma from which a more creditable policy might have failed to extricate him.

As the Bill now stands, any serious opposition can scarcely be looked for. Trinity College wishes to be released from the obligation of imposing religious tests upon its Fellows, and no one can have any interest in preventing it from getting its own way. Under any possible solution of the Irish University difficulty, this measure of emancipation would be included. Tests were abolished in Trinity College by the Government Bill; they are abolished by the Bill which Mr. HERON purposes to bring forward in the form of a string of amendments to Mr. FAWCETT's Bill; they would probably be abolished by Cardinal CULLEN's own Bill, if his Eminence had a seat in the House of Lords and were competent to introduce Bills in person. No theory of endowment can make it reasonable to endow a religion against its will, and since even the disestablished Church of Ireland no longer wishes the connexion between itself and Trinity College to be maintained, it would be an obvious impertinence for Parliament to insist on maintaining a union which is repudiated by both parties. It is something to have one half of a troublesome question disposed of, and this advantage the Session of 1873 seems really to have in store. The fact that the Bill was allowed to be read a first time between two and three o'clock on Friday morning may be taken to show that the hostility of the Irish members as well as of the Ministry is appeased by the sacrifice to which Mr. FAWCETT has consented; and even if they should resort from habit to their usual tactics, the possibility of talking out a measure supported by the Government is extremely slender.

THE JUDICATURE BILL.

IT was almost a matter of course that the Judicature Bill should be referred to a Select Committee, and one need not seek any explanation beyond what the nature of the subject supplies to account for the facility with which the LORD CHANCELLOR yielded to Lord CAIRNS's suggestion. Multitudes of details, of which many rise almost to the rank of leading principles, have to be moulded into shape before a measure for the reconstitution of all our courts of justice can be safely passed, and it is of vital importance that the discussion required for this purpose should take place in the House of Lords. There are not now many subjects of legislation on which the House of Commons will allow the Upper House to take the lead, but this is unquestionably one of them. As the Bill leaves the Lords it may be expected to pass with but little alteration, for only a small minority of the representatives of the people would profess to have given any serious consideration to the subject, and the opinions of lawyers cannot be expected to command that deference in the Lower House which the Peers habitually pay to the eminent phalanx of Law Lords who guide their deliberations on professional questions. The Bill will go down to the Commons simply as a Government measure which all good Liberals will support mainly on the authority of the legal wisdom and experience which will have been brought to bear upon it in the Upper House.

We deeply regret to find that Lord CAIRNS has given in his adhesion to the timid counsels of the LORD CHANCELLOR, and has pronounced it impossible at the present day to pass any but a confessedly inadequate measure. That the existing severance of the Common Law and Equity Courts should be maintained in practice while it is abolished in theory, Lord CAIRNS, in common with the LORD CHANCELLOR, seems to deplore as an inevitable misfortune. So at least we interpret this passage in his speech:—"I quite agree with those who "hold that there never can be a complete fusion of Law and "Equity till the distinction between them is abolished; but "as regards the present day, I believe my noble and learned "friend is right in the course he has adopted. He has taken "as large a step as can be taken at the present time." We are not insensible to the difference between the points of view of those who criticize and those whose duty it is to legislate, but after every allowance for such considerations, we are utterly unable to comprehend why men who can wield the overpowering influence possessed by Lord SELBORNE and Lord CAIRNS should be so wanting in the courage of their opinions as to concur in recommending a measure which both alike admit to be unequal to the occasion. That there is a lion in the path we must assume from the shrinking hesitation of our reforming champions; but what are the features of the formidable monster, and why it should strike such terror into such hearts, we can neither discover from anything which has passed in debate, nor picture to ourselves by any force of imagination. However, the fiat has gone forth that we are to have a scheme of Law Reform confessedly imperfect, a fusion which shall be at least as much nominal as real; and we are told to console ourselves with the hope that what begins with the semblance only of unity will one day clothe itself with reality, that a measure which cripples and narrows the expansive jurisdiction of Equity by hard and fast limitations of authority will result in ultimate freedom, and that the jurisprudence created by a line of illustrious Chancellors will thrive and grow the better for being handed over to the fostering care of Courts which have yet to acquire the principles ingrained in the course of centuries into the mind of the Court of Chancery. We would gladly indulge such hopes, if all experience did not teach us that they must prove delusions. How a measure which begins in imperfection is gradually to develop a perfect and harmonious system of legal administration we have not found a word to explain. The broad view of the LORD CHANCELLOR is intelligible enough to those who can condone the fatal error of giving a distinctive character to each of the divisional Courts. He says in effect that so long as you have distinct tribunals the true division will be, not between Courts which apply Common Law doctrines and Courts which apply Equity doctrines, but between Courts of litigation and Courts of administration; and accordingly he proposes to constitute three divisions exclusively for purposes of litigation, and one as nearly as may be exclusively for administrative work. On this principle all litigation, whether involving legal or equitable doctrines, is intended as a rule to be led into the Common Law Courts; while all administration such as has hitherto been entrusted to the Courts of Chancery, Bankruptcy, and Admiralty, is to be dealt with by what will remain of the old Court of the Chancellors. There is a certain symmetry about this plan which would be pretty enough in appearance if any such distinction of Courts were needed at all, and if the object of the measure were to found a new set of tribunals for a country wholly devoid of juridical traditions. But even in such a case a sounder method of distributing business would be to assign in practice administrative work to one (or, if need be, more than one) judge of each division, and so to preserve the requisite harmony between the doctrines applied in litigious and administrative suits by the constant supervision of the entire divisional Court.

In the actual problem with which the Legislature has to deal, considerations of a much weightier kind come into play. If it were conceded that one complete division should be engrossed with administrative work, it would not follow that the whole experience in Equity learning which is to be found on the Bench should be absorbed by this one Court, and that the only tribunals to which litigants are to be allowed access should be carefully purged of any taint of Equity traditions. The LORD CHANCELLOR in framing his scheme found at his disposal a certain amount of judicial power, of which three-fourths had been evolved out of Common Law traditions, and one-fourth only out of what we cannot help calling the higher traditions of Equity jurisprudence. Is it not a thriftless use of such materials to withdraw the whole of your specially developed Equity power from the field of litigation in order to use it up entirely in the narrower field of administration, and to leave nothing with which to leaven the old Common Law Courts? But it is as vain to argue with the masters of many votes as with the masters of many legions, and it will be more profitable now to consider how the mischief which we are told cannot be cured "at the "present day" may be mitigated, if not from the first, at any rate in some distant future.

It is not easy indeed to see how any sufficient mitigation is to be secured, but Lord CAIRNS has indicated two directions in which some improvement may be made in the Bill. One—and the most important—of these points to a radical change in the procedure laid down by the schedule of the Bill, the other to the preservation of the Chancellor's presidency over the Court of Chancery. The subject

of procedure calls for more detailed consideration than we can give to it at present, but we propose to recur to it at an early day. The proposed withdrawal of the Lord Chancellor from his ancient Court is a provision to which it is difficult to assign any motive except the desire to give to the Court of Queen's Bench a predominance which it has never yet enjoyed, and which it would be inconsistent with the dignity of a Lord Chancellor to submit to. Nothing perhaps could more clearly show that the limitation of the Court of Chancery to administrative work is understood as a degradation of its once supreme authority than the necessity which it has been supposed to imply of placing it under the presidency of a judge of rank inferior to that of the Chancellor; and, though we do not attach the same importance to matters of sentiment which the Bill seems to ascribe to them, it does strike us as unfortunate that the prestige of the Court of Chancery should be lowered at the moment when its power is to be taken away, and when prestige alone will remain to encourage the gradual assimilation of the doctrines of Equity by Courts which have hitherto known them only as amateurs, and whose judicial habits and instincts have been formed in a very different school. It is a strange time to destroy the primacy of the Court of Chancery when it is desired to establish on a surer footing the primacy of Equity jurisprudence. We trust that Lord CAIRNS will not falter in his resolution to save what he describes as "the "life and essence" of the Chancellor's Court.

In truth, it will be found on examination that this projected divorce of the Chancellor and his ancient Court is but a single part of one grave misconception which pervades the whole treatment of the so-called second division of the High Court. The grouping together of the Equity tribunals in one division is founded altogether on a false analogy. The Courts of the Master of the Rolls and the Vice-Chancellors are for all practical purposes as much distinct divisions as the Courts of Queen's Bench, Common Pleas, and Exchequer. It may be said, no doubt, that historically and theoretically the Vice-Chancellors are mere deputies of the Lord Chancellor; but in substance the Chancellor and the Lords Justices are Judges of Appeal only, and each Vice-Chancellor has an independent primary jurisdiction. A cause, it is true, may be once for all transferred from one Vice-Chancellor to another, as under the new scheme it may be transferred from the Queen's Bench to the Exchequer; but, to whatever Court it may be entrusted for the time being, the other Vice-Chancellors have no shred of jurisdiction over it, and cannot make the simplest interlocutory order. It is only because the Vice-Chancellors have been single-seated judges, and consequently few in number, that the idea of combining them into one division has been suggested. The truer analogy would have been to create a division out of each Court of primary jurisdiction in Equity, as well as at Law, and to appoint judges enough to enable them to escape in future the reproach of sending serious matters of law to Chief Clerks, and deciding matters of fact without hearing witnesses in open court. All and more than all that is now done by the two official examiners, backed by hosts of special examiners appointed for particular causes, ought, as every one admits, to be done by the Court itself, and the Bill, though it leaves a certain option in the matter of evidence, evidently intends that *vivâ voce* evidence should be used in every case of real conflict. If this direction is not meant to be as nominal as some other parts of the Bill, a Vice-Chancellor's Court will require nearly, if not quite, as many judges as any Common Law division. No one can seriously dispute this, or can fail to see the only remedy; but suggestions in this direction are, we imagine, among the things not to be listened to "in the present day," and the Court of Chancery is, according to the scheme of the Bill, to be condemned by its insufficient strength to go on as of old, trying facts by affidavit evidence, and to submit for ever to a reproach which it is not allowed to wipe away. The historical accidents by which suitors in Chancery have been denied the inestimable advantage of a fair trial of facts are well enough known; but why this grievous blot on the jurisdiction of the Chancellor should be practically stereotyped in the modern edition of the Judicature of England passes the skill of men who are not politicians to comprehend.

THE RUSSIAN EXPEDITION TO KHIVA.

THE official exposition of the motives which have caused the Russian expedition to Khiva is a dignified, temperate, and becoming State paper; and, like State papers in general, it contains so much of the truth as suits the immediate purpose. The document is addressed, not to the enemy, but to the Governments of Europe, and principally to the Power which is most directly interested in the affairs of Central Asia. The facts which are recapitulated will be recognized as probable and familiar by all who are, through experience or study, acquainted with Indian history. The Russian Government has, according to the official statement, desired to acquire only a peaceful and civilizing influence in the regions bordering on its Asiatic dominions; but it has been incessantly thwarted by the ignorance and prejudice of half-civilized tribes. Where proposed treaties of commerce have been rejected, more stringent methods of extending trade have been adopted; and it is alleged that Bokhara and some more distant States are gradually reconciling themselves to friendly intercourse with their powerful neighbour; Khiva alone, the most westward of the Khanates, has maintained its hostile attitude and its predatory habits. Protected tribes of Kirghese have been sometimes attacked by freebooters from Khiva, or they have been tempted to rebel against the paramount power; and the ruler of Khiva has been capricious and disrespectful in the conduct of his diplomatic relations with the Governor-General of Turkestan. For these and other reasons it has been thought necessary to take vigorous measures for bringing the contumacious Government and people to reason; nor can there be any doubt that, sooner or later, the supremacy of Russia will be established. Some of the converging forces which are moving from several different directions through the desert will probably meet under the walls of the capital, which is wholly unable to resist the attack of a regular force. The remainder will pause at different parts of the route to keep the warlike tribes of the neighbourhood in order. The irregular horsemen who form the army of Khiva will give the Russian commanders some trouble by attempting to interrupt their communications; but the most experienced officers of the Empire have been consulted on the preparations, and the generals in command fully understand the nature of the obstacles which must be encountered. At the worst Russia could, in the event of an unexpected failure, organize without difficulty in succession a dozen similar expeditions in equal force. The Government is not likely to be wanting in persistence and resolution; and ultimately victory must remain with the combatant who can rely on a practically inexhaustible reserve.

As Sir HENRY RAWLINSON lately explained to the Geographical Society, the gravest difficulties will commence when the Russian army has taken possession of Khiva. The victors will have to choose between the retention and the evacuation of their conquest; and either course presents serious inconvenience. During the recent negotiations the English Government was assured that the Russian army would retire when its objects were accomplished, and that it was not the purpose of Russia to reduce Khiva to the condition of a province. It is remarkable that the pledge is not renewed in the proclamation or manifesto which is addressed to the Russian nation and to Europe; and the newspapers of St. Petersburg systematically assume that their Government will repudiate the formal promises of Count SCHOUVALOFF. Perhaps it may have been deemed inexpedient to remind the Russian people that the EMPEROR could regulate his policy by any other consideration than his own sense of expediency and justice. The extension of the Empire is popular with all Russian politicians. Although the mass of the people is habitually averse to war, and probably indifferent to external affairs, those who hold and form whatever public opinion exists in Russia require no apology for any enterprise which tends to national aggrandizement, and possibly they might resent the publication of any promise which might seem to have been given in deference to the jealousy of a foreign Government. If, notwithstanding the diplomatic communications which have taken place, the interests of Russia seem to require the permanent occupation of Khiva, excuses will be easily found for the postponement of the evacuation. The safety of the army is the first object of military commanders; and, if it were explained that the maintenance of a garrison at Khiva was indispensable to the safety of the frontier forts, no foreign Power could with any effect question the declaration of the Russian Government. On the other hand, it seems probable that at the time of Count SCHOUVALOFF'S mission to England the scheme of the expedition was confined to an advance to be followed by an early retirement from the capital. The final decision will depend in a great degree on the result of the impending campaign, and on the experience which will be acquired during its course. If the Khanate is annexed to the Russian Empire, it will be necessary to hold the capital and the rich district around it in sufficient force to suppress any

sudden insurrection. The supplies of a garrison might perhaps be provided from the neighbouring country; but until the population is finally pacified the communications with other Russian provinces will be liable to frequent interruption. The objection to retirement after defeating and punishing the contumacious Government is that the backward movement of an invader is naturally, and for the most part justly, attributed to his inability to protect his conquest. According to Sir HENRY RAWLINSON, the return of POLLOCK and NOTT to India after the second occupation of Cabul was regarded both by the Afghans and by the subjects of the Company as an acknowledgment of defeat; and well-informed observers attribute the mutiny which occurred fifteen years afterwards to the loss of military reputation which resulted from the final evacuation of Afghanistan. It is difficult to understand how the Khan of KHIVA can be compelled to perform the obligations of any treaty which he may sign, except by a renewal of the pressure which extorts his original assent. As long as he is independent, he and his successors will not fail on every opportunity to display their hostility to Russia.

The stress which is laid in the official proclamation on the extension of commerce need not be literally construed; nor is it reasonable to expect that Englishmen should sympathize with the peculiar character of Russian projects for the advancement of trade. Commercial treaties between Russia and the half-civilized States of Central Asia are directed much less to the removal of artificial impediments and to the protection of traders than to the establishment of a close monopoly in favour of the dear and second-rate manufactures of the Empire. If the terms of the treaties which have already been concluded were examined, it would probably appear that the main object is the exclusion of the English products which might reach Central Asia by way of Hindostan. If the local Governments were learned in political economy, they would find that they have covenanted to exclude themselves from the cheapest market; but perhaps they might find consolation in their own purpose of giving the treaties the laxest possible construction. The general prevalence of the Russian commercial system, including high duties on goods from any other producing country, would differ but slightly from the establishment of political sovereignty. The provisions of the treaties could only be enforced by Russian functionaries, who would necessarily control all commercial intercourse. There is no ground for moral indignation against a political and commercial system which was first adopted on a large scale by England, though it has been of late years abandoned as unsound. The Indian Government deserves credit for its purpose of concluding more liberal treaties with the States in Central Asia which are still really or nominally independent. The Envoy from the ATALIEH GHAZEE has been courteously received by the VICEROY, and Mr. FORSYTH is to accompany him on his return from Constantinople, for the purpose of negotiating a commercial treaty with Yarkand. It is not known that any English commercial interest will be affected by the Russian conquest of Khiva. It is a cause for regret that the caution of the English Government and the suspicious policy of Russia will render the acquisition of accurate information on the affairs of Khiva difficult or unattainable. The invitation to an English officer to accompany the expedition has been courteously declined, and the Russian Government has politely but positively refused permission to an enterprising newspaper Correspondent to record the current history of the campaign. The official reasons for the refusal are founded on the inconvenience of having to protect civilians, who in this instance would have given the authorities little trouble. It has probably been thought undesirable to invite a witness of possible reverses, or of the imperfections which are found in every military organization. The Russian Government is using an undoubted right, and it would be idle to impeach its decision; but the probable success of the campaign will be less perfectly appreciated in the absence of an impartial observer.

SPAIN.

IT may be hoped that the social and political anarchy of Spain only reaches to a limited depth below the surface. Historians have often commented on the strange persistence of ordinary habits of pleasure and business through every revolutionary crisis. Even in the darkest days of the Reign of Terror men cultivated their lands and bought and sold in the markets; nor were luxurious enjoyments suspended when they were rendered possible by circumstances. The Spaniards are accustomed to regard their Government with little respect, and long experience has taught them not to place confidence in politicians. It is probable that nine-tenths of the population acquiesce in the Republic as an untoward necessity, and that they are profoundly indifferent to the question whether it shall be called Unitarian or Federal. If the finances are in hopeless disorder, there is the satisfaction of remembering that the foreign creditor will be the chief sufferer; and the mishaps of persons in office who may happen to come into collision with the caprices of the mob attract neither sympathy nor interest beyond the walls of the great towns. The civil war is for the present confined to the Northern provinces; and Federalism is so far indigenous and universal that an Andalusian is not likely to trouble himself with the disorders and sufferings of Catalonia. Against a foreign enemy all Spaniards would probably be disposed, as in the days of NAPOLEON, to unite; but fortunately modern Governments have learned the useful lesson that little is to be got by meddling with the quarrels of their neighbours. If Spanish factions think fit to decide their quarrels by arms, they will meet neither with help nor with impediment from abroad. As long as demagogues confine themselves to talk, they will produce no deep impression on the country; but it is impossible to conjecture the results which might follow from a general attack upon property. In former times the army finally settled every dispute, and the country acquiesced in the predominance of the successful military leader, until he also in turn was driven from power by a rival of the same character. The consequence was that during the reign of ISABELLA II., in spite of perpetual violations of constitutional right, Spain increased more rapidly in material prosperity than any other part of Europe. The country is far richer and more populous than at the close of the old Carlist war; and a serious interruption of national progress will disturb the general complacency. The only mode of saving such a society which has been invented will sooner or later be applied. The Republican Government of Madrid has already appealed for aid to SERRANO, and if he and his military colleagues can find any forces to obey them, they will be masters of their Republican employers.

No native or foreigner seems to attach any definite meaning to the Federalism which is unanimously professed by clamorous patriots. Even the London agitators who are always watching for an opportunity of welcoming the establishment of Republican institutions have suspended their expressions of sympathy for the present Spanish Government until they know whether it may not be possible to address their congratulations to more disreputable successors. FIGUERAS, CASTELAR, and PI Y MARZAL are all Federal Republicans, but the PRIME MINISTER was obliged to return from Barcelona without pacifying the revolutionary rabble. In Malaga and other towns the Federal Republic already exists, if Federalism consists in utter disregard of all central authority. If ardent Republicans were devoted to Scriptural studies, a precedent for the condition to which Spain is approaching might be found in those passages of the Book of Judges which record the state of Israel as often as there was an interregnum between two recognized deliverers. It will probably be useless to convoke a constituent Cortes to meet at Madrid. The electors will not be allowed to vote freely, and the candidates will be pledged not to exercise to the detriment of independent provinces the powers of national legislation with which they will be nominally invested. The Spaniards are not sufficiently advanced in the theory and practice of constitutional government to submit to the authority of their own chosen representatives. At Madrid there is a municipality, elected probably by universal suffrage, which has lately incurred the wrath of the more active section of its constituents. The mob has called on the municipality to resign, and, on its refusal, the leading demagogues have determined that the recalcitrant corporation must be responsible for the consequences which must ensue. In the same manner the Commune of Paris, after offering to release the prisoners whom it had kidnapped, on certain conditions, announced that M. THIERS was exclusively responsible for the murders which the insurgents proceeded deliberately to perpetrate. A revolutionary mob can never be made to understand that some hundreds or thousands of armed men are not entitled to speak in the name of a community which is regularly represented in a legislative or in a municipal body. It is possible that the Ministers may still have sufficient influence to prevent a collision in Madrid; but they have themselves been indebted to the mob for their victory over their Progressist opponents. At no distant time it will be necessary for the Government to employ force, if indeed it has any disciplined body of troops at its disposal; and the first shot which is fired in the attempt to restore order will destroy the popularity of the Republican orators who are for the moment at the head of affairs. The

short-sighted people of Madrid have forgotten, in their zeal for the Federal Republic, that one of the first objects of the genuine Federalists will be to deprive of all its privileges the capital of the monarchy.

The Carlists have lately made some progress, though the petty scale of the campaign is illustrated by the importance which is attached to the capture of a little town and of a few hundred rifles. It remains to be seen whether the insurrection has any strength beyond the limits of the provinces where it has long been a chronic malady. Probably neither the mass of the Carlists nor their adversaries trouble themselves with the principles which have been consistently professed by the Pretender as by his far-off cousin of France. It is scarcely to be expected that French Legitimists would, in the event of the death of the present head of the dynasty, remember that CHARLES of Spain is his nearest heir. A Spaniard would be intolerable even to the most bigoted French devotee of hereditary succession; but the doctrines which Don CARLOS professes are rigidly orthodox. He has never promised to confer on his future subjects any kind of constitutional government; and he is firmly resolved to maintain all the pretensions of the clergy and the POPE. The petty war in the North, like conflicts on a larger scale, causes the combatants to forget the nature of the quarrel in which they are fighting; but if in some strange combination of circumstances it seemed likely that the Pretender would seat himself on the throne, it would be impossible not to recognize the fact that an absolute Monarchy was, after an interval of fifty years, to be deliberately re-established. Even Spaniards like the sound and the name of freedom, though they may be indifferent to the substance. There is no stronger proof of the chaotic state of Spain since the proclamation of the Republic than the reported fact that many military officers and politicians in civil life are beginning to incline to the cause of Don CARLOS. As no other claimant of the Crown is in the field, even the obsolete representative of despotism is beginning to be adopted as a symbol of order and government. It would, in truth, be better to have a king, though he might be the most bigoted and incapable of rulers, than to break up into a cluster of little States and independent towns in accordance with the theory of the extreme Federalists. Don CARLOS and his predecessors have so far complied with the popular demand as to recognize the special privileges of the provinces in which their cause has consequently been to a certain extent popular; but an exceptional position allowed to ancient provinces bounded by well defined frontiers is more intelligible than a license to every petty district to set up a Republican Government of its own. In the great French Revolution patriotism took the opposite course of asserting with bloodthirsty zeal the unity of the State. When mobs are supreme it matters little what principles they support in their own characteristic manner. The fragmentary rumours which arrive from day to day by telegraph indicate the existence of a Carlist faction in places which might have been supposed to profess various shades of Liberal opinion. As far south as Valencia the arrest of a Carlist agent is said to have been followed by an engagement which is described as sanguinary, although it also appears that only one or two lives were lost. At the same date the rabble of Barcelona was clamouring for the blood of the unhappy officer who had been surprised and defeated by the Carlists at Berga. The missionaries of the city were expecting the arrival of a large supply of arms from Madrid, which will be available in the hands of the Volunteers for the purpose of violence and rapine. The Carlists have nothing to fear from the armed patriots, who seem likely to render town life in Spain utterly intolerable to the peaceable and respectable part of the community.

THE HOUSE OF COMMONS AND THE PRESS.

THE House of Commons was occupied during a considerable part of Thursday evening in considering whether certain expressions employed by the *Pall Mall Gazette* in criticizing the conduct of some Irish members should be treated as a Breach of Privilege. "It was not surprising," said the *Pall Mall*, "that the Irish Ultramontane members should "resort to every quibble discoverable in the technicalities of "the law of Parliament to defeat or delay a measure like "Mr. FAWCETT'S, which cuts the ground from under their venal "agitation and their traffic in noisy disloyalty." It is impossible, we think, to contend that this language did not go beyond the limits of fair criticism. A venal agitator is a man who at once agitates and sells himself in order that he may reap a personal benefit from his agitation; and although the expression was probably not intended to convey that what the Ultramontane members got by agitating was money, yet money is so generally the price of venality that a careful writer would think it necessary to show that this was not what the Ultramontane members sold themselves for, if he believed them to be pecuniarily honest. Whether Home Rulers can be fairly called disloyal is perhaps a more open question; for, although they earnestly proclaim that there is nothing disloyal in the cry for Home Rule, it is easy to contend that there is something in it very injurious to the QUEEN as the Head of the British Empire, and it is allowable to saddle politicians with the necessary consequences of their acts or words. All that can be said is that the language was too strong, and Mr. GLADSTONE expressed all that there was to say about it when he remarked that journalists have often to write very quickly and on very short notice, and that any injudicious expressions they may use ought to be viewed with proportionate indulgence. Most readers of the *Pall Mall Gazette* will feel themselves too much indebted to the spirited and vigorous language and thought of that journal to think that an accidental slip into over-harshness of expression should be regarded as much of an offence. Still, as one of the very best safeguards against the evils of modern political society is to be found in a press rising to the highest level, and habitually writing with justice and caution, although with perfect frankness, it is for the public good that fair criticism should be bestowed on unfair criticism, and the better the journal the more worth while is it to check its errors. Mr. MUNSTER gained all that he could gain by bringing the matter before the House, and by assuring himself that the House is quite as ready to do justice to Irish Ultramontanes as to any one else. To have gone further would have been a mistake. The House can only punish attacks on itself or its members by a process wholly inadequate and almost necessarily ludicrous. It can summon the printer and publisher to the bar, and hear two men, who have had no more real control than the doorkeepers of the House over the use of the expressions forming the subject of complaint, apologize for them, and explain that by "venal" they meant "pure" agitation, and by "noisy disloyalty" a meek attachment to the Throne. In order to save the House from going through such a farce, Mr. DISRAELI attempted to stop the discussion at its outset by suggesting that no Ultramontane members could be aggrieved, because no one knew that any members were Ultramontanes. Jocosity needs success to be pardoned, and this jocose mode of shirking the question failed to please, and naturally begat an increase of seriousness and bitterness. Fortunately Mr. GLADSTONE had himself been attacked in the passage from the *Pall Mall* read to the House, and as he was able to state that he did not in the least mind the attack, and generously hinted that people writing and judging in a hurry could not be expected to understand him, he was able to ask the Irish members to view their grievance with a similar indulgence. He added his experience to that of several members long accustomed to Parliamentary history in assuring Mr. MUNSTER that he had nothing to gain by persevering; and Mr. MUNSTER desisted, and expressed himself satisfied—as he well might have been—with the reception accorded by the House to his repudiation of the charges made against him and his friends.

The harmony of the House was, however, very nearly disturbed by a speech from the ATTORNEY-GENERAL, who attempted to show that the language complained of was not a Breach of Privilege. The argument of Sir JOHN COLERIDGE was that it was no Breach of Privilege to say that members resorted to every quibble discoverable in the technicalities of the law of Parliament to defeat a particular measure, and that the further imputations on the Ultramontane members were not imputations on them in their capacity of members of Parliament. A libel on a member of the House is not noticeable by the House unless it is a libel on him for something he does or says as a member of Parliament. It would, for example, be no Breach of Privilege to write of a member of the House that he was habitually engaged in promoting swindling companies. Now the agitation of the Ultramontane members, whether venal or not, could not be an agitation carried on by them as members, for agitation is a course of conduct carried on outside Parliament in order to influence it. Nor could the term "disloyal" be applied to anything they had said or done in Parliament, as they would have been immediately rebuked by the SPEAKER for any approach within the walls of the House to disloyalty; and this notoriously had not happened. The plain sense of the House of Commons failed to understand this exhibition of legal subtlety. Members regarded it as trifling with the subject, and so

strong was the feeling that there was at one time a strong inclination to force on a division, not that the printer or the publisher of the *Pall Mall* might be punished, but that it might be brought home to the ATTORNEY-GENERAL that the House did not adopt his view of Parliamentary law. It was, indeed, strange that the ATTORNEY-GENERAL could have failed to perceive that expressions neither of which was libellous in the Parliamentary sense when taken by itself might become so by being joined together. It is not libellous to say that members take advantage of every technicality to defeat a measure, for that is merely to say that they take, in their discretion, a particular course permitted by the forms of the House. Nor is it libellous in the Parliamentary sense to impute to a member bad conduct the region of which lies wholly without the House. But it is a very different thing to say that he takes a particular course in Parliament in order to facilitate or cover his bad conduct out of the House. There would be no meaning in regarding any libels as Breaches of Privilege if the House did not hold it libellous to say of a member that he was abusing the forms of the House to prevent the passage of a Bill against swindling companies, such as those he was habitually engaged in promoting.

Mr. RONAYNE, who is one of the latest and most ardent accessions to the supporters of Home Rule in the House, said that he was opposed to Mr. MUNSTER'S motion because he would not do anything whatever to hinder the English press from writing about Ireland and Irishmen as the *Pall Mall Gazette* had done. He thought that the articles which appeared in the leading journals of England, reflecting the opinions and prejudices of the English people, were the strongest instruments for promoting the agitation of Home Rule. As a matter of fact, he alleged that the effect of such articles had been admirable, and had done more to fan the flame of agitation for Home Rule than any of the unjust laws passed by England to the disadvantage of Ireland. The Irish, he said, are a proud and sensitive people, and they feel such things very keenly. There is a foundation of truth in Mr. RONAYNE'S language. His countrymen have two peculiarities. They do not want justice, but sympathy, and they remember all that is done against them, and forget all that is done for them. The English way of criticizing political affairs, and Irish political affairs among others, is distasteful to them. When what is alleged to be an Irish grievance is brought under the consideration of the English public, the course taken is to examine into the question, to ask how far it is a grievance, whether it is removable by legislation, what will be the consequences of removing it, and what are the characters and history of the men who are foremost in complaining of it. What the Irish would like is, that without inquiry or discussion they should be told that the Irish are a high-spirited and injured race, that Erin is always green, and that they may have any Bill passed they like to ask for. To find fault with them, and even to reason with them, is to incur their hostility. Nor do they like to give up lightly the delight of nursing their grievances, or to own that they have been well treated. They will dwell on the chance expressions of the *Pall Mall* as if they had been deliberately dictated by the whole of England, while they will forget the ready courtesy and respect with which the House of Commons received the complaint made by an Irish member whom those expressions aggrieved. We do not see much chance of this spirit dying away. Englishmen cannot change their habits. They wish to treat Ireland with exactly the same fairness and consideration with which they would treat Scotland or Lancashire, and when they are told that this is not enough for Ireland, they can only answer that they have no more to give. Some day, before very long, it is possible that Home Rule may be seriously discussed in the House of Commons, and the result of that discussion will, we have no doubt, be to show that, although there may be a measure of increased self-government which might be advantageously conceded to Ireland as well as to Scotland, and perhaps to English districts, yet this will be something very far short of what Irishmen fancy they mean when they talk of Home Rule; while to concede more would involve such a dissolution of the Empire that it would be far better to let Ireland set up as a separate State than for England to guarantee the external safety of a community acting on political principles to which Englishmen are consistently opposed. Ireland may perhaps get something out of the discussion of Home Rule; for the House of Commons has now more to do than it can do, and the discussion of Home Rule is as likely as anything else to lead to the abandonment by the House of a portion of its work But this will not satisfy the Irish, and they will pass over what they get, and make a new grievance out of what they do not get; and we shall have once more to comfort ourselves with the maxim, now so sadly familiar to us, that justice will work its way even in Ireland in the long run. Unfortunately the run in Ireland is very long.

THE FRENCH GOVERNMENT OF NATIONAL DEFENCE.

ANOTHER curious and important document has been added to the records of the history of France during the eventful time of the siege of Paris. The Parliamentary Commission appointed to report on the acts of the Government of the 4th of September has obtained from M. DRÉO, one of the Secretaries of that Government, a diary in which he entered the chief incidents of each Ministerial meeting. In giving up this diary to the Commission he stipulated that it should not be published as it was written, but only a summary given of its contents, as he considered it unfair to those who were then his superiors that statements as to what they had said and done should be exposed to general criticism when they had had no opportunity of revising what was written, and of judging whether a fair account of their transactions had been given by the Secretary. The Commission have kept their promise, and have only published what they term an analysis of the Secretary's journal; but it is a very long and full analysis, and they evidently think this diary itself so interesting that they invite the Assembly at the end of their Report to order further revelations to be made on its authority in spite of the very proper scruples of M. DRÉO. In one sense there is, of course, nothing very new in the materials now published, for the main outline of the history of the siege of Paris is known too fully and accurately to allow it to be possible that any very unexpected additions should be made to it. The interest of this new document is principally a personal one. It allows us to see the different characters, views, and wishes of the members of the Government, and it shows, not only how great were the difficulties the Ministry had to encounter, but also how far the overcoming or succumbing to these difficulties depended on the strength or weakness of each individual. The love of personal criticism, the malice, the ridicule, and the jealousy of enemies or friends, will find much to seize on in these extracts from the diary of M. DRÉO. But it may be doubted whether the general opinion of the characters and performances of the chief members of that unfortunate Government will be much affected by them; and it may even be fairly contended that, if sufficient allowance is made for their inexperience and for the combination of adverse circumstances they had to face, the enterprising adventurers who, on the fall of the Empire, declared themselves the Government, come out of the disclosures made in this diary better than could have been expected.

The history of the siege of Paris may be conveniently divided into three periods—the first extending from the formation of the Government on the 4th of September to the suppression of the outbreak of the 31st of October, the second extending to the failure of the great sortie at the beginning of December, and the third extending to the capitulation. The subjects which agitated and divided the Council of Ministers in the first period were the advisableness of having elections for a National Assembly held throughout France; the propriety of permitting municipal elections in Paris; the constitution of a delegated Government at Tours; and, above all, what was to be done with the extreme revolutionary leaders at Paris, and with dangerous journalists. On all these questions M. JULES FAVRE was the leader of the party of common sense and moderation. M. PICARD showed himself firm and even vehement, General TROCHU was always wavering, and GAMBETTA dominated all by his superior energy and breadth of view. Nothing indeed is more apparent through all the revelations of M. DRÉO than the ascendency of GAMBETTA. His colleagues first yielded to him, then distrusted him, then finally quarrelled with him and ordered him to be arrested, but they seem never to have lost the feeling that he was a bigger man than any of them, and that even his mistakes did not much diminish his superiority. Among the leaders of the Reds FLOURENS gave the most trouble, and the Ministers were always debating what was to be done with him. He began by declaring himself a colonel, which vexed General TROCHU, who naturally felt that, if it was open to popular orators to make themselves colonels, there was not much good in his being head of the army. Still neither TROCHU nor the Government ventured

summarily to reduce FLOURENS into his proper obscurity, and TROCHU announced as a contrivance of meritorious ingenuity that he had devised a special dignity and office for FLOURENS, and had named him Major du rempart. But FLOURENS soon got tired of being a major, and once more created himself a colonel, and subsequently the Government had to consider whether he should be arrested, and it was decided that he should be arrested; but the Prefect of Police found that his agents could not get into the asylum of Belleville where FLOURENS lived, and, as the Government did not venture to push the matter further, the Prefect of Police resigned. Journalism was also a thorn in the side of the Government, and was so mendacious and insolent that the Ministry debated most seriously what was to be done to correct its adverse influence. M. PICARD was of opinion that the members of the Government should themselves write in the papers, and thus supply from the fountain-head a stream of wholesome literature. His colleagues declined, and then he made the startling proposal that no journal whatever should be allowed to appear until the siege was over.

The peril of the 31st of October was a most serious one, and the diary of M. DRÉO makes it clear that, although M. FERRY, who actually saved the Ministry by his opportune arrival with a body of trustworthy troops, had entered into no agreement with the insurgents, some of his colleagues had committed themselves; and M. GARNIER-PAGÈS expressly asserted that he himself had assured DELESCLUZE that he should not suffer for his participation in the outbreak, and M. GARNIER-PAGÈS protested that unless this pledge were held sacred he would resign. It was indeed one of the chief difficulties of the Government that every member, unless he got his own way, immediately threatened to resign, and there was no one in the Government whose name carried with it such an authority as to make it clear that, if resignation once began, he would still rally a Government of some sort round him. During November, however, the Government had the happiest moments of its existence. The outbreak of October 31 had been suppressed, and the great sortie was coming off and might turn out a success. The plan of TROCHU and his generals was to make the sortie in the direction of the Rouen Railway, and it was only at the last moment that the design was changed in obedience to the demands of GAMBETTA, who insisted that a sortie must be made at once on the side of the Marne, and promised that those who forced the German lines should find at Fontainebleau a relieving army of 150,000 men ready to welcome them. TROCHU never pretended to believe in the efficacy of this or of any sortie. He said that to make it was an act of "heroic folly," but he contended that it ought to be made, and those of his colleagues who shared his gloomy anticipations quite agreed with him. The feeling of these men was that Paris was in the position of a duellist who has chosen to come on the ground, and has then no option but to stand fire. It was due to the honour of France, and especially of Paris, that the Parisian garrison, having defied the Germans, should show that it could stand the fire of its adversaries. TROCHU had a poor opinion of his troops, and General CLÉMENT THOMAS openly expressed his profound contempt for the National Guard, going so far as to apply the term "charlatanism" to the displays of rampant courage made by that part of the bellicose body which constantly demanded to be led into action.

After the great sortie had failed the Government had no further hope. The ominous word capitulation began to circulate among them. They took stock of the remaining provisions, and saw famine staring the city in the face. They talked wildly of replacing TROCHU, or of persuading him to do something such as no one had ever heard of a general doing, and opposed to all the rules of the art of war. A council of generals was called at the end of December, in order that each might be asked in turn whether it was not possible that a hole might be made in the German lines somewhere, and so a sortie be proved to be successful. They all one after another declared that it was utterly impossible. Most of them doubted whether even veteran troops could have forced their way through after the Germans had had so long a time to fortify their positions; but they all agreed that the troops under their command could not possibly do it. They were demoralized by the want of success, and they were weak with cold and hunger. TROCHU declared that, if he was bidden to go out and have a certain number of men killed uselessly, he would go, but that it was as clear as day that their death would be useless. Still he himself had, as the result of all his deliberations, to allow that another sortie must be made. The Government did not dare to tell the population what was the real state of the provisions, or the fate of the armies of GAMBETTA, or to give any hint that the end was approaching. The consequence was that the population of Paris kept asking that some great effort should be made, and TROCHU stated that, especially on the part of the middle classes, there was a genuine outburst of patriotism, and a real readiness to die for the country. The bloody and hopeless attempt of the 19th of January was the consequence, its object being, not to hurt the Germans, but to convince the Parisians that the Germans could not be hurt. Even after its failure there was the utmost reluctance to let Paris know the truth, although it was then impossible that the provisions could hold out longer than a very few days more. But the impression made by the record of M. DRÉO is that this reticence of the Government was not due either to its vanity or to its selfish timidity. The Ministers candidly avowed that, if they let the truth be known, the Government would certainly be upset, and probably its members would be torn to pieces by the mob. But, as TROCHU said, this was not a dishonourable mode of dying, and they could but die. What they were afraid of was the utter anarchy in which everything would be plunged if there was no Government left which the provinces and the armies outside Paris would obey, and none with which the Germans could or would treat. The Government was obliged to exist for the sake of the country, and to save Paris from worse misfortunes than befel it; but in order to exist it was obliged to keep Paris in the dark as to the real state of things, and to let thousands of Parisians be shot or starved to death in order to keep up the delusions of the people. The Government chose to do this rather than let Paris suffer as it would have suffered if this had not been done, and it is of course open to question whether the Government chose wisely; but the diary of M. DRÉO shows that it at least chose honestly, and that it was only after a most careful consideration of consequences that a course was taken which was eminently distasteful to the pride and the honourable feelings of many members of the Ministry.

POLITICAL DISSENT.

IT is the common fate of political parties occasionally to find themselves in alliance with those who accept their principles only for casual and temporary use, and as a means of promoting purely personal or sectional interests. A striking proof has just been afforded of the hollowness of the union which has for some time subsisted between the Liberals and the Ultramontanes, and it now remains to be seen how far the support of the Nonconformists can be retained without a sacrifice of Liberal principles. It would appear that the Nonconformists, like the Ultramontanes, have hitherto availed themselves of the doctrines of Liberalism only to serve their own private ends. They advocated religious freedom in order to obtain toleration and freedom for themselves. Now that they are free, and think themselves strong enough to pass from the defensive to the aggressive, their conception of freedom is found to include a considerable degree of interference and coercion with regard to others. The essence of Nonconformity turns out to be the assertion of a right to compel everybody to conform to Nonconformist ideas. Mr. GLADSTONE was indebted for the large majority with which he came into office to the common hostility of Liberals, Nonconformists, and Ultramontanes to the Established Church of Ireland. Although the different sections had in this instance arrived at the same conclusion, they were by no means at one in regard to the principles which had led them up to it; and Mr. GLADSTONE's recent embarrassments have been mainly due to the difficulty of striking out some other course of policy which should bring the various elements of his party once more into hearty co-operation. After the defection of the Roman Catholics, it is natural that the Ministry should consider what they can do to conciliate the Dissenters. The vote on the Burials Bill seems to be taken as an earnest of what may be expected from the Government on the Education question, and the Dissenters are apparently determined to make the most of their opportunity. It is worth while to observe the nature and spirit of their demands, especially as we are likely to find them assuming a good deal of prominence at the next general election. The other day we had a very frank and candid statement of their case by one of their friends. "However small," says a writer in the *Economist* who thinks that the Dissenters have

irresistible claims on the Government, and that something handsome should be done for them, "the scruple may "be which the Dissenters have raised on the subject "of the 25th Clause of the Education Act, it may be ad- "mitted at once that it is not the only cause of offence the "Act has given them. Very naturally they hoped that the "Education Act would do a great deal to destroy the caste "advantages which the Church enjoys in the country. And "unquestionably, owing no doubt to the praiseworthy zeal of "Churchmen, and also to their great advantages over the "Dissenters in wealth, it has not had that effect; but, in the "country districts at least, the opposite effect. We do not "say and do not think that the Government can fairly be "blamed for this. But it must be admitted that it is a fair "cause of disappointment to the Dissenters." In other words, the Dissenters looked to the Education Act only as a means of injuring the Church, and they consider themselves defrauded because it has not had this result. What they want is not a national system of education, free, unbiassed, and efficient, but a system of education which shall supply the means of weakening and fettering the Church of England, and of placing it at a disadvantage as compared with other religious bodies.

Anybody who will refer to the Dissenting journals will see that this is really a very fair statement of their views. It is not enough that education should be free and open, and that every denomination should have an equal opportunity of joining in the work of educating the people, as far as it is willing or able to do so. It is held that the State ought to do all it can in order to throw difficulties in the way of the Church which distances the rest by its zeal and liberality, and to prevent its members from voluntarily applying their private means to an important public object. Voluntaryism, in its latest development, takes the form of an appeal to the State to suppress voluntary effort. Whether a State Church is a good thing or a bad thing is of course a question upon which everybody is entitled to his own opinion; and it is only natural that those who think it a bad thing should agitate for its abolition. But this is not exactly the course which the Dissenters are now pursuing. They are not content to take the Church as it stands, and to prove that its actual condition supplies an urgent reason for its abolition. What they are trying to do is, by every artifice and stratagem, by side blows and indirect attacks, to reduce the Church to a position which would justify their condemnation of it. If they could only manage to frustrate its dangerous zeal and check its inconvenient liberality, to degrade its rites, and paralyse its ministrations, they would then be able to turn round and say, "See what a poor, feeble, worthless thing this Church "is; away with it without more ado." The Dissenters, in short, are now endeavouring by all manner of artificial expedients to produce such a state of things in the Church as may be used as an argument for getting rid of it. It is important, therefore, that the nature of these expedients and their general aim should be borne in mind, and that it should be distinctly understood that they are part of a general plan the object of which is to discredit, in order to destroy, the Church.

The Dissenters are in the habit of speaking as if they were a compact, and homogeneous communion, which divided the country with the Church of England. In reality they represent a vast variety of creeds and congregations, and a further distinction must be drawn between their political and non-political tendencies. The political Dissenters who assume to speak in the name of the whole body of Nonconformists are comparatively few in number, but keen, loud, active, and pushing. They can hardly be said to be bound together by any ties of religious sympathy or communion, for their creeds are of the most diverse, and even opposite and irreconcileable kind. Their only common ground is hostility to the Church of England, but their hostility to the Church, like their attraction towards each other, has very little relation to theology. When analysed it will be found to be more a feeling of personal or social jealousy than anything else. Christians and Rationalists, Trinitarians and Unitarians, put aside their religious differences in order to join in an attack upon the body which may be said, as far as religious belief is concerned, to divide Englishmen the least. The origin of this hostility, though seldom frankly avowed, comes out unmistakably enough in the writings and speeches of the leaders of the party. They resent with an intense, and, if we did not know how these small and morbid jealousies are apt to rankle in minds of a certain order, with an almost incredible, bitterness the idea that they occupy a lower social plane as compared with the Church, and that they are looked down upon—so one of their chief men lately put it—as a sort of inferior caste. Those who have had an opportunity of studying the personal relations between the Church and the Dissenters will understand how entirely unfounded this supposition is as regards the former, but it would of course be idle to try to argue the point with the Dissenters. They have made up their minds that they are looked down upon, and they will have it so; and as everything is viewed through this discolouring and distorting medium, it is not surprising that the assumption with which they start should seem to be abundantly confirmed. If the Church attempts to make friendly advances, its arrogant patronage is fiercely repelled; if it holds aloof lest it should be supposed to be meddling or intrusive, its supercilious isolation is an unfailing subject of invective.

In short, whatever the Church does or does not do is equally an outrage on Nonconformity, and when there is no chance of picking a quarrel directly with the Church, every little side question with which it can by any stretch of the imagination be identified is treated as a means of attack. There is nothing about steeples in the Prayer-Book or the Thirty-nine Articles, but it does happen that most of the churches connected with the Church of England have steeples, and to a certain class of Nonconformists, as appears from the anti-steeple agitation at Staplehurst, the mere sight of a steeple in the distance is like the waving of a red rag in the face of an excited bull. A similar spirit is observable in the tone taken with regard to the Deceased Wife's Sister question, the Burials Bill, and so on. Dissenters, as a rule, are quite content with the existing freedom of choice in matrimony; but Mr. BRIGHT once gave them a hint about "eccle- "siastical rubbish," and they felt bound to take sides against the Church, though the recent exhibition of a bishop on their own side must have rather staggered them. It is perhaps significant that the political agitators who hire themselves out as "representative working-men" are put on by their employers week about to attack landed property and to asperse the Church; and Mr. MIALL's friendly overtures to the Republicans and Internationalists of London will not have been forgotten. More appropriate means for the propagation of "blazing principles" could hardly be imagined. It will be found that the political Dissenters are mainly recruited from the pushing middle-class Radicalism of the towns—not so much the great towns where there is a wider stage of public life, with higher objects of ambition, but rather towns of the second and third rank. The organization of the Dissenting bodies renders them a convenient stepping-stone to local influence and position, and imaginary grievances against the Church supply a ready means of striking at the classes which are supposed to be associated with it. Nothing, however, could be more unjust to the sincere and earnest piety of the great body of Nonconformists than to identify them with the political faction which presumes to speak in their name, and which has abandoned the old principles of historical Nonconformity in order to gratify the impulses of class jealousy and social spleen.

THE UNIVERSITY BOAT-RACE.

THE University boat-race may suggest various trains of speculation, according as we prefer the character of sentimental observers of youthful amusements, or of educational theorists, or of simple critics of the art of rowing. To speak, first, in this last capacity, our duties are fortunately short and easy. To be perfectly candid, we may admit that they were partly simplified by our limited means of observation. In one sense we may claim to have seen the race; a vision of light and dark blue oars, rising and falling symmetrically, was undoubtedly impressed upon our retina during a certain number of minutes. Unfortunately the captains of two steamboats, on one of which it was our lot to be embarked, seized the opportunity for illustrating the theory and practice of ramming. Interesting as their experiments must have been to persons inclined to speculate upon the future of naval construction, they unfortunately cut short our view of the race. We solaced ourselves by various philosophical observations upon human nature; we admired the ease with which the passengers on each vessel instantly identified themselves with the fortunes of their own craft, and regarded their rivals as Drake might have regarded some Spanish admiral in old days; and we further were delighted with the extraordinary powers of observation which enabled the British reporter to know precisely what was going on round a corner at the distance of half-a-mile. For ourselves, it became evident that any detailed criticism as to the number of strokes rowed in a minute, the eccentricities of steering, or the form of the crews, was rigidly impossible. However, the history of the race was too plain to need much comment. Cambridge was the heavier and stronger crew, and rowed sufficiently well to make use of its weight

and strength. These advantages are almost always decisive in a long race; and everybody had foreseen that they would be decisive on the present occasion. In rowing it may be added that everybody is generally right, for the simple reason that chance is a much less important element in a boat-race than in a cricket-match, or in most other varieties of games. The only people to be excepted from "everybody" on this occasion were the very young and very enthusiastic persons, whose patriotism overpowered their judgment, and a few of those extremely acute critics who have observed, rightly enough, that the safest way to win reputation is to make an accurate prophecy in defiance of the general opinion, and who have inferred, not so rightly, that they should begin by defying the general opinion at all hazards. These gentlemen have had a pleasant occupation provided for them since Saturday last. They have had to show to their own satisfaction that the defeat of their anticipations is no imputation upon their sagacity. Of course the task is easy enough. The general principle in such cases is to abuse the unfortunate coxswain; he can't reply, and, if he did, he could not prove anything, inasmuch as the wake of an eight-oared boat disappears within a few seconds, and it is therefore perfectly safe to assert that he made a series of zigzags unprecedented in the whole previous history of navigation. Then mysterious currents may be suggested, and it may be shown that the wind came just the wrong way; and, in short, it may be demonstrated that facts behaved with their usual perverse disregard of theories. Let us hope that the erring prophets have regained their old complacency, and will prophesy as confidently as ever next year. The public at large may come to the conclusion that nothing very surprising has happened, and may deduce such consequences as they please from the facts that eight Cambridge lads averaged five pounds more than their Oxford rivals, and that, thanks to the improved state of the Cam, or to the energy of some reformers, Cambridge oarsmen have once more acquired sufficient skill in the art to take full advantage of their thews and sinews. We might of course say a good deal more; with the help of the eloquent reporters of the daily press and the sporting newspapers we might criticize the minutest detail of the style adopted by each youthful hero; we might talk about recovery and delivery, and catching, and hanging, and swinging, and feathering, and expatiate upon the marvellous effects of the great revolution in the art effected by the discovery of the sliding-seat — a discovery which in the imagination of some zealots seems to rival in importance the application of moveable types in the printing press. Eking out our limited opportunities of personal observation from portraits in the illustrated papers, we might endeavour to do justice to those stalwart young men who are declared in one of the reports (we quote from memory) to be ideal combinations of the Hercules and the Antinous of ancient sculptors. But we refrain, partly from unfeigned diffidence as to our graphic powers, partly from a conviction that such details do not throw much more light upon the matter, and partly from a suspicion that our readers may possibly have had enough of these minutiæ during the last six weeks. The gaze of the world has been so riveted upon these athletic champions that perhaps we have heard almost enough of them.

We turn, therefore, to a different line of speculation. People have been asking, for the last two or three years, whether the University race was not in danger of becoming an abuse. The question has of course been put timidly enough, but an answer of a distinct kind will have to be given before long. We will not run over once more the ordinary platitudes upon the subject. A love of athletic games in moderation, as everybody will admit, is an excellent thing; an excessive devotion to athleticism will be equally admitted, by everybody worth taking into account, to be a grave evil. The question is simply one of degree, and our object should be to define as nearly as may be the point at which excess begins and moderation ends. It is easy to put cases in which everybody would admit that the sport was becoming simply mischievous. If, for example, the University boat-race became an excuse for gambling, it would require speedy suppression. We are glad to believe that at present there are no serious symptoms of this worst form of degradation. There is, it is true, a very unpleasant flavour about some of the language used in regard to it. The anxious comparisons of the times in which trials are performed, and the elaborate discussions of what are called "lines" between the two crews, remind us unpleasantly, even in the slang which is used, of the touts and betting-men who have brought disgrace upon the Turf. We fully believe, however, that, in spite of some ugly rumours, the taint has not spread to any serious extent. Persons of sporting propensities are accustomed to eulogize the University boat-race as the one event which is absolutely free from any of those suspicions of foul play which invariably intrude where the gambling element becomes strongly marked. We accept their statements unhesitatingly, but we also infer that we cannot too jealously guard against an evil which, as the very frequency of the boast implies, would be absolutely fatal to the pursuit. The evil moreover begins long before this manifestation of its worst form. It is melancholy, for more reasons than one, to contrast the old rowing days with the present. It is melancholy because it reminds some of us that, when our experience began, the present athletes were not able to grasp a finger, to say nothing of an oar. But, besides more private reasons, the change in the spirit of the pursuit is significant of a change to which it is hard to prescribe limits. In the good old days when gentlemen used to row six-mile matches in eight-oared cutters, when boats had a gangway down the middle, when the athletes stopped to suck lemons during the heat of race, nobody cared to attend except personal friends; newspapers were silent; there were fewer spectators of the race than there are now of the trials; and dons, [illegible] of being sentimentally sympathetic, carefully averted their gaze and thought it beneath their dignity to do more than connive at the performance. After a time steamboats began to accompany the race; gradually they became so numerous as to impede the competitors. Then Parliament condescended to interfere in order to secure a fair course; and now the stationary craft which provide sitting room for spectators have become so numerous that, if the popularity of the sight increases at its present ratio, the whole river will be in danger of a block. Ten years hence the water will be much in the same state in which London Bridge is now at the middle of the day, and the difficulty of keeping order will be as great as in a thanksgiving procession. Now, whether that process be in other respects desirable or not, the meaning of it is tolerably clear. The crews used to be simply a set of young men engaged upon their own private amusement. Now they have become public property. Thus, for example, they had the honour on the present occasion of dining with the Lord Mayor, as though they had been Ministers of State or foreign potentates. The historic dignitary who received them gave them thanks in the name of the great community over which he presides. He made such remarks as great dignitaries make after dinner. He informed them that rowing combined love of the water with outdoor exercise—which is what Sam Weller called a self-evident proposition—and sang the praises of pluck, energy, and self-denial in the usual manner. And he further stated, what is quite true, that the race was the occasion of a great metropolitan holiday, and that the young men therefore deserved the thanks of London and a good dinner. We do not grudge it them; but we cannot help asking whether this is the kind of duty which undergraduates ought to discharge? Why should they give London a holiday? If London wants holidays, it can find excuses for them. It may see the Lord Mayor himself and his men in armour. It may burn Guy Fawkes, or attend Volunteer reviews, or see fireworks at the Crystal Palace. But what business has the many-headed monster to order up eighteen young gentlemen from their studies to play before it? Doubtless its thanks are very precious; but thanks impose an obligation. The oarsmen are not merely champions of their respective Universities, but they are public functionaries; and it is at this point, in our opinion, that the practice becomes questionable. A gentleman may without the slightest loss of self-respect play games with his friends; and he need not complain if a crowd looks on at his amusement. But when the crowd, or its representative, gives him a dinner and thanks him for his trouble, he begins to resemble Punch or an acrobat. There is no harm indeed in being an acrobat; but it is a pursuit not quite compatible with a University career.

In fact, as soon as this view is taken of the performance it acquires an utterly factitious importance. Outsiders put in a claim to have their interests consulted. If any change is made in the time or the scene of the race, they fancy themselves aggrieved. The youths, who are quite ready enough to think too much of themselves because they are the sons of Anak, begin to take airs as, in some sort, men of national mark. They are not merely the heroes of their Universities, but the heroes of a population of three millions. It is inevitable that the honour of performing before such an audience should be ridiculously exaggerated. If the University authorities should attempt to set bounds to the tournament they will be told that they are not the only people to be consulted. The consent of the Lord Mayor must be asked before the arrangements can be altered. The newspapers will cry out in the name of the public that London must not be deprived of a show. The oarsmen themselves will appeal from their tutors to the spectators of their prowess, and will declare their interests to be independent of any University regulations. Now, as public opinion is strong, and University authorities are by no means too independent of its voice, we think it is high time that they should take care that the matter does not go out of their hands. They may surely say, quite fairly, We are very willing to allow our pupils to amuse themselves in reason, but we cannot allow them to become performers for the amusement of the public. We must vindicate the simple principle that, so long as a youth is a student at the University, the interests of the University must be paramount. On this ground, we should say that it is not too soon to consider whether the race should be allowed to continue in London waters, and to be made the occasion of a great metropolitan holiday. When the Lord Mayor appears on the scene it is time for Vice-Chancellors and tutors to look to their authority.

CAPRI AND ITS ROMAN REMAINS.

AMONG the many charms of the little island of Capri must certainly be counted the number and interest of its Roman remains. The whole island is in fact a vast Roman wreck. Hillside and valley are filled with a mass of *débris* that brings home to one in a way which no detailed description can do the scale of the buildings with which it was crowded. At either landing-place huge substructures stretch away beneath the waves, the relics of moles, of arsenals, and of docks; a network of roads still links together the ruins of Imperial villas; every garden is watered from Roman cisterns; dig where he will, the excavator is rewarded by the discovery of vases, of urns, of fragments of sculpture, of mosaic pavements, of precious marbles. The churches of the island

and the royal palaces of the mainland are full of costly columns which have been removed from the ruins of Capri; and the Museum of Naples is largely indebted for its treasures of statuary to the researches made here at the close of the last century. The main archæological interest of the island, however, lies not in fragments or "finds" such as these, but in the huge masses of ruin which lie scattered so thickly over it. The Pharos which guided the Alexandrian corn-ships to Puteoli stands shattered on its headland. The waves dash idly against the enormous fragment of the sea-baths of Tiberius. His palace-citadel still looks from the summit of a mighty cliff across the Straits of Sorrento. The stairs of Anacapri, which, in the absence of any other date to which it is possible to assign them, we are forced to refer to the same period of construction, hewn as they are to the height of a thousand feet in the solid rock, vie in boldness with almost any achievement of Roman engineering. The smallness of the space—for the lower part of the island within which these relics are crowded is little more than a mile and a half either way—adds to the sense of wonder which the size and number of these creations excite. All that remains, too, it must be remembered, is the work of but a few years. There is no ground for believing that anything of importance was added after the death of Tiberius, or begun before the old age of Augustus. We catch glimpses indeed of the history of the island long before its purchase by the aged Emperor. Its commanding position at the mouth of the great Campanian bay had raised it into importance at a very early period. The Teleboes whom tradition, according to Tacitus, named as its first inhabitants have left only a trace of their existence in the verse of Virgil; but in the great strife between the Hellenic and Tyrrhenian races for the commercial monopoly of Southern Italy, Capri, like Sorrento, was seized as a naval station by the Etruscans, whose alliance with the Phœnicians in their common war against the Greeks may perhaps explain the vague legends of a Semitic settlement. The Hellenic victory of Cumæ, however, settled the fate of Capri, as it settled the fate of the coast; and the island fell to the lot of Neapolis, when the "new city" rose in the midst of the bay to which it has since given its name. The most enduring trace of its Greek colonization is to be found in the Greek type of countenance and form which endears Capri to artists; but, like the cities of the mainland, it preserved its Greek manners and speech long after it had passed with Neapolis into the grasp of Rome. The greater proportion of its inscriptions, even when dating from the Imperial period, are in Greek. Up to the time of Augustus, however, it played in Roman story but the humble part of lighting the great corn-fleet from Egypt through the Strait of Sorrento. Statius tells us of the joy with which the sailors welcomed the glare of its Pharos as they neared the land, the greeting they addressed to its cliff, while, on the other hand, they poured their libations to the goddess whose white temple gleamed from the headland of Sorrento. Its higher destinies began with a chance visit of Augustus when age and weakness had driven him to seek a summer retreat on the Campanian shore. A happy omen, the revival of a withered ilex at his landing, as well as the temperate air of the place itself, so charmed the Emperor that he forced Naples to accept Ischia in exchange for it, and chose it as his favourite refuge from the excessive heat. Suetonius gives a pleasant gossiping picture of the old man's life in his short holidays there, his delight in idly listening to the prattle of his Moorish and Syrian slave-boys as they played knuckle-bones on the beach, his enjoyment of the cool breeze which swept through his villa even in summer, or of the cool plash of water from the fountain in the peristyle, his curiosity about the big fossil bones dug up in the island which he sent to Rome to be placed in the galleries of his house on the Palatine, his fun in quizzing the pedants who followed him by Greek verses of his own making. But in the midst of his idleness the indefatigable energy which marked the man was seen in the buildings with which Suetonius tells us he furnished the island, and the progress of which after his death may possibly have been the inducement which drew his successor to its shores.

It is with the name of the second Cæsar rather than of the first that Capri is destined to be associated. While the jests and Greek verses of Augustus are forgotten, the terrible invective of Tacitus and the sarcasm of Juvenal recall the cruelties and the terrors of Tiberius. His retirement to Capri, although, as we have seen, in form but a carrying out of the purpose of Augustus, marks a distinct stage in the development of the Empire. For ten years not Rome, but an obscure island off the Campanian coast, became the centre of the government of the world. The spell of the Eternal City was suddenly broken, and it was never thoroughly restored. If Milan, Ravenna, Nicomedia, Constantinople, became afterwards her rivals or supplanters as the seat of empire, it was because Capri had led the way. For the first time, too, as Dean Merivale has pointed out, the world was made to see in its bare nakedness the fact that it had a single master. All the disguises which Augustus had flung around his personal rule were flung aside; Senate, Consuls, the Roman people itself, were left contemptuously behind. A single senator, a few knights, a little group of Greek pedants, were all that accompanied Tiberius to Capri. The figure of the Emperor stood out bare and alone on its solitary rock. But, great as the change really was, the skill of Tacitus has thrown over the retirement of Tiberius a character of strangeness which, as we have seen, hardly belongs to it. What in fact distinguished it from the retirement of Augustus to the same spot was simply the persistence of his successor in never returning to Rome. Capri in itself was nothing but a part of the great pleasure resort which Roman luxury had created round the shores of the Bay of Naples. From its cliffs the Emperor could see through the pure, transparent air the villas and watering-places which fringed the coast from Misenum to Sorrentum, the groves and lakes of Baiæ, the white line of Neapolis, Pompeii, and Herculaneum, the blue sea dappled with the painted sails of pleasure-boats as they wooed the summer air. The whole bay was a Roman Brighton, and the withdrawal of Tiberius from the world was much the same sort of withdrawal from the world as the seclusion of George IV. at the Pavilion. Of the viler pleasures which are commonly attributed to him in his retreat we need say nothing, for it is only by ingenious conjectures that any of the remains at Capri have been made to confirm them. The taste of Tiberius was as coarse as the taste of his fellow-Romans, and the scenes which Seneca paints as common at Baiæ—the drunkards wandering along the shore, the songs of the revellers, the drinking-toasts of the sailors, the boats with their gaudy cargo of noisy girls, the coarse jokes of the bathers among the rose-leaves which strewed the water—were probably as common in the revels at Capri. But for the more revolting details we have only the scandal of Rome to rely on, and scandal was easily quickened by the veil of solitude and secrecy which Tiberius flung around his retirement. The tale of his cruelties, of the fisherman tortured for having climbed the cliff which the Emperor deemed inaccessible, of the criminals dashed into the sea down the steep of the "Salto di Timberio," rest on the gossip of Suetonius alone. But in all this mass of gossip there is little that throws any real light on the character of the island or of the buildings whose remains excite our interest there; we can only guess at its far wilder condition from a story which shows us the Imperial litter fairly brought to a standstill by the thick brushwood, and the wrath of Tiberius venting itself in a ruthless thrashing of the centurion who served as his guide. The story is curious because it shows that, in spite of the rapidity with which the Imperial work had been carried on, the island when Tiberius arrived was still in many parts hidden with rough and impenetrable scrub, and that the wonderful series of hanging gardens which turned almost the whole of it into a vast pleasure-ground was mainly of his own creation.

It would of course be impossible to pass in review the numberless sites where either chance or research has detected traces of the work of Tiberius. "Duodecim villarum nominibus et molibus insederat," says Tacitus; and the twelve villas may in most cases be identified to-day, some basking in the sunshine by the shore, some placed in sheltered nooks where the cool sea-breeze tempered the summer heat, the grander ones crowning the summit of the hills. We can trace the docks, the grottoes still paved with mosaic which marks them as the scene of Imperial picnics, the terraces and arbours of the hanging gardens with the rock boldly cut away to make room for them, the system of roads which linked the villas together, the cisterns and aqueducts which supplied water, the buildings for the slaves of the household and for the legionaries who guarded the shore, the cemetery for the dead, the shrines and pavilions scattered about on the heights, and a small Mithraic temple hidden in the loveliest of the Caprese ravines. If we restore in fancy the scene to which these ruins belonged, fill the gardens with the fountains and statues whose fragments lie profusely scattered about, rear again the porticoes of marble columns, and restore the frescoes whose traces exist on the ruined walls, we shall form some inadequate conception of the luxury and grace which Tiberius flung around his retirement. By a singular piece of good fortune the one great wreck which towers above all the rest is the spot with which the Emperor himself is historically associated. Through the nine terrible months during which the conspiracy of Sejanus was in progress, he never left, Suetonius tells us, the Villa Jovis, and the villa still stands on the huge promontory, fifteen hundred feet above the sea, from which his eye could watch every galley that brought its news of good or ill from Misenum and from Rome. Few landscapes can compare in extent or beauty with the view on which Tiberius must have looked. The promontory of Massa lies across the blue reach of sea, almost as it seems under one's hand, yet really a few miles off, its northern side falling in brown slopes dotted with white villas to the orange gardens of Sorrento, its southern rushing steeply down to the hidden bays of Amalfi and Salerno. To the right the distant line of Apennine, broken by the shadowy dip that marks the plain of Pæstum, runs southward in a dim succession of capes and headlands; to the left the sunny bow of the Bay of Naples gleams clear and distinct through the brilliant air till the broken mass of Ischia leads the eye round again to the cliff of Anacapri, with the busy little Marina at its feet. A tiny chapel in charge of a hermit now crowns the plateau which forms the highest point of the Villa Jovis; on three sides of the height the cliffs fall in a sheer descent of more than a thousand feet to the sea, on the fourth the terrace walls are formed of fragments of brick and marble, which recall the hanging gardens that swept downwards to the plain. The Villa itself lies partly hewn out of the sides of the steep rock, partly supported by a vast series of substructures, whose arched vaults served as water-reservoirs and baths for the service of the house. In strength of site and in the character of its defences the palace was strictly what Pliny calls it, "Tiberii principis arx," but this was no special characteristic of the Villa Jovis. "Scias non villas esse sed castra," said Seneca of the luxurious villas on the coast of Baiæ; it was as if the soldier element of the Roman nature broke out even amidst the patrician's idlest repose in the choice of a military site

and the warlike strength of the buildings he erected on it. Within, however, life seems to have been luxurious enough. The ruins of a theatre, whose ground plan remains perfect, show that Tiberius combined more elegant relaxations with the coarse revels which are laid to his charge. Each passage is paved with mosaic, the walls still retain in patches their coloured stucco, and here and there in the small chambers we find traces of the designs which adorned them. It is, however, rather by the vast extent and huge size of the substructures than by the remains of the house itself that we can estimate the grandeur of the Villa Jovis; for here, as at the Baths near the Marina, the ruins have served as quarries for chapels and forts and every farmhouse in the neighbourhood. The Baths stand only second in grandeur to the Villa itself. The fall of the cliff has torn down fragment after fragment, but the half of an immense calidarium still stands like an apse fronting the sea, a grand sea-wall juts out into the waves, and at its base, like a great ship of stone in the midst of the water, lies still unbroken after eighteen hundred years the sea-bath itself. The roof has fallen in, the pillars are tumbled from its front, but the high walls, though undermined by the tide, still stand erect. On the cliff above, a Roman fortress, which must have resembled Burgh Castle in form, and which has since served as a modern fort, seems to have protected the Baths and the vast series of gardens which occupied the whole of the lower ground beneath the Stair of Anacapri, and whose boundary wall remains in a series of some twenty almost perfect arches.

As we have said, however, we cannot attempt to describe the Roman remains of Capri in detail. Their importance has long been understood by the archæologists of Italy, and something of their ruin may be attributed to the extensive excavations made by the Government a hundred years ago. But far more of the terrible wreck is owing to the ravages of time. With the death of Tiberius Capri sinks suddenly out of sight. Its name had in fact become associated with infamy, and there is no real ground for supposing that it remained as the pleasure-isle of later Emperors. But the vast buildings can only slowly have mouldered into decay; we find its Pharos flaming under Domitian, and the exile of two Roman princesses, Crispina and Lucilla, by Commodus, proves that Imperial villas still remained to shelter them. It is to the period which immediately follows the residence of Tiberius that we may refer one of the most curious among the existing monuments of Capri, the Mithraic temple of Metromania. Its situation is singularly picturesque. A stair cut in the rock leads steeply down a rift in the magnificent cliffs to the mouth of a little cave, once shrouded by a portico whose fragments lie scattered among the cacti and wild thyme. Within, the walls are lined with the characteristic reticulated Roman masonry, broken chambers and doorways on either side are blocked by *débris*, and two semi-circular platforms rise one within the other to a niche in the furthest recess of the cave, where the bas-relief of the Eastern deity which is now deposited in the Museum at Naples was found by the first excavators. Beside it lay a stone with a Greek inscription so strangely pathetic that it must tell its own tale:—"Welcome into Hades, O noble deities—dwellers in the Stygian land—welcome me too, most pitiful of men, ravished from life by no judgment of the Fates, but by a death sudden, violent, the death-stroke of a wrath defiant of justice. But now I stood in the first rank beside my lord! now he has reft me and my parents alike of hope! I am not fifteen, I have not reached my twentieth year, and—wretched I—I see no more the light! My name is Hypatus; but I pray my brother and my parents to weep for wretched ones no more." Conjecture has coupled this wail of a strange fate with the human sacrifices offered at the shrine of Mithras, and has seen in Hypatus a slave and favourite of Tiberius devoted by his master to the Eastern deity; but there is no ground whatever for either of the guesses. Such as it is, however, the death-cry of Hypatus alone breaks the later silence of Capri. The introduction of Christianity was marked by the rise of the mother church of San Costanzo, whose inner columns of giallo antico and cipollino were torn from the ruins of the Baths hard by, and from this moment we may trace the progress of destruction in each monument of the new faith. The sacrarium of San Stefano is paved with a mosaic of marbles from the Villa Jovis, and the chapel of St. Michael is erected out of a Roman building which occupied its site. We do not know when the island ceased to form a part of the Imperial estate, but the evidence of a charter of Gregory II., overlooked by the local topographers, shows that at the opening of the eighth century the "Insula Capreæ cum monasterio St. Stefani" had passed like the rest of the Imperial property in the South to the demesne of the Roman See. The change may have some relation to the subjection of Capri to the spiritual jurisdiction of Sorrento, of whose bishopric it formed a part till its own institution as a separate see in the tenth century. The name of the "Bishop of Quails," which attached itself to the prelate of Capri, points humorously to the chief source of his episcopal income, the revenue derived from the capture of the flocks of these birds who settle on the island in their two annual migrations in May and September. From the close of the ninth century, when the island passed out of the hands of Amalfi, it has followed the fortunes of the mainland; its ruin seems to have been completed by the raids of the Saracens from their neighbouring settlement on the coast of Lucania; and the two mediæval fortresses of Anacapri and Castiglione, which bear the name of Barbarossa, simply indicate that the Algerian pirate of the sixteenth century was the most dreaded of the long train of Moslem marauders who had made Capri their prey through the middle ages. Every raid and every fortress removed some monument of the Roman rule, and the fight which wrested the isle from Sir Hudson Lowe at the beginning of the present century put the coping-stone on the work of destruction. But, in spite of the ravages of time and of man, enough has been left to give a special archæological interest to the little rock-refuge of Capri.

MIXED MARRIAGES.

SEVERAL letters have lately appeared in the *Times* complaining of the refusal of Roman Catholic priests to celebrate marriages between Catholics and Protestants without a promise that the Protestant ceremony shall be dispensed with altogether, and a written engagement that all the children shall be brought up Catholics. The complaint, so far as it is directed against the individual priests, is wholly unreasonable, for they have no choice in the matter. The state of the case, briefly put, is this. So long as no marriages could be legally celebrated in England except by the clergy of the Established Church, the process was simple enough. All marriages, Catholic or Protestant, were, as a matter of course, solemnized in the parish church, any further ceremony, unknown to the law, which both or either of the parties might desire, being added at their discretion. But when, some five-and-thirty years ago, the option of civil marriage, either at the registrar's office, or by his attendance at the religious service in a Nonconformist place of worship, was introduced, this ceased to be necessary. It is true indeed, as has lately been pointed out in connexion with Mr. Osborne Morgan's preposterous Burials Bill, that a large proportion of Dissenters still prefer being married at church rather than at the registrar's office or their own chapels. But where both parties are Roman Catholics, they naturally elect to be united by priests of their own faith, and see no reason for repeating the ceremony elsewhere. When, however, one party was a Protestant, or at least a member of the Church of England, it became usual for the Anglican ceremony to follow the Roman Catholic, nor was any difficulty till very recently experienced in carrying out this arrangement. It was only stipulated by the Catholic authorities that their own rite should take precedence, so as to avoid repeating a marriage already validly effected. But a Papal dispensation is required for these unions, and for this certain conditions were imposed. Formerly, we believe, an agreement that the boys born of the marriage should be brought up in the religion of their father and the girls in the religion of their mother was very generally accepted, and most of us must have come across families of mixed religion both in England and abroad. But since Cardinal Wiseman's time an express stipulation that all the children should be baptized and educated as Catholics has been rigidly insisted upon in this country. No interference, however, with the received custom of repeating the marriage ceremony was attempted, as a Roman Catholic priest writing to the *Times* seems to imagine, till long after the change in the law. It was only when Dr. Manning became Archbishop of Westminster, that he lost no time in issuing a strict prohibition to his clergy against celebrating any such marriages till they had obtained an assurance that the Anglican ceremony would not be superadded. With the motive of this injunction we need not here concern ourselves, further than to say that it is obviously intended to discourage mixed marriages, which Ultramontanes are never tired of denouncing, and which, according to several official—and therefore now infallible—utterances of Popes, the Church "abominates and detests." The expediency of the regulation, from a Roman Catholic point of view, may be questioned. One of its first results was the refusal to solemnize what the papers call "a marriage in high life" at Warwick Street Chapel, which was in consequence performed at St. George's, Hanover Square only; and the Roman Catholic husband remained, we believe, for some years under virtual excommunication. Similar cases are said to have frequently occurred among the poor. This, however, is a consideration which chiefly affects those who have imposed the new restriction. It is more to our present purpose to inquire what has been the general tradition and practice of the Church in the matter, about which, as is natural, Protestants are apt to entertain very loose and inaccurate ideas.

In the first place, then, it must be borne in mind that, although matrimony is one of the seven Sacraments according to Catholic doctrine, neither its validity nor its sacramental character is dependent on the religious ceremony which has from a very early age been regarded as its fitting accompaniment. The "ministers of the Sacrament" are in this case explained by almost all theologians to be the contracting parties themselves, not the priest, and indeed no other theory can easily be made to harmonize with the canon law and the general practice of the Church. The essence of the Sacrament is held, very much as in the present Scotch law, which closely follows the ancient canon law, to consist in the mutual consent of the two parties to the contract. And hence clandestine marriages voluntarily entered upon were expressly declared by the Council of Trent to be valid so long as the Church does not annul them. But the Council, in order to prevent the recurrence of these clandestine unions, decreed that for the future the presence of the parish priest, or some priest acting with his approval, and of two other witnesses, should be required as conditions of a valid marriage. We say the *presence* of the parish priest, for it is not essential that he should perform the nuptial rite, or even that he should be a willing witness of the contract, as will be remembered by readers of the *Promessi*

Synod, where the whole plot hinges on this Tridentine ordinance, and the priest is eventually decoyed into witnessing what it had been his special object to prevent. In countries, therefore, where the Tridentine canons are received, of which England is not one, the presence of these three witnesses is held necessary to the validity of the marriage; elsewhere the principle of the old canon law holds good, by which any free consent of the contracting parties constitutes a valid marriage. We may add that, according to the old canon law, which here again agrees with the present law of Scotland, joint consent legitimated all children previously born. It will be clear from what has been said that the Church claims the right not merely to decide what marriages are lawful or unlawful by the divine and natural law, but also to enact additional conditions—that is, to make impediments—at her own discretion. This right appears to have been exercised from a very early period. Second marriages, for instance, though not forbidden, except to the clergy, were discouraged by the imposition of long canonical penances, in the second and third centuries; while third marriages are stigmatized in the *Apostolic Constitutions* as a proof of incontinence, and fourth marriages as no better than fornication. To come nearer to our immediate point, Tertullian speaks very strongly against the inconveniences and dangers of the union of a Christian woman with a heathen husband—supposing, that is, she was a Christian at the time of her marriage; for if she had been subsequently converted, he exhorts her to continue, with the blessing of God, in what is a valid union, and exert all her influence for good over her heathen partner. The Synod of Elvira, in 305, forbids Christian parents to give their daughters in marriage to Jews or heretics, on pain of five years exclusion from communion; or, if they give them in marriage to heathen priests, perpetual exclusion. Ten years later a similar canon, excommunicating women who contracted such a marriage, was passed at the Synod of Arles. Valentinian made a law against these mixed marriages, and the prohibition is included with several others in the Theodosian Code. But, although unlawful, such unions were not anciently held to be invalid, as is exemplified in the well-known case of St. Monica, the mother of St. Augustine, who was married to the heathen Patricius. The Church, however, claimed the right to constitute at her own will not only *impedimenta impedientia*, which make marriage illicit, but also *impedimenta dirimentia*, which make it absolutely null and void, over and above the impediments of nature or divine revelation. This claim is asserted under anathema by the Council of Trent, and its denial forms the subject of three of the condemned propositions of the Syllabus. And of these "diriment impediments" what is called disparity of cult is now one.

According to the present canon law there are no less than fourteen kinds of *impedimenta dirimentia*, some depending on natural, some on positive ecclesiastical law, which are summed up in the following quaint mnemonic lines:—

> Error, conditio, votum, cognatio, crimen,
> Cultûs disparitas, vis, ordo, ligamen, honestas,
> Si sis *affinis*, si forte coire nequibis,
> Si parochi et duplex desit præsentia testis,
> Raptaque sit mulier nec parti reddita tutæ:
> Hæc facienda vetant, connubia facta retractant.

It will of course be understood that these impediments must exist beforehand to make the marriage invalid. With one of them only need we specially concern ourselves now, which stands sixth in order in the lines just quoted. Disparity of cult does not here refer to the difference between Catholics and Protestants, but to the union of a baptized Christian with an unbaptized person, whether Jew, heathen, or member of some nominally Christian sect, which either omits baptism altogether, like the Quakers, or administers it, like the Unitarians, under what is held to be an invalid form. Such unions are declared to be null and void, because, as Christian marriage is a Sacrament, Christians have no right to marry those who, not having received baptism, are incapable of receiving any other Sacrament. The marriage of Catholics with heretics, on the other hand, is forbidden by the canons of Chalcedon and other subsequent Councils, but not made invalid, the chief reason of this prohibition alleged by canonists being the danger to the faith of the children. For, according to Aquinas, the main end of matrimony as a Sacrament is not merely the procreation of children, but their education in the Catholic faith. It has, however, long been customary for the Pope to grant dispensations for such marriages "for grave causes," and although the condition *abjurato prius hæresi* used to be inserted in these dispensations, and Benedict XIV. declares that they should very rarely indeed be given without such previous recantation, this condition has practically fallen into desuetude. Not so the stipulation about the religion of the children, for which a stand has been made wherever it was deemed practicable to enforce it. This formed one main item of the quarrel between the Holy See and the Prussian Government which led in 1837 to the imprisonment of the Archbishops of Cologne and Posen. What precise regulations are in force in Germany at the present day we are unable to say, but Dr. Döllinger observes in his last work that "marriages between Catholics and Protestants have increased of late years (in Germany), and will certainly continue to increase, and these multiplying marriages and families of mixed religion are already paving the way for the fusion of the Churches." We presume therefore that, in practice at all events, the religion of the children follows that of the parent of their own sex, as was formerly the custom in England. But in this, as in other respects, the violent Ultramontane reaction of the day has studiously opposed itself to everything in the shape of conciliation. In the language of the Papal Curia, the Church "abominates" mixed marriages, even where it is found expedient to tolerate them, and the Jesuits denounce them vigorously from the pulpit, and exert a more effective influence against them in the Confessional. If any authoritative reply was to be vouchsafed to the remonstrances of the Protestant correspondents of the *Times*, there can be no doubt about its drift, or its being, *ex hypothesi*, sufficiently conclusive. The complainants urge in effect that, instead of their path being smoothed for them in their natural and laudable desire to wed their Roman Catholic fellow-subjects, all sorts of gratuitous difficulties are thrown in their way. The answer would be, that it is by no means desirable in this case that the course of love, however true, should run smooth, but very much the reverse, and that difficulties are thrown in their way for the express purpose of thwarting it. Hence these tears. We are far from saying that such a policy is really the most conducive to the higher interests of Catholicism, but from their own point of view the position of its promoters is unassailable. They wish to make mixed marriages as infrequent as possible, and, having no direct means of influencing Protestants in the matter, they do all in their power to make the process of marrying Catholics as unpleasant to them as they can. And the outcry which has been raised is the best proof that they have succeeded.

LONDON AND NORTHUMBERLAND HOUSE.

THE meditated surrender of Northumberland House is leading to unexpected results. Our readers will remember that Lord Elcho bravely and wisely endeavoured to persuade the House of Commons to deviate for once from its narrow groove of rigid precedent, and to refer the Bill consummating the destruction of that historical mansion to a Select Committee competent to consider the question in its broad aspects, with a power of option, instead of leaving it to the merely mechanical action of a Private Bill Committee. For those who are not versed in Parliamentary forms we must point out that the latter tribunal can do no more than see that certain technicalities have been complied with, and that in the case of Northumberland House it is inexorably shut out from listening to any independent argument from any person or body of persons whatever, owing to the presumedly representative character of that Metropolitan Board which was promoting the Bill in the name, by a legal fiction, of all united London. Consequently no materials have been provided to enable it to understand the subject on which it is supposed to decide—no plans or designs of the new street, no sections, but merely a plan of the site as it is, with a thick stroke to show the line of the new street, and two thin strokes to show the "limits of deviation." The House which rejected the motion was not the House that had listened a few minutes previously to the debate, but a casual throng of members the majority of whom had unintelligently trooped in to support the Standing Orders. Lord Elcho has in consequence thrown himself upon the common sense of the public, and symptoms seem to indicate that the scandal of our haphazard treatment of public improvements within the Capital is at length pinching the national conscience. The meeting which he called, and over which Lord Lyttelton presided, did not come together to protest in favour of keeping Northumberland House, but to take advantage of the mismanagement leading to its projected sale, and to promote a memorial to Mr. Gladstone, inviting him, in the terms of his own strong declaration made a few years since, to find some remedy for the patent mischief. This course of procedure was, as matters stood, a wise one; for we do not imagine, although we have had in the meanwhile the rich blessing of an Ayrton, that Mr. Gladstone in 1873 can gainsay what he uttered in 1866:—"There is still a lamentable and deplorable state of our whole arrangements with regard to public works; vacillation, uncertainty, rashness, extravagance, meanness, and all the conflicting vices that could be enumerated, are united in our present system," and "there is a total want of authority to guide and direct." Still it leaves us open to the risk that—according to the precedent of African potentates who cement durable peace by killing a man—the long needed reform may be begun by the tasteless sacrifice of the great old house.

We have so often dwelt upon the general question that we have only now to point out briefly the most patent absurdities of the present system:—(1) The subordinate character of the office of the First Commissioner of Works, as a mere functionary of the Treasury, limited to one House, unsupported by a Parliamentary Secretary, and charged, though without complete responsibility, with an ill-assorted farrago of isolated duties; (2) The anomalous independence of control possessed by the Metropolitan Board of Works; (3) The fragmentary, spasmodic, and feeble control which Parliament possesses, either in its collective capacity or by its Committees, over metropolitan improvements, by whomsoever promoted; and (4) The jealous exclusion on all hands of competent advice either from trained experts or accomplished students. Apposite illustrations of this chaotic condition came to hand at the meeting, in the fact that on one side of Whitehall the Board of Works was pushing its Bill for the demolition of Northumberland House with as little formality and as light a heart as if it were a scheme for some branch railway or petty canal in a remote county, and that on the other side of the same street, but with no concert between the authorities, the Office of Works had been busy or fussy in bringing in and then mysteriously withdrawing "a Bill for the Acquisition of Property for the purpose of Erecting

thereon new Buildings in Whitehall for the Admiralty and War Office." The attention of the meeting was also recalled to that strange freak which Mr. Ayrton was allowed to commit some two years since with perfect impunity, when he marred the noble symmetry of Kensington Gardens, and ruined one of the two great avenues, by breaking its back, at the loss of some forty unreplaceable trees, in order to give at the point of divergence a fragmentary vista of the Albert Memorial. The different speakers, as might be supposed, dwelt upon various plans for remedying the evil. The suggestion offered in the second Report of Lord Elcho's Committee of 1869 to invest the First Commissioner with powers of critical supervision over metropolitan works was generally approved; as was the further suggestion which won favour with the same Committee, although it was not finally embodied in its Report, that the Commissioner should be supported in his enlarged duties by a Consultative Committee representing influential bodies and societies peculiarly interested in architecture and engineering. Again it was pointed out that this alteration would not be sufficient unless the status of the Minister himself were improved by a definition of duties, a position which should enable him to be a member of either House, and the assistance, as in other important departments down to the Board of Trade and the Local Government Board (not to mention the Education Office, where the second in command is called Vice-President), of a Parliamentary Secretary who would presumably be primarily concerned with the financial relations of his department. Beyond these official changes would naturally come the reorganization of the Parliamentary Committees dealing with important buildings and communications in the metropolis, in pursuance of the policy recommended during the last Session, and recently put into operation, which has substituted one Select Committee for the numerous little Committees which used to fiddle piecemeal with the different schemes for overrunning London with tramways.

All these are, however, suggestions for a period which is still future, however immediately so it may happily be. The question of the hour is, What must be done with Northumberland House? The subject is, we are glad to see, no longer regarded under the false lights of panic or of routine. The public is beginning to appreciate that there are two parties to this as to all other bargains, and that while it may suit the Duke of Northumberland to take half a million for his house, it may not suit London to give him that half-million. This view of the case is quite beside (although, no doubt, it is strengthened by) the artistic and historical value of Northumberland House in itself. At present we are told that the process of reaching the Embankment is somewhat devious; but, as was well pointed out at the meeting, the Embankment, with all its advantages of shortened through communication, must for ever remain comparatively empty, from its not being a shop or even a residential street, as are in both respects the quays of Paris and of Dublin. Stopping traffic so greatly contributes to the thronging of our thoroughfares, that the moving population of the Embankment must always remain limited, compared with the great competing East and West streets, and the more so (as was not stated in Willis's Rooms) because the railroad which runs under it must carry off a very appreciable amount even of the through traffic. At present, likewise, the façade of Northumberland House exists, and is admitted by all persons whose artistic taste has been even rudimentarily cultivated to be a noble specimen of a very interesting epoch of our national architecture, in spite of alterations which might very wisely be brought back to the original forms, while it serves as a mask to hide two of the most hideous masses of brick and of iron that human perversity ever put together—the Charing Cross Station and the Charing Cross Bridge. For the half-million London will get a straight cutting, which may swell the traffic on the Embankment or may fail in so doing, but will certainly reach that road with a very awkward angle; it will bring those woeful monstrosities, the station and the bridge, into full view of the so-called "noblest site in Europe"; it will deprive itself of the option of forming any other roadway with better angles, which would neither destroy Northumberland House nor lay bare the adjacent deformities; and it will render the prospective widening of the narrow gut of Whitehall very problematical. We are patient enough to think that none of these advantages are so very urgent as to make it imperative on Parliament to give final sanction to the haphazard system of metropolitan rebuilding—we will not term it improvement—and to sanction the irretrievable destruction of a great historical landmark for no better reason than the caprice of an irresponsible Board which is able to force its will upon a Parliamentary Committee, and to shut out any opposition on the colourable pretext that it represents in itself, as an elected body, every ratepayer and every inhabitant of the metropolis. Many things which seemed for the time more important than the destruction of Northumberland House have been postponed till men have lived to bless the delay. We want some guarantee that London shall be improved, not hacked about. We claim some instructed superintendence over our public buildings and approaches in the interests of economy and convenience no less than of taste, and we insist on this better organization being conducted in accordance with our national traditions of personal liberty and public responsibility. When these good ends have been attained, it will be time to consider, with many other questions, whether Northumberland House shall or shall not be permitted to stand, and, if it is to go, at how much cost the destruction is to be purchased. In the meanwhile Parliament will most wisely and most safely discharge its duty by refusing to sanction a transaction which is popular with no man beyond the circle of the managing Board, and which is suspected, disliked, and denounced by every independent and trustworthy thinker.

THE LOSS OF THE *ATLANTIC*.

THERE are several questions in regard to the loss of the *Atlantic* which will have to be cleared up, but there is at least no room for doubt as to the immediate cause of the catastrophe. At midnight on Monday, when Captain Williams went below, the steamer was making for Halifax, and the Sambro light near the mouth of that port was reckoned to be thirty-five miles north-north-west. Three hours afterwards the *Atlantic* struck on a rock, known as Meagher's Head, to the west of Sambro, and it was then of course clear that she had been steered by the wrong light. Whether there was an error in the captain's original calculation, or whether the first officer, who was left in charge of the vessel after the captain turned in, altered the course will perhaps be ascertained hereafter. It appears that the captain and nearly all the officers were able to provide for their own safety. It is stated that the weather was dark, but not thick. As some of the crew and passengers got on shore by the help of ropes, it may be assumed that the weather, though rough, was not then particularly stormy. It is mentioned that when the fishermen came to the rescue after daybreak, the sea became too rough for their boats to live on it, but this perhaps refers to the danger of being dashed against the wreck. There is no suggestion in any of the reports which have come to hand of the *Atlantic* having been driven on the rocks by the violence of the gale. It is evident that she got on the rocks simply because she was steered straight on to them, and she was steered in this direction because the officer in charge of the ship mistook one light for another, and had no idea that there were any rocks in the way. How this error occurred, whether the first officer fell into it on his own account, or whether he was in any way led into it by the captain's calculations, remains to be discovered. The steamer, as soon as she got upon the ledge, struck several times with great violence. The officers and men rushed on deck, and it was at once seen that the case was hopeless. The officers instantly turned their attention to the boats, hacking them clear with axes, as there was no time to lower them in the ordinary way, but it was already too late. Only one boat had been launched when the ship fell over on her beam-ends, carrying down the boat with her. A portion of the rigging remained above water, and as many as were able took refuge there. Mr. Brady, the third officer, swam to the rock with a rope, by the help of which others succeeded in escaping. At daybreak some fishermen arrived with their boats, and altogether some four hundred persons were saved. Most of the other six hundred on board the ship were probably drowned in their sleep. Between the first shock and the heeling over of the vessel only a few minutes elapsed, and those who had rushed on deck had alone a chance of escape. According to one account, the first boat had no sooner been launched than the men rushed in and filled it, but the turning over of the vessel swamped the boat, and all in it were drowned. It is impossible to read the narrative of this disaster without recalling the circumstances attending the recent loss of the *Northfleet*. Within a few weeks a couple of vessels have been lost, not in a storm, but in quiet, or at least comparatively quiet, weather, and close to land. In each case the disaster happened at night, when all were in bed and asleep, and only a small part of the crew and passengers were saved. In each case, too, the disaster was due to an error in steering, in the one case on the part of the ship that ran down the *Northfleet*, and in the other case on the part of the *Atlantic* herself.

It would seem to be quite clear that the *Atlantic* was lost because the officer in charge of her mistook the Prospect light, west of Sambro, for the Sambro light; but the *Atlantic* was already out of the natural course of a vessel bound for New York. And this suggests another question, to which as yet no satisfactory answer has been given. How came it that the *Atlantic*, on her way to New York, should have been making for Halifax? Captain Williams's explanation is said to be that he thought a storm was threatening, and his stock of coal was running short. He therefore wished to put in at Halifax for a fresh supply. It is stated, however, by the owners that when the *Atlantic* left Liverpool she had 976 tons of coal on board, being some 200 tons beyond the average supply for such a voyage. The reports from the ship when she touched at Queenstown on her way out were all of the most favourable kind. The engines were reported to be working well. The coals were said to be of superior quality, and everything seemed to be in excellent working order. It must be presumed, however, that the captain would not go out of his course to touch at Halifax unless he had a reason for it, and if it should prove that there was anything defective in the construction or equipment of the ship which rendered this deviation necessary, a heavy responsibility will undoubtedly rest on those who overlooked this weak point when she was sent to sea. There appears to have been very bad weather on the American side at the close of last month, and the *Atlantic* may possibly have got damaged in a gale. Whatever the explanation may be, it is clear that in the natural course of things a steamer from Liverpool to New York ought not to find it necessary to touch at Halifax, and as this was a coast with which the captain and officers were not familiar, there would be greater risk of error than on an ordinary voyage. But these are matters

on which it is idle to speculate in the absence of definite information. The *Atlantic*, from a description of her which has been published, seems to have been a strong well-built ship, with a hull comprising six water-tight compartments, steam steering apparatus, automatic tell-tale telegraphs, which by a return signal show whether the order given is being attended to, and all sorts of modern improvements and conveniences.

It is natural that a catastrophe of this kind, occurring at a moment when Mr. Plimsoll's agitation is making so much stir, and when so much is being said about the defective construction and equipment of ships, should produce a deep impression on the public mind, and that in the first instance doubts should be entertained of the soundness of the vessel. As far as is yet known there does not seem to be any ground for these suspicions, but the most effectual means of dissipating them will be by a full and searching inquiry. It may be remarked that it is to the absence of a preliminary survey that Mr. Plimsoll attributes the bad condition of the mercantile marine; but in this instance the *Atlantic*, as a passenger ship, must, we suppose, have had the benefit of a survey before she went to sea. Sir W. Fairbairn has been making some observations on this subject, which, from his experience and authority, both as a scientific and practical engineer, deserve attention. He asserts that the *Royal Charter*, the *London*, and the *Captain* were all lost from defective design and improper construction. Taking an average of three years, 2,800 lives have been annually lost at sea from misconstruction, bad material, and other causes, and these lives might have been saved by proper care and attention. He attributes many of the disasters that occur to the imperfect and insecure condition of iron constructions, and recommends careful inspection as a means of prevention. There is certainly no reason why sailors should not obtain the benefit of the same protection which is already extended to passengers. A sailor is, in regard to the general strength and seaworthiness of a vessel, scarcely a better judge than a landsman. He can judge only by what he sees; but all that is unseen and hidden away in the body of the ship he must take on trust. If a ship lies deep in the water, if she is wet or leaky, if the point of a knife will readily scratch a hole in the masts, if the cordage is frayed and rotten, and, above all, if the brass of the pumps looks very bright and worn, these are all things which he has an eye for, and on which he forms his estimate of the chances of his ever seeing land again if he goes to sea in the craft. But a ship may exhibit none of these external indications of neglect and exhaustion, and yet be in a very dangerous condition. An ordinary seaman, or indeed, for the matter of that, an ordinary merchant captain, has not the knowledge and experience of a practical shipbuilder, and even if he had, he has no opportunity of thoroughly overhauling the vessel. The danger of inspection is that it tempts people to trust too much to it. Even when it is carried out by honest and competent men, it is not an infallible test. The best surveyors are liable to make mistakes, to overlook weak points, or to underrate the importance of defects which have attracted their attention; and of course in any large body of men there are always some who are not altogether competent, or who are not perhaps absolutely incorruptible. Inspection is good as far as it goes, but it will be well to guard against the danger of expecting too much from it, and of relying too blindly and implicitly on the protection which it affords.

THE COMPLETE LETTER-CARRIER.

IN the days of the Protectorate, in 1654, appeared the posthumous collection of Sir Dudley Digges, well known to students of the Elizabethan age by the name of the *Compleat Ambassador*. The title was perhaps a little deceptive. One might have expected to find a code of precepts by which the beginner in diplomacy might make his way step by step till he deserved the honourable title which was bestowed on the book. But the philosophy of diplomacy was, in the eyes of Sir Dudley Digges or his editor, a philosophy which teaches wholly by example. The *Compleat Ambassador* is not a book of rules or instructions of any kind. It leaves the diplomatic aspirant to learn to do his work by seeing how the great men of past time did it before him. The *Compleat Ambassador* contains the letters written by Sir Francis Walsingham, when he was Queen Elizabeth's resident in France, about the twice contemplated marriage of the Queen with French Princes, and the answers of Lord Burleigh, the Earl of Leicester, Sir Thomas Smith, and others. In those days Englishmen had already learned that everything ought to go by precedent, but they had not yet learned that everything ought to go by examination. From the *Compleat Ambassador*, as thus defined, the gap does not seem to be very wide to the *Complete Letter-Writer*. The *Compleat Ambassador* dealt with letters, and letters dealing with very delicate questions, touching plans of marriage for a lady of the most exalted rank. As far as our very slight knowledge of the *Complete Letter-Writer* goes, it is largely filled with letters dealing with the same class of subjects, though not confined to persons so high in the world as members of the Houses of Tudor and Valois. But as human nature is the same in all ranks, and as we believe the *Complete Letter-Writer* proposes to supply ready letters for all the circumstances in which human nature can find itself, we have no doubt that it would supply a model which, with a few needful changes, might serve for any other prince who should chance to have to turn away from his blighted hopes, complaining of, and perhaps cursing, the fickleness of women and islanders. Still, here again we have to deal more with example than with precept. We outsiders have to form our notions of what a Complete Ambassador or a Complete Letter-Writer ought to be by studying the writings which actually passed under real given circumstances, or which experts have determined to be the right kind of thing to pass in given circumstances foreseen beforehand. But the most complete letter-writer would be somewhat at sea without the help of the public functionary by whose hands the letter is at last to reach the person for whom it is designed. The duties of the letter-carrier might seem to be easy, and his place in the economy of things might seem not to be very distinguished. This, we will say at once, is altogether a mistake. The Civil Service Commissioners have taken the letter-carrier under their care, and in their hands he seems likely to grow to a level at least with the complete letter-writer, if not with the complete ambassador himself. The Civil Service Commissioners have drawn the portrait of the complete letter-carrier, the letter-carrier as he ought to be, and, if they really find a live letter-carrier to answer to the portrait, he will be a very remarkable person indeed. It is, we have been told, literally true, though the story has grown in one of the magazines into a pleasant little romance, that an advertisement once appeared at the post-office of a Scottish island to the effect that a letter-carrier was wanted—"one able to read writing preferred." One would have thought that the power of reading writing was, in the case of a letter-carrier, not a mere counsel of perfection which might win a man a higher place than others, but the one cardinal virtue without which his craft could not be followed at all. How are Snooks and Tomkins each to get his own letters, if the letter-carrier does not know which of the mysterious marks on the covers stand for Snooks and which stand for Tomkins? Yet we are credibly told that in our Scottish island the *cæteris paribus* clause could not be carried out, and that a letter-carrier was appointed who could not read writing. He did his work with a kind of Homeric simplicity. As the herald showed the lots to the heroes, so that each hero might know his own, so, when our letter-carrier ignorant of letters showed himself, the people flocked around him to examine his freight, and each to carry off his own share, even if no mischievous wight ever carried off the share of his neighbour. Here was a state of things which certainly needed reform; a state of things which perhaps was to be found only in such out-of-the-way corners of the kingdom, and which may not have extended itself to the adjacent islands of Great Britain and Ireland. But anyhow the Civil Service Commissioners do strike us as going a little too far the other way. They seem to start from the assumption that the letter-carrier must needs be a perfect being, that he must reach a standard which we should have thought that no human being could reach, unless perhaps the present and late Lord Chancellors, and possibly here and there a stray bishop. For our own part, we should not think of risking ourselves in a competition, whether limited or open, in which so small a part of mankind can expect to reach even the positive standard which is set up. We feel our own weakness, and we could not undertake to practise all the virtues for so low a figure as fourteen shillings a week.

We will now let our readers into a little bit of a secret; we will show them one of the odd corners of the administration of this great community on which, as far as we know, no light has yet been thrown. The readers of Mr. Trollope's *Ralph the Heir* will remember how the successful candidate for the borough of Percycross was expected to bestir himself on behalf of a supporter, or the cousin of a supporter, or the cousin of the cousin of a supporter, who wished for the office of postmaster of the borough. Now a careful observer of men and things will notice the beautiful proportions and gradations which run through a large part of human life. The visitor to Reading a few years past might have been struck by the singular way in which ecclesiastical building had given way to prisons; but he must also have been struck with the beautiful propriety by which, while the mitred abbey was cut short to make room for the stately gaol of the county, the lowlier Friars church was set apart for the humbler prisoners of the borough. A proportion no less delicate seems to be established in the matter of which we are speaking. The successful candidate—to judge at least from the case of Sir Thomas Underwood—is expected to have some voice in disposing of the greater office of postmaster. But even the unsuccessful candidate ought to get something, at all events if his party happen to be in power. In the Homeric games those who were beaten got prizes, though smaller prizes, as well as those who succeeded; the successful wrestler was to receive the great tripod valued at twelve oxen, while he who was overthrown was to comfort himself with leading away the woman skilled in many works, who was valued at four oxen only. So, while the successful candidate has to deal with the postmasters, it is at least a popular belief that the unsuccessful candidate has the advowson of the post of letter-carrier. His faithful supporters all believe that a letter missive from him will have some weight in disposing of an office which seems to be more eagerly sought after than by the light of nature we should have thought that it would be. The local representative, however unsuccessful himself, of the cause which is successful has only to write to the proper authorities, and the privilege of earning fourteen shillings weekly by walking perhaps the same number of miles daily will be bestowed as he wishes. Nor is the popular belief altogether wrong. The only difficulty is to know to what branch of authority the application ought to be made. Write to the Treasury, and you are told that it rests

with the Post Office. Write to the Post Office, and you are told that it rests with the Treasury. Still all this is only a little official playfulness; the thing commonly turns out right in the end, and the man who cannot succeed himself, but who can procure the success of others, has presently the pleasure of seeing his nominee trudging along the road with the letter-bag. And both Post Office and Treasury are human; they write civil, and indeed friendly, letters, written on the same kind of paper and according to the same formulæ as the letters of other people. As long as you have only to do with the Post Office and the Treasury, well and good.

But behind these authorities lurks another power far more fearful, solemn, and inquisitive. Not at all times, but only on some rare emergencies, perhaps at moments of some special awakening of the official conscience, the Civil Service Commissioners step in, armed with questions almost as fearful as those which the examining angels of Mahometan belief put to the man who has just reached the other world, when they command him to stand up in his grave and question him concerning his creed. Treasury and Post Office will put up with a general recommendation, a recommendation perhaps grounded on hearsay, at any rate a recommendation set forth, like the lectures of Oxford Professors, "sine ulla sollennitate." Not so the sterner Civil Service Commissioners; they deal only in foolscap sheets, in printed formulæ with blank spaces, in solemn beginnings and endings, in little notices and mysterious figures printed at every corner—in everything, in short, which can oppress the unofficial mind with the feeling that they are High-Mightinesses indeed with whom he now has to deal. In the Treasury or the Post Office he may be dealing with men whom he never saw in the flesh; still they deal with him as a man and a brother. His correspondent at the Civil Service Commission, S.W., may sign a name personally familiar to him, but the awfulness of official grandeur must not be relaxed for a moment. Then comes the paper of searching inquiries. The first indeed is scratched out with a pen—"Are you related to the candidate? If so, what is the relationship?" It is well to guard against nepotism, but it seems to have flashed across the minds even of the Civil Service Commissioners that, as yet, whatever we may come to presently, even unsuccessful candidates for seats in Parliament are not likely to be near of kin to candidates for the office of letter-carrier. But the degree of knowledge which he who recommends ought to have of him whom he recommends is tested in such a way that there is no escape. "Are you well acquainted with the candidate?" "From what circumstances does your knowledge of him arise?" This in plain words perhaps means, "How do you come to know anything about him?" "How long have you known him?" What sort of relations can Civil Service Examiners conceive to exist between the kind of person who is likely to recommend a letter-carrier and the kind of person who is likely to be recommended? Do they fancy that the recommender is likely to have been so struck with the recommended the first time he saw him as to have noted down the date in his journal, like the people in the old translation of the *Arabian Nights* who always say to a stranger, "I am rejoiced to have made the acquaintance of a man of your merit." Then the questions go on—"What have been the places of his education?" The Civil Service Commissioners plainly look on a letter-carrier as one whose education cannot be finished in any one seat of learning. The chance that he may simply have been to the National or British School, or, as in our Scotch case, to no school at all, plainly has not come into their minds; a letter-carrier, like a mediæval scholar or a modern prince, is one who may be fairly expected to have "studied much in divers Universities." As for the moral qualities, they are searched into in a formula which we give as it is printed:—

Is he strictly honest?
sober?
intelligent?
diligent?

Of how many of our friends could we conscientiously say that they are strictly intelligent and strictly diligent? Strict honesty, strict sobriety, strict intelligence, strict diligence, pretty nearly all the moral and intellectual virtues, must all be had for fourteen shillings a week. What at this rate may be the salary of a Civil Service Commissioner, or what may be the qualifications of a Civil Service Commissioner, we will not presume to ask. Then, as if an unsuccessful candidate was bound to be the common physician and the common banker of all those whom he would fain have had for his constituents, he is further asked, "What has been the state of his health since you have known him?" "Do you believe him to be free from pecuniary embarrassments?" This we take to be high-polite Commissioner style for "Do you think he is likely to be in debt?" "Has he to your knowledge been bankrupt or insolvent?" One would have thought that even a Civil Service Commissioner might have known enough of human life to see the grotesqueness of thinking that any one of the class who are likely to apply for the post of letter-carrier is at all likely to find his way into the Bankruptcy Court. Lastly comes a question which we really think ought to be put by no one but a spiritual director. "Would you yourself trust him with employment requiring undoubted honesty, and would you recommend him for such to your personal friends?" Here at last we have a piece of worldly wisdom; the Commissioners have at least found out that there are many people who would recommend for public employment a man whom they would neither employ themselves nor recommend their personal friends to employ. This is no doubt a sad failure in the duty of the citizen to the State of which he is a member. Still it must be remembered that the State only offers fourteen shillings a week, and it must put up with what it can get for the money. Private people would perhaps find that it was quite worth their while to give more to a man who was perfectly free alike from bodily disease and from pecuniary embarrassment, who had studied in several places of education, and who displayed such an unusual combination of virtues as to be at once strictly sober, strictly honest, strictly intelligent, and strictly diligent. In fact, we begin to look upon the Complete Letter-Carrier as a self-sacrificing patriot, who is ready to hide his light under a bushel, ready to do much work and to receive little pay, as long as his toil is sweetened by the thought that he is serving his country. Ministers of State, we are told, do the same; they get poorer rather than richer in their country's service. Still they get fame and power; the Complete Letter-Carrier gets only the consciousness of his own unrewarded merits. The State is indeed a lucky master if such servants as the Commissioners describe are to be found every day. In private life we are often glad to get a less perfect being than the Complete Letter-Carrier at a higher rate than two shillings daily.

THE ACTION FOR SEDUCTION.

THE little Bills of Mr. Charley give a great deal of trouble to Parliament. He has brought in a Bill "to Amend the Laws relating to Seduction," which by three short clauses would produce an extensive and mischievous effect. The existing law of seduction is theoretically indefensible, but the alterations proposed by Mr. Charley would be practically objectionable. There are quite enough actions for seduction already, and under the amended law the number of such actions would be overwhelming. At present the action can be brought only by the parent or guardian of the woman, and it is grounded, not on the seduction itself, but on the loss of service to the parent or guardian by the woman's illness; and, therefore, unless there be in some sense of the word a service, there can be no action. It undoubtedly happens that in this state of the law compensation is obtained in some cases while it is refused in others which are equally meritorious. A girl worked as farm-servant by day, returning home to sleep; she was seduced by her master, and her father recovered damages because there was service, or the possibility of it, during the hours which she spent under her father's roof. Another girl held an ordinary place as domestic servant, and was seduced by her master's son. It was alleged that during her hours of leisure she, with her mistress's consent, and in her mistress's house, made shirts for the assistance of her mother in her mother's business of a shirtmaker, but it was held by the Court that this was not a sufficient service. Another limitation which the Courts have hitherto maintained is that there must be a child-birth, or at least an illness, as the apparent result of the alleged seduction. In a case where it appeared that the defendant had debauched the plaintiff's daughter, and that she was delivered of a child, but the jury found that the child was not the defendant's, the judge directed the jury to find a verdict for the defendant, and this ruling was upheld by the Court. This case was decided in the Exchequer at a time when that Court delighted in technical refinements, and it has been disapproved by a writer of high authority, but nevertheless it has been recognised as law in recent years. According to the evidence in this case, the seduction took place after Christmas Day, and a full-grown child was born in the June following. The law considered that a wrong to the father had been committed by the defendant's conduct towards his daughter and servant, and it gave an action for the loss of service thereby caused. In an old case of the time of the Commonwealth it is said, in reference to the technical distinction between an action "of trespass" and an action "on the case," and to the different limitations of time for bringing those actions respectively, that "the cause of action is *per quod servitium amisit*, and for this he hath brought the action within the time limited by the statute; for it is an action upon the case, although the *causa causans* is the *vi et armis*, which is but inducement to the action, and the *causa causata*—viz. the loss of service—is the ground of the action." The same idea is expressed more intelligibly by a modern judge, who says that "the foundation of the action by a father to recover damages against the wrongdoer for the seduction of his daughter has been uniformly placed, from the earliest time hitherto, not upon the seduction itself, which is the wrongful act of the defendant, but upon the loss of service of the daughter, in which service he is supposed to have a legal right or interest." It is not necessary that the daughter should be a minor, but only that she should be living with her father, or otherwise, in contemplation of law, in her father's service. Lord Mansfield thought it "very extraordinary that any action should lie to a person on account of incontinence between two others, both of whom may be of full age"; but such was the law in Lord Mansfield's time, and such is the law at present. Mr. Charley's Bill would have the effect of largely increasing an undesirable class of business in the courts. Under the present law some actions of seduction are brought, and many more are threatened, but the requirement of proof of actual or constructive service to the parent or guardian operates as a considerable check upon the activity of speculative attorneys.

The existing state of the law is well illustrated by a recent case in which the plaintiff lived at Canterbury and his daughter had

been in service at Deal. Her master discovered that she had been to a concert with a ticket given by the defendant, and thereupon he paid her a month's wages and told her to leave his service at once. Next day she started by railway on her return to her father's house, and on the journey she was seduced, as she alleged, by the defendant. Her father received her when she arrived at home, but he did not expect her, as he had not received notice that she had left service. She was afterwards delivered of a child, of which she swore that the defendant was the father. Taking this story to be true, it may be assumed that, if she had continued in service, the defendant would have seduced her on the first favourable opportunity, and in that case he would not have been liable to any action. But, as her master had dismissed her, it was held that her constructive service to her father revived, and the father became competent to bring an action, and the jury gave him 150*l.* damages. This verdict was sustained by the Court of Queen's Bench. "It must be taken," said the Lord Chief Justice, "that when the daughter entered the service she had the intention to return to her father on the termination of the service: the master discharged her with what must be taken to be good cause, and she was received by her father as soon as she reached home. I think there was enough to amount to a constructive service." The action was founded on the special ground of loss of service, and this was not very creditable to the law, but the action was substantially for the aggravated injury which the father had sustained by the seduction of his child. The damages, perhaps, were higher than the Court would have given, but the jury must be assumed to have taken all the circumstances into account, and the Lord Chief Justice did not think the Court ought to disturb the verdict. Another member of the Court said that the jury were to consider the injury as done to the natural guardian, and all that could be referred to that relation. "I do not say that they ought to calculate the actual cost of the maintenance of the grandchild, though they cannot well exclude that fact; but they may consider not only that the plaintiff has a daughter disgraced in the eyes of the neighbours, but that there is also a living memorial of the disgrace in a bastard grandchild."

There could not be a better example than this case affords of the evil, or supposed evil, which Mr. Charley undertakes to remedy. In form the action for seduction is by the master, having a right to the services of the servant, and having lost the benefit of those services by reason of the wrongful act of the defendant; but, though in form this is the nature of the action, the damage by loss of service is in reality entirely nominal, and so long ago as the time of Lord Chief Justice Ellenborough the practice had, as he says, become inveterate of giving to the parent, or person standing *in loco parentis*, damages beyond the mere loss of service in respect of the loss aggravated by the injury to the person seduced. But it was agreed when Mr. Charley's Bill came before the House of Commons on Wednesday, that the part of it which refers to this subject cannot pass. The result of the debate was, that something ought to be done, but that it was very difficult to say what that something ought to be. Mr. Charley displays on social questions something of that active boldness which Mr. Disraeli imputes to certain members of the Liberal party in reference to political questions. In fact, Mr. Charley rushes in where the Attorney-General fears to tread. It is easy to say that legal forms ought to be brought into harmony with fact, and that as the action for seduction is really for the woman's benefit, it should be brought in the woman's name. But then the question arises whether every case which a woman may think proper to treat as one of seduction is to be made the foundation of an action. It is disappointing to find that Mr. Charley's Bill contains no definition of seduction. He does not propose to allow the woman herself to bring the action, but it may be brought by any person standing in the place of a parent towards her, and no allegation of service shall be required. But if this allegation be made unnecessary, it would be difficult to give any reason why the woman herself should not bring the action; and it might be brought, according to the Bill, on her own mere oath that she had been seduced, without proving that child-birth or illness had ensued upon or even after the seduction.

There is a practical limit to these actions now, because they cannot be brought in a County Court. And if they are brought in a superior Court, and not more than 10*l.* damages is recovered, the plaintiff gets ordinarily no costs. It might be desirable to postpone legislation on this subject until, by discussion in or out of Parliament, some principle has been ascertained on which legislation ought to proceed. Our old lawyers would have been shocked at the notion of allowing a woman to sue directly for the price of her chastity, and yet they allowed the action by the parent to introduce itself by a side door. The Attorney-General expresses reluctance to do directly that which is done indirectly, and he suggests that the action by the woman should only be allowed in cases where the seduction has been accomplished by "something like fraud or violence." It remains to be seen whether the Attorney-General will undertake to remodel Mr. Charley's Bill, or whether that indefatigable legislator can be induced to think that the subject would bear letting alone. The Attorney-General says that under the present law there have been many cases in which women have obtained verdicts when they have not taken proper care of themselves. It may be gravely questioned whether it is desirable so to alter the law that the number of such cases shall be probably increased. Mr. Hardy dwelt upon the danger of encouraging young women to rely upon obtaining legal compensation, and he feared that members of the House, with the best intentions, might encourage vice. It may be hoped that Mr. Charley will pay heed to this warning from one of the most prudent leaders of his own party. The existing law is capricious in its operation, but it can hardly be abolished, and we greatly doubt the wisdom of rendering it more comprehensive.

THE BATTLE OF THE INDIAN GAUGES.

IT would generally be regarded as a safe thing to say that the English people are nothing if not skilful in engineering; nevertheless we suspect that, for arriving at a sound judgment on the question which is just now causing such agitation in Great George Street—namely, the proper gauge for the extension of Indian railways—the American engineers would be better advisers than our own. They are more accustomed to deal with great areas and great distances such as are met with in India, which render the problem altogether different from anything presented by the conditions of railway traffic in England. Here, where the traveller may pass over all the railway systems of the kingdom in a day's journey, and where those systems intersect each other in every direction, it needs no argument to show the intolerable inconvenience and interruption to business and trade which a break of gauge occasions. But when persons proceed from these patent facts to assume that the same evils would follow from a break of gauge in India, they forget that the enormous extent of that country produces an entirely different condition of things. The fact is that there are tracts in India as large as Great Britain which lie wholly beyond the railway system, either as at present constructed or as proposed to be constructed, and that therefore it would be quite possible to have different gauges in India, and yet to maintain a railway traffic no more interrupted by break of gauge than is the traffic of England by its insular position.

Further, such experience as we have had seems to show that for passenger traffic, although a break of gauge is a great nuisance in short journeys, it causes no inconvenience whatever in long ones. When the journey extends over several days and nights—as, for example, between Calcutta and Bombay—passengers will usually require rest here and there, and it matters little whether they return to the same or to different carriages. Indeed we are informed that on this particular line, although no break of gauge exists, it is actually found more convenient for the traffic arrangements, as well as more agreeable to the European passengers, to change the carriages half way than to run the same carriages through from end to end. Again, as regards the native third-class passengers, who form the great bulk of the traffic, the plan of through trains has, we believe, been already in great measure discontinued, and the train stops either by day or night, according to the season, disembarking all its passengers for eight or ten hours, to rest and cook meals; certainly a much more sensible plan than dragging them continuously through their journey in carriages which are usually packed like the 'tween-decks of a slaver.

Thus we apprehend that, even as regards through passenger traffic, the supposed evils of a break of gauge are almost imaginary; but it need hardly be remarked that the great bulk of the traffic would not be through traffic at all. The people who travel on English railways are not all of them going to Scotland or to France, and this local character of all railway traffic is especially marked in the case of agricultural communities such as make up the population of India. It is commerce which gives rise to long journeys, not agriculture. The people who travel in India are most of them travelling for only short distances; and when, therefore, this dreaded break of gauge means that at the end of a line eight or nine hundred miles long, of one gauge, there is found another line of the same length, but of a different gauge, the probability is that under such a system the vast majority of the people of India will live and die without ever having so much as seen the fatal point of junction between the two systems. So far, then, as passengers are concerned, we apprehend that the supposed evil of the break of gauge is a mere bugbear. With regard to the through traffic of goods the case no doubt is different; but the expense involved in shifting goods admits of correct estimation, and if it can be shown to be less than the saving involved by abandoning the broad gauge system for the extension of existing railways, then a sufficient case appears to be made out for such a policy.

There is, however, the military element in the question to be noticed. The Indian Government have selected for their first experiment with the metre gauge the line from Lahore, the capital of the Punjab, to Peshawur, on the border of Afghanistan; and this being unquestionably our most important military frontier, it is argued that, even if the interpolation of narrow gauge railways be admissible in other parts of the country, here at any rate no break of gauge ought to be introduced, since it would interfere to an extreme degree with the movement of an army to repel invasion from the North-West. But persons who enlarge on the importance of maintaining unbroken military communications in this part of India seem always to have in view large armies, on the scale with which war is made in Europe. They know that the Indian army contains in the aggregate a good many men, and they assume that the railway accommodation needed should be of a sort adapted to convey large bodies of troops. But, even if any considerable proportion of the Indian army could be spared for concentration at any one point, which is more than doubtful, it is certain that only a very small army, as armies go nowadays, would ever be sent into Afghanistan, because only such an army could be

fed in that inhospitable country. Further, by whatever mode of transit the army might travel to Peshawur, it would at any rate take leave of railroads, whether broad gauge or narrow, at that point, and would therefore need to set forth on its expedition completely equipped with the means of transport required for making its way on foot through the mountains and defiles beyond, just as if no railways existed. The state of the case would therefore probably be, that the mules, camels, elephants, horses, and bullocks needed for the army would be driven up from the different parts of the Punjab in which they were collected, and that the troops destined for the expedition would also march up to the frontier on foot, without making use of the railway. This is the more probable because Afghanistan is inaccessible for several months in the year, so that there would be no hurry; the Indian cold weather would be available for preparation and assembling at Peshawur, and the expeditionary force would move onwards late in the spring. The main use of the railway would be, we apprehend, to convey ammunition and supplies; and even if there were no break of gauge at Lahore, all such stores would probably be unloaded there in the first instance, since that place would naturally be constituted the principal magazine of the army, from which the smaller magazines in front would in turn be fed and kept supplied.

According to this view of the case, then, the military argument against a break of gauge at this particular point does not appear to have much force. There remains of course the objection that, although uniformity might not be required in this particular hypothesis, still it is impossible to say what exigencies may not arise, of a kind not foreseen; and that, whatever they may be, if a strain were placed on our communications, our difficulties in such an emergency would be vastly increased by a break of gauge. This may be admitted. No one foresaw the great mutiny, and there may be other evil days in store for us when we should have cause for bitter regret that we had sacrificed the completeness of our military communications for a small saving. It is, however, for the Indian Government to say whether such a contingency is sufficiently tangible to justify the sacrifice of economy. This is a point which can only be properly weighed by the authorities on the spot, and on which the opinions of persons at a distance, whether railway experts or otherwise, cannot be worth much. And those who are best informed do not appear to take much account of the risk.

Still it must be admitted that, even if a break of gauge does no harm, it certainly does no good. It could at best be only justified by the certainty of effecting a considerable saving; and here there appears to be extreme diversity of opinion. The general opinion of the experts—and we understand that the point is admitted even by the advocates of the narrow gauge—is that the saving under the most favourable circumstances would be but small, while some of the leading railway pundits stoutly maintain that there would be no saving at all. The advantage of the narrow gauge, they say, is that it admits of sharper curves than the broad, and therefore of a saving in earthwork and permanent way in hilly ground; but, since the greater part of India is a level plain, this advantage would not be gained there; in so easy a country the cost of one mode of construction would be no greater than the cost of the other. The question here is not, be it observed, between a broad gauge *heavy* railway and a narrow gauge *light* one, but between two railways, each adapted to carry only a light traffic and a light rolling stock, of similar capabilities and construction, but in one of which the rails are laid further apart than in the other. The advocates for broad gauge light lines, as against narrow, contend that the cost does not depend on the distance of the rails apart, but on the weight of the rolling stock, which again depends on the width of the carriages. A narrow gauge line, with carriages to match, would certainly, these gentlemen admit, be the cheaper; but then it is understood that the Indian carriages, although running on a three-feet three-inch gauge, are to be over six feet wide, in which case, they affirm, it would be quite as cheap to put the rails five feet six apart, and the only thing gained by this novel arrangement will be a loss of stability.

It seems clear, however, that the advocates for the light broad gauge line really surrender the point they are contending for. A line of this sort, even if it were as cheap as the narrow one, which appears *primâ facie* improbable, would virtually involve a break of gauge with the existing heavy lines almost as completely as the narrow ones, since it would not carry the heavy rolling stock of the latter, except possibly to a very limited degree, and by using extreme care. But, on the other hand, it would certainly not be a worse form of line than that proposed. The question therefore seems really to turn, as regards the principle, on this point of cost, as to which there appears to be at present nothing certain on record. The argument so far seems to have been based entirely on "estimates" framed by various engineers of what they think lines can be made for. Considering what is known of the nice agreement heretofore attained between those precious documents and actual cost—that one great Indian line, estimated at 5,000*l.*, cost just 20,000*l.*, a mile, that in all other cases there has either been a large excess over the estimate, or the estimate has been adhered to only by letting the work on contract at highly remunerative rates—an argument based on comparative estimates appears to savour of the Laputan philosophy. Facts on this head derived from experiment are what we want, and in this view it seems highly desirable that at least one of the new lines to be constructed in India should be of the light broad gauge type; but to retrace the steps already taken towards the completion of the narrow gauge lines now in progress, as Mr. Laing and his supporters lately proposed, would be to cause certain waste and inevitable delay in a matter which has been delayed too long already, without, so far as can at present be established, any commensurate advantage.

MADMEN AND WILLS.

IT is becoming very difficult to know what course elderly gentlemen who are anxious not to have their wills disputed had better follow with regard to organ-grinders and brass bands. A few weeks ago half a dozen mad doctors went into the witness-box in the Probate Court to declare that an old gentleman who was in the habit of swearing at itinerant musicians when they played under his window at Ramsgate must necessarily have been mad, and quite incapable of making a will. But happily the judge did not agree with them, and the will was upheld. This week we have had another case in the same court, in which a testator's partiality for German bands was adduced as conclusive proof of his insanity—an argument in which the jury appears to have fully concurred, and to which we may ourselves venture to add our cordial and emphatic assent. It is no doubt satisfactory to find that these decisions are in accordance with the common sense of mankind, but it is not the less startling and uncomfortable to observe that, whether a man curses or encourages brass bands, professional evidence is equally forthcoming to show that it is an infallible indication of insanity. In this instance Mr. Knight, the testator, an old gentleman living down in Shropshire, seems to have been anxious to relieve the dulness of country life as much as possible. He was fond of having German bands to play in front of the house, and would sometimes set the groom and coachman to canter on horseback round the carriage drive to lively airs, while the rest of the servants danced. Possibly Mr. Knight may have been a Young Englander in early life, and still clung to the maypole theory of the duties of country gentlemen. A brass band is perhaps the nearest approach to the pipe and tabor which can now be procured. Mr. Knight's efforts to amuse his household did not stop here. He dressed himself up in skins and mats, and painted his face in white and red stripes like a pantomime clown, and then went into the scullery with a gun in his hand to frighten the maid-servants. He had also a passion for musical-boxes, and would occasionally place one on a chair and set it going, and then dance to it himself without a partner. This love of music, however, does not seem to have exercised that softening and soothing influence which is usually attributed to it. Mr. Knight's sons testified to the capricious cruelty with which he treated them when they were children. He would strip and flog them severely for trivial offences. He was much attached to his wife and daughter, but he was always making unfounded complaints of their conduct, and latterly seemed to become more and more suspicious of them. He fancied that people were watching him, that there was a conspiracy against him, and that his life was in danger. He kept loaded firearms in his room, and was always on the look-out for robbers. Once he was afraid he would be taken up on a charge of murder, the real murderer not having been discovered. Another time he fancied that he was suspected of being a thief. He consulted different solicitors about imaginary conspiracies, and when he went from home carried bonds and securities to a large amount in his portmanteau. He fed his dogs with joints of good beef and mutton, and other things provided for his own table. Sometimes he would have a fancy for feeding rats in the house, and at other times would organize a battue for their destruction. He built fine greenhouses and fruiteries, and left the fruit to rot, or gave the dogs the run of it. On the other hand, notwithstanding these delusions and eccentricities, he was admitted to have been in all essential matters a good husband and father; he managed his affairs sensibly enough, looked after his expenditure, and his family always corresponded with and treated him as if he was perfectly sane. His property consisted of an estate worth about 1,500*l.* a year, exclusive of the house and park, and some 62,000*l.* of personalty. He was a second son, and during his father's life he had lived in straitened circumstances at Brussels and elsewhere, having only an income of 200*l.* a year for himself and family. He had quarrelled with his three sons, one after the other. Although he was believed to be deeply attached to his daughter and proud of her beauty and accomplishments, he treated her with strange neglect. After her death he took a fancy to her children, but they were not mentioned in his will; and no provision was made for a lunatic sister who was absolutely dependent on him for support. He left the interest of 10,000*l.* to his eldest son, a sum of 8,000*l.* to the second, and 7,000*l.* to the third, and also 10,000*l.* to a brother of his own, and 1,500*l.* to a sister, together with some other small legacies. The residue of his property was given to Sir Charles Boughton, who was a remote relation, and whose estate adjoined his own. The only reason that could be suggested for this was that he was afraid another proprietor, whom he disliked, would buy up the estate after his death, and "having at heart," as he wrote in one of his letters, "its future destinies and fortunes," he assigned it to Sir Charles in order to keep it intact. He might, however, have attained this object by entailing it on one of his sons or grandchildren. Sir Charles was on friendly, but not intimate, terms with Mr. Knight, occasionally visiting or corresponding with him.

Here we have the case of an eccentric, morose old man living a secluded life, seeing no company, estranged from his family, and apparently attached to nothing except his bit of property. He does not seem to have had any particular affection for his neighbour, Sir C. Boughton, and Sir Charles does not seem to have taken any trouble to ingratiate himself with him. The question which the jury had to determine was whether his will, taking its provisions in connexion with the testator's circumstances and habits, was the will of a sane man; and they came to the conclusion that it was not. On the whole, we think the verdict was undoubtedly justified by the facts of the case; but it is impossible not to feel the danger of throwing such questions upon a jury without more precise and definite directions as to the conditions under which sanity may, for legal purposes, be assumed to exist. The judge said that the question was essentially a practical one, to be decided by the good sense of men of the world rather than by legal definitions. It is quite true that no definitions can be laid down which are equally applicable to all cases. There are infinite gradations and degrees of madness, and a large margin must always be left for the discretion of a jury in applying the rules. It does not follow, however, that because questions of this sort cannot be settled offhand by cut and dry rules, they should be left so unreservedly to the good sense of men of the world. The tendency of men of the world is, we suspect, when left to themselves, to form their conclusions chiefly from the provisions of the will itself. If they think it a fair, reasonable will, the sort of will they would themselves, under similar circumstances, have been likely to make, they find in favour of it; but if it shocks their sense of family duty or natural affection, they probably give a verdict against it.

It is clear that in the present instance the testator was a sour, morose, eccentric man, and that he made what seems on the face of it to be a very foolish and unjust will. But the question is, on what ground he was pronounced to be mad. Was it on account of the provisions of the will? The only reason that was suggested for leaving the estate away from his family was that he wished it to be in the hands of some one who would not be likely to sell it. It can scarcely be said that this is an insane desire, for it is a very common desire. There are many men who are perfectly sane, and who, heartless and wicked as we may think it, do care a great deal more about their bit of land than about their children or all their relations put together. But then the testator might have accomplished his purpose, if he had known the law, by means of an entail. It is evident, however, that he was ignorant of law, for he wanted to impose as a condition on Sir Charles that the property should never be sold. Is ignorance of the law of real property a proof of insanity? The testator certainly did not make such provision for his family as they had a right to expect; but this again is by no means an uncommon occurrence. Apart from the contents of the will, did Mr. Knight's habits and behaviour indicate madness? He was undoubtedly under the influence of delusions. He thought he was threatened by some mysterious conspiracy, and that his life was in danger. These were utter delusions, but were they delusions which amounted to such a degree of insanity as would render a man incapable of managing his affairs? While he was alive nobody charged him with being out of his senses. His sons corresponded with him on the assumption that he was perfectly sane, and in ordinary matters he showed that he was quite capable of taking care of himself and his interests. There was a good deal of Thackeray's Sir Peter Crawley about him. He was boorish in his ways, and seems to have had a liking for low company and low fun. He used to go out rook-shooting with one of the women servants, and it turned out that he had had a child by her and had persuaded her to palm it off on another man. There is another question, too, and that is how far, supposing him to have been subject to delusions, the delusions influenced the making of the will. There is no apparent connexion between the delusions in this case and the disposal of the property. According to a well-known decision of Lord Brougham's, if a man is mad on one point, he must be held, so far as his legal capacity is concerned, to be mad on all points, since it is impossible to say how the madness might operate. The mind, though it has various faculties, is one and indivisible. If it is disordered in any one of those faculties, if it labours under any delusion arising from such disorder, though its other faculties and functions may remain undisturbed, it cannot be said to be sound. Such a mind is unsound, and testamentary incapacity is the necessary consequence. In a recent judgment pronounced by Chief Justice Cockburn (Banks *v.* Goodfellow), to which Sir James Hannen also referred, this view is considerably modified. The Chief Justice held that a man might have insane delusions and yet be capable of making a will, unless it could be shown that the delusions directly influenced his mind at the time of making the will. The Chief Justice said he did not think it necessary to discuss the question in its metaphysical or psychological aspects. It was not given to man to fathom the mystery of the human intelligence, or to ascertain the constitution of our sentient and intellectual being; but the pathology of mental disease showed that while, on the one hand, all the faculties, moral and intellectual, may be involved in one common ruin, as in the case of the raving maniac, in other instances one or more only of those faculties or functions may be disordered, while the rest are left unimpaired and undisturbed. The question for the jury was, he said, whether the delusion had or had not affected the general qualities of the mind, and whether it had exercised any effect on the will.

Sir James Hannen seemed to be disposed to adhere to the law laid down by the Chief Justice rather than to that laid down by Lord Brougham, which has hitherto been accepted in the Probate Court. It seems to us, however, that Sir A. Cockburn's way of putting the case is, in some respects, very like begging the question. It is true, no doubt, that a man may be obviously mad on one subject, and that in his behaviour in other respects there may be no apparent trace of the influence of the delusion. But then how can we tell how a delusion in the mind of a madman would be likely to operate? According to the Chief Justice's argument, there would be some danger of assuming that a delusion in the mind of a madman would operate in the same logical direction as a conviction which was not a delusion would do in the mind of a sane person. On the whole, it may be doubted whether Lord Brougham did not take up safer ground. The important question, however, is, whether the man is really mad at all, whether his delusions amount to positive madness? And this is the weak part of the present system of investigation. There is a dangerous readiness to assume the existence of insanity from odd, out-of-the-way habits and eccentric or violent manners. The test of insanity, for legal purposes, ought not to turn on mere isolated points like these, but on the general tenor of a man's character and conduct; and we think the judges would do well to impress this more forcibly on juries. It is to be regretted that juries should be confused and embarrassed by the nice distinctions of conflicting judgments and rival theories, and that some definite and authoritative principles cannot be laid down in regard both to legal capacity and criminal responsibility.

TRICOCHE ET CACOLET.

A PIECE, in five acts, lasting more than three hours, and which nobody finds too long, must have merit. Great praise is due to the authors of *Tricoche et Cacolet* for having built a substantial play out of such materials. The actors owe much to the authors, and the obligation is well repaid. The idea of a "private inquiry office" has become tolerably familiar to Londoners since the establishment of the Divorce Court, but perhaps if they had not been assisted by Parisian dramatists they might never have seen this idea on its comic side. "Agence Tricoche et Cacolet. Maison de confiance, recherches dans l'intérêt des familles. . . . . Spécialité pour les maris inquiets; surveillance de leurs dames, avant, pendant et après." These are some of the terms of the prospectus which Tricoche hands to M. Van der Pouf, banker, when he waits upon him in the character of le père Isaac. The banker's wife, Bernardine, has written a letter to her admirer, le duc Émile, and the enterprising firm has stolen the letter from the Duke's pocket and now offers to sell it to the husband. Tricoche, having completed this transaction, tells the banker that if he should ever find himself in such circumstances as are mentioned in the prospectus, and should need the services of an active, intelligent, and discreet man, he had better apply to the house of Tricoche et Cacolet, and let him be sure and ask for Tricoche, "car, dans le fond, Cacolet n'est qu'un imbécile." No sooner has Tricoche departed than Cacolet appears disguised as an Italian musician, bringing the pet dog which the banker's wife had lost, and for which she had offered a reward of 500 francs. The lady asks, "Comment vous est-elle tombée dans les mains?" Cacolet answers, "Tout naturellement, madame; je l'ai volée." But he did not steal the dog for the reward, but to make an opportunity of speaking to the lady. He knows of her correspondence with the Duke, and his experience teaches him that there is likely to be strife in the banker's household. Now if in that strife the lady should need assistance, where can she find it better than in the firm of Tricoche et Cacolet? If she wishes to intercept a correspondence—Tricoche et Cacolet. If she desires to watch her husband so as to arm herself against him—Tricoche et Cacolet. If she wants a carriage with a trusty driver—Tricoche et Cacolet. "Take a card, madame, and come and call on us if you have occasion; mais ayez bien soin de demander Cacolet, car au fond Tricoche n'est qu'une bête." With these words Cacolet departs. The banker's wife sends for the Duke, and imparts to him her fear for the safety of her letter. He is sure that he has it in a case next his heart; but on opening the case he finds, in place of the letter, a prospectus of the firm of Tricoche et Cacolet.

Thus in the first act the basis is laid for the fun that follows. The banker has requested his wife to receive the attentions of Oscar Pasha, from whom he hopes by her means to obtain the agency of a Turkish loan. The wife indignantly refuses, and a quarrel ensues which causes her to leave her husband's house under escort of the Duke. Thus the banker finds himself in the circumstances indicated by the prospectus, and he proceeds to the office of the firm to consult Tricoche. He is gently reproached for having given a false name at the door of a house where every inmate knows everything about everybody in Paris. He is told that le père Isaac, who had called upon him, is a mere understrapper of the firm, but the great Tricoche in person asks him in which of the cases indicated by the prospectus he now finds himself. He points to the heading "Maris inquiets"; and Tricoche tells him that of ten husbands who come to the office nine desire to have their wives watched. But, says he, "L'article se subdivise . . . . je vous demande dans quelle subdivision, avant, pendant, ou après?" The banker eagerly answers, "Avant, monsieur, avant." Tricoche, after further explanation, undertakes the

case. The banker leaves him, and he has just resolved that he will keep this affair to himself, and avoid any division of the profit of it with his partner, when the door opens and Cacolet appears. Tricoche dresses himself as a wealthy Englishman with a red face and tremendous yellow whiskers, and proceeds to the banker's house to examine the case against his wife. Cacolet remains in the office, and shortly receives a visit from the banker's wife and the Duke, who have found themselves in circumstances of difficulty and come to seek assistance. There happen to be in the office a man and woman who have just engaged themselves as servants to a lady who is to leave Paris for St. Petersburg that night. Cacolet directs the banker's wife and the Duke to exchange clothes with these persons, and sends them thus disguised to the lady's house, where they are to remain in the character of her servants until he comes to assist them further. He has despatched this business, and has just resolved that he will keep the profit of it to himself, when Tricoche returns with a disposition for quarrelling, which Cacolet reciprocates. Each charges the other with deceit, each detects the other's game, and vows that he will spoil it. Cacolet goes out, shuts the door and locks it. Tricoche exclaims, "Fool! not to know that I should jump out of the window," and disappears. Cacolet returns exclaiming, "Fool! not to know that I should know that he would jump out of the window."

The lady, Madlle. Bombance, to whom Cacolet sends these inexperienced servants, belongs to a class which is generally excluded from the English stage. She is of course in debt, and the Duke's awkwardness as a footman is compensated by a ready supply of money, with which he satisfies one or two pressing creditors. She says that she will continue the same arrangement until they arrive at St. Petersburg, and she treats with great indulgence a servant whom she finds so suitable. Thus when, having left the room and suddenly returned, she discovers the footman on his knees before the maid, she apologizes, and says that perhaps she ought to have knocked before she came in. Cacolet comes to the assistance of his charges disguised as a pensioner of the Invalides, and presently Tricoche arrives in the dress of a Commissionnaire carrying certain property of the pretended servants of which he has contrived to get possession. Thus, true to his threat, he hunts close on his partner's track. The meeting between the pensioner and the porter, each with his face distorted beyond possibility of recognition by the other, is droll beyond expression. After watching and dodging each other for some time, Tricoche knocks away the stick on which the infirm old soldier leans, and discovers as he falls that he is Cacolet. He runs off, and Cacolet pursues, displaying a bodily activity which astonishes the lady whose apartment he had entered as a feeble cripple.

The next stage in the adventures of the banker's wife and the Duke conducts them to the café of the Monstre Vert at Montparnasse. This scene is even more diverting than that which passes in the apartment of Madlle. Bombance. Indeed the notion of installing the lady and the nobleman as managers of this humble café is fertile in amusing incident. But before they arrive the business of the café is proceeding. A customer remarks, "Il est léger votre grog," to which the waiter answers, "C'est la spécialité de la maison, monsieur." Madame Boquet, the respectable proprietor of this establishment, is mother of Madlle. Bombance, and is expecting her daughter to dine with her that day. She was moderately afflicted when her daughter first left her to enter upon the way of life she has pursued, but became reconciled when her daughter returned in a fine yellow carriage to call upon her. These things, she tells a friend, are not looked at as they used to be; and the friend answers that that is true, for "les mœurs s'adoucissent de jour en jour." The indefatigable Cacolet now enters with his charge. The business of the café is bought outright with the Duke's money, and Bernardine is established at the counter, while the Duke assumes the waiter's apron and napkin. They begin to find these perpetual changes of social position fatiguing, and as trade is slack the Duke occupies himself in calculating the probable cost of his adventure. He has already spent 28,704 francs 75 cents. in part of a day, and he cannot reckon that his attachment to the lady will last less than fifteen days. He imparts this computation to the lady, to whom he had doubtless vowed eternal constancy, as is usual in such cases. While with chalk on the billiard table he is multiplying the day's expenditure by fifteen, a customer interrupts him by calling for a glass of Madeira. The Duke begins to perceive that amid all this hurry-skurry his love affair makes no progress, and that it would be cheaper as well as more comfortable to visit Bernardine, as he used to do, at her husband's house. The inevitable Tricoche now appears, admirably made up "en voyou," and followed by two attendants, who are ready to carry off the banker's wife by force. The new customer calls for *un mêlé*, and as the Duke cannot guess what that is, he applies to Bernardine, who suggests that perhaps the customer means *un mélange*. Hereupon the Duke brings all the bottles on the counter, and requests the customer to mix for himself. Now Cacolet returns, having got himself up in the same ruffianly style as Tricoche, and having the additional charm of a humpback. He accepts a challenge of Tricoche to play billiards. After a little time the other guests depart, and Tricoche turns off the gas in preparation for seizing the banker's wife. Cacolet springs upon him; a struggle ensues, and Tricoche throws Cacolet on the billiard-table, and tears off his wig. "I told you," he says, "that I would find Madame Van der Pouf. I have her, and will take her back to her husband." He departs in fancied triumph, and Cacolet bids the Duke keep quiet, for Tricoche has carried away Madlle. Bombance by mistake for the banker's wife.

This mistake, however annoying to Tricoche, was not his fault, nor does it turn out badly. M. Van der Pouf has invited Oscar Pasha to dinner, and Madlle. Bombance is much more agreeable to the Turkish Ambassador than the real wife of his host would have been. The rival potentates Tricoche and Cacolet have now accommodated their differences, and proceed harmoniously to earn a large reward from the Duke by restoring Bernardine with unblemished character to her husband's home. Meanwhile Madlle. Bombance has obtained from Oscar Pasha the agency of the new loan for M. Van der Pouf, and he in return undertakes to pay the lady's debts. We must not forget the last disguise of Tricoche, who appears as Madame Boquet accompanied by Cacolet as her lawyer, and charges M. Van der Pouf with having abducted her dove-like daughter from the maternal nest. Finally everybody is pleased and satisfied. Tricoche and Cacolet have only to remind the audience that in any of the cases indicated in the prospectus their firm may still be consulted at the well-known office; and, says Cacolet, "S'il s'agit de quelque chose de délicat, demandez Tricoche," to which his partner answers "Non! non! demandez Cacolet." Thus ends this amusing play, which, with all its extravagance, scarcely passes the bounds of possibility. One is reminded by it of that dictum of the *Critic*, that a play ought to show things just so strange that, though they never did, yet they might happen. There is a wealth of absurdity in the authors which goes far beyond our own artificers in burlesque; but they have the advantage of exploring the life and conversation of Madlle. Bombance, a domain which would be inaccessible to English dramatists. The new servants of that lady learn so much of their duty that they discreetly turn their backs after opening the door, and merely point with their hands held behind them in the direction which a visitor is to take. When the Duke first arrives and offers himself for the place of footman, Madlle. Bombance asks him the names of the mistresses he has served, and he gives her a full, true, and particular account. Some of the best and most harmless fun in this part of the play is produced by the appearance of Tricoche disguised as a sheriff's officer. He is proceeding to levy upon the goods or person of Madlle. Bombance, when the Duke with his all-sufficient purse comes to the rescue, and pays him out. But even the Duke's purse is finally exhausted, and this is perhaps the moral of the play.

REVIEWS.

GEORGE VILLIERS, SECOND DUKE OF BUCKINGHAM.*

WHEN the first George Villiers Duke of Buckingham, the great favourite of James I. and of Charles I., fell by the hand of an assassin, his son and namesake and successor was an infant eighteen months old. Charles I. told the widowed Duchess that he would be a husband to her and a father to her children. The Duchess was delivered of a second son, Francis, soon after her husband's murder. The two boys were brought up with the King's children, and in time went with the future Charles II. to Trinity College, Cambridge. They went thence to Christ Church, Oxford. The Civil War had begun, and the King was now at Oxford. The two youths, sixteen and fourteen, were in a hot fight at Lichfield early in 1643. They then went abroad for some years to travel under the care of the Earl of Northumberland, and returned to England in 1648, when the King was a prisoner at Carisbrooke. They took arms for the King, under the Earl of Holland, in Surrey. Lord Francis was slain, valiantly fighting; the Duke narrowly escaped with life in the utter rout of his party, joined Prince Charles on board ship in the Downs, and went with him into exile in Holland. His great estates, of a rental variously estimated at from twenty to thirty thousand a year, were declared forfeited by the Parliament. In 1651 he accompanied Charles to Scotland, and was with him at the fatal battle of Worcester. He had shortly before this battle angered Charles by an arrogant demand to be made general of his army, and had shown great resentment at the King's refusal. He escaped from Worcester into France, and served with credit as a volunteer in the French army in Flanders. A goodly portion of Buckingham's estates, including Helmesley in Yorkshire, and York House in London, had been granted by the Parliament to Lord Fairfax for arrears due to him as general. Fairfax was not less ready to bestow his only daughter, together with these estates, on the young handsome cavalier Duke from whom they had been wrested than was Buckingham to make this marriage, in order to recover some of his inheritance. Buckingham stealthily came over to England, and was married to Mary Fairfax on September 7, 1657. This marriage infuriated Cromwell, who quarrelled with Fairfax, and sent Buckingham a prisoner to Windsor. There he remained imprisoned till after Cromwell's death, when the Parliament of Richard Cromwell released him in February 1659, on a petition from Fairfax, a member of the Assembly, and on Fairfax's engagement in 20,000*l.* for Buckingham's good behaviour. The Restoration came. Fairfax, with whom Buckingham was living, had openly adhered to Monk in Yorkshire, as he marched from Scot-

* *George Villiers, Second Duke of Buckingham. The Rehearsal.* First acted December 7, 1671, published July 1672. Carefully edited by Edward Arber. 1868.

land to London. The Duke met his youthful companion and now restored King at Dover, when he landed there on May 25, 1660. Charles had recently conceived suspicion and dislike of Buckingham, whose volatile and self-willed nature he had had earlier ample occasion to know: and Bourdeaux, the French Ambassador, who carefully watched the Restoration, felt it sufficiently important to report that the King's reception of Buckingham was very cold, that Buckingham placed himself uninvited in the same carriage with the King and the Dukes of York and Gloucester and Monk, and that on the King's arrival in London he turned Buckingham out of the Council Chamber (Despatch of M. de Bourdeaux, June 7th, 1660, in the Archives of the French Foreign Office).

These two friends of boyhood had often before quarrelled, remained for a time aloof, and been reconciled. Buckingham's great powers of fascination were aided by Charles's easy good nature; and probably amiable tenderness for the companion of his youth, and grateful remembrance of sacrifices and services, contributed to make renewals of friendship now and on future occasions easy. Buckingham, without office, soon acquired a power over Charles which disquieted his responsible Ministers and Councillors. It was not long before he excited the fears of Clarendon. He was Lord-Lieutenant of the West Riding of Yorkshire, and was made a Privy Councillor in May 1662. Many private irregularities and public indecorums did not check the growth of his power over Charles. He provoked a quarrel at cards with Lord Sandwich, and failed to uphold his honour. Violent language in the House of Lords brought a challenge from the loved and honoured Lord Ossory, and he again lost reputation. He was the aggressor, at a Conference between the two Houses, in an unseemly scuffle with the Marquis of Dorchester, when, according to Samuel Pepys, he "struck off Dorchester's hat, and took him by his periwig, and pulled it aside, and held him." Both combatants were sent by the Lords to the Tower. Henry Pierrepoint, Marquis of Dorchester, was a man of great erudition, and a Roman Catholic. An unpublished letter of Buckingham to the King, of which there is a copy in the Record Office, written a few months before this scuffle, discloses pre-existing jealousy of Dorchester, and is interesting as proof of Buckingham's influence and familiarity with Charles. He wrote from York, August 4, 1666, to urge on the King the seizure of the French fleet in the Tagus; France was then the ally of Holland in war with England. He begins and ends his letter with thrusts at Lord Dorchester: –

> May it please your Majesty,
>
> Your Majesty knows that I am no great admirer of old proverbs, and yet I think one a pretty good one, that of two evils the least is to be chosen: and therefore the custom of the world laying an obligation upon me at present of doing an impertinent thing, I have chosen, instead of it, to do another impertinent thing, and to follow rather my Lord Dorchester's example in being very earnest to give your Majesty counsel than the practice of most of your other subjects in England, who, I suppose, at this time take a great deal of pains to assure your Majesty they are very glad you have beaten your enemies, and that they are out of danger of losing their estates.

He proceeds in a similarly familiar style to point out that there is a fine opportunity of punishing France and destroying her whole fleet at Lisbon, where "Monsieur de Beaufort is very busy drinking the Queen of Portugal's health, and, as I am informed, nothing can possibly hinder your Majesty's ships from coming in, and doing with them what you please." And he ends the letter thus:—

> I told your Majesty at the beginning that I was resolved to follow my Lord Dorchester's example, which I have done pretty well hitherto, and I have much ado to hinder myself from ending also like him, by positively asserting to your Majesty that I am in the right. If I am mistaken, I hope, as your Majesty is always used to forgive my Lord Dorchester upon the like occasion, so at this time you will pardon,
>
> May it please your Majesty,
>
> Your Majesty's most faithful and most obedient subject and servant,
>
> BUCKINGHAM.

Soon after the date of this letter Buckingham was successful as the writer of a comedy, "The Chances," brought out at the King's Theatre; Nell Gwyn having a part, and Mrs. Knipp's singing sending Samuel Pepys into ecstacies. Suddenly, in March 1667, a proclamation was issued for his apprehension as a traitor, and he was dismissed from the Privy Council. Rumour accused him of a discovered treasonable correspondence, and of endeavours to excite a great rebellion, in resentment of refusal of the high office of President of the North. He remained concealed, and evaded arrest for more than three months, when he suddenly appeared in London, ostentatiously surrendered himself to the Lieutenant of the Tower, and had an audience of His Majesty, whom he convinced of his innocence. The Chancellor Clarendon and Arlington, Secretary of State, had pressed the measures against him in the Privy Council. They were now at his feet. He brought down Clarendon, who a few months hence was an exile; and he never forgave Arlington, of whom he has left a bitter satirical character in verse. They were long rivals in the Administration, and Buckingham was instrumental, in 1673, in frustrating the ambition of Arlington to be Lord Treasurer, when Osborne was unexpectedly raised from the House of Commons to that post. After the fall of Clarendon Buckingham became the virtual Prime Minister. He had had a formidable rival for political power in Sir William Coventry, who was thought likely to succeed to Clarendon's supremacy. But Buckingham was on the point of bringing out a play in which Coventry was broadly burlesqued, when Coventry sent him a challenge, and the King, whose heart was with Buckingham, sent Coventry to the Tower, and dismissed him from the Privy Council. All men of character and consideration—so Colbert, the French Ambassador, wrote to his Government—supported Coventry, but the King was Buckingham's friend (Despatches in Archives of French Foreign Office, March 11, 14). The early measures of Buckingham's administration were wise and good. He promoted indulgence to Dissenters and comprehension within the Church. The Triple Alliance was effected. But pleasure and vice had obtained a dominion over him which prevented perseverance in business, and he had no laxity of principle to withstand the temptations of greed and of vanity. The King practically set him aside as a councillor, gave himself up to a Roman Catholic cabal and to Arlington and Clifford, and perfected a secret treaty of alliance with France for war against Holland, with a proviso for establishing the Roman Catholic faith in England by French arms and money, without the knowledge of Buckingham, who, he was afraid, would blab. Then he made Buckingham, nothing loth, his dupe and his tool for negotiation of a further treaty of alliance for a Dutch war, the provision as to the Roman Catholic religion remaining unknown to him and secretly binding. Lord Ashley, afterwards Shaftesbury, and the Presbyterian Lauderdale, were equally fooled with Buckingham for this second, which they thought the first and only, negotiation. Buckingham was the foremost in this second mock negotiation, and was indeed the soul of it. He was ambitious of the command of the military contingent to be sent to the Continent, and the French King fed his vanity by encouraging him to hope for it. With all his vast estates, recovered after the Restoration, he was now a ruined man, overwhelmed with debt; the French King gratified his avidity by presents and promises. He had a notorious and most scandalous intrigue with the Countess of Shrewsbury, whose husband he had killed in a duel, and with whom he was now living openly as a mistress; the French King, to please him, granted a large pension to Lady Shrewsbury. This was the time of what was nicknamed the Cabal Ministry. At this time Buckingham's reputation was at the worst possible. It was not ordinary vice only that he was charged with. Rumour freely ascribed to him the habit of still more detestable crimes; and this accusation afterwards found voice in the House of Commons, and later Lord Danby publicly threatened him with prosecution. But he remained in the Cabinet. Now it was that, laden with debt, the mark of general horror for vice known and greater vice accused, he charmed the town and made great literary fame by his brilliant satirical play of *The Rehearsal*, first acted in December 1671. He was the willing agent of Louis XIV. for conveying to Charles a new French mistress, who rapidly became Duchess of Portsmouth. The Parliamentary Session of 1673 shattered the Cabinet known as the Cabal. The Duke of York and Clifford were, as Roman Catholics, forced to quit. Public feeling against the Dutch war and the French alliance created a strong party in the Cabinet bent on ending them, which party Shaftesbury headed and Arlington joined. But Buckingham, still allured by hope, remained the advocate of France. He aspired to be general of an English force destined in 1673 for Continental operations; but he was disappointed, General Schomberg, a German military veteran from the French service, being brought over to take the place. He had raised a regiment in Yorkshire with infinite pains; the Yorkshire gentry were scandalized by his taking the Sacrament in all the parishes of the county to gain recruits, while his zeal and affability and kindness in teaching peasants the drill won for him popular enthusiasm. He was very wroth on being superseded by Schomberg, and declined to act under him, and disbanded his regiment. His total incapacity for self-restraint is shown by an incident which occurred while he was scheming and hoping to be made general. The coachman of his mistress, Lady Shrewsbury, interfering in an affray between two gentlemen of the Guards, was pierced through the body with his sword by one of them; he who killed the coachman was taken for examination before Buckingham, who beat him violently and broke his head, and told him that he should be hanged, though the Board of Green Cloth had found the act manslaughter (Unpublished Letter in the Record Office to Sir Joseph Williamson, July 4, 1673). Such stories and scandals of a Cabinet Minister two centuries ago are almost incredible. Much in the public administration of Charles II. resembles a wild dream or sensational romance. An Irish ruffian, Blood, waylaid the Duke of Ormond in London, carried him off to Tyburn to hang him, and was only prevented by a surprise from murdering him. Shortly after the same ruffian carried off the King's crown from the Tower. The King gave Blood an audience, pardoned him, gave him an estate in Ireland, and the *entrée* of the bed-chamber and of the Secretary of State's offices. Buckingham was believed to be Blood's instigator against Ormond; and Ormond's eldest son, the Earl of Ossory, charged him at Court in the King's presence with this instigation, telling him that if his father came to a violent death he should treat him as the assassin. "I shall pistol you," said Ossory, "though you stood behind the King's chair, and I tell it you in His Majesty's presence that you may be sure I shall keep my word."

In the last throes of the so-called Cabal Administration the King seriously entertained the idea of getting rid of Buckingham on account of his general discredit. But he remained untouched. Shaftesbury was dismissed for his opposition to the French alliance and the King's Roman Catholic policy. Buckingham was the fervent supporter of both. He now knew the secret treaty of Dover. Lord Danby, the new Lord Treasurer and virtual Prime Minister, was ignorant of it. When Parliament was about to

assemble in January 1674 Buckingham unscrupulously proposed to the King and Duke of York, who unscrupulously adopted the advice, to communicate to Parliament the treaty of 1672, from which the secret engagements as to the Roman Catholic religion were absent, with a declaration that that treaty contained the whole of England's engagements with France. The fraud was perpetrated, and Danby was duped. Buckingham's Ministerial career was now ended by a vote of the House of Commons for an address to the King to remove him from all employments held during the King's pleasure, and from his presence and councils for ever. In the debate on this address many speeches were made accusing him of scandalous life; and much was said of his open adultery with Lady Shrewsbury, and of far worse offences. His immoralities brought about his punishment. Driven from the King's councils, he became a leader of Opposition; and now he displayed in the House of Lords surpassing ability and eloquence in the advocacy of right and justice. His eloquence vied with Shaftesbury in opposition to Danby's enslaving Test Act. He was sent with Shaftesbury to the Tower as a martyr of free speech in the House of Lords. When Louis XIV., through Ruvigny and Barillon, opened his nefarious negotiations with the leaders of the English Opposition for keeping Charles in pecuniary difficulty, Buckingham, Holles, and Russell were the three leaders first discoursed with. Shaftesbury was not yet out of the Tower; Buckingham had been released. Holles and Russell, honourable men, refused money from Louis, and refused to treat with any one who would take it. Buckingham not only eagerly took what was offered him, but pressed for more. The vote of the House of Commons of 1674 prevented Buckingham from being included in the new Privy Council of 1679, which was to introduce a new system of administration, and of which Shaftesbury was President, and all the most distinguished Whig leaders were members. Charles soon broke all the promises with which he had ushered in the new Council, and dashed away all the hopes which had attended it. The exclusion of the Duke of York from the succession to the Throne became the rallying cry of the Opposition. Shaftesbury, Russell, and all the chief Whigs put forward the Duke of Monmouth as candidate for the succession. Buckingham now fell off from his friends. He pretended dissatisfaction with Shaftesbury's management. He pretended dissatisfaction with Monmouth. Meanwhile he was assiduous in frequenting the French Ambassador, Barillon, and importunate in begging money of him. He entered into close connexion with Algernon Sydney and William Penn, as leaders of the sectaries and Commonwealthsmen. He was for a Commonwealth. He talked to Barillon of his own claims to the throne by descent from a Plantagenet. Distracted and feverish, he was for making overtures to the Duke of York. The complete wreck of the Whig party came. Shaftesbury fled for his life; Russell and Sydney were executed. Charles was now firmly seated on the throne, and the Duke of York's succession secured. Buckingham was a cipher. Charles had long been thoroughly tired of him, and would not again trust or favour him. He now retired into Yorkshire, and there lived quietly, searching still for the philosopher's stone and giving himself up much to fox-hunting. When James succeeded Charles, royal favour became absolutely impossible for him. He died suddenly in April 1687, in his sixty-first year, from a fever caught by rash exposure to damp when hunting.

The reckless profligate whose public life has thus been sketched had received from nature brilliant gifts which, with ordinary character, might have made him equally eminent as an orator, a poet, and a man of science. He pursued chemistry as a freak, and squandered large sums of money in search of the philosopher's stone; but he had a talent for natural science, and was the inventor and patentee of improvements in the manufacture of glass, which were successfully worked under his direction on a large scale at Lambeth. The eminent success of *The Rehearsal* naturally depended much on the allusions to known living characters; but the salt of genius seasoned it. "Bayes" has lived beyond the age which knew him. Dryden never shook off the name; Marvell transferred it to Bishop Parker, and Prior and Montague revived it in their witty "Country Mouse and City Mouse," in parody of the "Hind and the Panther." Buckingham's lively imagination made him brilliant in quick repartee. When Dryden's bad line was recited on the stage—

> My wound is great because it is so small—

he convulsed the theatre by exclaiming from the boxes

> Then it were greater, were it none at all.

Such is the liveliness that shone in his farces. But he was equal to greater things in poetry. A poem of his on the death of his father-in-law, Fairfax, is of a very high order. There is little indeed to be found in English poetry superior in its way to the following stanza of his Pindaric Ode on Fairfax, the whole of which is pitched in the same high key, and which, with some little additional art and polish, would be perfect of its kind:—

> When all the nation he had won,
> And with expense of blood had bought
> Store great enough, he thought,
> Of glory and renown,
> He then his arms laid down
> With just as little pride
> As if he had been of his enemies side,
> Or one of them could do that were undone.
> He neither wealth nor places sought,
> He never for himself, but others, fought;
> He was content to know
> (For he had found it so)
> That when he pleased to conquer he was able,
> And left the spoil and plunder to the rabble.
> He might have been a king,
> But that he understood
> How much it was a meaner thing
> To be unjustly great than honourably good.

Sad indeed that vice should have enthralled one capable of so writing! "The passionate heart of the poet is given to folly and vice"; and the excitements of political life have too often destroyed moral equilibrium. We reprobate the vices of Buckingham, but who will not make allowance for fervid temperament, a youth without paternal restraint, great and distracting vicissitudes? It has not been Buckingham's good fortune, as it was that of a later dissolute and spendthrift orator, statesman, and poet, to have the laudations of a Moore and a Byron, enthusiastic admirers of his talents and charitably compassionate of his sins. May not Byron's lines on Sheridan apply equally to Buckingham?—

> But should there be to whom the fatal blight
> Of talking Wisdom yield a base delight,
> Men who exult when minds of heavenly tone
> Jar in the music which was born their own,
> Still let them pause—ah! little do they know
> That what to them seemed Vice might be but Woe.

Is not, again, Moore's eulogy equally applicable to Buckingham?—

> Was this then the fate of that high-gifted man,
> The pride of the palace, the bower, and the hall,
> The orator, dramatist, minstrel, who ran
> Through each mode of the lyre, and was master of all.

Moore proceeds:—

> Whose mind was an essence compounded with art
> From the finest and best of all other men's powers.

The same was said of Buckingham by Dryden, who sketched him when alive, but sketched him in bitter revenge, and heightened the effect of his scathing satire by an introductory homage to his splendid variety of gifts:—

> A man so various that he seemed to be
> Not one, but all mankind's epitome.

Dryden's hostile character was drawn at a time when Buckingham stood aloof from parties, and alone among the prominent men of public life, no longer a Minister, opposing the King's Administration, averse to Monmouth, jealous of Shaftesbury, restlessly busy, but without real influence, among the fanatical sectaries and Commonwealthsmen, the secret pensioner of France. Dryden boasted of the skilfulness of his "Zimri," with which he paid off his grudge of ten years' standing against the author of *The Rehearsal*. "The character of Zimri in my 'Absalom,'" Dryden wrote, "is in my opinion worth the whole poem; it is not bloody, but it is ridiculous enough, and he for whom it was intended was too witty to resent it as an injury." The master character is here reproduced with very slight curtailment:—

> Stiff in opinions, always in the wrong,
> Was everything by starts and nothing long;
> But in the course of one revolving moon
> Was chymist, fiddler, statesman, and buffoon;
> Then all for women, painting, rhyming, drinking,
> Besides ten thousand freaks that died in thinking.
> Railing and praising were his usual themes,
> And both, to show his judgment, in extremes.
> In squandering wealth was his peculiar art;
> Nothing went unrewarded but desert.
> Beggared by fools whom still he found too late,
> He had his jest, and they had his estate.
> He laughed himself from Court, then sought relief
> By forming parties, but could ne'er be chief;
> In spite of him, the weight of business fell
> On Absalom and wise Achitophel;
> Thus wicked but in will, of means bereft,
> He left not faction, but of that was left.

Buckingham rushed into print in reply to "Absalom and Achitophel," but his poem was mere fury, showing nothing of the art and skill which had distinguished him, and making clear the decay of his brilliant powers through dissipation and anguish. Another brilliant sketch of Buckingham, severe as Dryden's, came nearly fifty years after his death from Dryden's brilliant disciple. But Pope has misrepresented the circumstances of Buckingham's death:—

> In the worst inn's worst room, with mat half-hung,
> The floors of plaster, and the walls of dung,
> On once a flock-bed, but repaired with straw,
> With tape-tied curtains never meant to draw,
> The George and Garter dangling from that bed,
> Where tawdry yellow strove with dirty red,
> Great Villiers lies—alas! how changed from him,
> That life of pleasure and that soul of whim,
> Gallant and gay in Cliveden's proud alcove,
> The bower of wanton Shrewsbury and love;
> Or just as gay at council in a ring
> Of mimicked statesmen and their merry King.
> No wit to flatter left of all his store!
> No fool to laugh at, which he valued more.
> There, victor of his health, his fortune, friends,
> And fame, this lord of useless thousands ends.

Pope might have pointed the moral of Buckingham's life without exaggeration of the wretchedness of his death. Want did not drive him to die in a squalid inn. He was suddenly seized with ague and fever in the hunting-field, and carried to the nearest house, a tenant's on his Helmsley estate. He wished to be removed to a house of his own at York, but the removal was not judged prudent, and he died in three days in the humble

house to which he had first been moved. If the circumstances had been as Pope's sensational lines imply, the squalid end of one who had been so wealthy and had been Prime Minister would have been a theme of universal comment. As it is, Revesby and Luttrell simply mention the fact of the death of one who had in bygone days been a leading politician. Evelyn makes no mention of it.

Buckingham left no heir, and his estates were dispersed after his death by creditors. Helmesley, which he had inherited through his mother from the Mannerses, and which after confiscation in the Commonwealth he recovered by his marriage with Mary Fairfax, became the property of a City alderman and goldsmith, Sir Charles Duncombe:—

> And Helmesley, once proud Buckingham's delight,
> Slides to a scrivener or a City knight.

The Duncombes became in time merged in the territorial aristocracy of Yorkshire. The head of the family was in the present century made a peer. The eldest son of the peer's next brother was in the memory of most persons living a conspicuous member of Parliament, and a man of pleasure and a spendthrift. This was the handsome, gay, witty, fascinating Thomas Duncombe, endowed by nature with fine abilities, and having a special aptitude for political life, and in politics considerable industry; yet, with all his many fine advantages, a known licentious life and dark stories of pecuniary involvements closed for him completely the door of office and preferment. For in the two centuries that have passed since Buckingham's great vices were flaunted on a high political pinnacle, this at least has been achieved—that no social position, however high, no abilities however apt or brilliant, will admit one who notoriously disregards moral obligations to the honours and responsibilities of office.

KENELM CHILLINGLY.*

KENELM CHILLINGLY will of course derive a certain adventitious interest from the circumstances under which it appears. The posthumous work of so able and popular a writer will be studied with interest by those who have long been accustomed to derive amusement from his pages. We do not think, however, that there is any sufficient reason for our not expressing our opinion of it as frankly as though it were the first performance of some new aspirant to fame, or the work of a writer still in the meridian of his powers. If unfavourable, it can do little harm to a reputation which has already found its level with competent critics; and, if favourable, we cannot be accused of any desire to give undue praise to one so little in need of it.

Kenelm Chillingly, like all Lord Lytton's novels, is written with a distinct purpose: he has not only a story to tell, but a theory to illustrate. In this case the theory is more than usually prominent. We care little enough for the adventures of the hero. They are palpably introduced in order to give texts for the author's meditations, and not for their intrinsic interest. The novel is therefore not to be put beside Scott's romances or Lord Lytton's own pure novels, such, for example, as the *Caxtons*, but may rather be described as belonging to the same type as *Wilhelm Meister*; to which we observe that it has been compared. There are, indeed, some deductions to be made from this statement; but we may say with tolerable accuracy that Kenelm is intended for an embodiment of some of his creator's intellectual tendencies, and that he is sent on his travels through the world in order to tell us what the world looked like to Lord Lytton. Criticisms which would be applicable to an ordinary novel are therefore in some degree out of place here. We must consider the incidents and the characters chiefly in relation to the moral which they are intended to point. Now we need hardly say that we can go but a very little way through such a performance without coming upon our old friends, the Real and the Ideal. The model parson, for example, when requested to give his views as to the hero's education, begins by discussing, not the relative merits of Eton and Rugby, or the advantages of public schools and private tuition, but the more general problem of the propriety of forming the boy's character in the school of the Real or of the Ideal. Afterwards we find that the most remarkable peculiarity of the hero has been his "passionate longing to find ideal worth in real life." Kenelm, in fact, goes about preaching to London journalists, to sympathetic young ladies, and to ambitious village carpenters on the distinction between idealism and realism. In a general way he ridicules the realistic school, and conceives that the great defect in modern art and morality is the absence of a lofty idealism. Far be it from us to discuss at length the problem thus raised. In his peculiar dialect Lord Lytton makes many acute and some sound observations upon the subject. We will content ourselves with the remark that a search after the Ideal is a very good thing when undertaken by a genuine artist, but that it has its dangers for second-rate writers; and we might briefly indicate the weak side of Lord Lytton's work by saying that he is always straining after the Ideal without quite reaching it. His undoubted powers often led him to failure just because he fancied them to be fit for a higher sphere than that in which he naturally moved. A first-rate poet stands at a middle point between the two opposite poles. He has to show us beauty such as is never seen in actual life, and yet to make its existence vividly conceivable. So far as he loses his grasp of facts to soar into a mere dreamland, or adheres so closely to facts as to be merely commonplace, he fails to interest our imagination. Now it is often the case that Lord Lytton's desire to reach the ideal leads him to indulge in colourless abstractions, and deprives his characters of vitality without making them poetical. The two elements which are fused into a perfect whole by the fire of a great imagination are mechanically combined by the skilful literary artificer and remain cold and uninteresting. In most of his writings, and in none more conspicuously than in *Kenelm Chillingly*, we can see the two elements lying side by side, and are annoyed by the contrast between the design and the execution. Everything has been put together according to the orthodox rules of art; but the one thing wanting is just the one thing necessary.

Thus, so long as Lord Lytton consents to forget his ambition, he is often admirable. Whilst the Real and the Ideal are left on one side, he discourses vigorously and shrewdly upon life and character. We have the pleasure of talking to a keen man of the world who has seen men and manners, and whose observations have always been guided by a cultivated intelligence. Amongst the secondary characters in this book, for example, is a Mr. Chillingly Mivers, the proprietor and editor of a journal called the *Londoner*. This periodical reflects the character of Mivers, and is therefore the embodiment of sharp cynical worldly wisdom. It despises enthusiasm, sneers at sentiment, fails to understand rising genius, and compresses into pointed epigrams the views upon politics and literature which are current in the most heartless and cultivated classes of London society. The *Londoner*, which is the more meritorious as a work of imagination because it is obviously not designed after any existing paper, has some more questionable peculiarities. It is used not merely to puff the members of a small clique known as "the intellectuals," but also for insidious political manœuvres. It praises measures in the wrong places, with a view of covertly injuring them, and so on. Putting aside this part of the description, which we assume to be a caricature, we have no doubt that Mr. Mivers and his periodical would have welcomed Lord Lytton with open arms. He could have written biting bits of satire upon society, and exposed the folly of rash political schemers with a keenness which would leave nothing to be desired. The maxims by which Mr. Mivers governs his conduct are very good specimens of this caustic style. "Begin your wig early; thus you never become grey," is his first principle. Another is, "Refuse to be ill. Never tell people you are ill; never own it to yourself." "If you want to keep young," he says again, "live in a metropolis; never stay above a few weeks at a time in the country." "Don't be a family man; nothing ages one like matrimonial felicity and paternal ties. . . . . Shun ambition, it is so gouty. It takes a great deal out of a man's life, and gives him nothing worth having till he has ceased to enjoy it." Mr. Mivers, in short, resolves to preserve "the coats of his stomach and the enamel of his teeth" at any sacrifice of principle or sentiment; and he meets with the success due to persevering devotion to a single object. Lord Lytton is thoroughly in his element when indulging in this style of writing, whether he adopts the attitude of sympathy or of antipathy. We are indeed tolerably familiar with the vein of sentiment from which many of the best passages of his novels, from *Pelham* down to *Kenelm Chillingly*, have been extracted. The chief difference between his characters is that some of them abandon themselves altogether to worldly moralizings, whilst others are distracted by the pursuit of the Ideal. Kenelm Chillingly can talk after the model of his cousin Mivers, but his cynicism is dashed with occasional fragments of pure sentiment, which gradually become predominant as the hero learns the true lesson of life. A genuine humourist might have made the contrast very effective; as, indeed, the combination of a rough outside with a tender heart is amongst the most favourite devices of humorous writers. Lord Lytton, who is never weaker than in his attempts at humour, naturally fails in this; and Kenelm, from being an agreeable cynic, ends with talking something very like twaddle. When he comes of age he makes a speech to his father's tenantry of amusing but rather forced irony. He points out that the Chillinglys have lived on their family estates since the Conquest, and have done nothing during that period beyond eating and drinking:—

> Not that in this respect [he adds] they were a whit less insignificant than the generality of their fellow-creatures. Most of us now present are only born in order to die; and the chief consolation of our wounded pride in admitting this fact is the probability that our posterity will not be of more consequence to the scheme of nature than we ourselves are.

The tenantry are naturally puzzled and rather disgusted by this singular specimen of convivial oratory. They were doubtless consoled at a later period; for at the end of the third volume we find that Kenelm, having hunted the Ideal for a few years, in the course of which one young lady died for love of him, and another refused to marry in order to be in readiness if he ever wants a wife, discovers the true secret of happiness. The trying experiences through which he has passed, and the amount of philosophy which he has talked in the interval, encourage us to expect some startling revelation. The result is a little disappointing. He attends a debate in Parliament with his father; he is so much impressed by his own reflections and his father's remarks, that he exclaims, "Victory or Westminster Abbey!" and resolves to become a candidate at the next election. This is doubtless a very sensible decision; but it is not at first obvious why it requires so much philosophical and æsthetical discussion. The fact is, however,

---

* *Kenelm Chillingly; his Adventures and Opinions.* By the Author of "The Caxtons." London and Edinburgh: Blackwood & Sons. 1873

that talk about the Ideal is for the most part pretentious nonsense, or commonplace twisted into a sententious form; and it is not surprising that the young gentleman who has abandoned his mind to talking twaddle about adjectives with capital letters should gradually sink into talking Parliamentary twaddle of the ordinary kind. When we try to look into the grandest ornaments of his most philosophical orations we fear that they often turn out to be of the Brummagem variety. The enthusiastic young ladies who listen to them exclaim, "Talk on—talk thus, I like to hear you!" and the powerful young athletes whom he has thrashed into good manners weep like children at his platitudes. We don't. This scheme of making your own creations bear testimony to the wit and wisdom of each other is ingenious; but it won't bear inspection. When Kenelm asks one of the model young ladies in what he ought to feel an interest, she replies, "In the expression of thought, literature; in the conduct of action, politics." Kenelm, we are told, stared dumbfounded. He thinks that this "very terse reply" must have been borrowed from a book; which is not a very polite, though perhaps a natural, sentiment. But it is plain to the outsider that the lady is merely saying very stiffly what nine young ladies out of ten would say quite simply, "Why don't you go into Parliament, or write a book?" The dogmatic turn of phrase, and the odd expression "the conduct of action," give to a painfully obvious remark a certain sententious air, which impresses a young gentleman in pursuit of the Ideal, but may perhaps strike a sober critic as verging on the absurd. The little artifice which exalts this young lady's wisdom is turned to great account elsewhere. The admiration of the characters for each other is wonderful, and may become contagious to some readers. A few words from the judicious Kenelm convert, as we have seen, the village bully. A single exclamation from him in another place is the turning-point in the life of a Bohemian painter of genius. Elsewhere he succeeds by some commonplace advice in saving a young lady who is attempting to run away with an actor; and, again, he exorcises the bad passions of a couple who have a very serious reason for disliking the converted bully. This curious belief in the efficacy of a little fine talk is characteristic, and it casts a certain air of unreality over the whole story. The subsidiary actors are too plainly mere dummies to illustrate the effect of sermons upon the Ideal. And thus the story is an odd mixture of really shrewd and able writing and the flimsiest sentimental philosophy. Much of it, and especially the opening of the first volume, is really excellent; and then we are annoyed by the mere tinsel which is offered to us for genuine gold. Readers of Lord Lytton's novels are indeed familiar with this mixture. Those who believe in his claims to real genius will probably consider *Kenelm Chillingly* as a fair specimen of his powers, and perhaps improved by comparative freedom from some of his earlier extravagances. Others will see in it one more proof that careful workmanship and real talent cannot supply the place of higher qualities.

TALES OF THE TEUTONIC LANDS.*

MR. COX and his coadjutor Mr. Jones are such successful tellers of ancient stories that another volume from them will be welcomed even by many who are indifferent or hostile to comparative mythology. Readers who care nought for Sun, Dawn, and Dew, can find human interest in the loves of Siegfried and Kriemhild, of Frithjof and Ingebjorg, in the sorrows of the royal Danish maiden Gudrun drudging as a thrall in Normandy, in the wild feats of the outlawed Grottir, or in the terrible destruction of the gentle Icelander Njal and his household. They may like to trace the development of the chivalrous legend of Walter of Aquitaine from the fierce Nibelung lay, and of that again from the ghastly stories of the Volsungs, without going on to seek for the origin of these and similar tales in "the great tragedy of the year." They may not care to know that the Valkyrie Brynhild, lying within her flame-girt hall, spell-bound in the charmed slumber from which she is roused by the hero Sigurd, is the spring awakened by the sun; but they may be pleased at recognizing an early version of the familiar Sleeping Beauty. Some of the stories, notably the Gudrun lay and the tale of Gunnlaug and the Fair Helga, are of merit merely as stories; and most of them, even with their imperfect morality, their ferocity, and their extravagant amount of bloodshed, may be recommended as a healthy contrast to the morbid twaddle which has its admirers nowadays. At any rate the heroes and heroines are for the most part vigorous animals, and not mooning hypochondriacs. Not indeed that all the legends contained in this volume rise to the level of Gudrun or Gunnlaug. The compilers have chosen and arranged their tales with the design rather of illustrating comparative mythology than of producing a readable story-book. Were it otherwise, exception might be taken to the horrible story of Sigmund and Signy, which from a mythological point of view has its interest, but from a human one is simply revolting. Mr. Cox perhaps does not care to win the class of unscientific readers of whom we have been speaking; else we should suggest that the value of his work would be much increased if some information were given as to the sources from which the various tales have been derived, and the period at which they assumed their present form, and if a note were added here and there to elucidate dark passages. What are the uninstructed to make of the following sentence?—"Because of this byrnie in which she went to the wars, the maiden was called Brynhild." Even if they guess the nature of a byrnie, the meaning of Brynhild is not obvious.

Having uttered a plea on behalf of the general reader, we turn to the more serious aspect of the work. The tales, with two exceptions, have all been contributed by Mr. Jones; while the key to their meaning is given in the Introduction by Mr. Cox, who attempts, as he says, "to remove some strange misconceptions of the method which has been applied in the analysis of the popular legends of the Aryan nations." He divides his stories into three classes, the first being those for which, so far as we can judge, no historical character can be claimed; the second, those in which a certain amount of national or local history is imbedded in myth; and the third, those which lie mainly or wholly beyond the field of the comparative mythologist. The tales which Mr. Cox places in this last class are therefore removed out of the region of controversy; and it is over the first two classes that the mythological battle rages, perhaps most fiercely when the myth is half hidden by later details. Mr. Cox fights with all the ardour of sincere conviction, and, like devout believers in general, betrays some impatience at the unreasonableness of his adversaries in opposing him. Comparative mythology is to him so delightful that he evidently cannot understand why some people are distressed and irritated by it. He admits that "the temptation to regard as generally historical a poem or tale which exhibits vivid pictures of social life, as a set-off to a narrative of utterly impossible incidents, is, it would seem, widely felt"; but his tone is that of one who has never experienced the strength of the temptation himself. In fact, his very happiness in his own belief is likely to irritate those who may perhaps be constrained to yield an unwilling submission to his arguments. It is hard, we can imagine many people saying, not only to have to admit the truth of comparative mythology, but to be called upon to believe that it invests the stories upon which it works "with a deeper, nay, with an imperishable interest," and imparts "to the epic narratives into which these myths have been developed a higher and more abiding charm." So far from agreeing in this sentiment, ordinary readers of legend and romance, when they see one of their favourite tales subjected to the treatment of the mythologist, feel much as did Lenore in the ballad when she found the cavalier whom she had taken for her living lover resolving himself into a phantom skeleton. And when not only persons whom everybody admits to be fictitious, but also those who are commonly looked upon as more or less historical, are thus dealt with, the reluctance to accept the new doctrines becomes stronger, and the cry is raised that mythologists attempt to explain away history into fable; a charge against which Mr. Cox vigorously defends himself and his school. "No such attempt is made. If, on evidence not obtained from the fable itself, it can be shown that history is mixed up with it, and if the extent of this historical element be pointed out, the conclusion will be at once accepted; but in the interests of historic truth itself the mythologist must protest against the method which seeks to discover this element in myths which the historian has not the means of testing." It is not denied that myth and history are often mixed together in popular tradition, and that undoubtedly historical persons appear as heroes of legend; all that is contended for is that history cannot be extracted from myth. There was a Roland who fell in the Pyrenees; but our knowledge of the fact comes not from the legend, but from the sober pages of Eginhard. "The stories which take Karl the Great to Jerusalem may be founded on his historical relations with Haroun-al-Raschid; but we certainly do not gain our knowledge of these relations from the stories." There may have been a gallant Celtic chief named Arthur; there may have been kings named Agamemnon and Menelaus who led an expedition against Ilium; but neither the Arthur romances nor the Homeric poems can be admitted as proof of the fact. The accident of the heroes of a particular legend bearing historic names will not make that legend historical. The development of the Nibelungenlied from the Volsung story is, Mr. Cox argues, no way disproved by the fact of some half-dozen names in the later legend resembling those of some real persons of the fifth and sixth centuries. Supposing—such is his illustration—that a version of the Arthur romance were published in which the name of Arthur Duke of Wellington was substituted for that of Arthur the British King, the romance would not therefore be rendered a whit more historical:—

> The question turns less on the names of the actors than on their career. If the series of deeds attributed to Sigurd and Etzel, Jörmunrek and Gunnar were done by Siegbert and Attila, Hermanric and Gundicar, the tradition would certainly become historical: but it is not pretended that this is the case.
>
> * * * * *
>
> All that can be said (and this is willingly granted) is that the poet or poets of the Nibelung lay have adapted the names of the older legend to names of living or recently living persons, whenever it was possible to do so; that they have introduced some fresh names which were likewise borne by historical persons, and that they have further imparted to the story some appearance of agreement with great events of their own or of a recent age. Nor can the fidelity of the poet to the manners of his time be ascribed necessarily to the narrative of the acts of the several personages in the drama. The subordinate or unimportant details are probably described with exactness and care. There would be no temptation to depart from existing customs with regard to dress, weapons, food, the precedence of ranks in the state, religious worship, or the usages of war. But the care of the poets to represent these things aright imparts no credibility to narratives of events which are in themselves impossible; and when we find that these impossible events form the groundwork of a thousand other stories, whether Greek, or

* *Tales of the Teutonic Lands.* By George W. Cox, M.A., and Eustace Hinton Jones, Authors of "Popular Romances of the Middle Ages." London: Longmans, Green, & Co. 1872.

Teutonic, or Scandinavian, we are at once justified in asserting that in the common element thus found we discover the real character of these tales.

As the authors give the Volsung and Nibelung tales, together with their faint echo, the legend of Walter of Aquitaine, the reader is enabled to trace for himself the common element in the three. In the first two the points of resemblance, as to names, characters, and adventures, are many. In both there is the dragon-slaying hero, Sigurd or Siegfried, the winner of vast treasures, which, however, bring with them nothing but woe and discord. In both there is the fierce maiden Brynhild whom the hero wins—in the one case by riding through the flames which surround her magic castle, in the other by vanquishing her in warlike games—not for himself, but for a king named Gunnar or Gunther, whose sister Gudrun or Kriemhild becomes the hero's bride. In both a strife is stirred up by the rival heroines, which ends in the murder of the hero with the connivance of his brother-in-law. Poetical justice is done upon the murderers, in the one case through the instrumentality of Gudrun's second husband, Atli, angered by the withholding of the treasure which he claims as his wife's dowry; in the other by means of Kriemhild, who, though like her earlier representative she has been remarried, has never forgotten the slaughter of Siegfried. The strange stubbornness with which the treasure is concealed is, though with a few differences of detail, substantially the same in both. An attempt is made to learn the secret from one of the only two men alive who know the hiding place. He will not or may not tell during the lifetime of his companion, who is thereupon put to death, and his heart or his head displayed in proof. At the sight the survivor flings a scornful refusal to his questioners. "None knows now but God and I," says Hagen in the Nibelung lay, "and I will never tell!" This wild tale has, as Mr. Cox says, been "watered down until it assumed the form of the legend of Walter of Aquitaine," in which indeed there is little left except a few of the same names and the general idea of a base attack upon the hero, and a desperate fight for a treasure. Mr. Cox speaks of this tale as exhibiting "the old incidents" with a more cheerful ending; but the most striking incidents of the Volsung and Nibelung stories, notably the complication with two women in which the hero entangles himself, are wanting. We have instead a pretty romance of a pair of lovers, Walter and Hildegund, who have been given in their childhood as hostages to Etzel, "the Scourge of God," and brought up at his court, whence they make their escape, carrying off with them the treasures of the Hunnish conqueror. Hagen, who in the Nibelung lay is the murderer of Siegfried, here assists, though unwillingly, King Gunther of Worms in waylaying the fugitives for the sake of their gold. After losing respectively a hand and an eye—mutilations which they sustain with as much equanimity as a lobster might—Walter and Hagen, who are old friends, make up the quarrel, and Hildegund, the only whole and sound person on the spot, is summoned to attend to their wounds, or, as Mr. Cox, with his love of tracing parallels between various mythical personages, says, "to perform the office of Asklepios, or Oinônê, or Helgi, the healers."

The stories of Frithjof and Ingebjorg, and of Grettir the Strong, Mr. Cox places in his second class, holding that they "may contain a certain amount of local history inextricably imbedded in a mass of mythical details." We may here pause to notice one incident in the story of Frithjof, not for any mythical importance which it may possess, but simply as a fine conception of Northern honour and *sang-froid*. Most of these tales, indeed, revel in ideals of stubborn courage; but we think that the Viking Atli, who is defeated by Frithjof, may carry off the palm. "Had I now my sword I would still that tongue of thine, that it should no more boast itself against tired men," says Frithjof as, himself disarmed, he holds his adversary down by main force. "Fetch it. I will not stir," says the vanquished Atli; and he lies placidly waiting while his foeman fetches the sword wherewith to slay him. As for the Grettir Saga, its impossibilities and its points of resemblance to admitted myths lead Mr. Cox to the opinion that it "can scarcely be regarded as in any sense a record of incidents in Icelandic life"; but its occasional gleams of rough humour and the homely character of many of its episodes give it an air of reality in spite of its ogres, witches, and ghosts. To take one scene only, there is a lively picture of a braggart, Gisli, proud beyond measure of his fine clothes and polished weapons, who jauntily undertakes to deal with the outlaw Grettir:—"Like enough he may scare such folk as you; but I would have you to know that I have fought in battle along with the great King Cnut, and am no common sort of man." Of course, when brought to the point, Gisli makes as ignominious an exhibition of himself as Ancient Pistol; but he has been so amusing in his bragging and his cowardice that we are half inclined to pity him when the enemy whom he has so rashly provoked stands over him with the ominous question, "Now art thou that Gisli that was so fain to meet Grettir Asmundson?" and we half wish that the outlaw, content with his abjectly submissive reply, would let the poor fop off without a thrashing. The absence of a heroine also produces an unromantic and realistic effect. There are women enough, but, except for the unedifying sequel of Thurstein and Lady Spes, which has some touches that remind us of the *Merry Wives of Windsor*, there is no love-making.

People whose ideas have been fairly bewildered by comparative mythology may perhaps be glad to know what are the stories which Mr. Cox himself confesses to be not mythological. Of this class he gives two specimens, in order to show that he has no intention of resolving "the whole popular literature of the Aryan nations" into mythical phrases. Both are, like Grettir, Icelandic tales—the one being Burnt Njal, which Mr. Cox looks upon as an exaggerated narrative of possible events, and the other the sad love-tale of Gunnlaug and the Fair Helga, in which "there is little or nothing" "which may not have occurred in the annals of Icelandic families." Our Kings Æthelred and Cnut are made to some extent responsible for the crossing of Gunnlaug's love. The Icelandic adventurer has bound himself by an oath of service to King Æthelred, and, while longing to go home to claim his "vowed maiden," whose father has unwillingly consented to let her wait three years for him, is kept fretting and chafing in England in expectation of an invasion by Cnut, which for the sake of the story is deferred somewhat longer than history would allow. At last Æthelred lets him go, but, being further delayed on the road by a dislocated ancle and the difficulty of borrowing horses, he arrives just as Helga's hand has been given to the suitor of her father's choice. It is the familiar but ever-pathetic theme, "The bride had consented, the gallant came late." In the end the husband and the lover fall in fierce combat with each other, and Helga the Fair drags out the rest of her life in listless sorrow. A comparison of the stories of Njal and Gunnlaug with those which have been given before them is, Mr. Cox remarks, "more especially of service, as showing the classes into which the popular traditions of a country may throw themselves. So surely as we approach the limits of the actual history, whether of nations and tribes, or of families, or of individual men, so surely are we at once removed from that magic circle within which old mythical phrases have produced their magnificent and exuberant harvest."

PRUSSIAN OFFICIAL HISTORY OF THE WAR.—SAARBRUCK AND WEISSENBURG.*

THE First Section of this volume of the Official History, reviewed by us not long since, was devoted to preparing the way for the actual narrative, which is begun in the Section now before us. The moral of what went before the war is, above all, that careful preparation lay entirely on the side which was destined to be completely victorious. In no respect, as we before pointed out, was this forethought of the Germans more conspicuous than in the collection of knowledge as to the resources of the enemy—a military precaution utterly neglected by their adversary. Not that the French need have been left thus ill informed. The reports of Baron Stoffel exist to prove that there were not wanting in the Imperial army men intelligent enough to gather the needful particulars, and bold enough to offer the knowledge thus gained to their master, however little the results of the inquiry might please him. But the Second Empire chose deliberately to feed itself on illusions. The pupils at the Military School, who were to form the hope of its army, were taught that the Prussian forces were but a species of militia hardly worthy the notice of regular soldiers; just as they were trained to believe the Rhine to be the natural boundary of their country, held from Frenchmen only by an unrighteous combination. So, despite the warning given by the overthrow of Austria, the general uneasiness at the growth of Prussian power produced scarcely any practical result. Marshal Niel's efforts to reform and augment the army were nullified by political opposition to the Administration that supported them; and whilst small progress was made in preparing the national forces for the coming shock, absolutely nothing was done worthy of the name in the way of correctly measuring those which they must sooner or later encounter.

So it was also with the strategic designs which were to be based on such estimates. Whilst on the Prussian side, as we showed in our review of the First Section of this History (*Saturday Review*, November 2, 1872), all was clearness and determination, and the conception of Moltke's plan was so perfect and well arranged as to need but a few brief orders to execute it to the letter, with the French we find nothing but such confusion and hesitancy as could hardly have been equalled by the most maundering of the old-world Cabinets which the revolutionary armies of 1793-4 terrified in their day. A wild scheme, based upon corps not ready and upon allies who were arming against France, was the sole substitute that St. Cloud could provide for such definite plans as Moltke was keeping ready in his cabinet, or as Napoleon had worked out in his brain when, fifty-five years before, he gave the word to transfer the Army of Boulogne to the sources of the Danube. Now an army is, of all great machines, the most sensitive in reflecting the will of him who guides it. The irresolution which marked the conduct of the minor French commanders from the first was probably not so much the fruit of an inferior system as the result of their discovery of such want of certainty in their leaders as must have seemed to them to denote helpless imbecility. The readiness and audacity which even commonplace men showed at the head of German divisions was produced not only by a better mode of training and selection, but by the absolute confidence which they felt that their chiefs only needed hearty support in order to secure certain triumph. In short, from the first the French were weighted, not only by a vast disproportion of means, but by irresolution in the use of what they had. It becomes useless, therefore, to discuss seriously the often-raised problem of the

* *Der deutsch-französische Krieg* 1870-71; Redigirt von der Kriegsgeschichtlichen Abtheilung des grossen Generalstabes. Erster Theil, Heft 2. Mittler: Berlin.

effect which a sudden advance into the Palatinate during the few days' start allowed them might have produced, since it is evident that their lesser numbers and inferior leadership would have made of any such improvised plan one huge disaster, most probably exceeding Sedan in dimensions, as it would have anticipated it in date. From such speculations we may well pass to the record of events as they occurred, and trace the steps by which the forethought and sagacity which were to be found solely on the one side were to reap their certain reward in the great national duel.

We pass purposely over the first chapter of the present Section, which is devoted to that sort of scientific survey of the ground to be immediately operated upon which only a rare combination of the knowledge of physical geography and of military necessities could produce. Nor need we follow the writer through that very brief one which follows, and which narrates, somewhat drily, the events that succeeded immediately the transfer of the headquarters of the King, now Commander-in-Chief under private treaties of the forces of all Germany, to their first station at Mayence. Those which come after, and are devoted to the movements of the Germans up to the 5th of August, naturally claim our chief attention, for they comprise the ill-omened skirmish of Saarbruck, brought on by the French, the movements which succeeded it on the part of Steinmetz with the First Army, leading direct to the battle of Forbach, and the surprise and rout of Douay's division at Weissenburg by the Crown Prince.

The affair of Saarbruck as here told needs little comment. The description given of its details, if somewhat over-elaborate for so petty a subject, is a model of careful military narrative, so well given as to need no elucidation by way of comment. And it may be added that Colonel Pestel's management of the three companies of the 40th Prussian Regiment, with which he checked the whole advance of Frossard's corps for a considerable time, and then drew off across the Saar without the loss of a prisoner, inflicting on the French casualties as great as those suffered by his tiny command, is in its way also a model for the soldier's study. It would prove conclusively—even did it stand alone—that the German tactics had been elaborated with no less care than their strategy. If there is any point of special importance to note in this affair, it is that the want of enterprise in the French Staff comes out more clearly than ever. For it will be found from it that the French artillery, when once on the heights above Saarbruck, not only could cannonade the important railway station beyond, the only worthy object of their advance that day, and actually did set the loaded trucks there on fire; but practically so commanded the ground beyond (*beherrschte das ganze Abzugefeld*), that the retreat ordered from the vicinity of the town across it at two P.M. had to be made in all haste. Yet, with a point of this importance so completely in their power, and the approach to it cleared from the last of the bold little picquets that had opposed them, the French not only did not occupy it, but sent no armed reconnaissance forward, asked for no volunteer to explore the two or three hundred yards of ground between the river before them and the railroad beyond, and sat down to entrench hastily the heights just reached, as though they expected Pestel's little force to return upon them instantly with the armies which were still days distant to its rear. Never was there a more striking want of enterprise at the outset of a great adventure. The Germans were not slow to discover that the same features marked the whole conduct of their opponents all along the hostile line. The reports received from the front at this time are summed up in the significant words:—"The enemy everywhere showed himself careless in his outpost service, and little given to enterprise; he patrolled only in strong detachments." The way, in fact, was already opened for the adventurous Uhlan who played so large a part in the history of the invasion.

It is satisfactory in passing on to find that the Berlin General Staff has not evaded the one puzzle of this part of the campaign, the bringing on prematurely the battle of Forbach, and has assumed the responsibility of fixing the over-haste on the right shoulders. The affair has been usually ascribed to the impatience or readiness—call it which you will—of General Goeben, taking his corps suddenly into action. But it is now for the first time shown beyond a doubt that neither he nor Kameke, who actually began the fight, would have had the opportunity at all but for the too independent conduct of General Steinmetz, under whom they acted. He had deliberately pushed the First Army forward to the Saar in defiance of Moltke's instructions, in order to avoid being left behind, as he supposed himself about to be, by the advance of that under Prince Frederick Charles. Steinmetz, therefore, was the real and primary cause of the unexpected collision which, had Frossard been better supported and held his strong ground, would have seriously interfered with the German designs. The truth is stated with unsparing clearness, though in most temperate language, in this portion of the volume. After giving first the instructions actually sent to Steinmetz, which prescribed his moving to his right or west, in order to leave the roads clear for the Prince's (Second) Army, it explains how Steinmetz read its very liberal wording so freely as to resolve on moving south-west within easy distance of the Saar. His orders for this object, issued on the evening of the 5th August, are quoted textually, and then comes the decisive comment:—"Undoubtedly these movements of the First Army on the 6th led in their further consequences to the battle"; and, after giving the excuse for his advancing the troops which actually became engaged, that it was a necessary precaution to cover himself, there follows the true explanation of the matter:—

> Apart from this, there undeniably prevailed between the headquarters and the commander of the First Army a certain difference of views. . . . The First Army was collected earlier than the other two. It stood the nearest to the enemy, and formed a sort of advanced flank to the Second Army, until at least this got up into line with it. When later its position at Tholey was taken up under headquarter orders, and troops of the Second Army advanced beyond the quarters of the First towards the west, General Steinmetz must have feared that he would be thrown entirely into the second line should the troops of Prince Frederick Charles reach the frontier before him.

He did not know or conjecture Moltke's design, which was to move the two into line, give the tired columns of the Prince a day's rest on the 8th, and let the whole cross the frontier simultaneously on the 9th. So he read the orders as he preferred to read them, putting in fact for "move to your right out of the way," "move forward out of the way," and the battle precipitately brought on was the direct result. The bold and ready tactics of the German generals redeemed the error, and it is rather as a curious problem than as an important historical fact that one now regards the singularly independent conduct of Moltke's subordinate, which no doubt was the beginning of the misunderstandings that caused his subsequent supersession in the middle of the campaign.

On the battle of Weissenburg—the only important action narrated in this Section—there is no necessity to dwell at length. That a thin line of nine French battalions—for, deducting the troops left in the town, we believe there were no more—should have opposed any serious resistance at all to a well-combined attack of three full German corps, and, after fighting hard, got off without being destroyed or taken, speaks volumes as to the different state of moral feeling which prevailed in the Imperial army at the outset of the campaign from that to which a month of defeat and retreat had brought it when MacMahon courted destruction by turning to fight at Sedan with troops wholly unfit to face even an equal foe. The one problem here which needed solution is, How came it that Douay's troops, their general killed, themselves outnumbered, driven back from their position, and at the same time completely turned, were allowed thus to escape at all? The explanation here offered is not more satisfactory than the usual "some one had blundered" stereotyped for such occasions. It is not true—as we at first heard—that the Crown Prince had no cavalry; on the contrary, we read:—

> An order had already been sent at 11 A.M. to the 4th Cavalry Division to move to the Wachholder-Berg, near Altenstadt; but the officer sent did not find the division yet at the rendezvous assigned to it. It had halted a full hour at Bittigheim. . . . For immediate pursuit there was on the battle-field only the cavalry attached to the infantry divisions.

And this cavalry appears to have been very easily checked in its pursuit by some dropping fire from the first village on the road, and so waited for the support of its infantry whilst the French escaped. Such appears to be the whole solution of the question; and it gives rise to some suggestive thoughts as to how far the greater boldness of the Germans in pursuit, at later stages of the war, was due to the cowed state of the enemy they followed.

Of the last chapter of this Section, which deals with the French movements during the same first few days of the campaign, it is not necessary to speak here. Our pages, in reviews of the works of Frossard, Bazaine, and other officers of rank, and of the *Engineer's Journal during the Campaign of Metz*, have already exposed sufficiently the wretched vacillation of the French counsels and traced their cause. The chief moral lies in the fact that there seems to have been at the first no lack of fighting spirit among the men; but the jobbery which had distributed the corps commands among the favourites of St. Cloud and Compiègne was faithfully reflected in the nepotism that filled the second places on the Staff with a crowd of decorated incapables. And in war the soldier soon discovers whether those above him are capable of leading him on to victory, and follows them pretty much as they deserve to be followed.

MRS. HEATON'S HISTORY OF PAINTING.*

MRS. JAMESON has taught us that women can be excellent art critics. The female mind is sensitive and recipient, it is responsive to beauty and purity, it has just intuitions of right and of truth. Art indeed is a sphere specially suited to women, as being the region of fancy and of imagination rather than of strict reason; art, in fact, is cognate with the feminine side of genius, while science has closer affinity to the masculine intellect. We think it may be admitted that Mrs. Heaton brings to her task many of the qualities which favourably distinguish the gentler sex. Moreover, her style is pleasing, her narrative fluent, her arrangement clear. On the other hand, the work before us cannot be said to be free from certain infirmities which are supposed to inhere to the female mind. Of these may be mentioned what in logic is known as jumping at conclusions; also the use of superlatives, with the intrusion of emotional epithets, especially derivatives from the verb to love; likewise there is observable a tendency to fine writing, with gushing sentences in place of searching criticism. Indeed the choicest flowers of rhetoric might be gathered from these pages.

---

* *A Concise History of Painting.* By Mrs. Charles Heaton, Author of the "History of the Life of Albert Dürer of Nuremberg." With Illustrations in Permanent Photography. London: Bell & Daldy. 1873.

The work has little claim to originality; facts give way to effects, and historic characters are served up with an eye to dramatic situations.

Mrs. Heaton manages to pack away four thousand years into five hundred pages. With nimble step she passes trippingly over three quarters of the globe, and in quick succession greets in familiar terms Zeuxis, Raffaelle, Hogarth, and Turner. Her first idea is the "awakening of the artistic impulse," her last is a prophetic "promise of the present day." She begins with "the daughter of Dibutades, a potter of Corinth," who is supposed to have traced on a wall the profile of a lover; and she ends with "Holman Hunt, Frederick Leighton, John Everett Millais, Dante Gabriel Rossetti, Frederick Watts, T. J. Watson, Philip Calderon, F. A. Walker, and James Sant, working in their full strength amongst us." That the name of "James Sant" should be given as a pledge that a "nobler and fuller development awaits English painting in the future" is not more strange than many other brilliant ideas in these sparkling historic sketches. How one small head can hold the whole the author knows, must be a marvel to every one not versed in the process of neat compilation. The workmanship, it is true, is smooth and pretty to a fault. History is not allowed anywhere to show a rough unhewn surface, as in Pelasgic masonry. Every event occurs symmetrically; artists seem to be born just when wanted; painters of "the Development" prepare the way for artists of "the Blooming Time," till in due order, and according to laws which are glibly propounded, as if the actual lawgiver held the pen, comes the finale of Italian art, at the time when Caravaggio had wielded his "fierce power," and Spagnoletto had displayed "his ferocious style." The pains taken to render this treatise popular are beyond all praise. With this kind purpose, we presume space is found for the following pleasing, though scarcely profound, foot-note:—

> The amazing number of pictures in most of the Catholic Churches abroad, even at the present day, always strikes the attention of the English visitor accustomed to our plain Protestant places of worship.

Many are the remarks which may be appreciated by schoolgirl readers. But, when the authoress wishes to be profound, she appeals to Herr Lübke, or some equally good authority in the nearest circulating library. That one compiler should compile from another compiler may be natural enough. But to appropriate anything from Herr Lübke is certainly dangerous; first, because his letterpress is not accurate, and, secondly, because in his illustrations the unfair course has been taken of reproducing plates without a word of acknowledgment, as, for example, from the volumes of Mr. Edmund Street.

Mrs. Heaton contrives to give to this "Concise History" the charm of a romance. One chapter she calls "The Blooming Time," another "The Catholic Period," and a third "The Reformation Period." And when a fancy title is taken, or a pretty or a plausible idea started, the author's ingenuity naturally makes too much of the good thing. Many fine ideas no doubt can be enunciated about the fancy heads, or, as some would say, the veritable "portraits," of Christ, dating in the Catacombs as far back as the sixth century, and coming down in the fifteenth century to the perfected ideal in the "Last Supper" at Milan. Mrs. Heaton makes much of these tempting materials, and, as a matter of course, raves over the master-work of Da Vinci. Unfortunately she is not strict as to her facts. In the first place, for the sake of dramatic climax, the rotten condition of the "Last Supper" is intensified; the work is described as "a hopeless ruin"; "only," it is asserted, "the dim outline of a few of the heads can still be traced of the original work." This we know to be an exaggeration of actual facts. Photographs from the picture as it now is are before us. But in the next sentence "Raphael Morghen's noble engraving" is made to restore the original, which "ever speaks to us with some new significance, so unfathomable is its solemn beauty." Now the simple truth is that "Raphael Morghen's noble engraving" is about the most inaccurate, and therefore the most ignoble, of engravings ever vouched for by a great name. Artists who have not seen the original tell us that they could never form a conception of the transcendent merits of the picture until faithful photographs reached this country. And yet these photographs are taken from what Mrs. Heaton is pleased to term "a hopeless ruin," and a "dim outline." The central figure naturally furnishes further theme for transcendental criticism. Fuseli and others have written much that is fine, and so the authoress, with laudable emulation, sets herself to pen something finer still on the tempting theme. She makes indeed a discovery; she announces that "this divine face is but the perfect development of the type founded at Byzantium." Here, again, is a bold and bouncing exaggeration of acknowledged historic facts. The Christ of Leonardo cannot with any strictness be called a development from the frescoes in the Catacombs or from the mosaics in early Italian churches; as well might light be termed a development from darkness. Leonardo himself was wholly unconscious of any such process. The head in the "Last Supper" did not come to him historically or traditionally ready cast; on the contrary, we are told that for long the central space on the wall remained a blank, so great was the struggle of the painter in maturing his high conception. Moreover in the Brera in Milan is preserved a study from the life which is supposed to have been the germ of the perfected type. Thus Leonardo had recourse to present nature rather than to distant Byzantium. We cannot but think that a writer intent on giving what is called the romance of history might have made out of the recorded facts a more effective story.

The chapter called by flight of fancy "The Reformation Period" abounds in unsustained assumptions. The writer again gives proof of originality in an entirely new reading of history. Not only is Albert Dürer indissolubly identified with the Reformation, but Martin Schön is pronounced to be Dürer's "predecessor" and the actual founder of the Reformation School of German art. What is this "Reformation School," or what indeed may be the Reformation itself, we become curious to learn. At once we are kindly informed that the new element in art and in religion appeared as a weird and fantastic spirit, "a lingering remembrance and affection for the old Northern mythology, with its ice-giants, its world-encircling serpent." On this singular but, we presume, profound application of threadbare materials, it is well that the writer should speak for herself. In order to avoid suspicion of caricature of Mrs. Heaton's notions of the "Reformation" we quote the following exquisite morsel:—

> The fantastic or weird spirit in art loves to dwell in the twilight land of romance. It shrouds its meaning in curiously distorted forms; it delights in the grotesque, but gives it a poetical rather than a comic expression; it hides its meaning from common sense, but reveals it to children; it puzzles the wise, and delights the foolish; it is at once playful and serious; earnest and merry, truthful and romancing; it is neither theological nor rationalistic, spiritual nor intellectual; it is reviled by all exclusive lovers of classic beauty and Italian idealism; but Albrecht Dürer has expressed some of his greatest ideas by means of it.

We are really sorry for a graceful writer who thus exposes herself to ridicule; it may be urged in extenuation that the lady aspires to tread in the lofty path of Mr. Ruskin. But she lacks experience and knowledge; the pictures she describes under this "Reformation Period" she has apparently never seen. The chief work by Martin Schön, the so-called "founder of the Reformation School," a Virgin and Child which we have known in Colmar, and of which a photograph direct from the original is now before us, the writer describes after the manner of mere compilers. The "Feast of the Rose Garlands," in Prague, by Albert Dürer, before which we have recently made notes, is also, probably because never seen, much misunderstood. This master-work was painted in Venice, and shows by its unaccustomed richness of colour, and its unwonted dignity in form, that Dürer was emulous of Venetian painters—the Bellini, Titian, and others. And yet Mrs. Heaton, judging only from engravings, commits herself to the remark, that "it is strange to notice how very little influence Italian art had over" Dürer. Had we space or inclination to pursue this absurd Reformation theory further, it were easy to show that the majority of the pictures quoted are directly Romish in treatment. Martin Schön's masterpiece, the Virgin and Child, in Colmar, is certainly not directly Protestant; the "Feast of the Rose Garlands," in Prague, at any rate, includes St. Dominic, the Pope, and the Blessed Virgin; while Dürer's "Adoration of the Trinity," in Vienna, comprises two wearers of the triple crown, with cardinals, monks, and saints. Among the works of this period with which we are acquainted, the picture which best bears out the author's Reformation notions is the Crucifixion by Cranach, in a church in Weimar, wherein Martin Luther and Melanchthon, the latter in the character of St. John, stand beneath the cross. The painter is said to have instigated Luther to his marriage, and was present at the wedding. But an isolated case does not sustain a sweeping conclusion, and visionary conjectures are worthless when the grave and difficult question of the relation between the Reformation and the arts falls under discussion.

The rival claims of Holbein's two Madonnas, the one in Dresden, the other in Darmstadt, are disposed of in a few free and easy lines. Indeed the writer, in a foot-note, seems to think the question raised as to the authenticity of the Dresden picture is "of little consequence," though the issue of the controversy, even in point of money, involves, we venture to say, from 8,000*l.* to 10,000*l.* The respective merits of the two works which have "recently given rise to a storm of criticism" receive adjudication thus:—"Whichever was painted first, there seems to be little doubt that both examples were executed by the master himself in the fulness of his power, and in reality there is but little to choose between them." We are glad to find that Mrs. Heaton does not side with the iconoclast critics who denounce the Dresden replica as a mere copy. Still the value of her advocacy is considerably weakened by the hasty and inaccurate words, "In reality there is but little to choose between them"; the fact being that all authorities now agree that the Darmstadt Madonna is not only prior in time, but superior in quality; moreover, the Dresden replica, in parts at least, is ill painted, as if by scholars. By way of episode we may add that, since the volume before us went to press, Mr. Wornum reiterates dogmatically his well-known opinion that the Dresden picture is only "a copy made under the impression that the copyist was improving the general effect as a work of art by certain alterations of details, while doing which he missed, in some essentials, the real spirit of the master-hand, which does not admit of translation." We are not surprised to hear from Mr. Wornum that "he fell into disgrace with some of the authorities for having given expression to his feeling that the picture was not executed by the hand of Holbein at all." He now, by way of improving matters, goes further, and asserts that "this picture is showy and pretentious," and that till recently "Holbein's hand was not known in Germany, even by the initiated, much less therefore by the general public." These strictures find place in the letterpress published by the Arundel Society in elucidation of the recently issued chromo-lithograph of the Darmstadt original. Yet Mr. Wornum, from whom we disagree

as to his criticisms on the two Madonnas, does real service in speaking out fearlessly about this coarse reproduction. This vulgar parody suggests a doubt whether the Arundel Society sustains the pretension, once cherished, of improving public taste and of advancing high art.

Having warned the reader of the defects which disfigure this *Concise History of Painting*, we may add a word of praise. The style is eminently popular, the story never flags in interest, and the materials are put so pleasantly together as to lead young people onwards to the more thorough study of art. The pages are interspersed with scraps of poetry from Mr. Robert Browning and others, and "illustrations in permanent photography" are thrust in so as to mingle amusement with instruction. The work will have its subordinate uses, though it can never be quoted as an authority.

LIFE AND REMAINS OF JOHN CLARE.*

JOHN CLARE, the "Northamptonshire Peasant Poet," as he was called, died but nine years ago; he was thought by some to be a second Shakspeare; he saw his poems selling off rapidly, while his publisher complained to him that he had "some trouble to get through five hundred copies" of the last poem poor Keats wrote; and yet how little is he known now! The last thirty years of his life he had spent in the County Lunatic Asylum, where he wrote more than "five hundred poems." The editor of the work before us has made a selection of these, and with "more or less of revision and correction has submitted them to the public." We doubt very much if the selection was worth making, much more whether it was worth publishing. At all events, if the poems of a lunatic are published, they should be given, if indeed with omissions, yet most certainly without corrections. But with one or two exceptions the poems seem to us poor, and might well have been laid with the unfortunate poet in his grave, under the sycamore tree in Helstone churchyard. The Life itself is written in a kindly simple spirit, and is interesting enough. It might, however, have been made much more interesting if Mr. Cherry had given us, instead of the long and tedious letters of a Mrs. Emmerson, some more of the "thousand letters addressed to Clare by his friends and contemporaries (among them Charles Lamb, James Montgomery, Bloomfield, Sir Charles A. Elton, Hood, Cary, Allan Cunningham)." He does, indeed, give us one letter of Lamb's, but it is quite clear that more must have passed, while of Hood we have not even one.

It is certainly interesting to read how this poor country lad, who seemed as cruelly treated by fortune as any one well could be, thus pushed up his way into the friendship of men so distinguished as some of these were. His father was a country labourer whom "privation and toil disabled at a comparatively early age. He became a pauper, receiving from the parish an allowance of five shillings a week. His mother was of feeble constitution and was afflicted with dropsy." Clare himself was also of feeble constitution, and it was not till he lost his mind that he gained much strength of body. Then the change from the pinching privations to which he had been exposed in his poor home to the regular and abundant diet of the asylum soon made him look another man, and "in his old age he presented the outward aspect of a sturdy yeoman." Clare's father, miserably poor though he was, did what he could for his son's education, and kept the boy at school till the advanced age of seven, when he was set to watch sheep and geese on the village heath. Here he fell in with an old woman to whom is due the greatest share of the merit of the peasant poet's training. When the county set up its memorial of John Clare, a niche in it ought surely to have been found for "Granny Bains." At her feet the lad, while watching his geese and sheep, used to sit for hours together, listening to her pouring forth from "her mind, which was a very storehouse of songs," the old ballads that she had in her youth heard others sing. When he was ten years old he managed by the few pence he had earned by working overtime in the summer to pay for a little more schooling in the winter evenings, and, becoming a favourite of his master, was allowed the run of his little library. In his *Village Minstrel* he thus pleasantly refers to his early reading:—

> And oft, with books, spare hours he would beguile,
> And blunder oft with joy round Crusoe's lonely isle.

A happy friendship which he formed a year or two later with the son of a small farmer furnished him with more books and with writing materials:—

> He now began to "snatch a fearful joy" by scribbling on scraps of paper his unpolished rhymes. "When he was fourteen or fifteen," to use his mother's own words, "he would show me a piece of paper, printed sometimes on one side and scrawled all over on the other, and he would say, 'Mother, this is worth silver and gold,' and I used to say to him, 'Ay, boy, it looks as if it wur,' but I thought he was only wasting his time." John deposited a bundle of these fragments in a chink in the cottage wall, whence "they were daily and daily subtracted by his mother to boil the morning's kettle."

When he was thirteen years old, a companion showed him a copy of Thomson's *Seasons*, and the lad could not rest till he was master of a copy of his own. He learnt that the book could be bought at Stamford, seven miles off, for eighteenpence. The walk of fourteen miles was nothing, but the sum of eighteenpence was almost beyond him. His mother "contrived by great exertions to scrape together sevenpence, and the deficiency was made up by loans from friends in the village." But when he had got the money he had his walk at first all for nothing, for, either in the ignorance of a peasant lad or in the forgetfulness of a poet, he chose a Sunday for his journey to Stamford, and of course found the bookseller's shop shut. Nothing daunted, he set off again the next morning, and bearing off his volume in triumph, "clambered over the wall surrounding Burghley Park, and throwing himself on the grass, read the volume twice over before rising." In Burghley Park he later on was apprenticed under the head-gardener, and there might have done very well had he not fallen into bad company. He there "acquired a fondness for strong drink, with which he had to struggle, not always successfully, for years." He had to learn that lesson which a far greater "bard of rustic song" could teach so well and so pathetically by his words, and so ill by his life, that "prudent, cautious self-control is wisdom's root." Of Clare, too, it might be said, as Burns said of himself,

> Thoughtless follies laid him low,
> And stain'd his name.

He had only been at Burghley a year when he played the coward with his indenture, and showed it a fair pair of heels, and, finding employment as a lime-burner at ten shillings a week, at once fell in love. As he grew older his desire to get together a little money for his marriage set him scheming about turning his poems into the silver and gold about which he had talked to his mother. He saved up a sovereign, and so was enabled to have three hundred copies of a prospectus of his poems printed. It was very modestly written, and deserved to attract far more attention than it did. As it was, he had only seven subscribers. The publication, whether of his book or of his banns, seemed further off than ever. The farmers of his village considered that he did not know his place, "and refused to give him work, and the poor poet in his twenty-fifth year was forced to apply for parish relief." Happily for him a Stamford bookseller, Mr. Drury, was struck by one of his poems, and offered to help him in publishing them. In the end they were brought out by Mr. Taylor of London, and proved a great success. Deeply indebted as Clare throughout his life was to Mr. Taylor, we are not surprised that he was mortified by the introduction which that gentleman had written for his poems. No peasant poet of the present day, we feel sure, would be exposed to the degradation of what might fairly be described as an humble apology for genius. A complimentary article in the *Quarterly*, which had about this time "killed poor Keats," made Clare famous, and presents of books, applications for his autograph, tracts and complimentary letters (the postage of which was at times a grievous burden to him) flowed in upon him. One letter we should like to quote at full length had we space. We must, however, lay before what the writer of it calls "the beautiful ophthalmic organs" of our readers one passage:—

> But your literary prowess is too circuitously authenticated to admit of any punctilious commendation from my debilitated pen, and under its umbrageous recess, serenely segregated, from the malapert and hypochondriachal vapours of myopic critics (as I am no acromatic philosopher) I trust every solecism contained in this autographical epistle will find a salvable retirement.

Invitations to call upon the great people in the neighbourhood soon followed, and on each occasion, after the interview in the parlour, dinner was provided for the poet in the servants' hall, and at the servants' table. The poet of fifty years ago was only where the parson had been in his grandfather's time. However, Clare was no doubt not so much used to a plentiful dinner as to care where it was he got it, and moreover he was indebted to some of his great friends for an annuity of 45*l.* a year which they raised for him. But we are told that Lord Radstock, who was one of the kindest of them, "threatened to disown him" unless he cut out of his poems some lines which would have been thought innocent enough in *The Deserted Village*. If his lordship called such lines as the following "radical slang," what terms would he have found for the writers of the present day?

> Sweet rest and peace, ye dear, departed charms,
> Which industry once cherished in her arms,
> When ease and plenty, known but now to few,
> Were known to all, and labour had its due.

It was about this time that he received the letter from Charles Lamb, which is here published for the first time, we suppose, as we do not find it given in Talfourd's edition. Lamb thus ends his letter:—

> Since I saw you I have been in France and have eaten frogs. The nicest little rabbity things you ever tasted. Do look about for them. Make Mrs. Clare pick off the hind quarters; boil them plain with parsley and butter. The fore quarters are not so good. She may let them hop off by themselves.

In one of his letters to Mr. Field, written about the same time, Lamb writes:—"We have eaten frogs. It has been such a treat. You know our monotonous tenor. Frogs are the nicest little delicate things—rabbity flavoured. Imagine a Lilliputian rabbit. They fricassee them; but, in my mind, dressed, seethed, plain, with parsley and butter, would have been the decision of Apicius." Clare now visited London, and made the acquaintance of many of the first literary men of the day. But his visits did him little good, as his return to his poor hut and his hard cares, with no

---

* *Life and Remains of John Clare, the Northamptonshire Peasant Poet.* By J. L. Cherry. With Illustrations by Birket Foster. London: Warne & Co. Northampton: Taylor & Son. 1873.

literary companionship to solace him, rendered him only moody and discontented. Melancholy began to set in upon him—the beginning, no doubt, of that madness which was so soon to be his fate. One day he writes in the diary which he kept:—

> Very disturbed in conscience about the troubles of being forced to endure life and die by inches, and the anguish of leaving my children, and the dark porch of eternity, whence none return to tell the tale of their reception.

The diary is not wholly sad. It contains one or two curious observations he had made in natural history, of which he was very fond. Once in one of his botanizing excursions in a wood he was almost taken up as a poacher, when he writes, "What terrifying rascals those woodkeepers and gamekeepers are! They make a prison of a forest, and are its gaolers." He published one or two more volumes of poems, but did not meet with the same success. He began to get more and more depressed, and at last lost his reason, and had to be confined. His first love had been a beautiful girl, named Mary Joyce, but her father would not allow their marriage. In his insanity "he was possessed with the idea that he had two wives—Patty, whom he called his second wife, and his life-long ideal, Mary Joyce." He managed once to escape from an asylum near Waltham, where he was first confined, and "after being four days and three nights on the road, and being so near to dying of starvation that he was compelled to eat grass like the beasts of the field," he arrived at his home. He wrote an account of his journey, prefacing the narrative by this remark—"Returned home out of Essex and found no Mary." She had died some years earlier. We may hope that the last thirty years of his life were passed not unhappily. He became quite harmless, and was allowed to ramble about the town and country. At times, however, he must have found out what he was, and have remembered what he had been. Very powerful and very touching are the following lines, in which he thus writes of his own state:—

> I am! yet what I am who cares, or knows?
> My friends forsake me, like a memory lost.
> I am the self-consumer of my woes,
> They rise and vanish, an oblivious host,
> Shadows of life, whose very soul is lost.
> And yet I am—I live—though I am toss'd
>
> Into the nothingness of scorn and noise,
> Into the living sea of waking dream,
> Where there is neither sense of life, nor joys,
> But the huge shipwreck of my own esteem
> And all that's dear. Even those I loved the best
> Are strange—nay, they are stranger than the rest.
>
> I long for scenes where man has never trod—
> For scenes where woman never smiled or wept—
> There to abide with my Creator, God,
> And sleep as I in childhood sweetly slept.
> Full of high thoughts, unborn. So let me lie,
> The grass below; above the vaulted sky.

NEW TRANSLATIONS OF VIRGIL.*

IT is beyond a doubt that the late Professor Conington's interest in Virgil has been the cause of a new epoch in the popularity of that poet. His commentary invited scholars to discuss the sense and gist as well as the verbal meaning of Virgil's words and sentences more thoroughly. His octosyllabic version brought the Mantuan bard in English dress into hands which knew him not in the original, and did not care to become acquainted with him in the versions of Dryden or Kennedy. Since the Professor's death an unrevised translation in prose has been found amongst his remains, and Professor H. J. Smith has seen fit to print it in the second volume of his "Miscellaneous Works." For our own part, we think that he has exercised a wise judgment in doing so, for nothing that Conington thought or wrote about or upon Virgil could fail to interest and assist Virgilian students, and it is obvious that the circumstances of publication, posthumous as it has been, cover minor faults and discrepancies which, had the author seen his work through the press, it would have been open to critics to enlarge upon. Mr. Wilkins describes his own translation of the Eclogues and Georgics as "a competitive attempt of an inferior artist," but we cannot fully concur in the strictures upon Conington's prose translation which Mr. Wilkins piles up—unconsciously, no doubt—as if to justify a version by himself. At the same time the fact that Conington's translation lacked his final touches, and corresponded with the first and not the second edition of his commentary, leaves us free to question, where it seems needful, the judgment of a confessedly first-rate artist, and to welcome, whether at Mr. Wilkins's hands or at those of any other translator, renderings and explanations which, on the score of clearness, simplicity, elegance, or other merits, commend themselves more to our acceptance. After all it must be remembered that the latest in the field has the great advantage of having the successes as well as the faults of his predecessors to profit by; and the careful examination to which we have submitted Mr. Wilkins's meritorious version satisfies us that he has never failed to indorse the passages of Conington's prose translation, as well as the expressions and drift of Mr. Blackmore's poetic version of the Georgics, which have approved themselves to his critical faculty, and been found suitable to his purpose. Of the Æneid, which Mr. Wilkins has not taken in hand, a new translation has lately appeared by Mr. Clayton of Magdalen College, Oxford, which, though modest enough in pretensions, deserves notice for its general faithfulness, and its sound compromise between literality and idiomatic rendering. He too, here and there, may be preferred to Conington at isolated points, because he has aimed at less than one who with generally accurate interpretation combined a good deal of the instincts of a poet. We propose to dip into the Georgics and the first half of the Æneid, and, in passages which arrest us, to weigh the help afforded us by Conington with that of his successors in prose or verse translation.

Mr. Wilkins hits, perhaps a little hardly, a weakness of Conington for riding a metaphor to death, and cites from the Georgics several examples of this. The most amusing is perhaps G. II. 425—"Hoc pinguem et placitam paci nutritor olivam"—which the late Professor has rendered "Do this, and rear the olive to the *fatness which makes it peace's darling.*" The pregnant sense elicited here from "placitam paci" provokes the critic who is on the Professor's track to suggest that on the same principle "a fat pig must be peace's darling"; and it cannot be denied that he has indicated an idiosyncrasy referable partly to a poetic fancy and partly to a scholar's insight into the meanings of words. An extreme instance of this is to be found in his rendering of Æn. I. 718:—

> At memor ille
> Matris Acidaliæ, paulatim abolere Sychæum
> Incipit, et vivo tentat prævertere amore.

The passage relates to Cupid's personation of Iulus, and the use he makes of his time in Dido's lap at the banquet, and simply says, as Clayton would render it, that "he, mindful of his Acidalian mother, begins by degrees to banish the memory of Sychæus, &c." But see Conington's rendering:—"He, with mind still bent on his Acidalian mother, is beginning to efface *the name of Sychæus, letter by letter,* and endeavouring to surprise by a living passion affections long torpid, and a heart long unused to love." We hold that this interpretation of "paulatim abolere Sychæum," though it may be justifiable by the meaning of the words, is one that Virgil never so much as dreamed of, and that it is a striking example of fancy landing its votary in prose rather than in poetry. But, as a set-off against this weakness, which is doubtless not infrequent in Conington's prose version, be it remembered that there are many instances of his insight bringing out nice shades of meaning. Take the lines in the First Georgic which give the reason why Jove ordained toil as the lot of humanity:—

> Ut varios usus meditando extunderet artes
> Paulatim, *et sulcis frumenti quæreret herbam,*
> Et silicis venis abstrusum excuderet ignem.—133–5.

Mr. Wilkins translates this, "In order that use by slow degrees might hammer out art after art on the anvil of thought, *might find the corn-blade by delving the furrow,* and strike from the veins of flint the fire that Jove had hid." Nothing could be better; but the best part about it is the translation of the second clause, which we have italicized, and this, as we find by reference to Conington, is borrowed from his rendering "might get at the corn-blade by delving the furrow." The next best hit in it, let us add, is where "meditando extunderet" is so neatly referred to the mental forge; but here Mr. R. D. Blackmore has gone before Mr. Wilkins in a quatrain to which he is indebted for the idea. Jove did it, says the poetical translator,

> That practice might the various arts create
> On study's anvil by laborious dint,
> The plant of corn by furrows propagate,
> And strike the fire that lurks in veins of flint.

Earlier in the book, at vv. 65 6, we find that Mr. Wilkins's version of

> Glebasque jacentes
> Pulverulenta coquat maturis solibus æstas—

"And let the clods lie exposed for summer *to bake them to dust* with its ripening suns," meritorious for its close connexion of "pulverulenta" with "coquat," is, except in the English of "maturis," a transcript of Conington's; as is the case also in v. 210, where the translation of "Jamdudum incumbere aratris," "and *more than time* to bend o'er your ploughs," is in essentials identical with the forerunning exemplar of Conington. Another case of manifest indebtedness is at 485 of the same book, where one of the portents before Cæsar's death is that

> Altæ
> Per noctem resonare lupis ululantibus urbes.

This Mr. Wilkins renders, "or our steepbuilt towns to echo through the livelong night with the howl of wolves." Here too the English given to "altæ," "steep-built," is borrowed from Conington, who refers the epithet to the position of the Italian cities. It was open to him to have referred "altæ" with Wakefield to "resonare," and to have understood it of the sound being increased by the height of the buildings, as indeed does Blackmore:—

> And, *ringing deep,*
> The howl of wolves startled the city's sleep.

We do not of course at all deprecate appropriation of the sound interpretations of previous translators; but the hand that borrows should be slow to smite, and there is an old proverb about "Honour to whom honour is due."

---

* *A Literal Translation of the Eclogues and Georgics.* By H. Musgrave Wilkins, M.A., Fellow of Merton College, Oxford. London: Longmans & Co. 1873.

The Æneid of Virgil. Books I.—VI. Translated into English Prose. By T. Clayton, M.A. Oxford: Shrimpton. London: Whittaker & Co. 1873.

Whilst on the subject of the depreciatory view taken of Conington's translation by Mr. Wilkins, it is fair to say that we concur with him in that portion of his preface where he notes the inconsistency of the outspokenness of some of the Professor's translations with his reticence and prudery as to others. Whereas he declines to render "Huic aliud mercedis erit," in Ecl. VI. 26, and to reproduce, or give a compromise for, Georg. III. 135-7, which Mr. Wilkins shows may be rendered without offence to the most sensitive, he has erred on the side of undue explicitness in Georgic II. 324-331, where Virgil delicately figures the marriage of heaven and earth at spring-tide. The later translator, whilst extremely literal, has not offended the most delicate nerves, and we would quote his version but that a more attractive and not less refined rendering occurs to us in the metrical version to which we have already had recourse:—

> Then Air, almighty father, raining life,
> Sinks on the bosom of his laughing wife.
> All growth he feeds, commingling with the same,
> The mighty spirit in the mighty frame.
> The birds make music in the pathless groves,
> And herds and flocks prove faithful to their loves;
> The kind earth gives her increase, and the west,
> With fluttering warmth, unzones the meadow's breast.

Let us turn now to some points of difficulty in the text. In the well-known passage (Georg. I. 169-75) about the construction of a plough, which has a special interest as an imitation of Hesiod in his *Works and Days*, Mr. Wilkins needlessly adopts the conjectural reading "stivæ" for "stivaque" at the beginning of v. 174, and translates, "The light linden tree, too, is felled betimes for the pole, and the lofty beech *for the handle, which is to turn* the lowest part of the plough from behind." This, he says, is the only reading which clears the sense; but whilst it certainly is against authority and spoils the metre, it is also more prosaic than the retention of "stivaque" as part of a hendiadys, which represents the same thing—*e. g.*, "the tall beech, which is to be the handle to guide the carriage from behind." With this interpretation the version of Mr. Blackmore seems to agree. Passing on, we pause at a line descriptive of the housewife's labours while her spouse cuts torches in the long winter evenings:—

> Aut dulcis musti Volcano decoquit humorem,
> Et foliis undam trepidi despumat aheni (I. 295-6)—

"She boils down the juice of luscious must with Vulcan's aid, and skims with a leaf the bubbling cauldron's wave" (Wilkins). In his translation Conington is in accord with this rendering; but in his commentary he has applied collateral reading to a mistaken use. "Foliis," he tells us, after a reference to Pliny, means "vine leaves" here. Mr. Wilkins confines himself to generalities, and does not specify; and scholars may pass over the note without controversy; but it is unfortunate that we have at call a "market-gardener" who is a Virgilian translator. If, asks Mr. Blackmore, it was a vine leaf which the good wife used to skim her winter-pot, by what clever contrivance did she preserve the leaf of a deciduous tree into the month of December? There is another passage where we are disposed to espouse this critic's side, even against the banded strength of Conington and Wilkins, as well as many earlier editors. It is in Book II. 214-6, where the usual reading is

> Et tophus scaber et nigris exesa chelydris
> Creta negant alios æquo serpentibus agros
> Dulcem ferre cibum, et curvas præbere latebras.

Mr. Wilkins renders this, "While the scurfy sandstone and chalk that black-water snakes have eaten out tell you plainly that no other soils give the serpent such welcome food, and offer him such winding cells." And Conington's version is to the same effect. The Globe Virgil of Messrs. Lonsdale and Lee adopts the same interpretation and punctuation. But it must have struck many students that this making "tophus" and "creta" nominatives to "negant" is not at all in Virgil's usual manner; and our own preference is for the old commentator's plan of putting a full-stop at "creta" so as to make it and "tofus" find their verb in "ministrant," repeated from v. 213. It appears that Servius specified Nicander and Solinus as the nominatives to "negant" which the poet had in his eye; and we rejoice therefore to find a modern translator bold enough to stand by the old ways, and render the lines

> And gritty tophe lies barren on the leas,
> And hunks of chalk by black chelyders bored;
> No other field, they say, such victual makes,
> And winding lairs and harbourage for snakes.—Blackmore, p. 45.

We must, however, do Mr. Wilkins the justice to say that he very frequently adopts Mr. Blackmore's interpretations. Where he translates, in the Third Book of the Georgics,

> Ad puteos aut alta greges ad stagna jubebo
> Currentem illapis potare canalibus undam (329-30)

"I will bid your flocks at the wells or *steep* pools to quaff the stream as it flows through beechen troughs," the epithet *alta* is rendered *steep* instead of *deep* (as Conington terms it) in agreement with Blackmore, who argues that "alta" must have this meaning, or what need is there of troughs or rinks? With him, too, in III. 21, Mr. Wilkins translates "tonsæ olivæ" "trimmed olive," and not as Conington renders, "stripped olive leaves." Both might have profited by learning Mr. Blackmore's arguments for understanding "rotæ inanes" in the lines III. 170-1—

> Atque illis jam sæpe rotæ ducantur inanes
> Per terram, et summo vestigia pulvere signent—

as "wheels unattached to any carriage," "unbodied wheels" to teach the young steers to draw a light weight first; and "vestigia" as footprints light by reason of the light weight behind them, rather than as "wheel-ruts" or wheel-marks as Conington and Wilkins respectively translate. "Rotæ inanes" thus contrasts with the "juncti orbes" of III. 173. In the passage about the old Corycian's garden (IV. 142-3)—

> Quotque in flore novo pomis se fertilis arbos
> Induerat totidem autumno matura tenebat—

Mr. Wilkins echoes Mr. Blackmore in his translation, "And every fruit his bounteous trees had at early flowering worn, the same in autumn fully ripe they bore," connecting "matura" with *poma*, and not with *arbos*, as do Conington and the Globe translators.

We could say more of Mr. Wilkins's translation, the chief merit of which is a neat and not ungraceful rendering of the best interpretations of his author, wherever gleaned, were it not that we have as yet scarcely glanced at the version of the Æneid by Mr. Clayton. This will be found especially serviceable to those who prefer a more matter-of-fact translator than Mr. Conington, and yet one not unversed in the niceties of language and interpretation. Opening his translation in the latter part of the Third Book, we find that he guides his readers safely and soundly through the Scylla and Charybdis passage (684-6), taking "utramque viam lethi discrimine parvo" to mean "a passage edging close on either side to death"; and somewhat earlier in the book he in part accepts Henry's explanation of the vexed words "Nec cedit honori" in the description of Andromache's gifts to Ascanius:—

> Fert picturatas auri subtemine vestes
> Et Phrygiam Ascanio chlamydem, *nec cedit honori*,
> Textilibusque onerat donis (III. 481-5).

"She brings robes embroidered with threads of gold and a Phrygian mantle for Ascanius—he well becomes the gift—and loads him with presents of the loom." This is taking Ascanius as the subject of "cedit," which is Henry's plan, though he does the opposite to endorsing that commentator's sense of "cedit," which is "shrink from," and which comes round to mean that "he accepts the gift." "Andromache," "chlamys," and "Ascanius" have been variously supposed to be the subject; and, amid much uncertainty, Mr. Clayton's idea "that Virgil means that, handsome as the mantle was, its handsome wearer was equal to it," is entitled to some credit. A little further on, in Æneas's parting speech, plain folks will appreciate his rendering of

> Vivite felices, quibus est fortuna peracta
> Jam sua; nos alia ex aliis in fata vocamur (493-4),

"Live happily, ye whose fortune is fulfilled; from fate to fate we are summoned," rather than Conington's over-done periphrasis, "Live long and happily, as those should for whom the book of Fortune is closed. We alas! are still called to turn page after page." What warranty is there for either "book" or "pages" in the Latin? On the other hand, we must remind Mr. Clayton that some of his explanations are too perfunctory—*e. g.* where he says of "sinus reductos," in the well-known description of the haven on the coast of Libya in the First Book (v. 161), that his impression is that they mean "the indentations in that side of the island which faced seaward." Could any side of an island face otherwise than seaward? Again, we dislike such renderings as "an antre vast" for "vasto antro," though "antre" may be a Shakspearian word. Why would not "cavern" do as well? But this version is in the main clear, idiomatic, and trustworthy, and calculated to be of use to those who need a prose translation. For ourselves, or for younger students in whom we feel an interest, we should always prefer a good verse translation to one in prose; nor are we at all sure that the former need be much less literal and helpful than the latter. Certainly Conington's Æneid in octosyllables leaves scarcely a word or thought of the original unrepresented. And, as certainly, Mr. Blackmore's verse translation of the Georgics is so close, while perfectly poetic, as to enable Mr. Wilkins here and there to appropriate whole lines, and almost couplets. Since however there are sure to be those who prefer, and fancy they need, a prose version, we can recommend to them the labours of Mr. Wilkins and Mr. Clayton.

THE CRAVENS OF CRAVENSCROFT.*

THE hands of Esau and the voice of Jacob made a difficult combination for the recognition even of a father. In like manner the finery and slipslop of a modern Rosa Matilda, with the coarseness which is, we will hope, distinctive only of the lower creature, man, throw the parentage of a novel into an obscurity so dense that the critic is at a loss to know how to catalogue it, or to which side of the house to assign it. In one page of the *Cravens of Cravenscroft* we find a sickly sweetness and tinsel glitter essentially feminine; in another we stumble over expressions and ideas which we would fain believe have nothing feminine in them save their exaggeration; while the epicene name on the title-page may mean anything, from Henry to Harriet, or Hugh to Hester. If the book is written by a man, we should guess him to be one lately connected with millinery and haberdashery. The perpetual reference to certain circumstances of woman's attire seems to point to a training of this kind; or, it may be, to a still closer knowledge. "Gauntleted gloves" many times drawn on and off;

* *The Cravens of Cravenscroft.* By H. Bourmie Pigott. 3 vols. London: Tinsley Brothers. 1873.

dainty hats and plumes; trailing silks—"the chaste mauve trimmings" so "prettily contrasting" with the main colour of one thought worthy of special notice; "dressy petticoats" and "sixty-inch skirts"—this seems a touch decidedly beyond the average man. "The high heels and tall ankles, the dressy tassels and superfine kid of Mab's well-fitting gaiter-boots"; the absorbing and constantly recurring topic of dress and fashion; and the bitterness of poverty weighing on Maud Craven's young soul because she cannot afford expensive silks or superfine kid gaiter-boots, or plumes and dressy petticoats, like her friend Mab Ayre—are these the hairy hands of Esau touching sacred subjects with *suave*, if clumsy, reverence, or is it the piping voice of Jacob glibly running over conditions known by heart and familiar as household words? Add to this an immense amount of sensuality in the description of the *dramatis personæ*, a surfeit of "scarlet lips" and shining hair, &c. with the women, and the more suggestive than pleasant dwelling on the "attractive physical beauty" or the personal ugliness of the men, and we fall again into a sea of doubt. Is this baseness of standard from within or without? Has a woman written of her own sex so unworthily because of her profound knowledge, or a man because of his insolent ignorance? In either case we protest against the picture as utterly unfair to average decent women; founding, as it does, their claims to be loved and their reasons for loving on the one sole foundation of sensuous personal beauty.

The more technical qualities of the *Cravens of Cravenscroft* are also such as are generally, with reason or without, ascribed to lady-writers. Sentences are ruthlessly deprived of their nominatives, and broken off in mid career, like fountains gushing mightily at their source, but running into sand before they have gone half-a-dozen yards. In the opening pages a passage occurs which may serve as an example for the rest:—

> Even now, as he sits alone in the library, with its great shelves weighty with old literature, which would make modern readers shudder; a library whose heavy reading is quaint books of the last century, and whose light reading is *Gil Blas* and *Don Quixote*, the *Tatler*, and *The Gentleman's Magazine*. Even now, while Mr. Craven sits alone there, fumbling through a drawer of musty papers, he is thinking of how he should like to deck his daughter's beauty, to put flowers in her hair, and jewels on her neck, to give her carriages and horses, and luxuries of all kinds, to keep her softly, so that no rough wind might touch her.

This kind of odd chopped-up method is the dominant style of the book; but interspersed are wonderful little tricks of manner which form a playful embroidery on the severer substance, and enliven the more sober passages with their somewhat startling caprices. "Ware, there, Captain Ellerton," says the author to his favourite hero, who has "masculine eyes as dark and almost as sweet" as those of a certain Miss Nellie Hope. "George Ayre, George Ayre! you were never born into the world to win women by your beauty. Be warned, and stand aside; for, alas! goodness counts little with a girl ready to run mad for the sake of a handsome face or the glitter of a garish uniform." This is his cry to wide-mouthed, stiff-haired George Ayre, whom Maud Craven flouts because he is only good and not handsome, though Maud is meant to be the dearest little girl in the world, and a pearl of exceeding price. Again, "It certainly was not right. I am not going to defend Mab's secret love trysts, or any of the wrongdoings which followed in its (*sic*) track"—"I have grown to like Mab Ayre. As her story opens under my pen, as I see her flitting in and out amongst my pages, I have learned to welcome her. Has she won upon you? If she has not, it is because my power of delineation fails to paint her as she is." "Do you believe in luck? I do." The "you" in both these latter quotations, means, we suppose, the reader. Such tricks as these are simply silly; and the pretence of reality in them is the most contemptible feature of a contemptible affectation. A bad habit of calling God to witness this or that trumpery assumption of mock passion or pathos, in these "scarlet lipped" puppets is a sin of a deeper dye, and one which we can never too strongly condemn. If the dramatic exigencies of the scene demand some passionate appeal to a higher power, such as we know men naturally make in certain mental states, that might be passed by as one of the artistic necessities of the circumstance on hand. But when we find an author endeavouring to bolster up his miserable marionettes of sawdust and canvas-rag by pretended solemn adjurations to God to pity their sufferings and to pardon their sins, we feel that the whole thing is disgusting, on the one hand by its weakness, on the other by its impiety, and revolting in its sense of falsehood all round. Men who would have "paid down gold" for the love of such or such a woman; and women who would have "paid down gold" in their turn for "the laughing haughty lip, the fair oval of her cheek, or the graceful round of her chin," speaking of a sister and rival; dashing dragoons skilled in lady-killing under all skies and in all countries, suddenly pulling up and making model husbands, constant, contrite, and deliciously domesticated; fast young ladies, to whom life is nothing if it does not include luxury and pleasure and handsome jewelry and shining silks, giving up wealth and title and magnificent domains all for the sake of a handsome young barrister with superb grey eyes and great "physical beauty," but no practice to speak of, and finding exquisite enjoyment in love and a "bijou residence" in Bayswater; sallow-cheeked, pale-eyed young ladies plotting with serviceable aunts for a hopeless love, and against a suspected rival—these are some of the more striking addenda to the list we have already given; and we scarcely know which characteristic is the worst—the absurdity and something more of the style, or the faultiness and something more of the portraiture. "Everybody lively, everybody hungry and eager for their dinner. Maud Craven dressed in Mab's dressing-room; Mab running in and out all the while looking after her guests"—this is a phrase taken literally at a random opening. Another is the soliloquy of Captain Ellerton, the hero, as he sits in the wood making love to Maud Craven, the heroine:—"What a row she would make in town, if a fellow only caught such a trump and transplanted her to London! How the men would run wild after her, and how the women would hate her! She is the prettiest little devil I ever saw in my life."

We have seen something of the estimation in which Mab Ayre is held by the author. She is certainly not offered to us as quite spotless; but the confidential asides in which H. Bouverie Pigott indulges while confessing her sins and lamenting her shortcomings, confess also his or her triumphant admiration and even respect. On the whole, Mab Ayre's history hardly bears out her author's commendations. She is a handsome, voluptuous-looking girl, who seems to have two ideas by which she lives—love of dress and love of a certain Philip Marchmont, who is out of the picture till the end of the second volume. By the stale devices of false reports and intercepted letters, she is induced to believe him faithless; and after sundry veerings, she at last consents to accept the eligible offer of Sir Henry King, a swarthy, muscular, and decidedly unchristian person, with a thick under lip, bold, black, angry eyes, a fine estate, a considerable fortune, and a savage temper. She hates him, but rather ungratefully, for he loves her sincerely if brutally, and gives her "lovely presents," with a prodigality that should have had at least some kind of reward. To annoy him, and because she is thoroughly selfish and unprincipled, she encourages the insolent admiration of a certain Mr. Poland, a "City gentleman" with a Jewish nose, and also boasting a pair of bold black, if not angry, eyes; and when Sir Henry naturally objects to this questionable kind of partnership, she openly defies him, and encourages her Jewish-nosed admirer with yet greater freedom. Things go on in this uncomfortable manner, she hating her lover and furious at the position into which she has allowed herself to drift, when, the week before her marriage, while waiting in Vere Street for her aunt who is shopping at Marshall and Snelgrove's, she sees her former lover, Philip Marchmont, with his superb grey eyes and satisfactory physical beauty. One rapid explanation removes all difficulties and doubts, and they agree to meet to-morrow night "in the pines," down at Ayrefield, whither Mab and her mother, Lady Ayre, are going to-day. They do meet; but Mab refuses to elope with him on his first asking. The next night they meet again, and then, her No transformed to Yes, they go off together in a carriage and pair, quite like a couple in old-world romance. But before she takes this supreme step she gathers enough courage and straightforwardness to tell, first her mother, and then Sir Henry King, that she declines to marry him now at the eleventh hour; supplementing this by informing the latter that she hates and loathes him, and has always hated and loathed him. She and her lover are driving in her little pony carriage during this revelation; and a scene of characteristic coarseness follows. Sir Henry comes out in his true colours, and threatens to murder her; whereupon Mab, giving the ponies their heads, and urging the more spirited of the two to almost madness, does some damage to Sir Henry's collarbone in an upset, but escapes with a whole skin and pale cheeks for her own part. After which she elopes with Philip, wears her old ribbons with a good grace in her bijou residence at Bayswater, and by her new-found matronly dignity overawes the full-blown vulgarity of Mr. Poland, and stultifies the proverb about touching pitch and not being defiled. The *Cravens of Cravenscroft* is to careful literature what "dashing" work and free scumbling are to careful drawing. Everything is done breathlessly, in a hurry, without thought, without delicacy, without neatness or tenderness of touch. It is all broad lines and garish colours, with the look of trowel-work throughout; and the result is the invariable result of such a method of working—glare, disproportion, coarseness, and smudge.

FRENCH LITERATURE.

THE fourth volume of M. du Camp's large work on Paris * is full of melancholy interest, for it discusses the subject of mendicity and other kindred topics. The author does not content himself with giving us dry statistical details, and telling us what are the measures adopted at the present time for the better administration of public charity. He goes to the origin of the question, and in a graphic picture unfolds before us those mysteries of the Cour des Miracles which most readers know only through the pages of Victor Hugo's *Notre-Dame de Paris*. If the mediæval fraternity of beggars could boast of its *francs-mitoux*, its *sabouleux*, and its *coquillards*, the classification of modern mendicants is equally complicated; and M. du Camp brings forward a number of anecdotes which prove both the ingenuity of *ces messieurs* and the formidable proportions attained by that scourge of society. Hospitals, foundling institutions, and lunatic asylums are all, to a certain extent, connected with the serious problem of pauperism; and they are all minutely examined by our author,

* *Paris, ses organes, ses fonctions et sa vie.* Par Max. du Camp. Vol. 4. Paris and London: L. Hachette & Co.

who has evidently bestowed careful and persevering inquiry on the subject. It is certain, for instance, that cases of madness have rapidly multiplied of late in Paris, owing to the continually increasing consumption of alcoholic drinks; and there is little doubt, from what M. du Camp tells us, that the destruction of the public buildings during the civil war of the Commune was the result of a monomania fed by intoxication, with which politics had really little to do. One of the merits of the work before us is that it points out what reforms ought to be introduced in the laws and police measures which are applied to the surveillance of pauperism and to the administration of hospitals.

M. Tivier has composed a work * which supplies an important desideratum in the history of French literature. Even so lately as fifty years ago the seventeenth and eighteenth centuries were the only times considered worthy of study from a literary point of view; the Renaissance period was scarcely taken notice of; and as for the middle ages, they were regarded as a period of utter barbarism, a knowledge of which could answer no purpose whatever. The French University itself encouraged this narrow disposition, and we remember that M. Villemain's celebrated lectures on the literature of the mediæval times were considered as an almost scandalous departure from the old Sorbonne traditions. Matters have fortunately improved in this respect, and M. Tivier's handsome volume is the latest sign of a more liberal treatment of French national poetry. It reproduces the substance of the author's lectures at the Besançon Faculté des Lettres, and with a few exceptions it leaves comedy entirely unnoticed. The origin of dramatic literature in the old *jeu-parti*, the mysteries or miracle plays, and the quasi-historical dramas of Pierre Gringore, are first noticed; then comes the Renaissance, with Jodelle, Théodore Beza, and Jean de la Taille. All these authors may not perhaps rise to the true standard of taste and æsthetic perfection; but their works are extremely interesting, and it is always curious to trace the successive developments of any art from its early manifestations to its full growth. For this reason M. Tivier has done well to multiply quotations, and as the works from which the extracts are taken are not always easily accessible, the *Histoire de la littérature dramatique* has the twofold merit of an excellent didactic treatise and of a copious anthology.

M. Beulé is already well known to our readers. We have on several occasions reviewed his volumes on the Cæsars, and we have endeavoured to give an idea of that singular union of archæological and historical talent with political energy which constitutes his special characteristic as an author. His present work †, devoted to an account of explorations made by himself and others in Europe, Asia, and Africa, has exclusively a scientific interest, and the wide variety of the subjects discussed will recommend it to the general reader. One of the most curious essays in the first volume refers to the attitude of Christianity in Rome in the days of the Cæsars, and to the singular fact that the whole Flavian family was deeply leavened by the new religion. The Abbé Greppo, the Cavaliere de Rossi, and M. Aubé had already examined this episode from different points of view. M. Beulé in his turn passes judgment on the opinions maintained by these writers, and shows that, if the Imperial sceptre had remained in the hands of the Flavii, the triumph of Christianity would have taken place two centuries sooner than it actually did. Amongst the papers collected in the second volume we would name more especially M. Beulé's letters from Carthage, whither he had gone for the purpose of beginning a series of excavations, his account of Mr. Layard's Assyrian discoveries, and his notice of Mr. Newton's researches in Asia Minor.

The literary reputation of M. Granier de Cassagnac ‡ had until quite recently been considered as resting chiefly, if not exclusively, upon certain *ouvrages de circonstance* suggested by the politics of the day, which could not aspire to anything beyond a very ephemeral success. He now comes forward with a work of great pretensions on the Origin of the French Language, and we have no doubt that it will excite much discussion on the other side of the Channel. So far back as the year 1836 the daily paper *La Presse* published the original draft of this work, and even in its early form it was generally and favourably noticed. A distinguished philologist, M. Pierquin de Gembloux, transferred, in fact, the whole of it to his own *Histoire des patois*, as being a production of the highest importance and authority on the subject. Revised, corrected, and extended, the articles of the *Presse* now appear as a substantial treatise, and challenge the attention of scholars. Without attempting here to examine minutely the theory maintained by M. Granier de Cassagnac, we shall merely say that it starts from an absolute denial of the hypothesis so universally received which regards both the French language and the *patois* or dialects branching out from it as proceeding from a corruption of the Latin. In the first place, says our author, the original language of the Gauls never ceased to be both spoken and written during the Roman domination and after it, and we find it prevailing as late as the thirteenth century. Again, the occurrence of a large number of Greek words in the French language properly so called, and in all its dialects, cannot be accounted for by the mere presence of the Romans in Gaul. It is impossible, we are told, that they should have imported these words, especially those of which the Latin idiom has no trace whatever. Thirdly, M. de Cassagnac says that, if the Romans had been powerful enough to force their language upon the Gauls, it is inconceivable that they should not have followed the same course towards the Greeks, the Egyptians, the Jews, &c. Yet not only did those people carefully preserve the use of their own idiom, but even the immediate neighbours of the Latins, such as the Etruscans, the Osci, the Umbrians, and the Samnites never used Latin as a familiar and habitual mode of intercommunication. M. de Cassagnac concludes by arguing that, as the Gauls and the Latins sprang from a common origin, their languages had naturally many points of similarity; and in like manner both French and other European idioms betray the most striking affinity with the Sanscrit, although it would be absurd to suppose that, within the limits of historic time, the Hindus ever had any political intercourse with the Gauls or with the inhabitants of Italy. As we have said, we do not mean here to discuss M. de Cassagnac's theory; we merely state it, and we must add that it is very ingeniously worked out. The book is completed by an account of the formation of what may be called the literary languages of Italy, Spain, and France.

M. Paul Albert's new volume * treats of the seventeenth century, or, more strictly, of what is generally designated as the age of Louis XIV. After the first rude beginnings we come to the age of perfection; after a long epoch of formation we find ourselves in the midst of harmony, method, regularity, and æsthetic finish. We need scarcely say that Descartes, Pascal, Cardinal de Retz, and even Pierre Corneille, do not properly belong to what is called the Louis-Quatorze epoch. M. Victor Cousin has explained on several occasions what constitutes the difference between the writers who, like Madame de Sévigné, form part of the earlier group, and those who should be classed in the later one; but it is perhaps best to retain for purposes of teaching an arrangement which has the sanction of ages; and therefore M. Albert has included under the well-known denomination *siècle de Louis XIV* such authors as Vaugelas on the one side and Saint-Simon on the other. His first chapter is devoted to a sketch of French society, and his second to a short history of the Académie Française; then come the literary representatives of the Fronde, La Rochefoucauld and Cardinal de Retz; the Jansenists, with Pascal—that *effrayant génie*—and, finally, the "classics" properly so called. M. Albert has wisely kept a place apart in his gallery for burlesque poets, such as St.-Amant, Cyrano de Bergerac, and Scarron. This last-named author especially deserves to be remembered on account of the common sense and the sound critical views which are apparent throughout his *Virgile travesti*.

The remarkable articles which M. François Lenormant has reprinted in the volume entitled *Essais sur l'instruction publique* †, are the more interesting because they were written long before the terrible events of the last two years. When the *Correspondant* published his critiques, France had not yet sunk under the results of a system originating in the combined action of ignorance, conceit, and unbelief. M. Lenormant was one of the chief leaders of the Catholic party in France; he had persistently protested against the monopoly of teaching enjoyed by the University, and, whilst claiming on behalf of the Gallican Church the freedom which had been taken away from it since the beginning of the Revolution, he forcibly pointed out the defects of the system of instruction then adopted. But, as the preface to this new volume aptly states, all these defects still exist; France is of all countries in Europe the one where the spirit of routine most thrives, and there is not one of the changes called for by M. Lenormant which does not still appear prominently in the schemes of modern educational reformers. These posthumous papers are consequently well deserving of attention, and the learned archæologist who has edited them deserves the thanks of the public. Whilst raising a monument to his father's memory, he has also added a valuable item to the works recently suggested by the reform of education in France.

M. de Loménie's monograph on Beaumarchais ‡ reappears in a cheaper and more portable form: it certainly deserved the honours of a new edition, and we hope that it will induce persons interested in French literature to study the life of a man who occupies one of the most prominent places in the latter half of the eighteenth century. M. de Loménie has enjoyed the rare advantage of access to a large collection of family papers, and he has made use of them with admirable discretion and care. Before the publication of his work there existed no good biography of Beaumarchais, and it is rather singular that a man leading the busy, active, and exciting life of the author of the *Mariage de Figaro* should have left no memoir of himself; for the two volumes bearing that designation consist merely of legal documents, and of *factums* connected with the scandalous Goesman lawsuit, and supply no detail whatever as to the author's life. Fortunately M. de Loménie has come to the rescue, and his publication is perhaps even more valuable than autobiographical reminiscences would have been, because it has the merit of entire impartiality.

The new edition of Saint-Simon's Memoirs § now in course of

* *Histoire de la littérature dramatique en France, depuis ses origines jusqu'au Cid.* Par H. Tivier. Paris: Thorin.

† *Fouilles et Découvertes.* Par M. Beulé. Paris: Didier.

‡ *Histoire des origines de la langue française.* Par A. Granier de Cassagnac. Paris: Didot.

* *La littérature française au XVII^e siècle.* Par Paul Albert. Paris and London: Hachette & Co.

† *Essais sur l'instruction publique.* Par Ch. Lenormant. Publiés par son fils. Paris: Didier.

§ *Mémoires du duc de Saint-Simon.* Publiés par MM. Chéruel et Ad. Régnier fils. Vol. 2. Paris and London: L. Hachette & Co.

publication must not be looked upon as a mere reprint of the edition issued in 1856–58. It has been scrupulously revised from a collation of the original MS., and contains several important emendations. No author perhaps, no French author certainly, can be named whose style is so thoroughly original as that of Saint-Simon; his sentences constantly puzzle us by their want of connexion, and we find every now and then words, and even phrases, which can be met with nowhere else. All these irregularities are explained in the foot-notes.

The anonymous author of the pamphlet entitled *L'Europe orientale* * is anxious that France should recover in the sphere of politics the influence which she has lost, and the only means towards that end is, according to him, the favourite old recipe of the adepts of Radicalism. Appeal to the spirit of revolution, assist all malcontents everywhere in their attempts to throw off the yoke of government—in a word, hasten the era of universal brotherhood by setting the whole of Europe on fire.

The sixteenth volume of M. Louis Figuier's *Année scientifique* † equals its predecessors in interest, clearness of style, accuracy, and completeness. M. Figuier devotes a long section to an account of the first session held by the French Association for the Diffusion of Science. This new Society, organized on the same plan as its English prototype, met at Bordeaux last year under the presidency of M. de Quatrefages.

Count de Gasparin ‡ is a thorough Protestant, with more zeal than judgment, and therefore his estimate of the early Christian Church, of the Roman Empire, and of the middle ages cannot be safely trusted. He belongs to that class of writers, fortunately dwindling away both in numbers and influence, who believe that the mediæval epoch was radically bad, without one single good point to recommend it, and that in the interval between the assembling of the Council at Nicæa and the publication of Luther's theses there was nothing in Europe but utter darkness. We have no doubt that the lectures printed by Count de Gasparin in the present volume were highly successful, and that they gratified crowds of enthusiastic hearers; but the views of history which they are intended to convey are absolutely false in many points, and no amount of metaphors and eloquence can compensate for blind prejudice. We remember in one of the Countess de Gasparin's picturesquely written books an assertion to the effect that there was nothing good in the civilization of classical Greece, and that Plato especially was an objectionable author. Now, although Madame Dacier and the Abbess of Fontevrault both understood Greek and enjoyed it, we can excuse a lady for thinking mostly of Plato: but when we find a man who professes to teach history speaking of *cette déplorable période du moyen âge*, we simply shrug our shoulders, and conclude that Voltaire's fanaticism was nothing to this.

The history of Robert Bruce § related by M. Xavier Marmier from John Barbour, Froissart, Walter Scott, and Fraser Tytler, is an interesting volume. In the preface, taking up his second title, "Comment on reconquiert un royaume," the author says that Perth and Edinburgh have constantly reminded him of Strasburg and Metz, and he would fain tell his fellow-countrymen what is the best way of winning back again the provinces which the Germans have lately torn away from France. He then describes briefly the siege of Metz in 1552, and he is of opinion that, if the France of the nineteenth century had the faith and the spirit of self-sacrifice which characterized the contemporaries of Robert Bruce, Alsace and Lorraine would soon be restored to her. In the meanwhile, says M. Marmier, by destroying the Treaty of Munster, the Germans have created for themselves difficulties which they will never be able to overcome.

Two works lately published on Xenophon deserve to be noticed here. One of them, by M. Alfred Croiset, is an essay composed for the doctor's degree ‖, and it gives an excellent estimate both of Xenophon's moral character and of his literary merits. M. Croiset begins by a review of his hero's military career, and, in discussing those of his writings which refer to that part of his life, he deduces from them the principal elements of a portrait which seems to us impartially and accurately drawn. The philosopher, the disciple of Socrates, stands forth next for consideration, and here the *Memorabilia* are the source to be studied; they show us in Xenophon an essentially practical man, who never rises to general conceptions, and who therefore judges men and things from a point of view often too limited and partial. The *Hellenica* give our author an opportunity of estimating Xenophon as a continuator of Thucydides, and of showing that the commander who led the Ten Thousand back into Greece has neither the method, nor the depth, nor the harmonious proportion which characterize the immortal narrator of the Peloponnesian war. Xenophon, in short, possesses all the inferior qualities which we like to find in an agreeable, chatty writer of memoirs, but none of those belonging to the great masters of the historic style. M. Croiset devotes his last two chapters to a general review of the style of his hero and to a description of the last years of his life. A number of excellent notes terminate the volume.

M. Hémardinquer only examines one side of the intellectual character of Xenophon *; he studies him as a moralist and a politician, and accordingly he deals principally with the *Cyropædeia*, that historical romance which contains the author's views of education, family relations, politics, religion, and war. He considers Xenophon a somewhat superficial writer, and remarkable more for grace than vigour; he praises him, however, as being a man who, both in speculation and in practice, combined to a certain extent all the forces of the human mind.

In the current works of fiction, which still abound as of yore, we find either a persistent fondness for the analysis of psychological monstrosities, or a disposition to make the exhibition of wickedness and immorality serve as a pretext for denouncing the Second Empire. To novels representing the former class belongs M. Charles Diguet's *La vierge aux cheveux d'or* †; it is a production which has not even the merit of a brilliant style; the hero is a madman, and the book itself seems as if it had been composed in a lunatic asylum. M. Eugène Deligny does not aim at representing impossibilities, and at describing characters which no one has ever seen ‡; but he deals with the worst features of real life, and writes sketches which are simply repulsive. The most curious part of this system of novel-writing—for it is a system—is that the authors who adopt it pretend that they are really discharging a moral duty when they publish highly seasoned pictures of vice. They imagine that a tragical catastrophe involving the punishment of the faithless wife and her lover atones sufficiently for the scandalous character of the introductory chapters.

M. Hector Malot § wishes to describe the fast life of the Second Empire, the mania for speculation which then prevailed, and the doubtful personages who basked in the sunshine of Napoleon's Court. This may be extremely patriotic, but we cannot see what good result is to be obtained by such a perversion of talent and of literary skill. Would it not be far better to leave untold episodes illustrating the low state of morality into which France has lately sunk, and which had begun long before the days of Imperialism?

THE BUDGET.

MR. LOWE had an easy task in distributing his bounty; and, in the certainty of a favourable reception of his offers, he wasted no time in rhetorical amplification of an agreeable statement. It may be conjectured that on one material point he has been overruled by his colleagues. When Mr. LOWE two months ago informed a deputation on the Malt-tax that the surplus would be small, he was generally understood to mean that the greater part of the difference between revenue and expenditure would be applied to the payment of the *Alabama* damages. If it is true that the Budget was first communicated to the Cabinet on Saturday last, the large reduction of taxes which was proposed to the House of Commons on Monday may have resulted from considerations of general policy, if not of party convenience. It is remarkable that the CHANCELLOR of the EXCHEQUER had only three years ago voluntarily expressed his intention of retaining during his term of office the rate of duty on sugar as it remained when he had reduced it by one-half. It is not improbable that the first edition of the Budget may have provided for the removal of a penny in the pound of Income-tax, and for the payment in full of the *Alabama* damages out of the estimated surplus. Some members of the Cabinet may perhaps have objected to the exclusive relief of payers of Income-tax, and have suggested a partial approximation to Mr. BRIGHT'S scheme of "a free breakfast-"table." Whether a compromise has been effected in the mind of the CHANCELLOR of the EXCHEQUER or among different sections of the Government, the Budget is wanting in definite unity of conception. The plan of meeting half the American demand out of the proceeds of Exchequer Bonds, which will nevertheless probably not be issued, is ambiguous and awkward; nor is the disposal of the large surplus which remains after providing for the other half of the damages altogether unobjectionable. If the entire charge had been placed on the revenue of the year, there would have been no question of reducing either the Income-tax or the Sugar duty, but a million and a half might have been usefully employed in the removal of minor anomalies and in the relief of some of the poorer class of taxpayers. The other alternative of paying the damages out of capital, with the aid of a permanent or temporary loan, would have given the CHANCELLOR of the EXCHEQUER a rare opportunity of dealing with an anomalous Excise duty which in ordinary years is necessarily retained as the source of a large and indispensable revenue.

It would be captious and unjust to dispute the advantages which may be expected from the reduction of direct and indirect taxation. Sugar merits Mr. LOWE'S complimentary dithyrambic as the delight of infancy and the solace of age. Morose critics might object that sugar is poisonous to persons of a gouty temperament; but almost all children, and the majority of mature mankind, are happily free from gout. It is highly desirable to cheapen a palatable article of food; but a doubt remains whether the amount of duty which is remitted will pass into the pocket of the consumer or into the till of the grocer. For some mysterious reason sugar is, according to the unanimous assertion of retailers, not a profitable commodity to sell; and it is but too probable that dealers may recoup themselves for previous loss or for insufficient profit by refusing to their customers the benefit of their own diminished payments to the wholesale trade. It appears from Mr. LOWE'S statement that the establishment of a smaller margin between the respective duties on raw and on refined sugar will diminish a complication of bounties and drawbacks which affects the symmetry of the fiscal system. The mischief, such as it is, will probably be within a few years effectually abated by the repeal of the small residuary duty. It would be highly desirable to exempt ordinary articles of consumption from taxation, if only it were certain that no additional revenue would be at any future time required. It has now become extremely difficult to reimpose indirect taxes when they have once been removed; and it is not altogether satisfactory to depend for 20,000,000*l*. of income on the consumption of intoxicating liquors. If the present financial prosperity continues for a few years, strong arguments will be urged in favour of the exemption of sugar; for the total repeal of the duty would almost certainly reduce the retail price, and the removal of the Customs duty would render unnecessary the restrictions which at present interfere with the experiment of making beet-root sugar in some parts of England. Mr. CRAWFORD'S enthusiasm on the announcement of the reduction of the duty will perhaps not be generally shared.

The diminution of the Income-tax will give greater satisfaction; but it is a question whether, as long as the maintenance of an unpopular machinery is necessary, it is expedient to sacrifice a million and three-quarters of the revenue which it produces. It is certainly a curious coincidence that, with the aid of a modest contribution from Ireland, threepence in the pound produces the same return which sevenpence gave when Sir ROBERT PEEL imposed the Income-tax thirty-one years ago. It may be hoped that no further reduction will take place, for a charge of between five and six millions on the vast collective income of the community is sufficiently moderate. The amount is easy of calculation, and it is well that Mr. LOWE has not recurred to the elaborate puzzle of a percentage instead of a rate corresponding with pecuniary denominations. It may be hoped that the agitation against the tax recently promoted by the shopkeepers will be appeased or mitigated by Mr. LOWE'S concession. It was unfortunate that Mr. FAWCETT added to his protest against the monstrous iniquity of the proposal to exempt trades and professions, the expression of an opinion that the longer or shorter duration of incomes ought to be taken into consideration in the adjustment of the tax. There is no doubt that, as Mr. FAWCETT says, the holder of a precarious income of 600*l*. a year is a poorer man than his neighbour who receives the same sum in interest or rent; but uncertainty is equivalent to shortness of duration, and the temporary owner contributes only as long as his income lasts. The whole income of trades and professions is as durable as the whole income of landowners, and much more progressive than the whole income of fundholders. The best reason for the reduction of the Income-tax was the simultaneous reduction of the Sugar duty; and perhaps in both cases the disposable surplus might have been better applied. The controversy on the expediency of paying off debt, though it is revived on the occasion of each annual Budget, ought to be determined by considerations which have little relation to the casual balance of revenue and expenditure. The main objection to large payments of debt is that, through the constant fall in the value of gold, the capital represented by the interest of the debt is subject to incessant depreciation. The discharge of debt would, at the best, be equivalent to an investment at 3¼ per cent. of money derived from taxation. There is every reason to believe that the same result may be attained fifteen or twenty years hence at the cost of a much smaller percentage of the national income. On the other hand, the reduction of the debt is convenient, as it leaves Governments and Parliaments more completely at liberty to readjust and modify taxation. If the debt had been paid off by this time, the country would probably be much poorer than at present, because industry and trade would have been hampered by the continuance of burdens which have long since been removed; but if Chancellors of the Exchequer

had only to provide for current expenditure, they would enjoy great facilities for establishing a perfectly scientific system of finance.

It is a grave defect in the Budget that no special relief has been afforded either to the owners of small incomes or to applicants for remission who suffered under peculiar and unjust burdens. The great rise in the cost of living would have fully justified the alteration of the standard of exemption from Income-tax from 100*l.* to 150*l.*; and for the same reason it would have been desirable to allow to incomes under 400*l.* or 450*l.* a drawback or partial exemption of 100*l.* The refusal to relieve third-class passengers by fast trains from the tax which is not applicable to Parliamentary trains is wholly indefensible; and the CHANCELLOR of the EXCHEQUER lately admitted to a deputation from the metropolitan railways that the differential rate of taxation on the underground railways as compared with omnibuses and steamboats was a plain anomaly. The tavern-keepers may boast of being the only class which has succeeded in obtaining redress for an acknowledged grievance. The small amount of the surplus which has been reserved will deprive the CHANCELLOR of the EXCHEQUER of the means of rendering tardy justice. His answer to Mr. LAING showed that he had no intention of repealing the exceptional duty on railway passengers. The best employment which could have been made of three and a half millions of surplus revenue would have been the removal of one half of the Malt duty, which is more objectionable than the Sugar duty. An Excise duty on a wholesome and nutritious article of consumption can only be defended on the ground of necessity; and the argument, which in ordinary years is unanswerable, that seven millions cannot be spared, is a confession of helplessness. If half the duty were permanently retained, it would be in a high degree elastic; and future Finance Ministers would be able to exercise their discretion in dealing with a comparatively moderate amount of income. Although Mr. LOWE is not of a temper to adjust Budgets with a view to popularity, some of his colleagues might perhaps have thought it worth while to prove that their party were after all the true friends of the farmer. The highest praise which can be awarded to the Budget is that it might have been worse, although it is impossible to remit several millions of taxation without doing some good. The CHANCELLOR of the EXCHEQUER may claim the negative merit of having put it out of his own power to repeat his preposterous offer of applying the House duty to the relief of local taxation.

THE SESSION TO EASTER.

IT is only two months since Parliament met; the Easter vacation has commenced; and Mr. GLADSTONE is still Premier, with the same Cabinet. But, although the time of the Session has been so short, and outwardly so little has changed, the real change in the political world has been immense. The great GLADSTONE Ministry, strong, confident, fertile in devising novelties; impetuous, if not arrogant, in imposing them on the Legislature; with its majority of a hundred, its peculiar journals mad with triumph, and the constituencies asking for nothing from a candidate except that he should enjoy the favour and add to the strength of their favourite PREMIER—this is a thing of the past. Mr. GLADSTONE has been beaten by a decisive vote on a great Government measure; he and his Cabinet have resigned; he has even considered himself treated unjustly because the leader of the Opposition would not relieve him from the unwelcome burden of office. The Irish University Bill has proved fatal to him, and though he still holds office, he holds it with his pride wounded, his wings clipped, able to do little, and retaining his position simply as a matter of public duty. And yet it cannot be said that he has deserved the fate he has undergone. The Ministry made a mistake in not ascertaining beforehand what Ireland would think of such a Bill as it proposed; but it tried honestly, and not without boldness, to work out a solution of a problem to solving which it sincerely attached extreme importance. Thrown over by the Ultramontanes, it could only secure the adhesion of its Liberal supporters by pledging itself to treat almost every part of its measure as an open question. It got into a difficulty into which every step plunged it further. The QUEEN'S Speech had announced that the coming measure would unite a regard for sound learning with respect for liberty of conscience, and Lord DERBY on the first night of the Session had the prescience to suggest that to frame a Bill answering this description was beyond human power. The Irish Catholic bishops protested that Mr. GLADSTONE'S Bill did not respect religious liberty, for it did not endow their colleges; and British Liberals protested that it did not favour sound learning, for it withdrew from the sphere of education some of the most important branches of thought. The difficulty was probably insuperable, as Lord DERBY predicted that it would be found; but, could it have been overcome, Mr. GLADSTONE moved in a direction as likely as any to overcome it. The poor result of his ingenuity is that he has been obliged to make Mr. FAWCETT'S Bill for abolishing Tests a Government measure, after having burked it year after year on the ground that it settled nothing. The Conservatives found themselves in the delightful position of receiving the support of the Irish vote without having bought or courted it, and of declining office on high grounds of public convenience. The members of the Ministry have resumed their posts with a cloud hanging over them which seems to weigh on their spirits and unnerve their will. They follow rather than lead. They seek to please, not to govern; and even the unyielding CHANCELLOR of the EXCHEQUER has bent to the blast, and has appeared in the House drawing, as if by accident, out of his pocket a popularity Budget.

The altered relation of parties has been manifested out of the House by the candid confession of Mr. LOWE that the continued existence of the present Parliament hangs on the thread of Mr. DISRAELI'S pleasure, and in the House by the tone of something almost beyond equality with which the leaders of the Opposition called the Government to account for its negligence in having omitted to consider the very important question how the New Rules inserted in the Treaty of Washington should be brought to the notice of foreign Powers. It was quite evident that the Cabinet had totally overlooked this question, and was only made alive to its importance by the criticisms of the Opposition. Still, as no harm had been actually done, and as ample time for further consideration will probably elapse before the United States Government is ready for joint action in the matter, the Ministry was not much damaged by having been discovered to have blundered. And it is to be observed that the weakness of the Government is not due to its having irritated the House, or opposed or withstood its supporters, or exposed itself to adverse comments on much else than the Irish University Bill. On the contrary, it has been conciliatory and inoffensive. The speech of Mr. CARDWELL in moving the Army Estimates was a decided success, and the reputation he had already won as an administrator was heightened when it was learnt with what activity and completeness he had since last year been working out his scheme for attaching the army to local centres. Mr. GOSCHEN, although he had to deplore an increase in the Navy Estimates, succeeded in creating an impression that he was not demonstrably wrong in his views as to the management of the iron-clad navy, which is as much as can be said of any naval administrator or reformer. Mr. AYRTON got satisfactorily out of the pit that his enemies had dug for him, and complacently pleaded that he was but an innocent subordinate, carrying out the orders of his masters as to the management of the Parks; and Mr. BRUCE quietly settled the blazing question of the Regulations by throwing open the whole available space in Hyde Park to public meetings. Private members have been allowed some triumphs of the sort that delights them. An abstract motion made by Mr. HARCOURT in favour of reduction of expenditure was unexpectedly crowned with the concession of a Select Committee. Mr. PLIMSOLL has been promised his Commission to inquire into his allegations as to the treatment of merchant seamen. Indignant householders have secured a special Committee to examine and inform them why their coals are so dear; and Mr. GLADSTONE had the softest and kindest words for his faithless Ultramontanes when smarting under the erratic lash of the *Pall Mall Gazette*. The Burials Bill, which was suddenly lifted out of obscurity into a great party question, afforded an opportunity to the Government of showing the Nonconformists who were their true friends; while Parliament has enjoyed the pleasure of burking without a murmur proposals exciting no public interest, such as those for enabling widowers to marry their sisters-in-law, and the Turks to make a long railway through their deserts at the expense of England. Mr. GLADSTONE indeed on one occasion lost, or seemed to lose, his temper, when he objected to the first reading of one of Mr. FAWCETT'S Bills, but he has given little ground of complaint this Session personally, while he has renewed the fame of his oratorical powers by the speech with which he closed the debate on the University Bill, a speech which many competent judges pronounced to have been, with perhaps the exception of that on Charitable Endowment, the greatest of his efforts as a speaker.

But, although the Ministry has done nothing to provoke

enmity this Session, and, apart from the University Bill, little to provoke criticism, although the Opposition shows no sign of factiousness, and although the majority of the House of Commons would do almost anything rather than give any excuse for a dissolution this year, the Ministry is obviously weak, and shows at every turn how conscious it is of its weakness. It has got no great measure on hand, and has no heart to frame or strength to carry one. The CHANCELLOR'S Judicature Bill cannot be called a great measure; for, although it is not without merit, it is confessedly but a faltering and timid approach to what its author knows is wanted, and it threatens to sacrifice the more advanced to the ruder element of English law. All that has been done in two months is to get it into a Select Committee, which will scarcely take it in hand before another month is past; and although its defects may have made the chastening hand of a Select Committee necessary, no one can say that this is the way in which a strong Ministry forces a great measure forward. Mr. CHICHESTER FORTESCUE has made considerable progress with his Railway and Canal Bill, but he had the support and recommendations of the Joint Committee of last Session to fortify him, and his success may perhaps be partly accounted for by the general inability of his hearers to conjecture accurately how his proposals will practically work. The ATTORNEY-GENERAL'S Jury Bill is likely to die a very quiet death, for a desponding Government can scarcely venture on so bold an enterprise as that of reducing the number, and dispensing with the unanimity, of juries. But the Government, however much it may long to avoid all subjects that would awaken warm differences of opinion, cannot continue to do so without interruption. It has undertaken to propose a modification in the Education Bill, and, although it is not known what this modification is to be, yet as its introduction was announced in the QUEEN'S Speech it must be one of some moment, and it is not easy to see what modification can be devised that would gratify the Protestant Nonconformists without exposing the Government to the risk of a new coalition of the Conservatives and the Irish Catholics. But, no doubt, the great rock ahead of the Ministry is the measure for remodelling local taxation, which they are pledged to introduce. If their Bill is at all like that formerly proposed by Mr. GOSCHEN or conceived in the same spirit, it is sure to be strongly, and not improbably successfully, opposed in the Commons. If it reached the Upper House in a shape which the Ministry thought fairly satisfactory, it would have scarcely any chance of passing there; for the Lords would not like it, and they would reasonably say that they could not be expected to yield to the will of a House of Commons which may probably not represent the real feelings or wishes of the constituencies. This might easily make Mr. GLADSTONE'S position untenable without a dissolution next autumn, and it was probably in contemplation of some such contingency that Mr. LOWE pronounced that the existence of the present Parliament lay at the mercy of Mr. DISRAELI.

THE FRENCH ASSEMBLY AND THE GOVERNMENT.

M. BUFFET'S election to the Chair of the French Assembly is in various ways a discredit to all parties in the Chamber. The Right were free, no doubt, to get rid of M. GRÉVY if they could; and their notions of political prudence are so abnormal that they may perhaps believe that they are acting for the good of France in making use of their liberty. But they need not have cheered M. BUFFET when he declared that no one would be more happy than himself to see M. GRÉVY still President. If this was the wish of the Right, they could in all probability have gratified it without difficulty. They need only have voted for M. GRÉVY'S re-election on Wednesday week. On the following Friday they might plead that M. GRÉVY was not a candidate; but on the Wednesday every member of the Right had an opportunity of voting for him. Men who voted for M. BUFFET, when it was perfectly well known that nothing short of a unanimous re-election would induce M. GRÉVY to return to office, have no business to associate themselves with expressions of regret that he is no longer in the Chair. The desire to persuade constituents that they have had no hand in M. GRÉVY'S retirement supplies an obvious motive for these inarticulate professions of regret; but hypocrisy is not excused by the fact that it is not gratuitous.

The Left have acted with more straightforwardness than the Right, but they have shown an equal absence of sound political instinct. On former occasions when the Right have quarrelled with the Government, the Left have shown themselves ready to take advantage of the chance thus afforded them. It will hardly be denied, except by Radicals of the most extreme type, that the cause of the Republic is advanced by everything that strengthens the alliance between the Republican party and M. THIERS. Of late M. THIERS has given many indications of a paramount desire to keep on good terms with the Monarchists. When this side of his policy is in the ascendant, the Republicans can do little to promote their object. But, happily for the Republic, the Right never allow this state of things to last long. The more anxious M. THIERS is to win them, the more resolutely they refuse to be won. As regards the Bill for reorganizing the Lyons municipality, the Government has made an absolute surrender, but this eagerness to conciliate the majority has had no influence on the action of the majority. The Government candidate was no nearer to success—in fact, he was very much further from success—than he would have been if M. DE GOULARD had made his concession to the Left instead of to the Right. Here, therefore, was an occasion for the Left to bind M. THIERS to itself by the strong ties which link a statesman to the politicians who have stood by him when his friends have been untrue and those whom he has obliged have been ungrateful. M. THIERS was angry with the Right, and in this fact the Left have heretofore seen their most favourable opportunities. Instead of this, they are opposing the Foreign Minister in the election for Paris, and filling their journals with attacks on the PRESIDENT. It is an extremely short-sighted policy, and it speaks well for M. GRÉVY'S qualifications as a future party leader that he has had no hand in the adoption of it. On the contrary, he recommended his friends to vote for M. MARTEL, and, if his advice had been followed, M. MARTEL would certainly have been elected.

A third offender is the Government itself. Though the desertion of the Left was a blunder in tactics, it was not an unprovoked blunder. After the Right had shown by their support of M. DE GRAMMONT against M. GRÉVY on the Tuesday, and again by their voting for M. BUFFET instead of for M. GRÉVY on the Wednesday, of what impracticable stuff they were made, M. THIERS should have given up all thought of keeping them on his side. Even if he had been successful, their support would have been thoroughly untrustworthy, and by consequence thoroughly valueless. As it was, his final effort had no effect except to alienate the Left. Whenever M. DE GOULARD rises to speak, he manages to irritate the Republican party more or less; and to choose the crisis of the agitation about M. GRÉVY'S resignation for announcing that the Government had gone over to the Right on the Lyons Municipality Bill, and would not be sorry to see every large town treated in a similar way, was to run the risk of irritating them past all bearing. The choice of M. BARODET as the Radical candidate for Paris, and the abstention of the Extreme Left in the contest between M. BUFFET and M. MARTEL, were the answers to M. DE GOULARD'S challenge. The latter of the two was further prompted by the personal unpopularity of M. MARTEL. Where the object of the Government was to secure the return of a moderate candidate, and the votes of the Extreme Left were wanted for the purpose, a worse choice than the Chairman of the Committee of Pardons could hardly have been made. According to English precedent, M. MARTEL'S defeat would be tantamount to a vote of no confidence in the Government, and would be followed by a resignation of M. THIERS'S Cabinet, if not of M. THIERS himself. In France, although Ministerial responsibility has been the subject of innumerable discussions, and the Right constantly asserts that it must at once be established, while the Government retort as constantly that it is in full operation already, this result has occurred to no one as even possible. The Government accepts the implied censure, and the majority see that no notice is taken of it, and placidly acquiesce. Still the position of affairs can hardly be satisfactory to M. THIERS. His following in the Assembly is reduced by the defection of a large part of the Right Centre, and the loss has not, as in former instances, been compensated by increased good will on the part of the Extreme Left. There are rumours that he is becoming anxious for a speedy dissolution, and, uncertain as the composition of a new Chamber must at present be, he may well wish to go to the country before his authority in the existing Chamber has been any further weakened. That the Right will ever assent of their own free will to a dissolution is as improbable as ever. So long as the liberation of the territory was an event for which no date had been fixed, they had no objection to associating the two ideas. But now that the month of September will see the last German soldier started on his homeward journey, the thought of such a connexion has become hateful. M. BUFFET, who by no means represents the extreme section of the party, has insisted, in his address on

taking possession of the Chair, upon the importance and difficulty of the task that still lies before the Assembly. The indemnity has been paid and the term of foreign occupation brought to an end; but it remains to give to France all the guarantees for future security which it is possible to provide. When a member of the Right speaks of giving the country security, he means as nearly as possible the opposite of giving it a Republic, and, as the first act of a new Assembly would take the latter direction, the existing Assembly can have no choice but to retain its responsibilities in its own hands. There is no chance, however, that M. THIERS will lend any support to this attempt. To do so would be to cast in his lot with the Monarchists, and, both from conviction and policy, M. THIERS may now be set down as a Republican.

M. THIERS will have an opportunity of speaking out upon this subject soon after the Assembly meets again. M. MARCEL BARTHE has given notice of a Bill providing that within two months after the departure of the Germans the Assembly shall dissolve itself. This notice is accompanied by an extremely able statement of the reasons which make a dissolution imperative. The truce between parties, M. BARTHE asserts, is practically ended. The deputies who welcomed M. DE CASTELLANE'S proposal to define the constitutional conditions under which the Crown should be held, and to offer it to whichever branch of the BOURBONS would accept them, did not hold it to be still binding on them. The deputies who cheered M. BOYER'S invitation to confide the destinies of France to the Count of CHAMBORD without conditions did not hold it to be still binding on them. The Bonapartist deputies who associated themselves with M. HAETJENS'S declaration in favour of a plébiscite did not hold it to be still binding on them. M. BARTHE might have added that the deputies who avowedly accept the truce for no other reason than because it helps on the establishment of a Republic do not hold it to be still binding on them. The extension of the Assembly's life will not make these divisions less marked. Frenchmen of all parties did not lay aside their differences for the purpose of establishing any particular form of government, or even of securing that residuum of conservative institutions which is common to all working Governments. They laid them aside for the purpose of paying off the indemnity and getting quit of the army of occupation. When that purpose has been accomplished, the Bordeaux Compact will cease to exist. It was the creation of circumstances, and it will die with the circumstances that created it. Each party in the Assembly knows its own mind, and knows that this mind will not be changed by any arguments that can be brought forward in the Chamber. All that remains to be done is to ascertain as speedily as possible to what extent these several parties represent the mind of the country.

This is the substance of M. BARTHE'S reasoning. Its studied moderation will secure for it the adhesion of the whole Republican party, and there is not much likelihood that the orators of the Right will be either patient enough or ingenious enough to frame even a plausible answer to it. Unless M. THIERS chooses to frame an answer for them, he can hardly avoid supporting M. BARTHE'S Bill.

THE CARLIST SUBSCRIPTION.

THE formation of a Committee in England to collect subscriptions in aid of the Spanish Carlist insurrection suggests questions of principle far more important than the practical support which is afforded to the Legitimist cause. The English subscriptions announced in the *Westminster Gazette* of April 5 amount to exactly 100*l.*, while about 105*l.* is contributed in France and 80*l.* in Holland. As 8*l.* of the English subscription is specially appropriated to the use of the sick and wounded, the English Carlists have only applied the modest sum of 92*l.* to the sacred object of establishing orthodoxy and absolutism in Spain, at the risk of compromising the neutrality of England. It seems that the Law Officers have advised the Government that direct intervention in a civil war carried on in a foreign country involves no liability to prosecution. The opportune publication of a case submitted by Mr. CANNING to the Law Officers in 1823, and of the opinion which they returned, shows that the duties of neutrals were more strictly construed half a century ago than they are at present. It might have been expected that Mr. GLADSTONE would, after recent and painful experience, have expressed some dissatisfaction, not with his Law Officers, but with the unsatisfactory state of the law as interpreted by their opinion; but it would seem that, in the opinion of Government, the best mode of discharging international duties is to pay damages after the event for any breach which may have been committed. Professor THOROLD ROGERS, who, like other members of the extreme democratic party, always writes in a passion, expresses a not unnatural astonishment at the alleged laxity of the law. It is possible that his indignation might be less vehement if contributions were raised in England for some revolutionary enterprise of GARIBALDI or KOSSUTH. The assertion that Spain has been demoralized by the worst monarchy and the worst priesthood in Europe has, although it may be approximately true, no connexion with the question whether it is lawful to promote civil war in a foreign country. The Carlist subscription is neither more nor less like "an association of "burglars" than the numerous attempts of the same kind which have been made for the overthrow of unpopular Governments. The occasion of Mr. CANNING'S application to the Law Officers was the collection of subscriptions for the defence of Spain against the Royalist French invasion of Spain when CHATEAUBRIAND was Foreign Minister. A crusade against constitutional liberty undertaken in the interest of the BOURBON dynasty by an unscrupulous charlatan afforded some excuse for irregular efforts to assist the Liberal Government of Spain. Mr. CANNING and his colleagues had protested against French intervention, although they were not prepared to violate English neutrality.

The Editor of the *Westminster Gazette*, who appears to be the chief promoter of the Carlist subscription, is disposed, like Professor ROGERS, to decide the question of international law by reference to the merits of the particular case. In the estimation of a zealous Catholic and Absolutist, the Carlist cause is that, not of burglary, but of law, of order, and of religion. "The Carlist warfare has been hitherto singularly "free from wanton and cruel bloodshed or from aimless and "lawless destructiveness." The Republicans indeed always accuse their enemies of every crime which can be committed in civil strife; but it is true that there is no reason for believing every report which is circulated on Spanish authority. It is impossible to convince zealous partisans that they have no right to take sides in foreign conflicts. During the American War a large section of English fanatics denounced the criminal apathy which remained indifferent to the principle of Republican institutions and to the abolition of slavery; and a smaller and less noisy party supported with equal vehemence the cause of Southern independence. It is scarcely likely that any officious assistance will be offered by any class of Englishmen to the Republican party in Spain, for the faction which habitually sympathizes with anarchy is neither able nor willing to subscribe. The Alfonsists, who probably constitute the majority of the Spanish population, have no foreign supporters. The Carlists alone have succeeded in enlisting English sympathies, which may be valued at 92*l.* It may be admitted to the credit of the English Legitimists, if indeed they have a right to that title, that their representative declares that, if the opinion of the Law Officers had been unfavourable, his party would have abandoned their enterprise; but any layman is capable of understanding that, whatever may be the law of the case, a public subscription for the promotion of civil war must be injurious and offensive to the Government which is attacked. The Republican Government may reasonably complain of the London subscription; and in the contingency of the success of the Carlists, it is not improbable that the victorious party would resent interference on their own behalf. It is still an article of popular belief in Spain that the principal object of English intervention in the war against NAPOLEON was to get rid of the competition of certain manufactories in Madrid with English industry. A long-winded Carlist manifesto published in the *Westminster Gazette* boasts of the expulsion of the French invaders by Spanish valour, without the smallest reference to WELLINGTON or his army.

The opinion of the Law Officers will of course not be published, but it would be interesting to ascertain whether they advised the Government that the Carlist subscription was not illegal, or merely that it would be unadvisable to institute a prosecution. There is no doubt that subscriptions of a similar kind have often been collected for the benefit of insurgents or of other parties to civil contests. The Hungarians, the invaders of Sicily and Naples under GARIBALDI, the Poles, the Greeks, and the South American colonists have in turn received pecuniary aid from their respective partisans in England. The sympathisers of the United States have, as might be expected, contributed funds for similar purposes with still less concealment or reserve. Many American philanthropists, including the late Mr. GREELEY, subscribed

to the cabbage-garden rebellion of O'Brien, Mitchell, and Meagher; and more recently the highest functionaries in the States, from the President downwards, have afforded aid and countenance to the Fenian conspiracy. It may be presumed that the English Law Officers are not prepared to admit that the American invasion of Canada was a friendly or legal act because it was thought expedient to submit to the outrage in silence. They may probably have satisfied themselves that a subscription involves no violation of the Foreign Enlistment Act, which defines for most purposes the international duties of a neutral as limited or extended by the municipal law of England. It is only surprising that the vague and elastic law of conspiracy should not have been found applicable to the Carlist subscription. If half-a-dozen workmen were to break their contract with their employers, they might be punished under the law of conspiracy; but it would seem that a combination to organize resistance to a foreign Government is not directed to an unlawful object. The Judges have often held that an act inconsistent with public policy involves the offence of conspiracy when it is perpetrated by several persons in concert. It may certainly be assumed that a proceeding which may probably lead to a war or to a Geneva arbitration is contrary to public policy. A compact to do that which is morally but not legally wrong may for the most part be regarded as criminal. A frequenter of the turf may ruin a young man of fortune by inducing him to bet without actually violating the law, but a plot to effect the same object might render the promoters liable to indictment for conspiracy.

Even if the Law Officers are, as must be assumed, right in their interpretation of the law, it is unfortunate that any English faction should ostentatiously sympathize with the Carlist insurrection. The atrocities which have been attributed to Santa Cruz and to other Carlist chiefs are probably exaggerated, and perhaps they may be wholly fictitious; but it is scarcely possible that the charges should have been up to this time conclusively disproved. Few Englishmen would avow their approval of the despotic principles of government which Don Carlos has invariably professed; and it would not be creditable to the Roman Catholics to declare an exclusive desire for the triumph of their Church without reference to political interests. After all, the Legitimists contravene the rule of legitimate succession which prevailed in Spain from the earliest times to the accession of the Bourbons. The so-called Salic Law, on which alone the pretensions of Don Carlos are founded, was a fresh innovation introduced into Spain less than two hundred years ago. Isabella I., one of the two traditional "Catholic Kings" of Spain, would have been excluded from the throne of Castile by the law on which the claims of Don Carlos depend. The question whether the old Spanish law or the Bourbon rule of succession is to prevail may, if the monarchy is at any time restored, well be left to the decision of the Spaniards themselves.

THE PLEADING PROVISIONS OF THE JUDICATURE BILL.

THE most important part of the work of the Select Committee on the Judicature Bill will be to revise the scheme of procedure which is indicated rather than worked out by the schedule to the Bill. All impartial lawyers, and almost all even of those who are tainted with sectional prejudices, have arrived at the following conclusions. Equity pleading as a rule succeeds, and Common Law pleading often fails, in effecting the object of all pleadings—namely, the decision of a case upon its merits, irrespectively of the technical skill of the rival pleaders on either side. Equity procedure often fails, and Common Law procedure generally succeeds, in ascertaining from the evidence the truth as to contested facts. A system which should combine Equity methods of pleading with Common Law methods of investigating facts would be a much nearer approach to what is wanted than anything which we possess at present, though some little modification would be required to accommodate such a procedure to the different classes of cases which arise in ordinary litigation. Starting from these (as we believe) unquestioned assumptions, there ought not to be much difficulty in devising a scheme of procedure which should be approximately perfect. We do not forget that there is a large class of undefended causes in which a Court of Law is used, not for the determination of contested questions of law or fact, but merely as a debt-collecting machinery for bringing recalcitrant or impecunious defendants to book; but, postponing for the moment the discussion of such cases, and confining ourselves to litigation in the proper sense of the word, it is not difficult to say what the broad outline of legal procedure ought to be.

In every case where a real dispute exists the objects to be kept in view are these. In the first place, the plaintiff must tell the defendant that he requires him to appear before the Court, and must also inform him what are the alleged facts on which he conceives himself entitled to redress from a Court of Law; and it is convenient that he should also state the kind of relief which he claims. It is very essential, in order that the defendant may know what he has to meet, that the facts should be stated so fully and clearly as to obviate all possibility of surprise. It is much less important that the plaintiff's notion of what the Court ought to award him should be stated with precision, and there cannot be the slightest objection to his claiming alternative, or even somewhat general, relief, according to the view which the Court may ultimately take of his rights. The success or failure of the suit ought not to depend on the accuracy of the opinion which the plaintiff or his advisers may have formed of the law, but simply upon the merits which the Court, applying its own law to the facts alleged and proved, may consider the plaintiff or defendant to have shown. A suit is not a competitive examination to test the proficiency of opposing counsel, but a process for giving to each party the rights to which the law may entitle him. Remembering that we are dealing only at present with really contested causes, we may add that there is no reason whatever why the citation to the Court and the statement of the plaintiff should be severed. The simplest and least dilatory plan is to require the plaintiff by service of one and the same instrument to apprise the defendant that he is called upon to appear, and what the case is which he has to answer. Formerly it was the practice in all Courts first to summon the defendant, and to leave him to discover after appearance what it was that he was wanted for. This led to some little needless expense and a good deal of mischievous delay, and accordingly the able Commission on whose report the Chancery reforms of 1852 were based recommended that the citation of the defendant should be effected by service of a printed bill which was to contain the statement of the plaintiff's case. This has been the practice in Equity ever since, and no one has ever found any inconvenience from the suppression of the useless writ of subpœna, or, to speak more correctly, from its association with the bill itself in the shape of a minatory endorsement upon it. The advantages of printing the plaintiff's statement—and the observation applies equally to the defendant's pleading—in promoting economy and convenience, and obviating the risk of judicial oversights, have been so well established that it is needless to dilate upon them. These considerations give us, as the first step in a cause, something which—call it by what name you will—must be identical with a Bill in Chancery.

The next step in the cause is to get the defendant's statement of facts with his view of his rights, including, as it might well do, a claim for counter-relief if he thinks himself entitled to it. Except to the limited extent of pleading a set-off, it has not hitherto been the practice either at Law or in Equity to allow a defendant to set up a counter-claim without either a cross-action at law or a cross-bill in Equity; but when once opposing parties are brought face to face before the Court, there is no earthly reason why all their disputes should not be decided upon one set of pleadings, even though the result should be to award damages to a defendant or to decree specific performance in his favour. The defendant's statement ought, therefore, to be as free as that of the plaintiff, subject only to these qualifications—first, that he shall not be allowed to put forward any sham defences founded on false statements merely to embarrass his adversary; and, secondly, that he shall not be suffered to keep dark any part of his defence as a surprise to be sprung on the plaintiff at the last moment. There is only one way of excluding false and embarrassing statements from a defendant's answer, or whatever his pleading may be called, and that is by requiring him to put it in on oath. And there is only one way of preventing a defendant from suppressing the facts on which he means at last to rely, and that is to require him (whenever the plaintiff thinks it necessary) to frame his pleading in answer to specific interrogatories. These considerations lead us to a form of pleading by a defendant identical with an answer in Chancery, with the privilege superadded of introducing such allegations and such prayer for relief as would under the existing practice require the filing of a cross bill. In cases where the defendant, in order to sustain the defence set up or the relief asked by him, requires an answer on oath from the plaintiff, he should be at liberty to file interrogatories for the purpose,

as he is now, but, subject to this, it would never be necessary to carry the pleadings to the length of a replication. All the purposes of that additional step can be served more conveniently by means of amendments, as the effect of these is to disembarrass the pleadings of allegations found to be erroneous, and to present to the Court at the hearing two clear counter-statements of facts on which the parties, after informing themselves by means of discovery, are prepared to rely.

This modified form of Chancery pleading, to which we are driven by common sense considerations, has of course very little in common with the science of special pleading, and the strongest argument in its favour will be supplied by examining the nature and the source of the failures to which special pleading has so often led. The first striking difference is this, that, on the Common Law plan, a plaintiff is required to state, not the facts, but what he considers to be the legal effect of the facts. If his advisers take a wrong view of a doubtful point, and make him declare, say, for goods sold and delivered when the real facts as proved only make a case of goods bargained and sold, the unlucky plaintiff is cast, not because he is not entitled to recover, but because he has not put his case as wisely as he might have done. In practice dangers of this kind are mitigated, though by no means invariably escaped, by inserting a multitude of counts, all giving slightly different versions of the same transaction, in order that on one or other of them the plaintiff may be found to have stated correctly the legal effect of the facts. The permission to do this was in fact a recognition of the plaintiff's inherent right to ask alternative relief; but it was clogged by the absurd condition that he should only do so by resorting to the clumsy fiction of pretending to have a number of independent grounds of action when he knew that he had only one, but did not know exactly what the Court might consider the legal effect of his facts to be. This was not only unscientific and irrational, but in some cases it has led to enormous expense by compelling a plaintiff to declare on, and a defendant to plead to, scores of fictitiously differing counts, when there was only one matter in dispute between them. We do not suppose that the greatest zealot among special pleaders would say that such a queer scheme as this is preferable to one under which the plaintiff states the facts on which he founds his claim, and asks for such relief as their legal effect may entitle him to.

The next peculiarity to be noticed in Common Law pleading is one which must strike foreign jurists who may inquire into our methods almost dumb with amazement. In a case where a question may have arisen whether, under certain special circumstances, the defendant is bound to perform the terms of a conditional agreement, our foreigner would find that the defendant, as a matter of course, not only pleads the special circumstances which form his real defence, but also alleges, first, that he never executed the agreement, though he knows well that he did, and, secondly, that he has performed the terms, though he knows well that he has not, with as many other untrue pleas as the ingenuity of his counsel can devise. The object of all this false pleading is, of course, to put the plaintiff to the expense and difficulty of proving facts which both parties know to be true, and to embarrass him as much as possible by loading the record with hosts of false issues. Again, we say, no zealot could be found to defend such a system. It is very material, however, to add that false pleading, though the invariable practice, is not permitted by the rules of the science—or the game, as we are almost tempted to call it. It is a fundamental rule of special pleading that all pleadings should be true, but experience teaches us that this rule always must be, as it always has been, a dead letter, unless it is enforced by requiring a defendant to answer under the sanction of an oath. In Equity, pleadings are always true enough to bring out the real conflict as to facts; and all causes, with scarcely an exception, are decided on their merits. At Common Law, the pleadings never bring out the true issue without clouding it with many false issues, and sometimes fail to bring out the true issue altogether. This is why we say that a defendant's pleading ought to be on oath. But it may be asked why the same requirement should not be applied equally to the plaintiff's bill. For a very obvious reason. A plaintiff, as a rule, does not file a bill unless he thinks that the facts he is likely to prove will entitle him to relief, and so far is he from the habit of overstating his facts, that all experienced draftsmen lean in the opposite direction, and trust to strengthening their case by amendment in the event of useful facts being extracted by discovery. In practice the oath has been found to be unnecessary in the case of a plaintiff's original statement, though, even if this had been otherwise, it would have been a very simple matter to require bills as well as answers to be supported by oath.

There is yet another teaching of experience to be gathered from Common Law pleading. On account of the many pitfalls to which the system exposed litigants, large classes of defences have been allowed to be given under the general issue, and in these cases a plaintiff has often to come into Court with a very obscure notion of the sort of defence with which the defendant may surprise him. The only remedy for surprise, that of a new trial, is always costly, and, except in aggravated cases, difficult to obtain; and our supposed zealot will scarcely deny that it is the proper function of pleadings to prevent surprise, and not merely to indulge a plaintiff now and then with the expensive luxury of a second trial. This is why we say that it is essential to compel a defendant to put in his pleading in answer to interrogatories, a method which has practically excluded a defence by surprise from among the chances of litigation in Equity. The same end cannot be attained, or at any rate not nearly so conveniently, by a system of interrogatories apart from the pleadings. In the first place, there is the needless expense and complexity of two instruments—the plea and the answer—instead of one. Besides this, when the answer is obtained, the record is clouded by contradictory statements in the sworn and the unsworn documents. Lastly, it is found in practice that the right to file interrogatories at law does not prevent either false pleading or vague pleading. These considerations appear to us to supply unanswerable reasons why in all real litigation the method of pleading should be for the plaintiff to state his facts instead of their legal effect, and to ask for such relief as he may be entitled to, for the defendant to do the same under the pressure of an oath and, if need be, in answer to interrogatories, with the right to claim counter-relief and in his turn to call for an answer on oath.

One other point only remains to be dealt with in connexion with pleading. It is said by some that, although the methods which we have advocated may be sound enough for cases of litigation proper, they are not suitable for cases in which Courts of Law are used for mere purposes of compulsion, as a debt-collecting machinery, for which a simple writ without any statement at all is commonly sufficient. But it can scarcely be seriously contended that the efficiency of the pleadings intended to assist the Court in sifting complicated transactions and deciding intricate rights ought to be sacrificed to the convenience of the tradesman who desires to put a screw upon his customer. In truth, however, the two classes of plaintiffs may both be accommodated without interfering with one another. Let the debt-collecting plaintiff, or any one who thinks he has got an undefended cause, issue an endorsed writ without a printed pleading, and give him every facility for obtaining a cheap and rapid judgment, unless the defendant is able on affidavit to show that there is a question to be tried, in which event the plaintiff should be remitted to the ordinary course of pleading. There are well-known analogies for this mode of dealing with undefended causes, which might very well be made more general without subjecting plaintiffs in contested suits to the necessity of taking two successive steps where one only is required. We need hardly point out how largely the schedule to the Lord Chancellor's Bill must be altered if there is anything sound in what we have said. But there is one prohibition so opposed to the teaching of all experience that we cannot pass it by without specific mention. We refer to the direction that no documents or extracts are to be stated in the pleadings. It would in many cases be much better to say that nothing else besides documents should be so printed. The saving in more copying of wills and other instruments often far more than repays the cost of printing, and the accuracy and rapidity of the Judge's work are enormously increased by having the whole, or so much as is necessary, of the instrument to be construed clearly printed before his eyes. We have something to add on the subject of evidence, which will go some way to balance the account between Courts of Law and Equity, but which we must defer to a future opportunity.

PARIS.

PARIS and Lyons are perpetual thorns in the side of every French Government, and the present Government has succeeded in provoking at the same moment the wrath of both these great towns, or at least of the most violent and prominent part of their inhabitants. The indignation of Paris and Lyons is, indeed, primarily directed, not against M. Thiers and his Ministry, but against the majority of the Assembly; and M. Thiers is not regarded as an enemy, but as a weak friend whose weakness is always betraying him into

disastrous concessions. Since the suppression of the Commune, Paris has been kept in subjection. The state of siege is still maintained, the Mayors are appointed by the Government, as is the President of the Municipal Council, and the Assembly remains resolutely at Versailles. At last Lyons has been also reduced to subjection in the same way. The office of its municipal chief, the Central Mayor, is to be suppressed, and the mayors of each district are to be appointed by the Government. The functionary who has thus been deprived of the office of Central Mayor is a M. BARODET, who has been accustomed to ride on a very high horse indeed, declining to recognize any superiority in the authority of the Prefect of the Rhône, hoisting the red flag, and otherwise behaving as a democratic autocrat, and grievously wounding Conservative feelings. It so happens that in about a fortnight's time a new deputy is to be elected for Paris, and M. THIERS earnestly wished that M. DE RÉMUSAT, who, although a Minister, is not a deputy, should be elected. But the Paris Radicals have suddenly set their affections on the ex-Mayor of Lyons, M. BARODET, and announce that he is to be their candidate. They do not wish, as they are good enough to explain, to humiliate the Government, but merely to give it a salutary warning. M. DE RÉMUSAT is to be defeated, and M. BARODET is to be returned, if they can manage it, in order that M. THIERS may understand that he must not trifle with the feelings of the eminent Republicans of Paris and Lyons, who would support him in every possible way if only he would always do exactly what they wished. M. THIERS does not at all like this lecture being given him, and he is feeling his way to see whether he cannot get enough support from the Moderate Republicans to start and carry M. DE RÉMUSAT. Probably it is not merely because he does not like to be thwarted, or because he thinks Paris ought willingly to return so eminent, moderate, and liberal a man as M. DE RÉMUSAT, that he views the candidature of M. BARODET with so much chagrin. He sees what a hindrance to the permanent establishment of the Republic may be caused by the capital insisting, in the present crisis of affairs, on making a hero of such a man as M. BARODET. Waverers will be easily persuaded that a Republic really means nothing less than a revival of the Commune, and the timidity of large classes may throw them into the hands of the reactionary parties. M. GAMBETTA appears to have been perfectly alive to the danger, and he resisted the nomination of M. BARODET as long as he could. It was only when he found that he could not stem the current that he determined to go with it, and suddenly announced in his journal that Paris was faithful to its historical mission, and had been prompted by a beautiful and generous inspiration to select M. BARODET, and to give France a new opportunity of recognizing the devotion and high political spirit prevailing in its capital. Good wine needs no bush; but then M. BARODET is by no means good wine, and this is the sort of bush that M. GAMBETTA thinks necessary to adorn the candidature of a man who he knows is utterly unfit to represent Paris, and whose success or defeat will equally cause all French Republicans who are not mere foolish fanatics an infinity of embarrassment. Of the two, M. BARODET's defeat will perhaps cause M. GAMBETTA least annoyance, and it will be easy for him to show that Paris has fulfilled its historical mission whoever may be returned.

The Conservatives naturally regard this struggle between M. THIERS and the Paris Radicals with the greatest complacency. If M. BARODET is defeated, a breach will be made, or rather the existing breach will be widened, between the PRESIDENT and the Extreme Left. If M. BARODET is returned, the true character of Republicans will be alleged to have been revealed beyond dispute when their hero of the day is a violent Lyons demagogue who has dared to contemplate arresting generals, has bearded Prefects and prohibited religious teaching. The Conservatives are fully entitled to make all the capital they can out of this candidature of M. BARODET. It shows that the leaders of the Republican party, of that party which desires the Republic for itself, and because of its inherent virtues, and not merely as the best means of living a quiet life, are powerless to resist the domination of a mob of noisy, foolish, violent men, and cannot understand the conditions on which the government of a great country must be carried on. The defeat of M. DE RÉMUSAT by M. BARODET would be a gain to the Conservatives that may sensibly alter their position in the eyes of France, unless they hasten to efface its memory by the commission of some new folly. But, although they are quite justified in using very strong language about the candidature of M. BARODET, it is not easy to see why they should object so strongly as they seem to do to the steps taken by his supporters. Two Committees of violent Republicans have been formed to promote his return, and one of these Committees has announced that he must comply with a *mandat* which it seeks to impose on him. The Conservatives see something very dreadful in the formation of these Committees, and in the imposition of this *mandat*. But when we read the manifesto of the Committee, we find that this *mandat* means nothing but the exaction of a pledge that the selected candidate will labour for the early dissolution of the Assembly, the preservation of universal suffrage, the termination of the state of siege in Paris, and the proclamation of an amnesty. This is only the political programme of the party which hopes to win the election, and there is no country in which a candidate is not expected to accept the general political programme of his party. That Committees should be formed to determine an election seems terrible to the Conservatives simply because these Committees are not formed of men whom they like, and because they think, and perhaps not without justice, that it is out of such Committees that a revival of the Commune may spring. But what are Parisian electors to do to win an election against the Government? The city is in a state of siege, and all public meetings have hitherto been forbidden, even if, at the last moment, the Government may be inclined to permit them for the purposes of the coming election. For those who are willing to accept a Government candidate simply because he is the candidate of the Government no Committees are necessary. Nothing can be easier than to vote for a nominee of the existing authorities. But an Opposition must proclaim its existence, organize its strength, and marshal its forces. It must, in order to win, inspire its adherents with confidence, and confidence cannot be inspired among electors unless those who seek to win a triumph can show that they possess an adequate machinery working to a distinct end. The Conservatives, like most French parties, do not really know what they want. They would like to keep Paris in the subjection in which a petty departmental town used to be kept under the domination of an Imperial Préfet; and yet they cannot bring themselves to treat the inhabitants of the capital of France like a knot of dependent villagers. They wish, above all things, to preserve order, but they cannot make up their minds whether order means anything besides a licence to annoy, thwart, and injure their adversaries. The consequence is that the alienation between Paris and the majority of the Assembly continues almost unabated; and the only barrier to the expression of this alienation, the belief entertained by many even extreme politicians in Paris that M. THIERS was really their friend, and that the best way to aid their friend was to keep quiet, may melt away in the new turn of feeling to which the candidature of M. BARODET may give rise.

Some light has lately been thrown on the mode in which the pretensions of Paris are viewed in the provinces by a debate in the Assembly on a proposal made by the Government as to indemnifications for losses during the war. Briefly stated, the proposal was that 140 millions of indemnity should be granted to Paris, and 100 millions to the departments. The calculations as to how Paris and the departments would respectively stand under this arrangement, having regard to what had already been paid, to the total losses, and to the nature of the claims, were very intricate, and would scarcely interest any but Frenchmen. The general tenor of the discussion was, however, worth noticing, for the majority of the provincial deputies complained that Paris was treated unfairly well, and that while the departments were only to have thirty per cent. of their losses made good, Paris was to receive an indemnity which, according to some, reached nearly to fifty per cent. of its claims. The Government was as firm as it could be, and strongly opposed any increase of the grant; but in the end, after being beaten on a vote, it had to admit a compromise, and to allow the indemnity to the departments to be raised to 120 millions. There was not much virulence or bitterness on the part of the provincial deputies towards Paris. They were all proud of the figure Paris had made in the war, and as the larger part of the claim of Paris was founded on the payment of the eight millions sterling, exacted by the Germans at the date of the armistice, it was impossible to separate the consideration of the claims of Paris from the memories of the famous siege. But what the provincial deputies urged was that there were provincial towns which had suffered in proportion much more than Paris, and that it was very ungrateful as well as unjust to treat such places worse than Paris simply because they were not great cities. Paris, it was said, paid to the enemy four times the amount of its annual direct taxation, but Orleans and Le Mans paid six times, and Versailles five.

Or, if the amount of suffering was to be the test, nothing that Paris had suffered was, said a deputy who was Mayor of Sedan in 1870, to be compared with the sufferings of places like Bazeilles, where the cloud of utter ruin had not even yet passed away from the life of the unhappy peasants. But the deputies who urged these arguments did not affect to think only of the abstract justice of the case. They had before their minds what would be said in the provinces if Paris got too much. The Government, they observed, proclaimed that more could not be given, because the State could not possibly afford to give more. But then the Government proposes to increase the direct taxation of the departments, in order to make good a deficiency which is partly caused by the grant of these very indemnities. What would the burdened provincials say if they realized that their direct taxes were to be increased in order that Paris might be favoured, and get what would be denied to Orleans or Le Mans? Nor was this all. As one deputy remarked, the provincials see fine people go away from the country to Paris, and hear of them living there in a very grand way, and making fortunes, and enjoying every luxury; but then the quiet provincials comfort themselves by reflecting that big towns have their dangers, and that provincial life, if homely, is safe. What then would be the state of the provincial mind if it comprehended that the provinces were to pay extra taxes in order to make good the losses of Paris, and so to protect great people from the very dangers of the capital, the thought of which has infused contentment into so many rural bosoms? Such were the arguments of this typical member of the majority of the Assembly, and if he had spoken volumes, he could not have better expressed the mixture of admiration and jealousy with which Paris is regarded in the country districts of France.

MR. HOWARD'S LANDLORD AND TENANT BILL.

THE malcontent section of the Opposition which still resents its own support of Mr. DISRAELI'S Reform Bill probably suspects that its ingenious leader is once more preparing to educate his party in a branch of learning which is especially repugnant to their inclinations. It appears that Mr. DISRAELI has induced a meeting of his supporters assembled at the Carlton Club to vote for the second reading of Mr. HOWARD'S Landlord and Tenant Bill, on condition that the Bill shall afterwards be referred to a Select Committee. By an odd coincidence Lord SALISBURY has obtained a Committee of the House of Lords on one of the objects of Mr. HOWARD'S Bill. Modern legislation has considerably enlarged the powers of limited owners; and, by one of the strangest contrivances which have ever been devised, certain privileged Companies are enabled to advance money to life tenants for certain classes of improvements. According to Lord SALISBURY, the facilities offered to borrowers are not extended in an equal degree to proprietors who may wish to expend money of their own on their estates. The Inclosure Commissioners indeed may allow advances to be made a charge on the estate; but Lord NAPIER of Ettrick complained that they insist on a scale of payment which includes a sinking fund, as well as interest on the outlay. If it is desirable to secure to the utmost the rights and interests of remainder men, it is proper that charges imposed on the land for the sake of improving its value should not be converted into perpetual annuities or mortgages. Cottages and drains deteriorate in the course of twenty years, and the actual possessor will during that period have probably recouped himself for any judicious expenditure. The present tendency of opinion inclines to the discouragement of limitations and of reversionary estates; and it may be plausibly contended that the present holder ought, for the benefit of the land, to be able to exercise the same powers as if he were tenant in fee. On the other hand, Lord SALISBURY maintains with considerable force that a system of life tenancies affords the best security against the excessive creation of mortgages. The owner of a limited estate in land has no power of raising money in such a manner as to impoverish his successors. Needy and embarrassed proprietors are far more incapable than limited owners of providing money for improvements. It is generally believed that land is more heavily mortgaged in France than in England. As the House of Lords Committee will be composed of members who have a practical knowledge of land, it will probably produce some useful result, although the subject of reference is narrow and almost insignificant.

The Bill which Mr. J. HOWARD and Mr. CLARE READ have prepared has a much wider scope. The principal object of the measure is to provide in all cases the compensation for unexhausted improvements which in many parts of England is already secured by the custom of the country. The Bill is well and intelligibly drawn, and its provisions are for the most part moderate; but the preamble contains an invidious and objectionable assumption. The recital that "it is expedient "for the greater improvement of land, and the consequent "increased production of food therefrom, to amend the law "relating to the occupation and ownership of land in England," is too large for the enactments which follow; and it is evidently intended as an appeal to popular prejudice. The demagogues who propose to expropriate owners and tenant-farmers alike will applaud the assertion that the present tenure of land interferes with the production of food. The existing system of society is founded on the principle that the supply of food, as of all other commodities, must depend on the operation of the motives which affect the owners of property and capital. Direct or indirect attempts to stimulate the production of corn or of cattle on English soil can only be defended by the arguments which were formerly employed in defence of the Corn-laws. Notwithstanding any defects which may exist in the laws which regulate the tenure of land, more food is produced in England by a given number of workmen than in any other country in the world. It may be a legitimate object to remove the supposed impediments which may in some cases restrain the application of capital to the improvement of land; but it is quite unnecessary to propose an abstract resolution in the form of a preamble which might cover the revolutionary proposals of Mr. ODGER or Mr. MILL. It is extremely doubtful whether the effect of the Landlord and Tenant Bill will be to increase by a single bushel the amount of home-grown corn in England. If the measure tends to the improvement of agriculture, the inference that in that case it will tend to increase the supply of food is obvious and superfluous. Acts of Parliament ought not to be framed on the model of those speeches of Mr. GLADSTONE in which general propositions are extemporaneously enunciated for the purpose of deducing from them specific and limited conclusions.

The Bill provides that a tenant on quitting his holding shall be entitled to compensation for three different classes of improvements. Temporary improvements consist chiefly in the application of artificial manures, or in the provision of artificial food, such as corn and oil-cake, for live stock. Durable improvements include sub-soiling, removal of stones, chalking, liming, boning with undissolved bones, laying down in permanent pasture, and other improvements of similar character. The application of quicklime to land ought to be included in the provisions relating to artificial manures. Chalk applied in its natural state to clay lands has a more durable effect. Permanent improvements are such as draining, levelling, warping, works of irrigation, erection of buildings, and other operations which tend to increase the permanent value of the land. No permanent improvement, except draining, or making or improving watercourses, will entitle the tenant to compensation, unless the outlay was made with the written consent of the arbitrator. The exception is just and reasonable; but it almost amounts to a repeal of the clause which provides compensation for permanent improvements. No tenant in his senses would erect buildings or undertake the costly enterprise of warping, without a written agreement with his landlord; and, if written consent is given, it would be a matter of course that the conditions were specified in such a manner as to leave an arbitrator nothing to determine. It is fair that a tenant should be repaid for cost of draining, if the landlord has refused to perform the work on reasonable terms. In some cases the effect of drainage is almost equivalent to the creation of land; and tenants may be trusted not to spend their money in draining dry land for the purpose of afterwards obtaining compensation from their landlords. No outlay for permanent improvements made more than twenty years before is to be taken into consideration, nor any outlay which is not held to have added to the letting value of the land.

The clause which regulates the valuation of temporary improvements will require some alteration. The arbitrators are not to award in respect of the unexhausted value of such outlay more than the average annual amount of such outlay during the last four years of the tenancy. If the enactment is interpreted as a direction to award in ordinary cases a year's outlay on artificial food and manure, the tenant will generally receive a bonus at the expense of the landlord. The greater part of the benefit of artificial manure will probably have been represented by the crops of the outlying tenant; and he will have resold most of the artificial food in the form of fat stock. The provision that a tenant is not to contract himself

out of the benefits of the Act is more than questionable. It is not desirable to surround English farmers with the artificial protection which was thought to be necessary for the security of petty Irish tenants; but it will be unnecessary to discuss the question if it be true that the promoters of the Bill have already agreed to omit the objectionable clause. It is unreasonable that the tenant should be allowed to hold his farm until the compensation awarded is paid or received. Landlords are for the most part solvent and responsible; and if the proceedings in the arbitration were delayed, a contract with an incoming tenant might be rendered by such an enactment incapable of fulfilment. The landlord is to be in turn entitled to compensation for deterioration of his property; but no corresponding security for any payment which he may claim will be given by the tenant. By far the strongest objection to the Bill is its tendency to promote litigation. All questions of compensation are, in default of agreement in the choice of arbitrators, to be determined by an umpire to be appointed by the Inclosure Commissioners. Those respectable functionaries are extremely likely to be subject to a bias; and they may perhaps appoint for each district a standing arbitrator who may have a strong leaning to one of the contending classes. If it is once understood that the arbitrator favours the more popular side, no outgoing tenant will be inclined to make a fair and equitable settlement with his landlord. In some parts of the country no tenant ever dreams of making an improvement, temporary, durable, or permanent. The pales and fences at the end of the term are worse than at the beginning, and the land which perhaps was at the beginning of the tenancy in good condition is filled with weeds and exhausted. Not a single tenant of this class would leave his farm without demanding compensation for improvements which consist exclusively in a return to a state of nature; nor would there be the smallest difficulty in proving the claim by the evidence of neighbouring farmers who would meditate a similar demand against their own landlords. On the whole, the Conservative leader may possibly be right in preventing his followers from opposing the second reading of the Bill; but it was hardly worth while to make an ostentatious display of the sympathies of himself and his party with the tenant-farmer.

SCHOOL FEES IN LONDON.

THE proceedings at the last weekly meeting of the London School Board were of unusual interest. The By-laws Committee reported on two cases of inability on the part of the parents to pay school fees. In the first case the Committee recommended that the fees should be paid for three children attending a school at Bayswater. The father is a painter, but "owing to slackness of trade his average weekly "earnings amount to only ten shillings." Out of this seven persons have to be supported and the mother and two children are ill. Upon this case two remarks at once suggest themselves. In the first place, how have the By-laws Committee satisfied themselves as to the truth of the facts? The School Board has no adequate staff for doing the sort of work which is done for the Guardians of the Poor by the Relieving Officers. Even in small towns School Boards have found themselves powerless to distinguish between real and simulated distress, and the organization for this purpose is not likely to be more complete in a city where even the Poor Law authorities often find themselves at fault. At all events, if there is such a body of inspectors at the command of the London School Board, it is only fair to the ratepayers to let them know how their money goes. They are taxed for the education of poor children. Are they to be taxed in addition for the purpose of investigating the circumstances of poor parents? The carelessness of town populations as to local taxation is so remarkable that it is possible that Londoners may not object to maintaining a duplicate staff of Relieving Officers. But the fact ought at least to be explained to them. It is possible that the By-laws Committee will answer that they have no regular machinery for distinguishing between real and simulated distress, but that in this particular instance they have had exceptional means of forming a conclusion in the shape of the personal knowledge of some of their members or of voluntary agency. If so, how do they propose to deal with similar applications which do not admit of either of these tests being applied to them? Are they prepared to tell other painters who plead that owing to slackness of trade their average weekly earnings amount to only ten shillings, that unless they are known to some member of the Committee, or to some friend of a member of the Committee, no school fees can be paid for their children? It is obvious that to take this line will be to set up a standard of qualification for educational relief not contemplated by the framers of the Education Act. School fees will in future be paid, not for children whose parents are too poor to pay them, but for children whose parents unite the qualifications of being too poor to pay them, and of having done odd jobs about the house of a member of the School Board. This may be the principle on which the ratepayers of London like to see their money distributed, but they ought at least to be consulted before it is made a rule of action for the School Board.

Assuming, however, that the evidence of distress in this case and in all similar cases is perfectly conclusive, a further question arises. How does the payment of school fees on behalf of a man whose earnings, owing to slackness of trade, amount on an average to only ten shillings a week, differ from other forms of outdoor relief? A man who out of this income has to support seven persons, three of whom are ill, must often see his children in want of other necessaries besides schooling. Indeed he must often see them in want of necessaries without which schooling will be of very little use to them. A child will hardly do a good morning's work on an empty stomach, and without shoes his attendance in bad weather is likely to be exceedingly irregular. Why is the relief to be limited to a single form of want when there are others which are scarcely less prejudicial to the children's education than the inability to pay school fees? Mr. PICTON urged on Wednesday that the Board had nothing to do with the circumstances of the parents, but had only to get the children to school. If the Education Act had established a system of gratuitous education, the argument would be perfectly in place. But so long as School Boards are empowered to pay school fees in cases where parents are unable to pay them through poverty, the Board has necessarily something to do with the circumstances of the applicants. We admit that this responsibility has been wrongly thrown on the School Board; and this fact may excuse the Board from using proper precautions against pauperizing the recipients of their alms. But it will not excuse the Government from moving Parliament to put an end to so anomalous a state of things. We hope that Mr. FORSTER will study the report of Wednesday's meeting before he introduces his Bill to amend the Education Act. Whatever alterations the Act may require to satisfy sects or secularists, some alteration is needed if a system of wholesale pauperization is not to be reintroduced under cover of educating the children of poor parents. Mr. PICTON is of opinion that, as the rich get their children educated on public foundations, there is no reason why the poor should not do the same. He ignores, it will be seen, all the reforms that have been introduced of late years into the system which he is anxious to see made universal. But, leaving these out of the question, his inference may easily be disposed of. Whatever abuses there may be in the administration of educational foundations for the benefit of the rich, the parents who benefit by these foundations are not pauperized by their enjoyment of them. No man is encouraged to make an imprudent marriage, or not to lay by against a rainy day, by the hope of getting his son on the Foundation at Eton or Winchester. But the knowledge that they can get their children educated for nothing does remove one of the few inducements to thrift which operate upon the English poor.

The second case reported by the By-laws Committee was an apt illustration of the readiness with which applications for the payment of school fees are made. A man named UNWIN had made such an application to the Greenwich Divisional Committee. He now, it seems, withdraws his application on the ground that he objects to have the particulars of his case published in the newspapers, and says that he will endeavour to find other means of sending his children to school. It is clear, therefore, that he made his application before he had exhausted all the means at his disposal of paying the fees himself. It is fortunate that the dislike of publicity should occasionally serve as a test by which to distinguish inability to pay the fees from inability to pay them without inconvenience. The disposition of parents generally will be to treat the two states as identical, and the only way of forcing them to recognize the distinction is to make the receipt of educational relief as much a public confession of destitution as the receipt of relief in any other form. So long as the law remains in its present unsatisfactory condition, the best thing that can be done is for School Boards to follow Mr. CURRIE'S suggestion, and not to pay or remit fees, for children whose parents are able-bodied, for a longer period than four weeks. It is to be regretted that the *Times* did not report more fully the speeches made against Mr. CURRIE'S motion. We are told that Mr. WAUGH spoke "at some

"length" in favour of the previous question; and as on a division nine members voted on that side against twelve who supported Mr. CURRIE, it must be supposed that his arguments seemed to have something in them. But what that something can have been we are at a loss to imagine. If applications for the payment of school fees on the part of able-bodied parents are held, when once granted, to have been granted for ever, it will be the interest of every father of a large family to become destitute for a week or two in order to exonerate himself for all time to come from the liability to pay for his children's schooling. The man who is in need of relief to-day may be earning good wages two months hence. But a minority of the London School Board objects to any corresponding change being made in his position as regards the education of his children. That was provided at the expense of the ratepayers when he was destitute, and unless some quixotic sense of independence induces him to give notice of his change of circumstances to the School Board, it ought to be provided at the expense of the ratepayers when he is well off. Mr. CURRIE might well say that Mr. PICTON and his friends had pity for one class of poor, those who make application for relief, but none for another class, the struggling ratepayers who have to find the money which enables the School Board to grant these applications, and to educate their own children into the bargain. Educational enthusiasm is a very respectable quality, but, like other virtues, it needs to be kept within bounds. If every application for the payment or remission of fees is to be granted as a matter of course, then ratepayers will soon be demanding the universal establishment of free schools. Whatever other objections there may be to this way out of the difficulty, it does not entail the gross injustice which is involved in making a man who is just able to keep himself and his family above water share his plank with another man who makes no efforts to find a plank for himself. To insist on applications for payment or remission of fees being repeated at short intervals gives the recipient the trouble of making a fresh request, and exposes him to the risk of having any improvement in his circumstances that may have taken place in the interval since the last application communicated to the Board. This is but an imperfect test of the truth of his representation, but it is better than no test at all.

BRUMMAGEM CHIVALRY.

ON Monday evening, it seems, a momentous, but somewhat mysterious, function was performed in one of the upper chambers of Willis's Rooms. With "solemn, almost sacred, "rites"—we need hardly say that we are borrowing the adjectives of the *Daily Telegraph*—the Prince of WALES was installed as the "Most Eminent Grand Master" of the Order of Knights Templars in England, Ireland, and Wales, and the dependencies of the English Crown. The *Times* somehow does not appear to have grasped the importance of this great national event, for it dismissed it with contemptuous brevity in an obscure paragraph. But the *Telegraph*, which has indeed a sympathetic eye for great things, especially for the sort of great things that look very little and trumpery to ordinary people, proved to be quite equal to the occasion; and we are indebted to one of its most powerful artists, aided by its biggest type, for a description of this historical scene which is in every way worthy of it. The description is very full and minute, but there is certainly one point on which, at starting, we should have been glad of more definite information, and that is as to what constitutes a Knight Templar, and what he is supposed to do. It is no doubt highly instructive to learn that "every Knight Templar must be a Mason, but not every "Mason is a Knight Templar," but this carries us only a very little way; and even the assurance, delightful as it is, that "the "Knights Templars who form the Grand Conclaves are the *crème* "*de la crême* of Masonry" rather tantalizes than satisfies our burning curiosity. We are still more perplexed, on turning to a rival print, to be told that the Knights Templars are really not Masons at all. The *Daily News* boldly takes upon itself to assert that the Knights Templars, although "an "exalted degree"—it admits this—are "somewhat distinct "from the craft of Freemasonry." From the difficulty of obtaining information on the subject, we are driven to conjecture that the Templars are a secret order, and that their great secret is the object of their own existence. There is perhaps the less chance of this mystery ever being divulged, as it may be doubted whether it is known to the Knights themselves. But, after all, this is only a detail. We know at least that the Knights Templars exist for the purpose of going through ceremonies, and we may imitate the famous answer about archidiaconal functions by saying that the object of a Conclave is to sit in conclave. But even in regard to the actual business of Monday there is a good deal of perplexing vagueness and confusion. For example, we find the gathering variously designated as a Conclave, a Convent General, a Priory, and an Encampment. All that would seem to be certain is that there was either a Conclave, or a Convent General, or an Encampment, or something else, and that the Prince of WALES was formally installed as Most Eminent Grand Master.

Many persons probably passed along Duke Street on Monday evening without having the faintest notion of the great things that were being done upstairs at Willis's Rooms. There were no external indications of the momentous event. The Prince of WALES—much apparently to the disappointment of the *Daily Telegraph*—arrived "in the most unostentatious manner." It would certainly have been more in the interests of fine writing if the "Most Eminent" had come clothed in mail and on a prancing charger, surrounded by a flashing retinue of Knights and spears. Yet there is an artistic touch to be got out of this unostentatious arrival; for the everyday overcoat and private brougham, the dull, shabby, dusky street, and apathetic passers-by help to give effect to the blaze of mystic splendour which opens upon us when we pass into the hall inside, draped with scarlet hangings, blazing with lights, gorgeous banners on the walls, all the Knights in their mantles, wearing their swords and other insignia, Grand Masters, Great Priors, Seneschals, Constables, Provosts, Almoners, and Standard-Bearers, and in the middle "the Sepulchre, with the "Cross, bearing the figure of Our SAVIOUR." The *Telegraph* was probably reserving itself for Good Friday, or it would have had a good deal to say about the Sepulchre. Not only was there a Sepulchre, but there were prayers; and even more strange perhaps, there seems to have been a real clergyman to read them. The Primate of the order had the equivocal and unenviable distinction of solemnly invoking the blessing of Heaven on the mummeries of a convivial club. This is the part of the ceremony which the discriminating writer of the *Telegraph* apparently alludes to as "almost sacred;" but, uncharitable people might be tempted to describe it by a different epithet. It is an obvious objection to the introduction of a religious service at the mock installation of a sham dignitary that it is apt to seem to be only part of the farce with which it is associated. The Grand Master bound himself by solemn oaths to uphold his authority to the best of his ability, not to acknowledge any superior, co-ordinate, or inferior jurisdiction, nor to permit his authority or prerogative to be infringed; but he would probably have been puzzled to say what authority or prerogative he possessed. When the Herald had made due proclamation of the installation, the Knights in order filed past from both sides, saluting with their swords, and, after some other formalities, the affair was over. But of course there was a dinner, or rather, we should say, a "banquet," afterwards. We are assured by the *Daily Telegraph* that the influence of Masonry, including that of the Knights Templars, is "as widespread as it is "beneficent, and that its subtle power, in this as in other "instances, will be exercised for the general good." It is the peculiar subtlety of this beneficent influence which perhaps prevents its being more easily appreciated; but it appears to be expected that the ceremony of Monday last will produce a deep and important effect on the relations between England and Ireland. It is confidently assumed that the Irish people will "rejoice" at the fusion of the Conclaves, and that Home Rule and Fenianism will be effectually checkmated. It is awkward for this supposition that everything connected with Freemasonry should be vehemently denounced by the Church to which the majority of the Irish people happen to belong; but the Templars themselves, to do them justice, do not seem to have had any object in view except their own diversion.

We should think that most people who have taken the trouble to read the account of these proceedings must have been struck by the extreme childishness and silliness of the whole affair, and must have been rather amazed that any men of education and intelligence could be found to take part in such an idiotic performance. An impromptu masquerade of this kind might be excusable enough as a bit of fun in a country house, just to amuse the children; but that grown-up men, men with beards to their chins, fathers of families, should actually make elaborate preparations for such mummery, and should go through it solemnly and deliberately, and send for reporters to come and glorify their tomfoolery, is really about as astonishing as anything that could well happen. It

is just possible, however, that one good result may indirectly be promoted by this buffoonery. If it does not bind Ireland and England together for ever in the fondest love, it may at least help to establish a sort of sympathetic understanding between the upper and lower classes in our own country. One touch of nature makes the whole world kin, and the working-men who are in the habit of occasionally appearing in green tunics, gaping boots, and hats with enormous plumes, ought now to feel that noblemen and gentlemen who are capable of taking delight in the twopenny tinsel and puerile parade of the Knights Templars cannot be so very different from themselves. The effect would of course have been very much greater—and it is a pity it was not thought of in time—if the Conclaves had all gone in vans to the Crystal Palace, and held their Encampment, Priory, General Convent, or whatever they call it, in the grounds. It would have been interesting to see "the *crême de la crême* of "Masonry," and of society generally, emulating the antics of the Foresters, Ancient Shepherds, and other Odd Fellows. It would of course be hard to say that the upper classes should not be allowed to indulge in innocent amusements as freely as the lower orders. It might be pleaded that they are deprived of the natural outlet for their activity which others find in daily labour, and the inevitable tedium of an existence devoted to pure amusement cannot fail to excite general commiseration. After all, the worst that can be said of the Templars is only that their diversions are silly and babyish, with perhaps just a touch of profanity in the introduction of prayers. At the same time, it is not perhaps altogether unreasonable to expect that men of rank, education, and refinement should show some degree of elevation and intelligence even in their relaxations, and the vulgar stupidity of the Templars' ceremonial, with its tawdry finery and cheap rant, is no doubt rather depressing from this point of view. Life, as a philosopher has observed, is not all beer and skittles; and even hunting, races, pigeon-shooting, and playing at being Templars does not exhaust its possibilities. It may strike some people perhaps as the oddest part of the affair that a real Prince should find any enjoyment in playing at being a sham Prior. It has sometimes been regretted that the Heir-Apparent in this country should have so narrow a sphere for public activity. He is necessarily excluded from politics, and it would probably be resented if he were to connect himself too closely with military affairs. Yet beyond these limits there is ample scope for a manly, elevated, and patriotic life. A Prince who allows himself to be associated in the public mind only with the pursuit of mere amusement, and that not of the highest and most intellectual kind, is obviously sacrificing a large measure of his legitimate influence.

HOLIDAYS.

THERE is a certain trite old story, which is indeed so trite that we are half ashamed to allude to it, about a King and a philosopher. It should be esteemed as great an offence in literature to bring up worn-out anecdotes as in society to wear worn-out clothes. The German who evolves things out of his consciousness, the notorious New Zealander, and the Indian who asked what the tortoise stood upon, should be abolished by Act of Parliament. We will therefore indicate the anecdote in question only in a circuitous manner, by saying that it is intended to illustrate the folly of not taking a holiday at once, instead of wasting your life in qualifying yourself for a holiday. Englishmen are apt to complain, or rather to boast, under the form of complaint, that they are incapable of taking this piece of advice. They labour from youth to old age without once fairly getting out of the traces, and asking themselves plainly whether their life is, on the whole, worth leading. Would it be really better if they did? Most people would of course reply, when the question is stated in this way, that it certainly would be better. They would point to the innumerable cases of men who are killing themselves by inches in the effort to rise one step in the ladder when they are already perfectly comfortable. Thousands of people might be enjoying reasonable lives, with opportunities for self-culture, for social enjoyment, and for charitable effort, whose whole energy is absorbed in the desperate struggle to add superfluities to comforts. They are well; they would be better; and they get a softening of the brain. That is the history of many wasted lives. Things might be changed if only people would systematically step aside from themselves at stated intervals and make a careful valuation of their existence. Probably most men can recall certain moments at which such a new light has flashed upon them. They have felt a shock such as comes across us when we accidentally catch sight of ourselves in an unexpected mirror, and, mistaking our own image for somebody else, exclaim frankly, What an ill-looking fellow that is! The mirror may be formed out of a benevolent retrospect, or it may be constructed out of our own imaginations. Hermits who retired to the deserts in old days were haunted by strange phantoms, and probably the strangest and most instructive of apparitions were their own doubles. It is worth while, so it is suggested, that we should periodically retire to such deserts as lie within a day's journey from Charing Cross to have a chance of a similar vision. Sitting in solitude, apart from the noise of carriages and the gossip of clubs or newspapers, we shall perhaps catch sight of a familiar and yet a startling figure. We shall, it may be, see a worldly sophisticated figure, deformed by unhealthy toil, in an uncongenial atmosphere, cramped by the artificial dress which has become a kind of second skin, and shall be shocked to discover that the ugly object is nothing but a faithful copy of ourselves. The patriotic Minister will be revealed to himself as a time-serving demagogue, the eloquent preacher as a mere mass of unctuous sentimentalism; and half the world would discover that in one way or another it was dropping the substance in pursuit of the shadow. Would not such revelations contain some highly useful, though very bitter, lessons? and should we not all come back wiser and better men from our temporary retreat? Holidays so employed would speedily raise the tone of society, and disperse half the shams by which others besides Mr. Carlyle are offended.

There is undoubtedly much truth in such a theory. It would probably be a very excellent regulation if every Prime Minister, for example, were condemned after a certain tenure of office to pass a proportional time in Pentonville Penitentiary. Left there to himself with nothing but bread and water, with all distracting books, such as Homer or treatises of controversial theology, carefully put out of his way, he might doubtless issue from his confinement a wiser and a sadder man. A little communing with the eternal silences would teach him some lessons differing from those which are generally enforced by the "hear hears" of the House of Commons. And it may be added that our present system of keeping holidays is very little calculated to promote such fruitful meditations. Nine men out of ten at the present day complain of being overworked; a complaint to which it is well to listen in most cases with a very sceptical ear. Overwork is generally a polite synonym for being bored. A man is weary, not from excessive application, but from want of interest in his work. A holiday, therefore, means an opportunity for distraction, or, in other words, for discharging the pent-up energies which have been accumulating during the time of elaborate idleness, miscalled labour. The more active-minded seize the occasion for riding some favourite hobby with new zeal; and even the more frivolous seek for the excitement derivable from sightseeing or crowds. A large number of persons, it is credibly supposed, will spend their holiday this summer in walking the treadmill of a Universal Exhibition in a capital city. Holidays spent in this fashion are certainly not likely to bring with them any deeper insight into the conditions of our own existence. Rather the case is likely to be inverted, and business hours are likely to be spent in reflecting on the extreme absurdity of our leisure occupations. Were men really in search of the calming influences of a holiday, they would make their retreat elsewhere. They would scatter as widely as possible, instead of herding together in migratory droves. They would seriously study the neglected art of doing nothing. Persons who feel this eccentric desire for solitude may easily gratify their propensities. The best of all retreats is of course to be found in London. A Sunday walk in the City produces a sense of utter retirement far more than the wildest moor; and there is no better place for calm meditation than the deserted smoking-room of a club in the dead season. The absence of the ordinary life in such places becomes a positive instead of a merely negative element. You feel yourself to be not merely alone, but deserted, and consequently are not only at liberty to moralise if you please, but are compelled to moralise whether you like it or not. If a member of Parliament could secure the key of the House of Commons and look upon the empty benches from the Speaker's chair for a couple of hours daily during the recess, he would be qualified at the end of it to preach a moving course of sermons on the everlasting text, Vanity of vanities. The old ghosts of dead politicians would sit with him, not as they appear when invoked by some orator appealing to the glories of the British Constitution, but in a sadder and more sober light. Patients are sent to breathe the air of pine woods or of mountain heather; why should not those who are suffering from the moral diseases engendered by too much intercourse with the world try the effect of the strange aroma which lingers in places consecrated by old associations?

The advantages, whatever they may be, produced by temporary retirement from our ordinary selves are indeed counterbalanced by very considerable evils. Few people are really qualified to turn such opportunities to good account. Repentance is an excellent thing when it leads to action, but if it means a simple disposition to kick against the inevitable, it is a very questionable frame of mind. When a man is once fixed in a groove, the best thing that he can do, in ninety-nine cases out of a hundred, is to stay in it. Why then should he cultivate fancies which are only likely to make him discontented? Before it was generally understood that teaching people to read and write was a short way of converting men into angels, good old-fashioned Tories used to argue that it was absurd to disqualify people for their ordinary duties. A ploughman could drive his horses just as well without composing poetry; and, if you tried to make a Burns of him, the chances were that you would make a drunken bard of a sober ploughman. It was easy to reply that education when universal

would not disqualify men from any employment; and to add more frankly that, as society is not perfect, it was desirable to encourage discontent with existing arrangements. There was, however, a certain vein of truth in the old complaint, which has perhaps been put down a little too summarily. But, however this may be, the argument is more or less applicable to most of us. We are chained down to certain work, whether ploughing or preaching, which we naturally regard as altogether unfit for our talents. Luckily for us, the chains are too strong to be often broken, and we are forced, in spite of ourselves, to stick to our trade. Shakspeare complained with a good deal of bitterness that his nature was almost subdued "to what it worked in, like the dyer's hand"; and he no doubt thought that he would have done something much more worthy of himself if fortune had provided him with abundant means to pursue his own fancies. On the whole, however, we are tolerably content with *Hamlet*, and should have certainly refused, if we had been consulted, to remove the fetters which forced him, as Pope says, "to grow immortal in his own despite." The number of people who agree with Shakspeare that they could do infinitely better in any other sphere than their own is considerably greater than the number whose fate is really so kind under such an appearance of cruelty. But, though most men may be bad enough in the place where their fortune has placed them, it is probably true that they would generally be worse in the place which they would select for themselves. If by some magic every man could appear after Easter in the character which he conceives himself most fitted to adorn, one of the first results would be the appearance of some thousand epic poems and systems of philosophy in the next few months; for there is no man of any intellectual activity who does not conceive himself to be potentially a Milton or a Locke. Now the meditations to which we deliver ourselves on rare occasions of self-inspection are for the most part confined to the two topics of regretting that we cannot change the past and inventing chimerical schemes for the future. It is an exceedingly tempting, but not a very useful, employment to speculate on what might have happened now if something had formerly happened which did not happen; and it is almost equally pleasant to carve out imaginary fortunes in the future. A man who can strictly confine his hypotheses within the barriers of the realizable may profit by his hours of solitude; but those who have the necessary self-command are rare; and therefore it is probably better for the bulk of mankind, contrary as their conduct may be to the precepts of well-meaning moralists, to use a holiday simply as a means of distraction. We are all more or less in the position of galley-slaves doomed to unpleasant labours; and as few of us can hope to escape, it is as well to employ our moments of relaxation rather in the first absorbing amusement that comes to hand than in thinking of the pleasures of not being chained to the oar. The holiday of the truly philosophic kind is only for true philosophers, and their numbers are strictly limited.

MERTON PRIORY.

A MONASTIC ruin, if ruin is exactly the word in the case of which we speak, in what may now pass as a London suburb has something almost more incongruous about it than if it stood in the heart of London itself. London—at any rate the proper London and its daughter of Westminster—is, after all, an ancient city; it is mainly owing to the comparatively recent fire that it does not proclaim its antiquity as clearly as Bristol or York. London has been going on in one shape or another at least from the days of Aulus Plautius; many will doubtless be offended if we are not prepared to place its beginnings any number of thousand years earlier. It has gone on since that time, constantly changing, but changing in that kind of way which is the surest mark of permanence. London differs now from the London of William and the London of Constantine, as a modern city must differ from a mediæval and a Roman city. But the likeness at all those times is much stronger than the unlikeness; the London of all those dates agrees in being a city and one of the chief cities of Britain. With the suburbs of London and with the neighbourhood of London generally the case is quite different. No part of England changes more, and it changes at once gradually and suddenly. Till quite lately a great part of Surrey must have been one of the wildest parts of England; parts of it are so still. Large districts look as if they had been untouched by man's hand during all the time from the battle of Wimbledon till people began to build villas a few years back. The passenger who goes from London to Basingstoke or from London to Reading by the Surrey route, goes through a land wilder than anything that he will see again till he gets to the New Forest—we are inclined to say wilder than anything that he will see again till he gets to Dartmoor. The incongruity of a piece of wild heath, with spick and span houses scattered here and there, is something like the process which goes on at Bournemouth, where every man cuts down so much of the wood as is needful for the site of his house, and leaves the trees growing ready made in his garden. One feature of the country not the least striking to the passer-by is that, at one stage of his journey, he goes through a district which seems to be inhabited by dead people only. Nearer again to London, at Wimbledon, Tooting, Streatham, Clapham, and in all that district, we are still struck by the unenclosed land, the commons, some of them more or less famous. Open spaces of this kind are certainly more common round London than in most parts of England, and when surrounded by houses, they have a distinctly suburban character which is seldom seen anywhere. Near Wakefield there is something of the kind, a large open space surrounded by houses of considerable size and considerable age, and the feeling which it at once suggests is that we have been suddenly moved into the neighbourhood of London. All this shows that the country was never fully reclaimed till it became suburban; it could never have had the look of an ordinary agricultural or grazing district: it passed from a more natural state into a more artificial one. Still here and there, among the scattered dwellings of greater size, among the respectable houses of a century back and the prim villas of our own time, we come upon remains—survivals one might almost call them—of the old villages, as they stood before they became thoroughly suburban. And among them, in a spot jammed in in a strange way by roads and railways, in a low and certainly not attractive spot, we find the remains of a house which at once suggests a long string of historic memories, the Priory of Austin Canons of Merton.

The name of Merton, *Merantún*, *Meretún*, appears in our history long before the foundation of the Priory. This last dates only from the reign of Henry the First, but we first hear of Merton in the eighth century. It was the scene of that remarkable story of the death of Cynewulf which so strongly brings out the old institution of the *Comitatus*, the personal tie which bound a man to his lord, and which, as in this case, was often held more binding than the common duty to the law and to the King as the common head of the State. In this story Cynewulf is killed by his kinsman, the banished Ætheling Cyneheard, and his following, and the King's death is avenged by his own following on his murderer. The King's men show all zeal and loyalty, but their feeling is evidently one of attachment rather to their own personal lord than to the head of the State. The men of the outlawed Ætheling are as faithful to him as the King's men are to the King, and each side seems to make it a point of honour to refuse all offers made by the other. Each side alike fights to the death, and on each side one wounded man only escapes with life. Of the King's men a British hostage only survives; he may well have had less loyalty than his fellows to the West-Saxon King, who had fought many fights with his countrymen. In the case of the one who escaped on the Æthelings side the personal tie again comes in in another shape. The one man who was spared was the godson of the Ealdorman Osric, the leader of the King's party, and he owed his life to that spiritual kindred. In the next century, in 871, Merton was the scene of one of the battles of Æthelred and Ælfred, one of those puzzling stories in which we read that the Danes were put to flight, and yet that they kept possession of the place of slaughter. This seeming contradiction has sometimes been turned against the credibility of the Chronicles. Yet it is quite possible that the Danes, every man of them a trained soldier, who had no homes and no hope except in keeping together, might have to give way before an impetuous charge of the raw English levies, and yet be able to recover themselves while the momentary victors were scattered abroad, while some perhaps in the blind impulse of victory were already beginning to go to their own homes. When Merton was the scene of events which stand out in our annals like these, it is remarkable that its name is hardly ever found in the ancient charters—only once, as far as we can find, in an alleged charter of Eadgar which Mr. Kemble marks as spurious. The foundation of the Priory in 1117 brought the place into more importance. One Gilbert Norman, Sheriff of Surrey, is called the founder; but in the foundation charter of Henry the First no founder is spoken of but the King himself. This however may only be by the same courtly fiction by which Edward the Second and Queen Elizabeth are held to have been the founders of Oriel and Jesus College respectively. In the time of its first Prior, Robert, who bears the surname of Bayle, the house of the Canons of Merton became for a while the dwelling-place of a guest and scholar who was to win himself a name far beyond the bounds of Merton or of England. Thomas of London, the son of Gilbert of Rouen and Rohesia of Caen, the future Chancellor and Archbishop, came in his boyhood to learn the first beginnings of knowledge at Merton, before he went on to his more matured studies at Paris. And, according to the legend, it was at Merton that the future greatness of the son was revealed to the father. William Fitz-Stephen tells us how Gilbert, coming to see his child, amazed and scandalized Prior Robert by falling down before him. The Prior rebuked the mad old man who paid to his own son the honour which his son should have paid to him. But Gilbert, so the tale runs, knew better, and privately told the Prior that he bowed to one who would one day be great in the eyes of the Lord.

But it is in the thirteenth century that Merton plays its most important part in the history of England. There are no Merton Annals that we know of, but the Annals of the other houses contain several entries of local Merton matters, besides their notices of events happening at Merton which concerned the whole kingdom. And moreover Merton was the place of an event which was the indirect cause of great results. If Merton was the seat of the early learning of Thomas in days when Oxford was not a seat of learning at all, it was also the birthplace of a man who did more than any other to make Oxford a seat of learning. At Merton, where Alfred fought a battle and where Walter of Merton was born, the real and the imaginary founder of the collegiate system in Oxford are in a manner brought face to face. But during this century events connected with Merton, both local

and general, press fast upon us. In 1222 the Dunstable Annals tell us that the tower fell, doubtless from the same cause which brought down so many towers in those days and that of Chichester in our own. In 1230 a Bishop of Llandaff, Elias of Radnor, Treasurer of Hereford, was consecrated at Merton by the obscure Archbishop Richard le Grant, who covers the short time between the great names of Stephen Langton and Edmund Rich. The monks of Christ Church, as we are pointedly told, did not fail to protest against this breach of privileges of the metropolitan church. Two years later the Priory of Merton finds its way into the general stream of English history. Then it was that the famous Hubert of Burgh, charged with all manner of crimes, took shelter and hid himself all trembling among the canons—"ad ecclesiam Meritoniæ fugit inter canonicos pavidus delitescens," says Roger of Wendover; then King Henry bade the Mayor of London to march at the head of the citizens and seize Hubert and bring him before them alive or dead. Set out they did, an army—it is called *exercitus*—of twenty thousand; but while they were on their way the Earl of Chester wisely suggested to the King that such a force, when once got together, might be dangerous ("si talem excitaret seditionem in vulgo irrationabili et fatuo, posset Rex timere ne seditionem semel inchoatam sedare non valeret cum vellet"). So the citizens marched back again, and the rest of the history of Hubert is in no way connected with Merton.

In the course of the same century Merton was the scene of two important meetings, a great Council of the Realm, and of a Synod of the Church. The Council of Merton in 1236 was an assembly whose acts won the approval of Matthew Paris; and it is even famous for the answer of the Barons, which has been cut short into the phrase which has almost passed into a proverb—"nolumus leges Angliæ mutare." The saying is perhaps sometimes quoted by people who do not remember what was the question at issue. It was no other than the proposal to make the law of England agree with the Canon and Civil Law—that is to say, speaking generally, with the law of the rest of Christendom,—in making children born before wedlock legitimate by a subsequent marriage. There is an extant letter of Robert Grossetesto, in which he pours forth a flood of Scripture and canonical argument on the point. But the Barons were not to be moved, and this has ever since been one of the points in which English law stands by itself. The other assembly of Merton was a purely ecclesiastical one, held in 1258 by Archbishop Boniface of Savoy, who had by that time tamed down a little from the days, eight years before, when he had held his wonderful visitation of St. Bartholomew's Priory. He had now changed into a vigorous asserter of ecclesiastical discipline and ecclesiastical rights, and in the canons which he put forth at Merton we find the immunities of the Church strongly stated, and the secular power in all its forms, from the King downwards, strictly taken to task for various breaches of alleged ecclesiastical rights.

A place which has seen all this, a place which so specially connects itself with the development and the special insular character of the English law, is certainly entitled to rank high among the historic spots of England. But we cannot say that the place is now particularly impressive. We could have wished to see some stately remains of the Priory itself, some castle or royal hall, or, better still, some untouched piece of hill and plain on which we could trace out the battle-field of Alfred. But the roads, the railways, the factories, the general atmosphere of a somewhat mean suburban village, are less favourable for research and contemplation than the hillside of Assandún or the keep and hall of Kenilworth. Yet Merton Priory, a rich foundation, whose income at the time of the Dissolution was over a thousand pounds yearly, has by no means vanished without leaving traces of itself. No remains that we could see of the church or of the domestic buildings of the house are left, but the wall which enclosed the monastic precinct is still nearly perfect; we suspect that it was quite perfect till the coming of the railways. And the preservation of this particular trace of the ancient building is not without its effect. Though, as far as we can make out, there is positively nothing to be studied within the walls, yet there is something striking in finding the old precinct in this way still fenced off; it is a reminder which is quite as speaking as any mere fragment of the church or monastery would itself have been. And the old associations of the place are not quite forgotten. The Priory, exalted as usual into an abbey, has left its name on more than one point of local nomenclature, and vague traditions still hang about of its having been the scene of events beyond the common. Still the old associations are, perhaps not unnaturally, not quite so strong as some later ones. Merton has been the dwelling-place of a modern hero. Nelson once lived there, and several names of streets and suchlike places remind the visitor of the fact. And after all the latest, and all but the earliest, associations of Merton are not incongruous. If we can conceive the great King who fought at Merton feeling as it were abashed in the presence of a man whose real glory has been so shamelessly transferred to himself, the latest associations of Merton connect his name with one who really carried out a work which he began. The fictitious deeds of Alfred may be forgotten in the presence of the real. A place which beheld the exploits, though on another element, of the first founder of the English navy was no unfit dwelling-place for the man who raised it to its highest pitch of glory. On a spot where the two names of Alfred and Nelson meet together we may well hail one of the many cycles which bind the earliest and the latest stages of English history together.

DESTITUTE BARRISTERS.

MR. WEIGHTMAN, a barrister, has been sentenced to six months' imprisonment for stealing a book from the library of the Inner Temple. Mr. Weightman did not confess, though he did not exactly deny, the crime; but after the jury had returned a verdict against him, he entreated the judge to sentence him to penal servitude, "in the hope that before the full extent of the time of punishment had elapsed he might find, even in a felon's grave, that repose which he had in vain sought in the world, whether in literature or in the daily pursuits of life." He explained that he had been repeatedly on the brink of starvation, and had lived for weeks and months without a dinner, "simply upon bread and tea, and such nutriment as that," and that he had sold "the coat from his back, and the shirt from his skin," to supply his daily wants. There would seem to be no doubt that he was in a most miserably necessitous condition, and if he had addressed in the first instance to the jury the appeal which he afterwards addressed to the judge, his fate, even with the clearest evidence against him, might have been different. There can be no question that he stole the book; but if it had been pleaded on his behalf that when he stole it he was, through want of food and distress of mind, not competent to know what he was doing, the plea might possibly have been successful.

This case appears to have thrown some of our contemporaries into a very wild state of mind. It is impossible to say whether they find it more difficult to account for a barrister stealing a book or for his being impelled to do so by absolute destitution. Of course it is very sad that any member of an honourable profession should either commit a crime or be in danger of starving; but we cannot help thinking that, if Parliament had not suspended its sittings, we should have heard less about this unfortunate gentleman and his dismal fate. It is quite true that a barrister is always supposed to be a gentleman, and that he is entitled to write Esquire after his name; but then nowadays everybody fancies himself quite as good a gentleman as everybody else, and better too, and all the world calls itself Esquire, whether it has any right to the designation or not; so that, after all, this distinction does not come to so much in real life as might be supposed. Every Term a considerable number of young gentlemen are called to the Bar, perhaps twenty or more at each of the chief Inns of Court; and as there are four Terms in a year, it is easy to calculate roughly what must be the continuous additions to the numbers of the profession. Until lately anybody could join who could pay down 100*l.* as a deposit for fees, and who had leisure to attend two sets of lectures and eat so many dinners in the course of three years; whether he listened to the lectures, or was even capable of understanding a syllable of them, was not of the slightest consequence. He might, indeed, have been utterly unable either to read or write or even to speak his own or any other language. The Benchers were good-natured enough to take for granted that all who sat out the lectures necessarily imbibed the wisdom and learning which was poured forth for their edification; and the consumption of a fourth part of a bottle of port—of the sort called "old and curious" at cheap taverns—at each of the dinners put the finishing touch to a legal education. Admission to the Bar is now less easily obtained, but the conditions are not particularly onerous, and every year a great many young fellows get called, not perhaps with any settled determination to stick to the Bar, or with any consciousness of abilities for it, but simply because it is a start in life that does not cost very much, and that may or may not lead to something afterwards. After all, it is argued, a man is none the worse for being a barrister, even if he does not see his way to succeed at the Bar, except indeed as regards the investment of the entrance money, and that is not a very serious affair. The stakes are small compared with the possible winnings. It will easily be understood, therefore, that the Bar is not only desperately overstocked in numbers, but includes a very miscellaneous set of characters. That in a large body of this kind a stray member should happen to fall into destitution or criminal courses is, after all, not particularly wonderful.

It seems that only a few months ago a barrister died in very destitute circumstances. His death, it was clear, had been hastened by want, and at this time Mr. Weightman took a prominent part in bringing to light the dark side of the legal profession. There is no reason to suppose that penury and destitution are unknown among members of this any more than among the members of any other profession. The number of barristers in actual practice has through the extension of local courts greatly increased of late years, and it is probably destined to go on increasing. But the men in practice, in steady, regular, continuous practice, are still few compared with the number of men who have qualified for the profession. There are many reasons why barristers fail in their own line. They may not possess the requisite amount of ability or industry, or they may have allowed themselves to be distracted by literary or other occupations, or they may have been unable to procure good introductions at starting. The ordinary work of the profession makes very slender demands either on the intellectual capacity or learning of those who follow it. There are few really good lawyers—that is, lawyers who know the law—now at the Bar, and still fewer good speakers. The great run of lawyers are content to scramble on with mouthfuls of law picked up from day to day as occasion requires, trusting to text-books and luck for getting up the necessary information when a call happens to be made for it. The

common oratory of the Bar is a deplorable exhibition. It has reached a high average standard when it is just articulate, and does not too violently outrage the rudimentary laws of grammar. With the exception of the Lord Chancellor and the Chief Justice there is hardly a judge on the Bench who, to say nothing of elevated thought and literary subtlety, can even turn a decent sentence; and at the Bar Sir John Karslake and the Attorney-General stand almost alone in preserving the old traditions of forensic eloquence. It seldom happens that if a barrister has a fair chance of getting into practice he has not sufficient ability to take advantage of it. But many men break down through want of application, or through allowing themselves to be drawn aside, during the dull years of waiting, into other grooves, and many more through want of the necessary introductions at the outset. The key to the profession lies after all with the attorneys. When a man has made a name, and taken up a position, he may be independent of the attorneys, but in the first instance it is to them he must look for an opening. The chances are terribly against a man of only average ability who starts without the open sesame of their support. An English barrister cannot, like an American, advertise in the newspapers. He is forbidden by etiquette to tout or solicit briefs. Touting no doubt is practised, and in the lower criminal courts to a scandalous extent, but it carries a taint with it, and seldom pays in the long run. A barrister can do little else than take chambers in an Inn, have his name painted up at the foot of the stairs and published in the *Law List*, and then sit in his room waiting for briefs, with an occasional visit to the Courts to air his wig and shake the creases out of his gown.

There are two classes of men who have good prospects at the Bar—the men who have been born or married into a wide-spread attorney connexion, or into a connexion that, in one way or another, has influence with attorneys; and the men who have high natural abilities and good powers of work, with some private means to keep them going at the beginning. For the rest the outlook is very cheerless indeed. Perhaps the most pathetic stage in a barrister's career is that in which he fancies, or at least other people fancy, that he is making progress when it is only an empty show. He is often holding briefs in Court, and his name is in the papers, and his table in chambers is covered with papers, some of them marked with handsome figures. Yet all this practice may be perfectly illusory as far as any means of subsistence is concerned. The young barrister may be holding briefs for seniors who pocket the fees without ever dreaming of giving him a share, or he may get into the hands of one of that too numerous class of attorneys who pay over to their counsel only small instalments of the fees for counsel which they have charged to their own clients. The Long Vacation, compressing the work of the year into a few months, and some of the Trade-Unionist practices of the Bar, such as exclusive circuits and special retainers, tend to keep the bulk of the business in the hands of a comparatively small body of men, and increase enormously the chances of those who by personal connexions have attained a good start as against those who have not enjoyed this advantage. It is not surprising, therefore, that there should be failures at the Bar; the proportion of failures must always necessarily be infinitely larger than the successes. But it is certainly rare that a man who, like Mr. Weightman, has utterly broken down at the Bar, and has had it painfully brought home to him that he has not a ghost of a chance there, should not be able to obtain a livelihood, however modest, in some other way. A barrister who has failed at the Bar has still all the world open to him. If it were not so, the libraries of the Inns of Court would certainly run some risk of being pillaged wholesale.

A writer in the *Daily Telegraph* has been led in the course of his reflections on this case into a highly suggestive survey of the opportunities of plunder which are open to any one who is conventionally recognized as a gentleman. "Jewelry, plate, forks, a hundred valuable articles of portable property, are every day thrown in his way." He may plunder the houses at which he visits, pocket the spoons at his club, or carry off the books from the library, "any one of which would, upon the average, sell for half-a-guinea." Then there are the coats in the cloak-room, and the umbrella-stand offers a handsome harvest. But the *Telegraph*, while it paints the temptations that lie on every side in the strongest colours, produces its antidote—to reflect on the maxim *noblesse oblige*. These are levelling days, and *noblesse oblige* must have rather come down in the world when it is used to fortify readers of the *Telegraph* against the temptation to pocket spoons and walk off with other people's umbrellas. Plato too is pressed into the service, with his "immortal thesis that honesty is its own reward, and the best of all possible policy." It is satisfactory to know that the arguments of Plato on this point "stand to-day as they stood more than two thousand years ago," but, considering the class which is being preached to, one cannot help thinking that a reference to the police would probably be more effectual than a citation from Plato.

THE WILD ANIMALS OF THE HIGHLANDS.

COULD the practical school of economists have the wishes of their hearts realized, the British isles would be rolled out as flat as Holland, the mountains would be tumbled into the lakes, and the whole would be reclaimed, drained, top-dressed, and divided into symmetrical allotments which might be partitioned among the community on the principle of manhood landowning. The "vermin" of the country would be extirpated, of course; indeed there would be no longer cliff or cairn, rushy swamp or tangled copse, to furnish them with eyries, or lairs, or shelter of any kind. Happily there are insurmountable physical obstacles to the realization of these dreams of Utopia, and the gentlemen of the positive school have scarcely that faith in their people's paradise of the future which would enable them to remove our mountains and change all the moorland into waving cornfields. But if the world keeps moving at its present pace, and if the Scotch agitation against any species of Game-laws finds voice and vote in a unanimous chorus of delegates solemnly pledged to their abolition, it is possible that considerable strides may be made in the desired direction. Much depends on the upshot of the inquiry that is going on at present, and on the views which the Parliamentary Committee may express on the controversy between the Highland game-preservers and the economical utilitarians. Apart from considerations of sport and proprietors' profits, it is certain that the sympathies of lovers of the picturesque in nature must go all in one direction. Our wild animals have been decreasing fast and steadily. The system of grouse preserving has told terribly against them, for the keepers wage implacable war against all manner of vermin that prey upon the grouse. The extension of sheep-farming has been greatly against some of them, for the eagles and the foxes in particular take toll freely of the lambs. But the deer forests, on the other hand, have been in their favour, although more especially in favour of the smaller and more insignificant species; for in the deer forest everything is encouraged that helps to keep down the grouse. So that if the beasts and birds of prey have greatly decreased over the country in general, we find some comfort in the thought that in some of the most savage and sequestered scenery of Scotland they have latterly been decidedly on the increase.

It is no easy thing to take stock of these shy creatures, whose instincts lead them to shun the sight of man, and many of whom love to lie close in the daytime and to do their hunting in the night. The estimates that are hazarded even by the best authority must of course be of the vaguest kind. But to those who are interested in the subject we recommend a lecture lately delivered by the well known author of *The Moor and the Loch*, and published by Messrs. Blackwood. Mr. Colquhoun has much to tell that is worth the hearing. He is a veteran sportsman and naturalist, and an admirer of the picturesque and beautiful as well. We fancy the best part of his life has been passed in Scotland, and it is considerably more than half a century since he first carried a gun as a boy on his father's wild shooting grounds on Loch Lomond. In that half-century he has seen some melancholy changes. Game generally has greatly increased, for half a century ago there was no market for shootings. The proprietor and his friends shot over his own ground with their single barrels, and were contented with the light mixed bag which the keeper could carry easily on his strong shoulders. That functionary's place was a good deal of a sinecure in those days, and his office very much an honorary one. When comparatively few strangers were moving about, permission to shoot was lightly asked and easily granted. It was about the time when Walter Scott's novels were beginning to bring the Highlands into fashion, and sending Southern visitors in search of scenery up romantic glens that had never been trodden by the Saxon foot. It was a little after the time when Francis Tyrrel and his half-brother Bulmer had liberty to sport over the laird of St. Ronan's moors because they chanced to be putting up in a change-house on the property, and when old St. Ronan's keeper winked at the doings of the veteran poacher who kept Mrs. Dodd's larder supplied with muirfowl. But if sportsmen were scarce and not very deadly, it was all the worse for the grouse. If outlying ground was seldom shot over except by occasional poachers, the vermin had it their own way everywhere. Foxes might be hunted down when they made themselves too obnoxious to the sheep farmers, but the keepers seldom wasted their shot on carrion, and had learned nothing of the arts of trapping and snaring. But since Highland shooting has become the rage, pitiless war has been waged against everything that could tend to thin the stock of game and deteriorate the value of shooting rents. On moors where the sportsmen have kept on friendly terms with the shepherds the breed of birds has been artificially increased till overtasked nature has been driven to assert her rights, and has periodically relieved the overstocking by an outbreak of the grouse disease. So with the deer. In olden times the red-deer was really a wild animal. The Highlands which he inhabited were far less solitary than now, although they were little troubled with English tourists. Most of the glens were thickly peopled by aborigines, whose descendants have since been shipped to America and the colonies; you may still trace the foundations of their hamlets, and come upon the abandoned mountain burying-grounds where they sleep. These cottiers had their cows and their corn. The mountains were grazed everywhere by sheep and goats and, black cattle as shy as the deer. The deer were kept continually on the move, and their restless and nomadic life did not tend to their multiplication. Now that the best deer land is everywhere forested and let at fancy rents, the deer lead the most unruffled of lives, and increase so fast that there are places where the breed actually degenerates, owing to excessive numbers. Then there is one noble species of game which had once become extinct, but is again acclimatised with us. Some large proprietors—the late Marquis of Breadalbane in particular—were at great pains to introduce the capercailzie, and that gigantic tree-grouse is spreading again through the wide pine woods of Perthshire.

But if game is on the increase, Mr. Colquhoun has to deplore the disappearance of its picturesque enemies in fur and feathers. The partial sanctuary offered to certain species in the deer forests does not compensate for the general reclamation of waste ground, and the universal war of extirpation waged against them in the Lowlands and on the grouse moors. The mountain fox, he thinks, will be among the last to linger with us. The fox of the Highlands has all the cunning of his race; he is always in superb health and wind; he travels long distances to get his living, and he takes up his quarters in the clefts of the crags, and the bowels of great cairns of stones among the most remote and inaccessible mountains. Yet he needs all his cunning, strength, and audacity to hold his own against the innumerable enemies who are after him. The sheep farmers set a price upon his brush, because he does not scruple to make free with the lambs on occasion. The keepers detest him; he is not only a deadly enemy to the brood mothers and their young, but he retrieves all the wounded game that goes away crippled by the gun. Nothing is more systematic than the fox's method of hunting, whether he works against the wind through the heather, carefully quartering the most likely ground, or makes the tour of the loch or tarn the night after you have been out wildfowl shooting. Track him next day round the soft mud or the yielding sand, and you will see how small is the chance of the wounded duck that may have sought a refuge among the rushes. Then it must be owned that there is no better fun on an off-day in the Highlands than going foxhunting. The chase, it is true, is somewhat different from sport in the Shires. But it is scarcely less exciting when you introduce the long-backed "varmint" terriers in the crannies of the great pile of heather-grown boulders, and hear, faintly struggling to the surface from far beneath, the choking, stifled noises that tell of the subterranean battle. Still, even when you have run your fox to earth, or rather to stone, it is not always possible to get at him. As Mr. Colquhoun remarks, he is the most difficult of all animals to trap; so we may reasonably expect that, happen what may, he will outlast our destructive generation, and something more. So may the wild cats and marten cats, for some stray specimens may be picked up in very remote and inaccessible places. But they are dying out fast, and are likely to be killed off faster. They are very ornamental when you have the luck to come upon one, but they are most pestilential. They are more easily trapped than the fox, and they may often be traced by your terriers; and as they generally go prowling in the immediate vicinity of their lairs, it is much more easy to track and take them. St. John, in his *Wild Sports of the Highlands*, talks of listening to the melancholy night cries of a whole colony of wild cats who had quartered themselves on the banks of one of the lochs in Inverness-shire. More than once he tells of coming across marten cats while shooting with his keeper Donald, on the banks of the Findhorn in Morayshire. We question greatly whether that wild cat colony in Inverness-shire survives still, and we should fancy that the marten cat has become a rarity in the parts of Morayshire where St. John used to shoot. Mr. Colquhoun tells us that they have vanished from even the greater part of the Scottish hill districts, and that should a tourist go in search of them, the natives of two-thirds of the Highlands will tell him there are none to be seen nowadays. Badgers, like foxes, keep to their earths for the day, while they go grubbing for their food in the dusk and the night. No animal can be more harmless, yet they have shared in the indiscriminate proscription of every beast that has not an obvious use or is not fit for the table. Mr. Colquhoun assures us, by the way, that badger hams are excellent; but, unfortunately perhaps for the animal himself, they have never been appreciated as a table delicacy. We are acquainted ourselves with districts even in the Lowlands where the badger was very common a dozen or fifteen years ago. Now the only traces of their former residence are the yawning chasms under the roots of some gigantic fir-tree where their powerful claws had enlarged a rabbit burrow into commodious quarters. There is no harder work than digging out a family of badgers. They take ingenious care to entrench themselves behind an infinity of natural barriers, and if they cannot find a convenient cairn, which, like the mountain fox, they prefer to all other refuges, they are sure to run their earths under the toughest network of tree roots to be found in all the neighbourhood. But then they walk even into common rabbit traps with a sublime indifference, which partly accounts for the rapid rate at which they have been disappearing. Otters are the only other four-footed animals worth noting. As for polecats, stoats, weasels, and the smaller bloodsuckers, for our part we can very well spare them. Otters have been greatly thinned like their congeners, yet we imagine that they continue to be more common than is generally supposed. Indeed Mr. Colquhoun says that, thanks to the cunning and secluded lives they lead, their decrease has neither been so swift nor so sudden. They never show themselves when they can possibly help it, and an otter may live unsuspected in the stream that flows past your door, although he has made his home in the roots of some willow-tree that overhangs the pool where you are perpetually angling. Besides, he does little harm except to the fish, and, although he may be somewhat hard on a salmon or trout river, owing to his epicurean practice of killing fish after fish and taking often but a single bite out of the shoulder of each, yet as a rule he is made very welcome to the small trout on the Highland shootings, for the mountain rivulets and tarns are always overstocked.

Mr. Colquhoun says little or nothing of the birds of prey; yet there is no more picturesque feature in Highland animated nature. With the exception of the owls, which hunt by night, they pursue their prey in the bright daylight. The keepers kill them down, of course, for they live by game, while specimens of the nobler breeds will always command high prices with the bird-stuffers. Besides, their eggs will always fetch enough to make it worth the adventurer's while to risk his neck going after them. Yet happily the golden eagle and the peregrine falcon are still far from uncommon in the wilder parts. Building year after year in the same recess in the cliffs which long experience has proved to be quite inaccessible, you may see them circling high in the air over the moor, as your dogs are quartering the heather below. Of a sudden the floating wings contract, the bird sweeps with the velocity of lightning and the precision of a rifle ball, a very embodiment of the grandeur and beauty of motion, and you must be a churl if you grudge it the grouse or the leveret that it bears away in its claws. There are still ospreys that build on the truncated rocks in the Sutherland lochs, where they have hatched their young from time immemorial, and sea-eagles that have their eyries in the bold headlands of the Western coast, whence they sweep the sea-shore, the terror of the seagulls; but those birds are plainly doomed unless the Legislature or the proprietors interpose more actively for their protection. The prospect on the whole is anything but cheering for those who love wild nature, and prefer the picturesqueness of sport to its butchery. Another fifty years, and some grandson of Mr. Colquhoun may lecture on our extinct *feræ naturæ* from Professor Owen's standpoint, and construct eagles and foxes from the claws and pads that have been embalmed in the peat bogs and disinterred from them.

A CRANKY REFORMER.

THERE are several familiar types of reformers. There is the reformer who promises the most tremendous results from some trumpery little change, perhaps scarcely more than a nominal change, in the existing system. There is the reformer who, for the sake of an infinitesimal and doubtful advantage, is willing to turn everything topsy-turvy; and there is the reformer who, having a good case on one point, discredits and obscures it by mixing it up with all sorts of irrelevant matter, and jumping at large conclusions from a few small facts. We should be disposed to class the anonymous writer of a little book called *Contrasts*, which has just been published with a dedication "to the ratepayers of London," in the last-named category. He has been looking over the accounts of the different hospitals, asylums, workhouses, and other charitable institutions of the capital; and he has been very much struck by the diversity of expenditure for similar objects which appears in their accounts. He is puzzled to understand why the expenses per bed in one hospital should be higher than in another, why the cost of maintaining a child or an aged person should be so much in one place, and so much more in another, and so much more again in a third. He assumes that, if the lower standard of expenditure furnishes all that is really required, there must necessarily be waste and extravagance in those establishments where this standard is exceeded; and he arrives at the conclusion that, under a more careful and conscientious system of administration, the expenditure might be made to yield a great deal more good than is at present obtained from it, while the ratepayers might be relieved at the expense of the endowments. If the writer of *Contrasts* had confined himself to the question of diversity of expenditure, and had taken the trouble to go thoroughly into the facts of the case, he would undoubtedly have rendered an important service to the class to whom he has dedicated his book. It can hardly be questioned that, in regard to various branches of expenditure, it is possible to lay down certain rough calculations as to what is a sufficient and reasonable outlay. There can be no difficulty, for example, in coming to an understanding as to the average cost of maintaining a child or adult in town and in the country, or of keeping up a bed in an hospital, including provision for food, medicine, and nursing. It does not follow that it would be wise to enforce hard and fast rules of this kind; but at least it would be useful to have a standard of expenditure for the guidance both of those who supply and those who spend the money. At the request of the President of the Local Government Board, Mr. Rowsell, the Superintendent of Contracts at the Admiralty, lately undertook an interesting inquiry into the expenditure on provisions in the different workhouses, and some rather startling discrepancies were thus brought to light. Although the different establishments are all situated within a few miles of each other, there seemed to be no common standard of market prices. Butter was cheap in one district and dear in another, butcher's meat ran up and down in an utterly incomprehensible way, and as for wines and spirits they were bought at almost every price. These differences were of course partly due to differences in quality; in other cases the contractors seemed to fix their own terms, which were at once agreed to without inquiry as to what prices were paid in the next parish, or even in the very street outside the workhouse door. It is obvious that within such an area as that of the metropolis there ought to be some common measure of quality and prices. The articles required are not at all of an out of the way kind, and the quantities in which they are required can be calculated with tolerable exactness. There is no reason why the

parishes or Unions, instead of buying independently, or, as sometimes happens, against each other, should not establish a central purchase department, to which they could resort according to their wants. Economy would be promoted not only by the scale on which purchases would be made, but by a reduction in the staff of buyers and other officials. The only objection to the plan—and in its way it is perhaps a formidable one—is that it would put a stop to local jobbery. This, however, is too small a matter for the author of *Contrasts*. He does not seem to have heard of Mr. Rowsell's inquiry, nor does he think it worth while to analyse expenditure too closely. He jumps about from one subject to another in the most embarrassing way—from ventilation to women's rights, from the Poor-law to the licensing system, from hospitals to the destruction of houses for the working classes. His general conclusion is that, as a rule, everything is grossly mismanaged; but he gets rather hazy when he comes to the question, What should be done to put matters right? Everybody knows the old gentleman with a sniff whom one meets occasionally in a railway train or hotel coffee-room, who affects to be particularly shrewd and deep, and able to see through everything by just looking over the top of his spectacles, and who is quite sure that nothing is managed as it ought to be, and that we 'are humbugged and swindled on every side. This is just the sort of sniff—the sniff of a superior being who can take in everything at a glance—which runs through *Contrasts*. The worst of it is that the writer is sometimes right, and that he discredits sound conclusions by his obvious superficiality and illogical cantankerousness.

The book may be divided into two parts—one dealing with the expenditure of the workhouses and the other devoted to an argument in favour of applying the endowments of the large hospitals, such as St. Thomas's and St. Bartholomew's, to strictly Poor Law purposes, with a view to the reduction of the rates. Nobody who is at all acquainted with the subject can doubt that the expenditure of the Poor Law system is—we are now of course speaking of London—extremely high as compared with the results obtained from it; nor are the reasons of this far to seek. They are to be found, first, in the want of a clear and settled public policy on the subject; and, secondly, in the want of capable administrators. The Guardians are perhaps, on the whole, of a higher class than they used to be; but the policy of the system is still wavering and unsettled. A few years ago people were very much shocked to find that the provision for the sick poor and for the class known as casuals was so defective, and then there was a reaction the other way. This reaction is now pretty well exhausted, but another is perhaps preparing. A good many rash, and possibly some rather extravagant, things have been done, and there is now a disposition to cut down expenses. Anybody who would show how economies can be effected without diminishing the efficiency of the system would be doing an important public service; but we must say we do not see what help is to be obtained from *Contrasts*. Here is an example of the writer's style of argument. He calculates that a dock labourer, with a wife and four young children, is in receipt of about 18*s.* a week all the year round. They fall into distress and go into the workhouse, where they cost the ratepayers 3*l.* a week. He asks, therefore, whether it would not be better to say to the man, "My dear fellow, give yourself no further uneasiness about your family. You say you earn 18*s.* a week when in work. Well, we will give you 18*s.* a week; go and smoke your pipe, and spend your time as you please, and don't trouble yourself about your family!" In this way the Guardians would save two guineas a week. It will be observed that this calculation is based on the assumption, which we do not dispute, that every pauper, man, woman, or child, costs the public on the average 10*s.* a week for maintenance, exclusive of the cost of lodgings. No doubt the author thinks this a very clever way of putting the matter; but it is odd he does not see that it is only another way of saying that it costs less to provide for a family by themselves than to provide for a family *plus* people to watch over and minister to them—a tolerably self-evident proposition. In the one case you have to pay only for the food and necessaries of the family, in the other case you have to pay in addition for people to wait on them. The writer is constantly falling into fallacies of this kind. He mentions a case in which two young ladies undertook to provide for a couple of motherless children. They wrote to a married sister who lived in the country, and asked her to find some respectable farm-labourer's wife to take charge of the children under her own supervision. This was done, and the children were boarded out at 7*s.* a-week for the pair of them. Clothing was provided for them by the young ladies from their own cast-off dresses. Now suppose, says the writer, that the children, instead of being provided for in this way, had been thrown on the parish, and sent to the Anerley schools; they would then have cost more than twice as much. "And here," he adds, "another noteworthy feature presents itself. The poor father shuddered at the idea of his children being sent to the Anerley pauper schools, where so large an amount would be spent on them, and yet accepted with gratitude the charitable and at the same time more economical offer of the ladies." Let us just take this story to pieces. In the first instance, the two young ladies who negotiated the transfer of the children to the country, and the married sister who promised to look after them, all gave their services gratuitously, and they also sent their old clothes to the children. In the other case, the officials who look after the children have all to be paid. If the author of *Contrasts* had said that services which have to be paid for cost more than services which are given for nothing, it would not have looked so very wonderful; yet this is all his story comes to. Whether the services of Poor Law officials are in any degree overpaid is of course another question. As to the father shuddering at receiving relief from the public, while willing to accept it to any amount from private persons, it can hardly be seriously suggested that feelings of this kind ought to be encouraged. Alms are alms by whomsoever they are given, and a man is not less a pauper because he or his family is maintained by private charity instead of out of the rates. Another of the delusions into which the writer seems to have fallen is that a handsome architectural effect necessarily adds to the cost of a building, and he is greatly shocked at "an asylum for the poor having the appearance of a palace." To say that a building has the appearance of a palace is, as far as English palaces go, certainly not saying much for it architecturally; but if it is only meant that the building has a handsome appearance, we see no reason why an asylum for the poor should not be handsome, and we see many reasons why it should. Of course economy must be considered, and a large addition to the outlay for the mere sake of beautifying the building would no doubt be improper; but ugly buildings have been known before now to cost more than pretty ones.

The main object of *Contrasts* would seem to be to advocate the application of the funds of the "Endowed Medical Establishments" of London to Poor Law purposes—in other words, the conversion of the large hospitals into Workhouse infirmaries. The writer has convinced himself that St. Bartholomew's and St. Thomas's were the original Poor Law infirmaries of the metropolis, and it is no doubt true that, before the Poor Law system was invented, they in some degree served that purpose. It is more important, however, to observe that, like Guy's, they are now very much more than ordinary infirmaries. They are not only hospitals ministering to the sick, but great medical schools; and their value must be measured, not merely by the number of patients treated within their walls, but by the number of skilled practitioners who are trained and educated there for the benefit of the country at large, and by the extent to which medical science is encouraged and promoted. It is clearly unfair to compare the great hospitals with the small infirmaries, either in regard to expenditure or in regard to mortality. Difficult and desperate cases naturally tend towards the hospitals, and this adds both to their expenses and to the number of fatal cases. The arrangements which are necessary for the purposes of a medical school of course add another element of expense which is wanting in the infirmaries. It is absurd to take the case of a small river-side hospital, hastily extemporized in an old building given for the purpose, and dealing only with the common run of accidents in the docks and iron-works of a limited district, and to contrast it with an institution like St. Thomas's, which has to discharge the functions both of an hospital and of a school, to maintain a large and highly skilled staff, and to provide for a constant succession of serious and difficult cases of all kinds collected from a vast area. The contrast which the writer draws between Bethlehem Hospital and the Caterham Asylum for Idiots is equally at fault; for lunatics have to be carefully watched and tended, while the idiots at Caterham contribute in no small degree by their labours to the support of the institution. It is obvious that, if the revenues of the hospitals were to be confiscated for the relief of the ratepayers, the hospitals would either have to be given up, or other funds would have to be found for carrying them on. The ordinary infirmaries would certainly not supply their place. It may be mentioned that our reformer incidentally proposes to apply the property of the Livery Companies to cover the School Board fees. "Local Taxation Made Easy" would have been a very good title for his book; but, after all, there is nothing very new in the idea of seizing upon other people's property in order to spare their own pockets.

THE COMING INTERNATIONAL EXHIBITION.

THE managers of the International Exhibition never use a short word when a long word will serve their purpose equally well. They have conceived a laudable idea, which in their exalted style they announce to the world by stating that "food will be illustrated by various preparations of it, and by the machinery employed." This is the grand way of saying that a mutton-chop will be broiled upon a gridiron. The School of Popular Cookery will give "illustrations of cooking food," and a limited number of persons will be allowed the "privilege" of tasting the "practical illustrations" of the lessons in cooking. There is a proverb that fine words do not butter parsnips, and they are likely to be equally useless in other culinary processes. But nevertheless the Commissioners have our hearty good wishes for the success of the undertaking which they have thus magniloquently proclaimed. They will of course provide in this part of the Exhibition a "chamber of horrors" to which a large part of the ordinary products of the British kitchen will be relegated. They ought to establish, not only lectures, but examinations and prizes; and we hope to see the day, or rather night, when young ladies will appear at balls with the medals of the Exhibition for cooking upon their breasts. We shall await with interest the appearance of the Catalogue of this part of the Exhibition, which may be expected to contain descriptive passages worthy of the literary reputation which the Commissioners have achieved in former years. The official reporter on this department will remark that, from the earliest ages, food has been a necessary of human life, and that

the progress of civilization may be traced by observing the course of improvement in the art of cooking. We fear that it will not be possible for the Commissioners to avoid offending the intolerant party which denounces the use of alcohol. Not only food, but drink, will, as we understand, be "illustrated" in this department of the Exhibition, and it is only reasonable to expect that all the advertising wine merchants in London will become exhibitors. The Commissioners have now entered upon a career of usefulness of which it is difficult to foresee the end. In the preparation of food they are entitled to include the making of sherry-cobbler, punch, claret-cup, and other refreshing drinks. Classes for instruction in all these processes ought to be established, and a tasting-room would be a necessary adjunct to a set of lecture-rooms. The purpose of this tasting-room would be, to use a favourite word of the Commissioners, educational. It could not be properly regarded as a general refreshment-room, but arrangements could be made to allow a limited number of persons to taste the "practical illustrations" of the lessons in making punch, and those persons would doubtless remember a precept applicable to punch equally with beer, that "it can't be tasted in a sip."

The adulteration of food is to be "illustrated" by chemical analysis, and if this part of the programme is fully carried out, we may expect some curious and valuable investigations. Suppose, for example, that the proceeds of all the grocers' shops in Brompton were to be used as "practical illustrations" of what are sometimes called the tricks of trade. We do not ourselves object to drink being classed as food, but it is perhaps going rather too far to include tobacco in the same category. Cigars will be made upon the premises, and pipes of all countries and ages will be exhibited, but we doubt whether "practical illustrations" of this branch of cookery will be permitted. The different food sections will, we hope, be kept carefully apart, as it might give a shock to public confidence if, by any accident, cabbage-leaves which entered the Exhibition as vegetables should emerge from it as cigars.

It is natural and proper that the same Exhibition should comprise both food and knives and forks, but perhaps the collection of surgical instruments might have been less complete than it is without disappointment to the public. We only wonder that the Commissioners did not include medicine as well as surgery in this year's programme, and it would have been pleasant to peruse an Official Report upon Holloway's pills, although we should not have desired to witness, and still less to share, a "practical illustration" of their working. It is a pity that so fine a collection of dentists' tools as are here displayed should remain unused, and therefore perhaps the Commissioners may be able to arrange for lectures, with "practical illustrations," upon the same principles as they have adopted in regard to cooking. The lecture-room being of limited dimensions, early application would be necessary to secure places. The charge for one hour's lecture would be on three days of the week sixpence, and on the other three days one shilling, and sixpence extra would be charged for admission to the front row, accommodating only twelve persons, with the privilege of having a tooth extracted.

It must be admitted that the Commissioners have exerted themselves with some success to disguise the inevitable predominance of the commercial element in their programme. The exhibition of carriages is indeed a hopeless and irreclaimable bazaar, to which neither the Queen's State carriage nor the Holyhead mail-coach can impart a sufficiently "educational" aspect to deceive the most simple-minded visitor. But the arrangements for concerts are capable of being plausibly described as made "with a view to an adequate exposition of the art of music." The "annotated programmes," which are designed to make the concerts "as educational in their results as possible," will doubtless sustain the character which the Commissioners have gained by their Catalogues and Reports. It is lamentable that the educational aspirations of the Commissioners should not be shared by all persons interested in the property under their management. The proprietors of the Albert Hall are doubtless in full accord with the Commissioners, but the Horticultural Society, which forms a sort of third partner in the undertaking at South Kensington, appears to be less anxious than could be wished for the attainment of educational results. A majority of the fellows of that Society have indicated an intention to restrict as far as possible to their own members the use of the Garden which it holds under the Commissioners. It appears that the enterprising persons who work under the name of the Commissioners proposed that the Society should admit to the portions of the estate leased to them, and to the Flower Shows at Kensington, all the visitors to the Exhibition. This proposal the Society declined, and thereupon the Council of the Society, which had recommended its adoption, resigned their offices. A fresh Council has been elected, and negotiations are, or lately were, pending between this Council and the Commissioners. It is possible that a mutually advantageous compromise may be effected; but this of course depends upon the question whether each party can give something which the other party is willing to take. The Commissioners manifestly require the use of the garden of the Society, but it is not equally clear that the Society is sensible of the value of the educational results of International Exhibitions. It is perhaps true that the young ladies who display their fine dresses at flower shows would be more profitably engaged in learning to fry fish or boil potatoes; but then it is to be observed that there is usually a sprinkling of young gentlemen at flower shows, whereas there is not likely to be a solitary representative of the male species at a cooking-class. As representatives of the outside public, we should desire that the Garden should be open to visitors to the Exhibition, for the simple reason that the Garden offers a welcome change from the monotony of the Exhibition. But of course the rights of the Society must be maintained, and it is possible that the members have had enough to last them for some years of International Exhibitions, and do not greatly value the privilege of admission to the one which is about to open. Indeed it is stated that the members, with a deplorable insensibility to the value of educational results, have expressed a desire to keep the admission to their Garden, at least on particular days, select.

The picture galleries will doubtless contain some valuable works of art and much rubbish. The peculiarly English school of portrait-painting is handsomely represented by a large picture of a gentleman on board his own yacht, with his claret-cup and his dish of fruit and all his little comforts conveniently arranged around him. Such a picture is well placed in an Exhibition organized by these Commissioners. There is also a collection of pictures and other works of art by officers of the army and navy, and we would suggest that next year a similar compliment might be paid to the lawyers and the doctors. When the Managers call this an International Exhibition, we sometimes wonder whether they seriously desire that foreigners should look at all the rubbish which they put into it. Any man, whatever be his profession, can call to mind several members of it who amuse themselves, and perhaps their friends, by drawing or painting; but the idea of putting all such works, or even a selection of them, into an Exhibition, would have surprised most of us if it had not been produced on the authority of "Her Majesty's Commissioners." If the Horticultural Society were to offer to hold in their grounds a show of roses grown by stockbrokers, the Commissioners might not perhaps think much of the privilege of admission to such a very select society of flowers. However, as the Commissioners have built all these galleries and arcades, they must be allowed to fill them in the best way they can. It might deserve consideration whether an exhibition of signboards might not prove an attractive feature of next year's programme. There must be upon the staff of the Commissioners more than one gentleman capable of writing upon the application of art to signboards, historically, analytically, and in every other mode of treatment. We are not at all sure that this department of art is not on the decline in England, and it is, we think, well adapted to be taken up and developed by the Commissioners. They might impress on innkeepers the duty of encouraging art by providing not merely an inscription of the words "Red Lion" or "Blue Boar," but a pictorial representation of the animal thereby signified. But even in inscriptions there is much scope for art and more for talk, and therefore we recommend the whole subject of the embellishment of public-houses to the consideration of the Commissioners. As the nation has drunk itself out of the *Alabama* difficulty, or at least out of half of it, to the manifest advantage of the publicans, we think that the publicans ought to do something for the nation in return, and therefore we suggest that they should encourage art under the guidance of the Commissioners. It is, indeed, possible that the Commissioners already contemplate something of this kind. They have collected a vast and various store of pipes and cigars, cups and glasses, and therefore it is merely a matter of arrangement to produce an example of the interior of a public-house managed on artistic principles. Indeed it is quite possible that visitors may confound the refreshment stalls of Messrs. Spiers and Pond with the compartments of the Exhibition, and it may at any rate be satisfactory to these visitors to believe that they have not been drinking, but merely contemplating a practical illustration of the art of drawing beer.

SCARCITY OF HORSES.

THERE can be few more interesting and important subjects of inquiry than that of the alleged scarcity or deterioration of English horses. The Committee of the House of Lords to which this subject has been referred will doubtless collect a valuable body of evidence, and make a sensible report; but as their labours will probably occupy some weeks or months, it may be useful in the meantime to consider such facts and opinions as are brought forward by writers who make horse-breeding a special study. There have been numerous articles and letters on this subject in *Bell's Life*, from which we will select some remarks by "Cecil" as deserving special attention. This writer says that, as regards hunters, it is difficult to explain where they come from; inasmuch as within his own observation there are not so many bred as there were forty years ago, yet in the hunting-field the numbers are greatly in excess. When in his juvenile days he first visited Leicestershire, the number of horses located at Melton was not one-fifth of what it now is, neither was their breeding and quality as good. As regards matter of opinion, it is possible that "Cecil" may err, but he can hardly be wrong on matter of fact. He says that he has a vivid remembrance of Mr. Osbaldeston's stud when he was Master of the Quorn, but he thinks, if they could be resuscitated, they would not be pronounced equal to Mr. Tailby's. The "Squire" and his horses have been made famous by a pen to which perhaps no equal could be found in the modern literature of sport, but it does not follow that the subject as well as the treatment was unrivalled. Still we can only get opinion either way; but "Cecil" can hardly be wrong in pointing to the hunting-stables at Cheltenham, Leamington, and Rugby, as

proving a vast increase since his youth in the number of hunters kept. Formerly there were only three regular hunting-men at Wolverhampton, and they kept not more than three or four horses apiece; but now the number of hunters kept by traders of Wolverhampton exceeds one hundred. So the hunting-men of Birmingham have "multiplied marvellously," and their horses have wonderfully improved. If these statements which "Cecil" makes, apparently from personal knowledge, are true, the same causes must have produced like effects elsewhere. The popularity of hunting, with both sexes, may be inferred from recent novels which endeavour to represent the actual manners of the time. The ladies, says "Cecil," have taken largely to hunting in the last fifteen years, and horses suitable for their riding have greatly risen in price. There are, in fact, many persons who consider the keeping and occasional riding of hunters as a necessary appropriation of part of the wealth which they enjoy. We have heard of a gentleman who was much more liberal of his purse than of his person, and who kept three varieties of horses; one that he rode habitually, another that he rode occasionally, and a third that he dared not ride at all. It may be hoped that this gentleman found friends to do for him that which he could not do himself, and it appears reasonable to infer that, as there is much more money in the country than there used to be, so there are many more horses which fetch more or less deservedly high prices.

There are not perhaps many writers who equal "Cecil" at once in experience and discretion, and it is rather embarrassing to find that the horse, alive or dead, excites an enthusiasm scarcely compatible with judgment. But if a writer goes into ecstasy alike at the memory of Beadsman and the sight of Knight of the Garter, we may perhaps be right in concluding that praise of the past and admiration of the present are equally well founded. A series of articles in *Bell's Life* on the "Sires of the Season" ought to go some way to reassure alarmists. The author of these articles undertook a search for hunting-sires; but he is really unable to get away from the "animals of priceless value and merit" which are reserved for the highest purposes of the stud. The death of Beadsman was doubtless regarded by this writer when it occurred as a national calamity; but he has now convinced himself that the sons and grandsons of Beadsman are able to save the country, if the country will only allow itself to be saved. "The sons of the great Beadsman have many of them been racehorses of such intrinsic value that to cross them with anything save of the purest blood would almost be a waste; but a legion of their sons might serve England in years to come if our Government will only collect them, instead of allowing them to pass year by year out of sight, picked up by foreigners, or made useless as sires, and often being abused and knocked about in steeplechases and hurdle-races, to become at last victims to the cab-stand." The pathos of this passage will reach every heart, and we need only therefore draw attention to its truth, which is perhaps less obvious. Among many horses now on the Turf there must be some good ones, and if these could be made the best of, the deterioration of the general breed of horses, whatever be its extent, would be arrested. This writer thinks that, by utilizing the produce of the Turf, England would soon possess the grandest stud of stallions in the world. Thanks, he says, are due to those who have laid the groundwork; such as Sir Joseph Hawley, the breeder of Beadsman, Baron Rothschild, the founder of the King Tom family, and Mr. I'Anson, the breeder of Blair Athol. Happy, say we, is the country that can count at least three saviours! "Probably the above-named families of horses are the most remarkable now in England, and Sir Joseph Hawley stands alone in planting a family tree, and then going down from father to son with a continuation of merit." Certainly Sir Joseph Hawley is more fortunate than the husbandman of whom the Latin Grammar used to speak—*Arbores serit diligens agricola quarum adspiciet baccam ipse numquam.* But Sir Joseph Hawley has planted the tree and eaten of the fruit. He won the Derby with Beadsman, and he won it ten years afterwards with Beadsman's son, Blue Gown, and thus "he has made an improvement on perfection." Blue Gown, it is true, has gone abroad, but his brethren The Palmer, Rosicrucian, and Pero Gomez still remain; and if the Legislature cannot give the country good horses, at least it cannot take them away. The Palmer is settled apparently for life in Yorkshire; and this writer, after seeing him, could not rest until he had seen his brother Rosicrucian, who still adorns his native Kent. The King is dead, long live the King! It was a severe misfortune to Sir Joseph Hawley and England to lose Beadsman in his prime, but it was a great consolation to have a son, Rosicrucian, just ready to take his father's high position in the stud-book, where, if he has any rival, it must be his own brother, The Palmer.

It may of course be said that all this is mere opinion. But there is one practical test of the value of the horses of which this writer speaks—that foreigners buy them whenever they get a chance. It is difficult to see how this can be prevented, even if we admit that it is an evil. We are told that clever foreigners "managed to get Buccaneer out of Mr. Cookson," but if Mr. Cookson had made up his mind to part with Buccaneer, any one who offered the price could have him, and if he had not, the most clever foreigner could do nothing with the astute master of the Neasham stud. In other commodities it generally appears that demand is favourable to production, and we should not easily be persuaded that this rule does not apply to horseflesh. As regards stallions, however, it can hardly be doubted that there are enough of good ones in the country, if they could be properly distributed; but then it is said that these insatiable foreigners also buy our mares, and breed from them, and years afterwards supply the scarcity which they have created by selling to us the produce. Some writers insist that the English breed of horses has deteriorated through two-year-old racing, but this is doubtful. The practice is carried too far, but in moderation it may possibly be useful, for a racehorse, like an acrobat, learns his business best if he learns it young. The proposal of an export duty on mares would be contrary to our commercial policy, and the notion of Government establishments for breeding is painfully suggestive of waste and jobbery. As regards mounting cavalry, the only plan appears to be to pay the price of a good horse, which, like that of a good man, shows a tendency to considerable advances. Some plan of examining and registering stallions seems to be generally approved, and it may, at any rate, be said that such a plan would do no harm. It is further proposed by some writers that a system of subvention should be introduced, and, if 15,000*l.* a year could in this way be profitably expended, Parliament might perhaps be persuaded to grant the money. But another writer goes to the root of the matter by inquiring where are the mares to which these subsidized stallions might be useful. The great difficulty of this subject is the want of accurate statistics. We get partial observations and recollections on which it is impossible to found a satisfactory judgment. But it is probable that in some counties horse-breeding suffers discouragements which might easily be removed, and it is worthy of the attention of noblemen and squires to consider whether they cannot provide their poorer neighbours with facilities which only wealth can buy. A writer remarks that magistrates at Quarter Sessions who are often puzzled by points of law would be good judges of the qualities of a stallion. Horse-breeding is at best an uncertain business, and the farmer of small capital naturally prefers to breed sheep and oxen, for which he gets a return more speedily. Then, again, there are large districts of England which are not specially suitable for breeding horses, and besides, England is a small country, and you cannot crowd horses together without risk of disease among them.

The complaint that Englishmen are losing their love for horses is certainly not supported by an inspection of the literature of the subject. The Earl of Durham has lately formed a breeding stud, and a writer in *Bell's Life* would have described what he saw on a visit to it if his pen had not been occupied with what he had heard of racing in that country forty years ago. Another writer finds himself near Richmond, and he cannot pass the gates of Aske without calling to see Voltigeur; and of course he cannot name Lord Zetland's horse without telling once more the story of his match with the Flying Dutchman. There is no doubt that these writers understand the public taste. In fact, almost all Englishmen desire to own horses, or, failing that, to think and talk about the horses which are owned by others. If the taste remains, the means of gratifying it are likely to be found, and we ought to be tolerably content if the worst that can be said about our horses is that foreigners come and buy them whenever they get a chance.

THE FRENCH GALLERY IN PALL MALL.

THIS Gallery, now in its twentieth season, offers a pleasing epitome of European art; it is like a duodecimo edition of a large volume; the type may be small, and the contents abridged, but the binding is neat, and the general get-up tasteful. M. Meissonier is an artist who, above all others, can epitomize the drama of the world within the compass of a nut-shell. His marvellous power of concentration is seen supremely in the fifteen cabinet gems still at Bethnal Green. M. Meissonier, in the character of a highly finished painter, is known to every one, but as a sketcher or a student, who approaches by successive steps to the consummated end, he now for the first time makes confession of his secret. No fewer than seventeen sketches exemplify his system, if he has a system. Certainly there is no trick, no shirking of work, but an honest and resolute endeavour to get directly at nature in its breadth, its detail, and its brilliance. The subjects, though varied, are circumscribed; they never imply the high faculty of creation; they rather stand out as problems, puzzles, or manipulative feats; in mental sphere they do not belong to imagination, but rather to keen penetrating intellect, which sees vividly and seizes vigorously. That they are not more imaginative is of course accounted a merit in this unimaginative age. The studies before us seem to indicate that the artist, to use a term borrowed from the photographic art, first focusses his subject; that is, he so fixes his distances and spaces, his light and shade, as to bring out the principal figure in a keen and round relief, startling in reality, lifelike in salient detail. Some critics have said that Meissonier is indebted to photographs for his detail and his realism. But here is a sketch of a broken wall of stone and mortar with a ruined balcony above, dazzling in colour and in sunlight—a study simply made on the spot, and then left without a further touch indoors. Another oil sketch is in the wood at Passy; here the interweaving tree stems show an eye which keeps watch on nature, and yet all the while is attentive to the exigencies of art. Nothing, not even nature, is permitted to spoil the picture; in other words, art is paramount, and yet the art is nature. These sketches moreover prove supreme tact in seizing on the very nick of time when momentary action may be best fixed in order to be portrayed; yet the action is never swift as in Rubens or Tintoret, the

incident is never a moving drama, the figures have attitude but not motion. This is exemplified by a life-like study of a horseman, his hand and cup raised in the act of drinking; the moment seized is when motion has just become rest. The figures are often as firmly fixed as petrifactions, and yet they are ready for instantaneous action. Some landscape studies show a mental joy and a love for nature which we might almost have supposed to be denied to the whole school of art cynicism. Meissonier, Gérôme, and other French painters have always deemed emotion a proof of weakness. These remarkable sketches show a process peculiarly their own; instead of canvas, millboard, or well-primed panel, the artist has taken for his groundwork a smooth piece of satinwood which, when left bare, gives a warm middle tone. Neither pencil nor charcoal is used for outlines, but instead a firm free brush. These truly student sketches might entitle Meissonier to make the boast of Michael Angelo, that he owed nothing to genius but all to labour, so true it is that in art work is the price of all excellence. Of Meissonier, too, it might be said that he alone of living men can "carve a giant on a cherry-stone."

Microscopic vision may be said to be an idiosyncrasy in French art. M. Frère, M. Duverger, and M. Plassan, once more seen within these walls, are severally masters of miniature, though what may be termed the manipulation of the mosaicist is with them less sharp and sparkling than in Meissonier. It is always a good sign when an artist can make a small digest of a large subject; thus it speaks well for M. Heilbuth that he is able to paint a pleasing epitome of one of his oft-repeated dialogues on the Pincian Hill. Here again is a red cardinal who has descended from his carriage to take a short constitutional. M. Heilbuth has watched this species of the human race with the eye of a humourist; he never paints as if he were within the pale of the Church, and yet he is not irreverent. Other examples might be adduced of the truth that in art brevity is the soul of wit; the French school is certainly neatest when smallest. "A Franc-tireur" (66), by M. Bellecour, and "The Armourer" (109), by M. Fabei, are examples of the perfect technique and the true art construction acquired by comparative tiros in the French school—a school which, like the French people, rises with recruited force out of disaster, and asserts itself, notwithstanding occasional folly and extravagance, as the first among European nations for versatility, vivacity, and vigour.

It is strange that in France some of the weakest painters persist in proving their inability on the largest scale. Thus, while the strength that lies in concentration is, as we have seen, exemplified by M. Meissonier and others, the feebleness and effeminacy of surfaces dilated nervelessly to life-size is proved by painters such as MM. Bouguereau, Landelle, Jalabert, Jourdan, Merle, and Hublin. It were waste of time to bestow criticism on the honey and wax women and the invertebrate molluscous children which these anti-naturalistic artists serve up *ad nauseam* for sale. That such nondescript creatures should find a chief market in England is one of the many sad proofs that whatever wares are cried up the most loudly obtain the readiest sale. We might have hoped that this effete art would have been swept away with the Second Empire.

But what young life and unspent vigour remain to France is sufficiently apparent in "The Red Cross Ambulance" (71), by M. Castres, a young artist, who for this master-stroke of nature and of art gained in the Paris Salon a second medal. The terrible realities of the late war will crop up for many a season in our picture galleries. The snow is lying white and cold on a dreary plain, the sky is of iron grey without a gleam to dispel the gloom which saddens alike the face of nature and the human heart. Onward at solemn pace advances the ambulance which bears the wounded and the dying. All is silent; not a whisper of victory, not a wail of defeat is heard; forward the armed guards march in duty, and heavily lie the sick in endurance. Each figure might have been studied on the battle-field, so true is it to nature, and the handling is firm and unflinching, as if the artist had been himself trained to the sword. No painters equal the French in the incidents of the battle-field; what may be termed the pictorial tactics of war have been settled for the whole of Europe by Horace Vernet, Protais, and Bellangé.

Brittany is to M. Jules Breton and other artists of France what Scotland is to the painters of Great Britain. Indeed our Scottish painters of peasant life, Mr. Faed and others, are known by a style which has a wide geographic distribution over the North of Europe. It is always satisfactory when any art phenomena can be referred back to generic causes, such as climate, race, commerce, government. It is curious that the intimate relationships which subsisted in former times between the North of France, Scandinavia, and the North of Britain seem after the lapse of centuries to survive in the art of painting. The bond of union is no longer between rulers or nobles, but among the children of toil. We may imagine that seed sown broadcast, after lying for years dormant, has sprung up not so much under culture as through spontaneous vitality. Certain it is that along the North of Europe, from Brittany to Düsseldorf, thence to Christiania and Stockholm, and back again to the coast of Scotland, there is a native art which, either by its subject-matter or by the strong individuality of the painter, appears to have a common origin. Our present purpose is to speak of M. Jules Breton, often seen in this French Gallery and known throughout Europe as the painter who has devoted the best part of his life to the good people of Brittany. "A Breton Peasant" (123) is a figure of which he is fond; the study is taken from one of the lower orders who delight in religious processions; a candle is carried reverently in one hand, a rosary in another, and the countenance is fixed by that stolid, well-meaning superstition which maintains its stronghold in the North-West of France. The picture, though wholly characteristic of the school, is scarcely first-rate of its kind. The subject is not of sufficient import to sustain life-size, neither does the artist's manner bear to be thus magnified; it is often dangerous and even fatal to a painter to depart from his accustomed scale. An American, Mr. R. Wyllie by name, has, strange to say, caught up the manner; the Breton Sorceress exorcising an evil spirit from a sick child, the whole household looking on with fearful curiosity, has a character, vigour, and texture which pertain to schools of the North. The Dutch painter, M. Israels, of whom there are here two examples, also falls into the same realistic and unimaginative class.

Sometimes, however, there will suddenly and unexpectedly rise up a man whose talents stand outside the circuit of external causation, whose works are independent of the circumstances of time and space. Such a man is M. Alma Tadema, of Holland. In looking at the "Improvisatore" (178) we fancy ourselves transported from Northern lands to the shores of the Mediterranean; the night is lit by stars, and the silence has just been broken by the wild sweep of the hand across the lyre. Listeners are seated beneath dark pines and yews, others lie in reverie on the ground. We believe that an analysis of this art would detect the presence of both Northern and Southern elements. The spirit of weird mystery which has taken possession of the scene is Teutonic and Scandinavian. Of the very many pictures which we know by this artist few, if any, could be mistaken for Southern products. It is, indeed, far from easy to complete either in this or any other gallery the ethnographic chart of Europe, so greatly are the styles, once distinctive or national, now intermingled. However, it cannot be very difficult to identify M. C. Bisschop with the Low Countries; "The Sexton's Daughter" (86) shares the shadow of Rembrandt with the realism of Teniers. The way in which national styles lose their nationality receives illustration in the works here seen by M. and Madame Bisschop; the latter used to be known in London galleries by works unmistakably English, but since the lady has changed her name and her domicile her style is so altered that it can scarcely be distinguished from the strongly pronounced Dutch manner of her husband. The complexities or elective affinities induced by matrimony are particularly perplexing in the philosophy of national schools.

The Belgians, it has been asserted, have one of the longest pedigrees in painting; but who are the present artists of Belgium becomes a question. M. Alfred Stevens and M. Willems, whom everybody will be happy to meet once more, avowedly pertain as much to Paris as to Brussels; but the works here shown are too far from the highest mark to merit distinctive notice. Belgium has at least two schools of figure-painting; the one, that of MM. Stevens and Willems, is clothed sumptuously in silk apparel; the other, that which follows after the late Baron Leys, affects sackcloth. "The Visit to the Taxidermist" (113), by M. Lagye, is after this last antiquarian manner; all is old, stuffed birds and collector together. The tone and colour too belong to the past; the picture itself seems dead.

M. Fortuny, who has now grown into a favourite all but essential to the London Art season, is one of many artists who lie on the frontier line of national schools. His strength, as likewise his extravagance, is best seen in the well selected Gallery of Mr. McLean. The artist confessedly owes as much to Paris as to Madrid; the bull fight is the arena of his genius, a scene which he forces up after the *outré* manner and the bad taste of Goya, Gavarni, and Doré. Such art degrades just in proportion as it delights. M. Roybet, in "Who Comes?" (40), is another painter who stoops to satisfy the craving of vulgar patrons for sensation. M. Gérôme too, in "The Slave Market" (46), has sunk to one of the lowest depths possible to genius. Even in point of technique, colour, or texture, there here is more to blame than to praise, and as to moral, the less that is said the better. A row of semi-nude slaves ranged against a wall with a slave merchant seated at the receipt of custom is a subject which, unless elevated, is simply revolting. The late William Muller ennobled a like scene by glory of colour and grandeur of chiaroscuro. M. Gérôme never paints with a high purpose, and thus by necessity his art sinks from year to year, step by step.

That landscape usually follows in the wake of figure-painting finds illustration in this Gallery. The tendency of Continental art is to melancholy; we find that the most trivial incident becomes moody; even trees grow as if for churchyard service. There is scarcely a landscape-painter in the Gallery who is not shadowy and sombre, pensive and sad in sentiment. A stranger visiting Continental exhibitions after a long interval might imagine that nature had put on mourning under the funereal state of things in Europe generally. Such painters as M. Corot, M. Lambinet, M. Gabriel, M. W. Maris, and M. I. Maris it were difficult under the most cheerful circumstances to arouse out of placid meditation; they possess their souls in peace; certainly the scenes to which they surrender themselves are never agitated by storm. But other artists exist such as M. Dupré, who habitually breaks out into tumult; tempest also is foretold by M. Rousseau in "A Wild Evening" (64), and by M. Diaz in "A Stormy Sunset" (65). Yet the law cannot be laid down dogmatically that landscape-painters are peaceful or passionate according to the political temper of their times. Gaspar Poussin and Claude Lorraine belong to

the same generation; but the one throws himself into the storm land of the Apennines, while the other seeks the rest and the reverie of flat horizons and sunny skies. And so it is down to our day; the landscape-painters now living and working throughout Europe are fortunately so diversified in aim as to reflect and represent that variety in nature which is all but infinite.

REVIEWS.

THE MAN IN THE IRON MASK.*

IT is barely three years since the able work of M. Marius Topin seemed, in the opinion of most students of the subject, to have set finally at rest the vexed question of the personality of the Man in the Iron Mask. The pile of fable and exaggeration which imaginative writers from Voltaire downwards had reared upon a slight basis of fact had, it was thought, been cleared away by dint of authentic research and scientific criticism. Based upon materials drawn forth for the first time from the national archives, and wrought with great literary or forensic skill into a consistent fabric of proof, his book left, it might be thought, little room for doubt that the mysterious personage upon whom the curiosity and pity of the world had for two centuries been concentrated was no other than Ercole Matthioli, the Minister of the Duke of Mantua, who had incurred the vengeance of Louis by the defeat and betrayal of his designs upon Montferrat. Such dates and facts as are known for certain in the history of the masked personage were shown to fit in plausibly with all that could be thus far ascertained of the intrigues in which the Italian was engaged, and with his disappearance from the political stage. At the same time an exhaustive criticism of the evidence put forth on behalf of the rival hypotheses may be said to have disposed finally of one and all of these. Neither the Count of Vermandois, nor a twin brother of Louis XIV., whose claims had up to that time seemed the best supported of the dozen that have by turns been brought forward, could henceforth be identified for a moment with the masked personage of the Bastille, who wore, however, it has incidentally been made clear, no mask of iron, but simply one of black velvet fastened by springs of steel behind the head.

Our readers will probably hear with surprise that a totally new hypothesis has been lately brought forward. An officer on the staff of the French army, M. Iung, has had the advantage of access to a new and rich mine of materials in the archives of the Ministry of War, together with all that was to be gained from free and minute exploration of the fortresses which held the mysterious prisoner, their records, and their plans. Interrupted for a while by the calls of service during the war, his researches have since been resumed, and they have for their result a solution of the problem entirely unexpected, yet one which, as far as circumstantial proof can be allowed to settle such a question, carries with it a force which it is difficult to resist.

It is a good idea of M. Iung's to set down at the outset in a synoptical table the names of the different personages who have been thus far put forward as the Man in the Iron Mask, with the names of the writers advancing them, and the dates of the respective claims. Of the dozen who make up the list, it will be generally admitted at the present time that none but Matthioli, first brought forward by Baron de Weiss in 1770, need any more concern us. In our notice of M. Topin's work (*Saturday Review*, April 23, 1870) we sketched out briefly the train of evidence by which the writer sought to make good his thesis, and indicated what seemed to us weak points in his harness of proof. It is precisely on these points that the new weapons of M. Iung's logic are brought to bear with grievous, if not fatal, effect. We cannot, it may be, do better for the clearing up of the mystery than proceed step by step from the primary facts which are beyond doubt to the later or more speculative portions of the case.

The starting point of the whole story was from the first the fact announced in the Amsterdam Gazette, on the strength of a letter dated Paris, September 18, 1698, that St.-Mars had taken charge of the Bastille, to which he had brought with him a masked prisoner. This has always been held to be the date of the arrival of the mysterious personage of the legend. M. Iung brings it forward as strange, but does somewhat in the sequel to clear it up, that the same Gazette had, on the 14th of March, 1695, reported the arrival at the Bastille of a lieutenant bringing with him from Provence in a litter a masked prisoner, who was thought to be of great importance, as he had been kept with the utmost secrecy during the journey. The practice of masking prisoners of consequence in transit was in all probability sufficiently common to warrant us in still believing that the arrival of 1698 was that which alone concerns our story. This is confirmed by the circumstantial entry in De Junca's Register of the Bastille of the "ancient prisoner from Pignerol," whom M. de St.-Mars had brought with him in a litter, "Thursday, September 18, 1698, at three o'clock in the afternoon," of whom M. de Barbezieux, in a letter to St.-Mars, August 13, 1697, had spoken as "le prisonnier d'il y a vingt ans." A final point beyond dispute is the burial of this prisoner at the church of St. Paul, November 20, 1703, his name being inserted in the register, De Junca writes, as "M. de Marchiel." M. Topin, giving this name, we know not on what grounds, as "Marchialy," considers it a simple mis-spelling for "Matthioli," and a conclusive proof of his theory being the right one. Now of the date of Matthioli's arrest having been April 23, 1679, there is no question. Where was he in the meantime? At Pignerol, answers M. Topin, until the date of his transfer to the charge of St.-Mars in March 1694, preparatory to his removal to Paris. Upon this point M. Topin makes his entire case depend. That there had been an idea of sending Matthioli with St.-Mars to Exiles, where the latter had just been appointed Governor, might be gathered from the despatch of Louvois, June 1681:—"A l'esgard des hardes que vous avez du sieur Matthioly, vous n'avez que les faire porter à Exiles pour les luy pouvoir rendre, si jamais Sa Majesté ordonnoit qu'il fût mis en liberté." But this idea seems to have been given up. To M. d'Estrades St.-Mars writes, June 25, 1681, of his intended journey to Exiles:—"J'aurai en garde deux merles que j'ai ici, lesquels n'ont point d'autres noms que messieurs de la tour d'en bas. Matthioli restera ici avec deux autres prisonniers." Beyond doubt, then, Matthioli remained at Pignerol. That he was, or had been, however, in the "tour d'en bas," appears from a letter of St.-Mars to Louvois (given by M. Iung, p. 450), October 26, 1680:—

> Mattioli a obligé Blainvilliers à lui faire des menaces *d'une rude discipline* s'il n'étoit plus sage et plus modéré dans ses paroles. Lorsqu'on l'a mis dans la tour d'en bas [misprinted *d'Exiles* in M. Iung's book] avec le jacobin, j'ai chargé Blainvilliers de lui dire, en lui faisant voir un gourdin, qu'avec cela l'on tenoit les extravagants hommes, et que s'il ne le devenoit, l'on sauroit bien le mettre à la raison.

And Louvois writes in return, November 2:—

> Il faut garder la bague que le sieur Mattioli a donnée au sieur de Blainvilliers, pour la lui rendre, si jamais le Roi ordonnoit qu'il fût mis en liberté.

Matthioli was not then, it would seem, a prisoner of such supreme importance but that it was held likely he might be released. The frequent and open mention of Matthioli by name in despatches to and fro is a further proof of the little secrecy that was observed in his case, or the slight importance that was attached to him. Would it be thought necessary to speak of him at other times so guardedly as "l'ancien prisonnier," "le prisonnier de vingt ans"? Moreover, be it observed in passing, he had not been twenty years in prison when Louvois thus wrote, but only twelve, and not five of these under the charge of St.-Mars. Of Matthioli by name we have the last undoubted mention in a despatch of Barbezieux to Laprade, then governor of Pignerol, December 27, 1683, when the prisoner had been trying to open communications with the outer world:—

> Vous n'avez qu'à brûler ce qui vous reste des petits morceaux des poches sur lesquelles le nommé Matthioli et son homme ont escrit, et que vous avez trouvés dans la doublure de leurs justaucorps, où ils les avoient cachés.

Leaving Matthioli at Pignerol for the whole space of time from his arrest till 1694, let us now follow the movements of St.-Mars. In his orders appointing him to the governorship of Exiles, Louvois had spoken of two prisoners de la tour d'en bas, whom alone the King would have him take with him; "à l'esgard des deux de la tour d'en bas, vous n'avez qu'à les marquer de ce nom sans y mettre autre chose." These were obviously the *deux merles* of the despatch of June 25, 1681. Of these he has to announce the death of one by dropsy, January 1686. Who then was the survivor? Obviously the same whom St.-Mars takes with him when transferred to the Iles Ste. Marguerite, in Provence, April 17, 1687, and of whom he speaks as *mon prisonnier*, who had been ill on the way, and whom he had guardedly conducted by way of Embrun, Briançon, Grasse, Mougins, and Cannes. We thus far find St.-Mars in charge of a single prisoner of great importance, who is certainly not Matthioli.

We now come to the despatch of Barbezieux to Laprade, March 20, 1694, enjoining him to convey to St.-Mars at the Iles three prisoners who were then at Pignerol, one by one, with great care. Here we as unquestionably come upon Matthioli, who, as M. Topin shows, came thus with his valet (of whom frequent mention is made) once more under the charge of St.-Mars. But it is not long before we find that a prisoner who had a valet (and no other prisoner but Matthioli is spoken of as having a valet) is dead. "Vous pouvez," writes Barbezieux to St.-Mars, May 10, "suivant que vous le proposez, faire mettre dans la prison voûtée le valet du prisonnier qui est mort." If this refers to Matthioli, as M. Iung thinks beyond dispute, there is an end to the Italian, who never was the prisoner of the Bastille.

We pass now to the theory to which M. Iung has been led by his researches amongst the seventeen hundred volumes of despatches and reports in the bureau of the Ministry of War, and in which he considers himself confirmed by concurrent proofs from other sources of authority. Extensive reading and much critical insight have been employed by him in constructing a whole chapter on the political history of the time, while dragging to light the long-hidden personage who formed the central figure in a wide and complex conspiracy. We will let him give in his own words what may be termed the first episode in the drama, the plot and details of which he proceeds to draw out with scrupulous minuteness from the *pièces justificatives* which form the bulk of his work:—

> Dans la nuit du 28 au 29 mars 1673, par un temps brumeux, un groupe de cavaliers s'approchait de l'un des faux passages de la Somme qui existent

* *La Vérité sur le Masque de Fer (les Emprisonneurs) d'après des documents inédits des archives de la guerre et autres dépôts publics* (1664–1703). Par Th. Iung, officier d'état-major. Ouvrage accompagné de cinq gravures et plans inédits du temps. Paris. Henri Plon. 1873.

à proximité de la place de Péronne. Celui qui paraissait être le chef s'aventura le premier dans le gué qu'il semblait parfaitement connaître. Grand, élancé, jeune encore, cet homme était vêtu d'un justaucorps de panne orné de boutons d'argent et d'un grand manteau dont les pans relevés cachaient son visage. Un vaste chapeau de feutre avec une plume noire, des bottes molles en cuir fauve dites à *la Mercy*, une épée de combat, achevaient son accoutrement. Les compagnons qui le suivaient à distance s'engagèrent successivement dans la rivière. Mais le chef venait à peine d'atteindre le sommet de la berge opposée, et son cheval de secouer l'eau provenant de cette immersion inattendue, que des coups de feu partirent des remblais qui avoisinaient les débouchés du passage. Des soldats se levèrent en même temps et se jetèrent sur les brides du cheval de l'inconnu, qui fut vite renversé et lié solidement. Quant à ses hommes, atteints ou non, ils avaient prudemment tourné bride.

Conduit immédiatement par la porte de Paris au donjon de Péronne, qui se trouvait dans le bastion voisin de celui dit de Richelieu, interrogé par M. *de Lespine-Beauregard*, lieutenant de Roi dans ladite place, et M. Legrain, prévôt général de la connétablie et maréchaussée de France, le personnage déclara se nommer *Louis de Oldendorff, natif de Nimègue*. Ses assertions, malheureusement, ne se trouvèrent pas conformes à celles contenues dans les papiers qu'on prit sur lui et dans la sacoche de son cheval. Quatre jours après, il était à la Bastille, dans la tour Bertaudière, confié aux soins vigilants de M. *Besmaus de Montlesun*, et interrogé le jour même par le secrétaire d'État de la guerre, M. le marquis de Louvois, qui revint plusieurs fois le voir avant son départ à l'armée.

A year later, on the night of the 29th-30th April, 1674, a closed litter escorted by a troop of horse under Legrain, having left Paris twenty days before, stopped at Bron, some leagues from Lyons. From the litter descended a young man of slim and active figure, his face hidden by a mask, his hands firmly tied, in which state he lay down on a couch prepared beforehand. The next day arrived ten horsemen under the Chevalier de St.-Martin, with sealed orders from St.-Mars to convey the prisoner with the utmost secrecy to the fortress of Pignerol, always by roads through the royal domain. In the despatch of Louvois to St.-Mars, giving him this commission (March 10), he is spoken of as "un prisonnier qui, quoique obscur, ne laisse pas d'être homme de conséquence." Assuredly one who had been under St.-Mars since the spring of 1674 could with greater strictness be spoken of in August 1694 as "votre prisonnier depuis vingt ans" than could Matthioli, who was not arrested till April 1679. The researches of M. Iung have enabled him to give the names of other inmates of Pignerol under St.-Mars, to the number of sixty-one, with the designation and place of their dungeons, the distribution of which is made clearer by authentic plans of the fortress. In 1674 there were in the central tower at Pignerol Fouquet and Lauzun; Eustache Danger in a cell of the "tour d'en bas," the new prisoner being lodged in the second cell. It was doubtless in Danger's cell, who had been removed early in the year, that Matthioli with his valet was installed in 1679, and there he remained till 1694. M. Iung proceeds to work out with minute precision the movements of his newly found captive, as one of the two prisoners of the tour d'en bas (les deux merles), with St.-Mars to Exiles (June 1681), from whence despatches by the dozen speak of the precautions observed concerning them, their health or illness, and the death of the dropsical patient. From Exiles St.-Mars conveys his prisoner to the Îles Ste.-Marguerite, April 30, 1687, having previously had orders to build there, at the cost of 1,900 livres, a new prison next the Chapel, and looking over the sea, "de manière qu'il ne puisse avoir commerce avec personne, et qu'il ne puisse mésarriver dans les bâtiments qui sont déjà faits." The expenses of the journey were 203 livres. The captive had bad health all this while, writes his gaoler, January 8, 1688, adding that the impression on the road and throughout the province was that he was the Duke of Beaufort or the son of Cromwell. On the death of Louvois in 1691 his son, the Marquis de Barbezieux, fifteen days after (August 13), writes to urge upon St.-Mars the same care of the prisoner "qui est sous votre garde depuis vingt ans." Half-a-dozen Protestant ministers are thrown in in the three years following, after which comes, in March 1694, the arrival of the three above-mentioned prisoners from Pignerol, which had become untenable during the course of the war; Matthioli, as M. Iung believes, in full accord for once with M. Topin, being among them, coming thus once more within the same prison walls with the true masked captive. A despatch of St.-Mars unknown to M. Topin, partly mutilated (January 6, 1696), speaks again of the "ensien prisonnier," and of the care taken at Exiles to prevent his marking his plate or linen, or having writing-paper. With equal care the "ancient prisoner" is brought by St.-Mars to the Bastille, September 18, 1698, and immured in the third chamber of the Bertaudière tower—the same, if M. Iung's theory is correct, which he had quitted twenty-six years before. From the national archives our author has brought to light the list of his fellow-prisoners at the Bastille in the year 1698, a score or so in number, among them Madame Guyon and her daughter, "une demoiselle irlandaise (enceinte)," "le sieur Gordon, Anglais," and "un inconnu," who is considered to be the masked prisoner of the Amsterdam Gazette of 1695. So strictly apart from all sight and contact had the real man of the mask been kept all these years, that setting aside himself, Louvois, and his father Le Tellier, and high officers like Lespine-Beauregard, Legrain, Besmaus de Montlesun, and St.-Martin, "nulle personne au monde," St.-Mars could declare, "ne peut s'être vantée d'avoir vu le prisonnier et d'avoir causé avec lui."

In the chain of proof which M. Iung has drawn out with consummate patience and skill the weak point is the absence of all but indirect and circumstantial proof making Louis Oldendorff one with De Marchiel. The latter name appears nowhere, but in the notice of interment. M. Iung thinks it clear that Oldendorff was an assumed name. The prisoner appears to have been known in the Bastille as M. Le Froid. His name occurs in one despatch of Louvois as the Chevalier de Kiffenbach. In another he is referred to as "le Chevalier des Armoises." Father Hyacinthe speaks of him as "le mestre de camp, le Lorrain, le libéral." With Besmaus he is "l'homme de Lisola." If De Marchiel was really the mysterious personage hidden under so many names, for what cause was he kept a prisoner so jealously and so long? The answer which M. Iung has to give, if not conclusive, is one of the highest plausibility. As may be learned from the political history of the time, especially from the writings of MM. Clément and Ravaisson, a wide and skilfully organized conspiracy had been set on foot, having for its object the death of Louis XIV. Poison was the accepted or fashionable crime of the day. In a chapter of his work, "Les Empoisonneurs," showing wide and careful reading, M. Iung recounts the numerous cases, more or less connected with the cabals of the time and with each other, which give a tragic interest to the latter half of the seventeenth century. Of these many were plots directed against the person of the King. Colbert was said to have been the object of another. A similar charge brought Fouquet to Pignerol, together with Danger, who was said to have been his valet. In 1673 the crisis approached, together with the King's departure for the siege of Maestricht. A vast conspiracy was known to Le Tellier, and to Louvois, having several foci both in France and abroad, with MM. de Molina, de Lisola, Van Buninghen, Van Bulen, and the Marquis de Grave for its reputed chiefs. Other lives besides those of the King were held to be in jeopardy. On the 11th of April Louvois writes to the Bishop of Strasburg, "Vous ne sauriez prendre trop de précautions pour vous garantir des misérables qui ont intention de vous assassiner." One of the most active agents of Louvois, Father Hyacinthe (Lefebvre), Father Provincial of the Recollets of Arras, writes that the first intimation of the plot was due to Baron d'Aspres, President of Zealand, others tracing it to the English Court. The theatre of the intended drama was to be the frontier of French Flanders, from Cambrai to Arras or from St.-Quentin to Péronne. Spaniards, Italians, and Dutchmen, besides Frenchmen and Flemings, were engaged in it. Louvois's right-hand man, his cousin Lespine-Beauregard, lieutenant du roi, writes to him, March 27, "Je souhaite que Dieu me fasse la grâce de me rendre maître du chef de ces exécrables," and Father Hyacinthe speaks at the same time of the "détestable chef de la conspiration." A certain "gentilhomme" was set at Brussels to watch the chief conspirator, who passed there, as we have seen, by the name of the Chevalier de Harmoises, and at Paris as the Chevalier de Kiffenbach. He was a Lorrainer, it was thought, by birth, spoke many languages, lived freely, and had lately caried off the wife of a Bohemian colonel. The funds of the conspiracy were in the hands of the sieur Groët of Amsterdam, and the papers were kept by one Abraham Kiffied at Brussels. The chief being expected to cross the Somme with three accomplices towards the end of March, every one of the nine fords is carefully watched by cavalry pickets, set by Lespine-Beauregard, who succeeded in arresting him, as we have read in the extract given above, and who writes to ask (April 13):—"J'ose vous demander si le dit Oldendorf est cet exécrable que nous cherchons de cette abominable cabale," adding (April 17), "Celui que j'ai envoyé à Bruxelles en a rapporté heureusement le coffre du sieur de Oldendorf, qui n'a point été ouvert et qui est en dépôt chez M. de Nancré." Having seen at Péronne the contents of this box, Louvois writes to Besmaus to prepare for the reception of a prisoner at the Bastille, adding, "Il est de la dernière importance que l'on continue à ne savoir point ce qu'il est devenu." The extracts we have already given will enable our readers to trace the subsequent movements of this prisoner to Pignerol, to Exiles, to the Îles, and back to the Bastille, and to judge of the strength of the case made out by M. Iung for his identity with the subject of so many diverse theories. Death having at length relieved St.-Mars of all responsibility, it is conceivable that he may have so far allowed the veil of secrecy to be withdrawn as to let the name of De Marchiel appear in the death register. That the charge against him as the chief of such a plot was grave enough to account for all the precautions displayed can hardly be called in question. To put to death prisoners of this kind was by no means the practice of statesmen of the time, influenced as they doubtless were by the hope of revelations to be extracted from a captive, or of prestige to be gained to themselves from the retention even of a minor piece upon the political chessboard. Efforts have been made by M. Iung to raise in importance the otherwise little known personage in question, taking De Marchiel as his real name, and tracing several families of noble rank in Lorraine who were known as De Marchal, Maroschal, or Marcheuille, and allied with other old and distinguished lines, the Armoises, Harmoises, or Hermoises. Indecisive as such speculations must be at the best, they add somewhat to the likelihood of our having after all in the register of St. Paul the revelation of the long-sought identity of the Man with the Iron Mask.

KINGSLEY'S PLAYS AND PURITANS.*

MR. KINGSLEY has here reprinted three articles from the *North British Review*, which he has judiciously placed in their exact order of merit, as the first is much the best and the

* *Plays and Puritans, and other Historical Essays.* By Charles Kingsley. London: Macmillan & Co. 1873.

last is much the weakest. But all of them teach us what Mr. Kingsley can do and what he cannot. He can, when he chooses, describe a scene or tell a story as well as any man. He can put forth a conviction of his own mind so as to make us feel quite sure that it really is a conviction. We may or not agree with his proposition; we may sometimes smile at the way in which it is put forth; but we feel that we are dealing with a man who means literally what he says. Mr. Kingsley differs in this from the author whom he so greatly admires, Mr. Froude. With Mr. Froude we do not always feel sure whether the whole thing is not meant as a joke, whether he is not, after all, trying to see how great a mass of ingenious and contradictory paradoxes people can be got to swallow. We never for a moment think anything of this kind with Mr. Kingsley. Whatever else he is, he is at least in earnest. The weak side of Mr. Kingsley is that he is too much in earnest. We do not expect him to see the other side in any question; that is a power reserved for a Hallam or a Thirlwall. But Mr. Kingsley's earnest belief in his own convictions would be far more likely to carry conviction to the minds of others if it did not so constantly boil over in an excited, impetuous way of writing. We say "constantly," because there are times and places where his best manner is thoroughly in place, and where even his worst manner is not so much out of place as it is elsewhere. Mr. Kingsley can write a novel and he can preach a sermon. Even in a novel or a sermon a little check on himself might not be amiss; still in a novel or a sermon Mr. Kingsley's ardent and impassioned way of writing is very often the right thing. But it does not do for history, either for narrative or for argument. For historical writing of any kind a certain calmness is needed. We have hinted that complete impartiality, the power thoroughly to take in the position, feelings, and arguments on both sides in a controversy, to deal in short as Hallam does with the Civil War of England or Thirlwall with the history of Philip and Alexander, is a gift given to few men indeed. But without expecting every man to reach this level, every man may carry about him the remembrance of the great truth that there are two sides to most questions; that, even though he may not see what the excuses were, the chances are that even the people on the wrong side may have had some excuses, something to say on their own behalf; that it is most unlikely that the people on one side should be all angels and the people on the other side all devils. We were quite ready to hear and to weigh Mr. Froude's pleading on behalf of Henry the Eighth. We have always held that, up to a certain point, it is a successful pleading. He has, as we hold, utterly failed to understand his own hero; he has not gone to the bottom of one of the most remarkable studies of human nature that history gives us. He has utterly failed to justify Henry's crimes, and we think that he has not even entered dramatically into the position of Henry as the doer of them. But he has brought out, in such a way as to make people understand it much more clearly than they commonly do, that there was another side also to Henry's reign and to Henry's character, and one which quite accounts for the position which he held at home and abroad. So with Queen Elizabeth; so with anybody else. There are very few perfect monsters either of virtue or of vice. But this way of looking at things does not suit Mr. Kingsley's temperament; he can see one side only at a time. Now even in a novel this may be carried too far, and in writing or discussing history it at once makes an end of all truth and of all criticism. Then again comes in Mr. Kingsley's other temptation; besides being a novel-writer, he is also a preacher, and he forgets that what may be quite in place in a sermon may be quite out of place in an historical essay. We do not want anybody to write history or to discuss history as if man were a mere machine, and as if there were no such thing as a God that judgeth in the earth. But it is too much to have the Divine Name coming over and over again half a dozen times in the same page, to be told, at every turn of the life of Raleigh or of any one else, about God's will, God's purposes, God's judgment, as if Mr. Kingsley knew personally all about it—as if, in short, he had been promoted to the post which Alfonso the Wise wished that he had himself held. This sort of thing is, to our mind, not only bad in point of taste, but it altogether fails in its effect. Arnold could treat history from the religious and moral side without running off into extravagances of this kind. Nobody doubts Mr. Kingsley's sincerity in everything that he says; but this is just the sort of talk which may easily sink into a mere habit, and even into a mere formula.

We have said that the first of the three essays, that headed *Plays and Puritans*, is the best of the three. It is the best, because it is the one in which Mr. Kingsley's peculiar way of writing is least out of place. A great part of it comes in its own nature very near to a sermon, and at the end it grows into the germ of a very pretty novel. In making either the sermon or the novel Mr. Kingsley is at home, and he therefore succeeds much better here than when he is discussing the character of Henry the Eighth. His position is this:—The Puritans were not dull, unpoetic, unreasonable people who spitefully and morosely objected to art and poetry and everything coming under the head of what is now called "culture." The age of Charles the First was not, as Mr. Kingsley says that most people fancy it was, a kind of happy period of transition, uniting the romance and picturesqueness of an earlier time with the solid civilization of a later; in the point of dramatic poetry especially, one of the things which the Puritans are most blamed for running down, it was not a whit better in point of morality than the time of Charles the Second. In protesting against the plays of the time the Puritans did no more than every decent person now would do and does as far as he has any occasion. In most of the points in which the Puritans were unlike the Cavaliers—in dress, manners, and the like—the practice of modern times has decided for the Puritan and against the Cavalier. An English gentleman of our own time has far more in common with the Puritan than with the Cavalier. And the whole winds up with a very pleasant picture of Zeal-for-Truth Thoresby and his pretty cousin Patience, to show that Puritans had the same feelings and the same inherent poetry as other people. This picture might easily have been expanded into a novel in Mr. Kingsley's best style. It is thoroughly well drawn in every way, and we have not a word to say against it in itself, except that Mr. Kingsley need not have again dragged in the inevitable Viking. The only objection is that this kind of pretty rural picture is not the sort of thing which one would look for in an historical essay. As for the body of the essay, it is no doubt an exaggeration to maintain that the Court of Charles the First was no better in point of morality than the Court of Charles the Second; this is one of those statements which by going too far defeat their own purpose. Still Mr. Kingsley undoubtedly makes good some of his points, especially as to the immorality of the dramatic literature of the first half of the seventeenth century as well as of the latter half. But, whether all his statements can be borne out or not, they are just the kind of statements in which there is least to be said against Mr. Kingsley's way of treating them. He is here called upon, not so much to reason, as to declaim and to denounce. His business is to be a moral prophet rather than a critic. No doubt he overdoes it; he gets over-excited and waxes fiercer than need be; but, on the whole, this is a case in which he does well to be angry; his indignation is in the main righteous; if he is a good hater, it is not without a good cause. Another man might perhaps have treated the same argument without lashing himself into quite such a pitch of fury, and without running off into the paradox into which Mr. Kingsley certainly does run off. But Mr. Kingsley, like other people, must do things after his own fashion or not do them at all; and in this case we certainly do not wish that the thing had been left undone.

The two other pieces, on Sir Walter Raleigh and on the early volumes of Mr. Froude's History, may from one point of view be taken together. They have filled us with an eager desire to know what Mr. Kingsley thinks of Mr. Froude's later volumes. Mr. Kingsley in one of these papers sets up Queen Elizabeth, in the other he sets up Mr. Froude. When he wrote them, the cultus of Elizabeth and the cultus of Froude had not been shown to be inconsistent; but what does he say now? He describes Queen Elizabeth and all about her in his most impassioned style. He is eager to rescue her from certain calumniators—Lingard, we conceive, or some writers on that side. She is about as perfect in Mr. Kingsley's eyes as any human creature can be, so perfect that it was quite sober and reasonable for people, Raleigh among them, to be making fierce love to so adorable a being even at the age of sixty. We cannot go all Mr. Kingsley's lengths, but we quite go with him in holding that Elizabeth was a great Queen and her age a great age. So Mr. Froude, when he wrote about Henry the Eighth, was going to say, but, when the time came, he did not say it. Perhaps Mr. Kingsley may remember how Mr. Froude in hot haste once found out some scandal about Queen Elizabeth and very prudently covered it up again. At any rate Mr. Kingsley's heart must be grieved at finding, after all his flourish of trumpets on behalf of Mr. Froude, to how very small a figure the great Queen has been cut down in Mr. Froude's hands. On the whole, we think Mr. Kingsley would be happier if he were to leave Mr. Froude and come over to us. We certainly feel ourselves a degree or two nearer to Mr. Kingsley's devotion than we are to Mr. Froude's contempt.

The third essay, about the early volume of Mr. Froude and the defences of Henry the Eighth, we really need not go into. We have discussed the matter over and over again. And meanwhile another volume comes from Mr. Brewer, not a thin volume, yet, when we open it, we find that it is not a volume at all, but only the middle part of a volume, the preface to which is not to come till the last part. Then too Mr. Hepworth Dixon has been writing about "Two Queens," or, we believe, as yet only one Queen. So that there is altogether a good deal of King Harry matter afloat to be looked to some day or other. So we will not go into details with Mr. Kingsley, but will only stop to ask whether he ever saw the amazing documents which have been brought to light by Mr. Pocock? No amount of zeal on behalf of Henry or of his panegyrist will get rid of the story of Mary Boleyn. The Raleigh story would be quite worth going through, if only Mr. Kingsley would tell his tale a little more quietly. It is plain that he has really read and thought about it, and that he has earned a right to be heard, if he would put himself into a shape in which he can be heard. But when Mr. Kingsley tells a tale, there is no such process as hearing in any critical sense. We can neither agree with nor differ from, we cannot argue for or against, a full stream of passion which leaves no choice but either to go along with the stream or to shut up the book. We will make one comment only, perhaps a prosaic, perhaps a superstitious one. Mr. Kingsley sees divine judgments on those who got possession of Raleigh's estate of Sherborne Castle. He forgets that many people saw a divine judgment on Raleigh himself, because Sherborne Castle was a possession of the see of Salisbury, of which Raleigh had got possession after a way not very honest, though not worse than the doings of most other people in those

days. We do not presume to go so deep into such matters as those who feel free to dogmatize on either side. We only say that one view of judgments seems to us at least as reasonable as the other, and that it is hardly fair to bring one out prominently and to hide the other altogether.

Our counsel to Mr. Kingsley would be to leave King Harry to his lawful owner Mr. Brewer, and to give us a seventeenth-century story on the adventures of Zeal-for-Truth and his cousin Patience. There he would be quite at home. And, as he has shown himself so well able to describe the evils of the seventeenth century, he may perhaps be able, in his new sphere of usefulness at Westminster, to say something about those of the nineteenth century also.

OLD COURT LIFE IN FRANCE.*

WHEN, about two years ago, we had occasion to notice the *Diary of an Idle Woman*, we sincerely hoped we had seen the last of the writer for a long time to come. The dreary flow of verbose commonplace, only broken by frequent sallies of what was apparently intended for wit, made Mrs. Elliot's Diary very unattractive reading. She has again, however, obtruded herself on the public, not this time to tell her own experiences, but as the retailer of a sort of *chronique scandaleuse* of the French Court during the two centuries which elapsed from the accession of Francis I. to the death of Louis XIV. The work, to judge from the preface—which is not here termed an *Avant Propos*—seems designed to take the place of an historical novel or succession of novels, but is really nothing of the kind; it lacks equally the truth of history and the grace of fiction. The author informs us that she has "been all her life a student of French memoir-history," and "was bold enough to fancy that somewhat yet remained to tell"; which is no doubt the case, but it does not follow that she was the person to tell it. Nor is it clear that the details, or imagined details, of the relations of the French Kings with their various mistresses were the "somewhat" best deserving to be told. However, Mrs. Elliot considered that "some pictures might be made of those old French personages for English readers in a way that should pourtray the substance and spirit of history, without affecting to maintain its form and dress." Perhaps there might; but, as far as we can perceive, the authoress has throughout affected to maintain the form and dress of history, and she has certainly manifested a striking ignorance of its spirit and substance whenever she has had the opportunity. Very different indeed is her own estimate of her labours. For she finally assures us, with a happy confusion of metaphors:—"Keeping close to the background of history, I have endeavoured to group the figures of my foreground as they grouped themselves in actual life. I have framed them in the frames in which they really lived." Certainly not always, if "frames" is to be taken for frames of mind.

Mrs. Elliot explains in her first page her reasons for selecting this particular period, and it is only fair to give her the benefit of the explanation:—

> At this period, three highly educated and unscrupulous young men divide the power of Europe. They are Henry VIII. of England, Charles V. of Austria, and Francis I. of France. Each is magnificent in taste; each is desirous of power and conquest. Each acts as a spur to the others both in peace and in war. They introduce the cultivated tastes, the refined habits, the freedom of thought of modern life, and from the period in which they flourish modern history dates.

It would hardly have occurred to us that cultivated tastes or refined habits were characteristic of Henry VIII., or that "freedom of thought"—except in the sense of very considerable freedom both of thought and conduct in their marital relations—was very remarkably exemplified in any of the three. But that is probably what is meant. As the writer happily phrases it a few pages further on, when speaking of her earliest hero, Charles de Bourbon, "Suzanne (his wife) had failed to interest his heart." That is, in fact, the one distinguishing feature of all her heroes. Their wives had failed to interest their hearts, and, with the partial exception of Louis XIII.—for whom she is never tired of expressing her utter contempt—they all displayed an admirable aptitude for supplying the lack of interest elsewhere. To take, for instance, the very first hero and heroine, whose meeting is thus described:—

> Marguerite d'Alençon is present; like Bourbon, she is unhappily mated. The Duc d'Alençon is, physically and mentally, her inferior. When the Constable salutes the King, Marguerite stands apart. Conscious that her brother's eyes read her thoughts, she blushes deeply and averts her face. Bourbon advances to the spot where she is seated in the recess of an oriel window. He bows low before her; Marguerite rises, and offers him her hand. Their eyes meet. There is no disguise in the passionate glance of the Constable; Marguerite, confused and embarrassed, turns away.

It may be observed that both the extracts we have given possess one historical element, and as it is about the only one which generally pervades the book, it is but right to call attention to it. We mean what grammarians call "the historical present." This is quite a leading peculiarity of Mrs. Elliot's style, and it is always most conspicuous when there is least likelihood or possibility of her narrative resting on any historical evidence; as thus:—

> It is spring; Francis is seated in the broad embrasure of an oriel window, in an oak-panelled saloon which looks towards the surrounding forest. He eagerly watches the gathering clouds that veil the sun and threaten to prevent the boar-hunt projected for that morning. Beside him, in the window, sits his sister Marguerite. She wears a black velvet riding-habit, faced with gold; her luxuriant hair is gathered into a net under a plumed hat on which a diamond aigrette glistens. At the farther end of the room Queen Claude is seated on a high-backed chair, richly carved, in the midst of her ladies.
>
> * * * * * *
>
> "Marguerite," says the King, turning to the Duchesse d'Alençon, as the sun reappears out of a bank of cloud, "the weather mends; in a quarter of an hour we shall start. Meanwhile, dear sister, sit beside me. *Morbleu*, how well that riding-dress becomes you! You are very handsome, and worthy to be called the Rose of the Valois. There are few royal ladies in our Court to compare to you;" and Francis glances significantly at his gentle queen.

And so on for several pages of similar historical and dramatic interest. There are very few dialogues, however, in which a brother and sister are the interlocutors. "The age," we are reminded, "was an age of intrigue," which is perfectly true; but, if Mrs. Elliot can urge the plea put into the mouth of Euripides by the great Athenian satirist, "Did I invent the story of Phædra?" the reply is equally applicable, "No, but vice should be concealed and not paraded by poets." We do not mean, of course, to imply that Mrs. Elliot is a poet—very far from it. So absorbing, however, to her mind is the interest and importance of these amorous intrigues, that she seems to think them the pivot on which all history turns. Thus, we are informed, as if it were an ascertained fact of history, that it was the advice of Gabrielle, his favourite mistress, which induced Henry IV. to become a Catholic. It is possible that Gabrielle may have exerted some influence over him in the matter, but the latest writer on French Church history, Mr. Jervis, has argued with much force, as we pointed out in reviewing his work, that Henry's change of religion was probably sincere, and at all events he had abundant political motives to influence his decision, quite apart from the wishes of Gabrielle d'Estrées.

It is especially in her estimate of the great statesmen of the period that Mrs. Elliot betrays her entire absence of any real historical knowledge. She might have luxuriated to her heart's content in the private scandals of French Court life without meddling at all in such high matters. But, if she chooses to discuss the characters of personages like Richelieu and Mazarin, she ought, to use her own phraseology, to put them in their right frames. How far she has done so may be judged when we find Richelieu described as a bloodthirsty monster of revenge and hatred, with a more than feminine vanity, half ogre and half flirt; his dying words, "I have had no enemies but those of the State"—the sincerity of which there is no reason to question—being quoted in proof of his remaining a hypocrite to the last. A stern, inexorable man he was, no doubt, even measured by the standard of rougher days than ours; but of his thorough and lifelong devotion to the interests of France, as he understood them, there can be as little question as of his consummate ability as a statesman. Mazarin was not his equal either in moral or intellectual force, and he is fairly open to the charge of avarice; but his loyalty to his adopted country is unimpeachable, and he was altogether as unlike as possible to the pitiful and sordid impostor depicted by the authoress. She seems, indeed, incapable of conceiving any but sordid and selfish motives in those who have played a prominent part in public life. We forget who first invented the term "scavengers of history," but it would be hard to find a writer who more unpleasantly recalls it to our mind. There is one public character, to be sure, on whom her warmest eulogiums are showered, but she is scarcely happier in her praise than in her abuse. Richelieu is a tyrant and a butcher, Mazarin "only a soft-spoken Italian, with a slight frame, long thin hands, and a sallow, womanish face"; but De Retz—the kid-gloved hero of the ridiculous war of the Fronde, a tonsured duellist and seducer at fifteen, by his own confession, an archbishop openly glorying in his debaucheries at thirty, a selfish egotist and finished hypocrite from first to last—De Retz is "a patriot, grand, noble, generous even to his enemies" (whom he never lost an opportunity of maligning), "*incapable of envy or deceit*, a daring statesman, *a resolute reformer*." But then De Retz, though his profession precluded him from having a wife who could "fail to interest his heart," was a handsome man with a whole bevy of mistresses. Even in points of detail Mrs. Elliot displays quite a genius for blundering. Cardinal Mazarin is introduced as "only in deacon's orders, and, with a dispense, free to marry." Here are three blunders at least compressed into one line. A priest is equally free with a deacon to marry with what Mrs. Elliot calls "a dispense," but dispensations are very rarely given to either one or the other. Mazarin was not a deacon or subdeacon, but in minor orders, and therefore was so far at liberty to marry without any dispensation. However, Mrs. Elliot may be congratulated on having made some advance in her ecclesiastical knowledge. When she wrote her Roman Diary, she was under the impression, as we had occasion to notice at the time, that deacons are young priests, just as children are apt to fancy that ponies are horses in an immature stage of development. It is something that she has now learnt that a full-grown cardinal may be a deacon, though her discovery happens to be based on a fabulous example. We have again an elaborate account of the poisoning of Henrietta, Duchess of Orleans (daughter of Charles I.), as though it were an established fact of history, and of the King's horror at hearing of it. No hint is dropped of the extremely slender evidence for the rumour—so slender that, in an age when poison was the accepted explanation of all sudden deaths, Louis, after his first paroxysm of grief, came entirely to disbelieve it. But evidence is not the writer's speciality. Not only does she hardly ever give any reference, but a great deal of both volumes is filled

---

* *Old Court-Life in France.* By Frances Elliot, Author of "The Diary of an Idle Woman," "Pictures of Old Rome," &c. 2 vols. London: Chapman & Hall. 1873.

up with secret dialogues, like that between Catherine de' Medici and her astrologer, of which, if they took place, we may be very sure that no record would have been left. It is possible, of course, that Mrs. Elliot may be a medium, and thus have obtained her information direct from headquarters; otherwise, both "figures" and "frames" must be drawn from the depths of her own consciousness.

There are several other passages which we had marked for reference or citation, but by this time our readers have probably had enough. It would not be fair, however, to close without giving a specimen of the ordinary style of the book; and we shall take it from one of those scenes the authenticity of which it is so difficult to guarantee, except on the hypothesis of Spiritualist revelations. Louis XIV., whose young Spanish bride had already "failed to interest his heart," is making love to La Vallière during a thunderstorm in the forest of St. Germain, much like Dido and Æneas in the Fourth Book of the Æneid. It is just the occasion to bring out Mrs. Elliot's enthusiasm:—

"What!" cries he, "do you fear me more than the storm? What have I done to alarm you? you whom I love, whom I adore! Why do you hate me? Speak, I implore you, Louise."

"Oh, Sire! do not say hate. I revere you—I love you—as my King, but——"

"Sweet girl, I breathe again. But why only love me as your Sovereign—I, who cherish your every look, who seek only to be your servant—your slave?"

Saying this, Louis falls on his knees before her; he seizes her hands, which he covers with kisses; he swears he will never rise until she has promised to love him, and to pardon the terror his declaration has caused her.

Mademoiselle de la Vallière cannot control her emotion. She implores him to rise.

"You are my King," she says, "the husband of the Queen. My royal master, I am your faithful subject. Can I say more?"

"Yes, dearest, promise me your love. Give me your heart; that is the possession I desire," murmurs Louis.

Pressed by the King to grant him some mark of her favour, La Vallière becomes so confused she cannot reply. Louis grows more and more pressing, interpreting her emotion as favourable to his suit. In the midst of the tenderest entreaties the thunder again bursts forth, and poor Louise, overcome at once by fear, love, and remorse, swoons away. The King naturally receives the precious burden in his arms. He seeks hastily to rejoin the other fugitives and his attendants, in order to obtain assistance. Ever and anon he stops in the openings of the forest to admire her, as she lies calm and lovely in repose, her long eyelashes sweeping her delicate cheeks, her half-closed lips revealing the prettiest and whitest teeth. I leave my readers to imagine if Louis did not imprint a few kisses on the fainting beauty he bears so carefully in his arms, and if now and then he did not press her beloved form closer to his breast. If in this he *did* take advantage of the situation chance had afforded him, he must be forgiven; he was young, and he was deeply in love.

It is impossible, in taking leave of the authoress, not to be haunted by an uneasy suspicion that her passion for sensational bookmaking may find only too ample materials in the "Old Court Life" of other countries besides France. It is unfortunately not French Sovereigns only whose wives "have failed to interest their hearts." Suppose, for instance, she were to compile a couple of volumes under the title of "Evenings at the Escorial," and another couple on "Curiosities of Harem Life." There is abundant scope for a prurient imagination in the secret history of the Courts of Constantinople and Madrid, and a writer who gloats over the nauseous details of the massacre of St. Bartholomew need fear no lack of congenial matter in the interior of the torture-chambers of the Inquisition, and the brutal slaughter of the Janissaries; to say nothing of the bull-fights of former days, when the young Spanish nobles used to expose themselves much like the amateur gladiators of Juvenal's day in the Coliseum, and the hideous solemnities of an *auto da fé*, which would more than match the darkest atrocities of St. Bartholomew. On the latter subject, by the way, Mrs. Elliot romances *more suo*: she has multiplied the number of victims, so far as there are any authentic records to guide us, by about ten, and then follows a ghastly description of Charles IX. dying in agonies of remorse, and bathed in a sweat of blood. Now it so happens that we have the express testimony of his confessor, Sorbin—one of the most ardent admirers and eulogists of the crime—that what chiefly troubled the King in his last moments was having left his murderous work unfinished. But we need not waste more words on the historical value of Mrs. Elliot's lucubrations. It is truly alarming to reflect what "an idle woman," with a voracious appetite for frivolous gossip and tales of lust and blood, may manage to rake together before she has finally laid down her pen.

CAIRNES'S ESSAYS ON POLITICAL ECONOMY.*

PROFESSOR CAIRNES has collected in this volume a series of essays which have appeared in different periodicals in the course of the last fourteen years. All students of economical theories will be very grateful to Professor Cairnes for republishing these essays, and in a secondary degree to Professor Fawcett, at whose suggestion—so their author tells us—the republication has been made. For there is no living economist who possesses in a higher degree the qualities necessary for a satisfactory discussion of such topics. He is always clear, logical, and to the point; and if at times we feel a slight inclination to complain of the demand made upon our attention, the fault, if it be a fault, is of the slightest. It is owing, not to any want of lucidity, but to a strenuous effort at compression. There is more sound and clear reasoning in this volume than would supply a whole library of the diffuse and prosy discourses from which we are too often condemned to extract economic theories. We cannot indeed state in fairness to our readers that Professor Cairnes is exactly amusing. His topics are of necessity a trifle dry. About half the volume is occupied by an inquiry into the effects of the gold discoveries in California and Australia. It is a model of the way of treating such a subject; and though we cannot assert that Professor Cairnes is in all cases absolutely right, we are convinced of the thorough soundness of most of his reasoning. Such objections as occurred to us were not of a serious character, and might very probably disappear on further examination. Of the remaining essays, the first is devoted to describing the results of co-operation as carried out in the Welsh slate quarries; the second is an essay published during the debates on the Irish Land-law, and discussing the policy of various measures under consideration; the third is a lecture delivered at University College as to the connexion between political economy and the *laissez-faire* principle (why, by the way, should not this very English principle have an English name, and be called, say, the "let alone" principle?); the fourth is a vindication of the claims of political economy to be called a science, in opposition to the theories of Comte; and the fifth and last is a short, and, as it seems to us, a conclusive and masterly exposure of the fallacies involved in the characteristic doctrines of Bastiat. Each of these essays shows the same qualities of style and reasoning. We should be happy to give our entire adhesion to nearly all the principles expounded, as indeed Professor Cairnes is a thoroughly orthodox disciple of the school of Ricardo and Mr. Mill. As, however, our space is limited, and it is very difficult to compress into any moderate space discussions already remarkable for the closeness with which they are packed, we shall confine ourselves to saying a few words upon one of the most interesting of the essays, and the one in which we find ourselves most at variance with Professor Cairnes. We speak upon it with some diffidence; for the subject is a very large one to which it is impossible to do justice without going into some abstruse inquiries. We will, however, endeavour to indicate briefly the nature of our objections to Professor Cairnes's teaching; though it is possible that, after all, we differ from him rather in words than in substance.

Is political economy entitled to be a called a science? Comte, as is known to all his readers, said emphatically, No. Professor Cairnes suspects, and we are much inclined to share his suspicion, that this reply was founded as much upon an unphilosophical prejudice as upon grounds of pure reason. Comte, in fact, found political economy very much in his way when attempting to construct a science of "sociology," and he condemned it accordingly without much examination. "It is quite evident," says Professor Cairnes, "that M. Comte had no effective knowledge of the branch of science which he denounced;" and several of his attacks show an arrogant contempt for other thinkers of his own time which unfortunately is by no means rare in his writings. The claims of political economists are, however, repudiated by others besides Comte, and though he was rash and dogmatic, he may not have been mistaken in his assertions. When he condescends to argue, he gives some reasons which can be examined, and challenges economists to a test to which, as Professor Cairnes fully grants, they are clearly bound to submit.

We will first take a statement which Professor Cairnes considers to be the root of Comte's whole argument. Phenomena, says Comte, in proportion as they are more complex, are more "solidaires"—whatever that may mean. Hence it follows that, as social phenomena present the highest degree of complexity and "solidarity," it is necessary to consider them as a whole; instead of following the method common to all sciences which deal with inorganic matter, and breaking up the phenomena into different classes for separate examination. It seems to us that, in his answer to this argument, Professor Cairnes scarcely meets the real difficulty. He asserts that, as a general rule, the more simple a compound is, the more complete is its "solidarity." Water, for example, chemically considered, is of the lowest degree of complexity, and its solidarity—by which Professor Cairnes understands "intimacy of relationship, closeness of interdependence"—is of an extremely intense kind. In short, the more complex the compound, the more easily it is decomposed. This conclusion, says Professor Cairnes, "appears to be the reverse of that for which Comte contends." Now it is always rash to make any assertion as to Comte's meaning, seeing that it is hidden away within a stupendous mass of terribly complex sentences, and that his disciples are always ready to prove that every one who is not his disciple has utterly misunderstood him. But the argument does not seem to us to require the sense which Professor Cairnes puts upon it. It is true that compounds are generally more stable in proportion to their simplicity; and if it were necessary actually to decompose the compound in order to unravel the play of the various forces by which it is affected, the difficulty of analysis would also be great in proportion to the stability. But this, as it seems to us, is to give a new meaning to the word "solidarity." We should interpret that phrase, not as implying the difficulty of resolving the concrete phenomenon into its elements, but the difficulty of studying separately the action of the various forces by which it is affected. Thus, for example, water, as Professor Cairnes says, has mechanical, optical, and electrical as well as chemical qualities. Comte's argument is

* *Essays on Political Economy.* By J. E. Cairnes. London: Macmillan & Co. 1873.

that we can easily study the mechanical qualities without troubling ourselves about the chemical; and it is just because the chemical "solidarity" is so complete that we are enabled to do this. In a human being, on the other hand, though the solidarity is less complete, in the sense that he is more easily resolved into his elements, the interdependence of the phenomena which he presents is far closer. We cannot study his physiological apart from his moral qualities, or *vice versâ*. We can examine the laws of equilibrium of a floating body without the least knowledge of the composition of water. We cannot so easily study the laws of digestion without some reference to the moral and mental laws by which it is often affected. This is Comte's argument as we understand it, and it appears to us to point to a real and very serious difficulty in the way of the political economist. Nor, if we have understood it rightly, do we see how it is affected by Professor Cairnes's argument that the concrete phenomenon water cannot easily be resolved into hydrogen and oxygen.

However this may be, there is obviously one answer to Comte which, if it can be given, is conclusive. To prove that political economy is a science, the shortest way is to point to the laws which have been definitely established. Comte asserts that political economy fails to satisfy the requisite conditions, because it is wanting in "continuity" and in "fecundity." Unlike the physical sciences, it does not show a steady development of a body of settled truth; and it does not lead to a constant succession of new applications. On both these points Professor Cairnes meets the argument by showing, first, that political economy has made a steady progress from Adam Smith to Mr. Mill, and that many theorems may be regarded as established instead of leading to barren controversy; and, secondly, that it is fruitful in applications, and that, although we must admit that it does not give us a power of unconditional prevision, it has yet enabled us to predict, without actual experiment, the result of many new combinations.

We think that Professor Cairnes has clearly proved that political economy has claims to be called a science which were overlooked by Comte, but we confess that we doubt his success in establishing its right to be ranked with those branches of knowledge which may in the fullest sense be called scientific. We could have wished, in order to avoid mere logomachy, that Professor Cairnes had told us more distinctly what he means by science. He says, for example, that "geology is counted a science," and of course, in a popular sense, nobody would hesitate to use that phrase. But geology is not a science in the sense in which chemistry and biology claim to be sciences. If geology be a science, we must call history a science; the one determines the fact that a pterodactyle lived at a certain epoch, and the other that Julius Cæsar or Alexander lived at another epoch. The nature of the proof may or may not be different in the two cases; but both studies merely aim at ascertaining the existence of a certain number of facts. They provide materials for the sciences of biology or sociology, but they are not, in a strict sense, sciences themselves. The analogous study in a different department of thought is statistics, which also arrogates to itself the name of science in popular usage; but which is no more entitled to the name than book-keeping. In short, if the word be used in this sense, every true assertion must be called scientific. It is as scientific to say that John Smith walked down the Strand yesterday as to say that the moon is at a given distance from the earth. Professor Cairnes of course claims more than this for political economy. It does not record facts, but states the laws by which facts are connected. Admitting fully that political economy does enable us to make such statements, we still doubt whether it should be ranked amongst the genuine sciences. To illustrate the point, let us imagine that somebody should give an accurate description of a complex piece of machinery, say a watch. He would undoubtedly be able to reveal a great many useful truths of which we might have been previously ignorant. He would point out through what intermediate apparatus the movement of a particular wheel was propagated to the hands; and he would incidentally exhibit the futility of a great many empirical notions which might have been popular before his time. It would appear, for example, that you could not move the hour-hand without proportionally increasing the speed of the minute-hand; or that turning the face did not alter the speed of the works; and, if a notion as absurd as the commercial theory had prevailed in regard to the nature of watches, his observations would have annihilated them, and saved many mainsprings. Such a description, however, would scarcely rank as scientific unless the observer had proceeded further, and given some of the mechanical laws which determine the motions of clockwork as of all other arrangements of matter, and the observation of which enables us to make permanent improvements in their construction. It would result, too, that after a certain number of truths had been discovered, this branch of observation would become sterile. We should learn a definite set of empirical rules, but we should get no further until a philosopher arose who traced them back to the ultimate laws of motion. Now political economy presents so far an analogous case that it describes for us the movements of the highly complex mechanism by which wealth is produced and distributed. Its discoveries enable us to discard at once many of the absurd nostrums by which economical quacks professed to increase wealth when they were only tampering injuriously with the modes of distribution. But such observations cannot of themselves be ranked as scientific until they are connected with those laws of human nature of which they are in some sense the remote products. Political economy certainly enables us to trace with great confidence the real tendencies of certain social arrangements; as it has incidentally done some occasional mischief by leading people to fancy that those arrangements were eternal and immutable. The knowledge thus acquired does not become in the highest sense scientific until we can deduce it from the action of those molecular forces by which the human units are bound together into the great social whole. So far as political economy, in short, deals simply with the mechanism and not with the ultimate forces of society, it must be regarded rather as a useful preparatory study than as part of that science of sociology which is certainly not as yet, and perhaps may never be, constituted. We cannot here inquire which description would be accurate, and the question, as we have stated it between ourselves and Professor Cairnes, is perhaps rather one of nomenclature than of facts. If political economy be rightly called a science, he is certainly one of its ablest expositors; and we may fairly say that the spirit in which he treats it is scientific, so far as logical rigour, thorough impartiality, and a careful testing of theory by facts are deserving of the name.

HOLLAND'S INSTITUTES OF JUSTINIAN.*

THIS edition of the Institutes of Justinian presents a striking contrast to the edition of Gaius which recently issued from the same press. Mr. Poste's work is of course very different in its conception and object from the text-books which supply the practical wants of English lawyers. But in one way it curiously resembles some of the strictly professional books which are in the highest esteem, and whose statements of the law are regarded as having an authority only short of judicial. The learned authors professed to be only annotators, and modestly called their notes the least valuable part of the work. But the result of their own labours and those of successive editors has been a relation of the old cases reprinted as the nucleus of their dissertations to the learning accumulated round them, not unlike that of the square of text in Merlin's book of magic to the margin "scribbled, crost, and crammed with comment." In one book, indeed, the original text has become to a great extent valueless in the present state of the law, but it still survives at the top of the page in a fossilized condition of abridgment and small print, overlaid with two distinct strata of notes deposited at different periods, one of which may already be said to belong to a past epoch of legal formation. Somewhat in the same fashion, but with more definite purpose and better reasons, Mr. Poste made his commentary on Gaius much more than a commentary strictly need be. He made use of the occasion to give, partly by way of preface and partly by way of incidental discussion, a very good and substantial introduction to the study of Roman law and of legal conceptions in general. This procedure is no doubt founded on the opinion, in which we thoroughly agree, that at present the best way for an English student to acquire a true scientific knowledge of law—as distinguished from that outward familiarity with the mechanism of law which is called technical, but which in Plato's higher sense is eminently untechnical (ἄτεχνος τριβή)—is to begin with Roman law, and that in Roman law the best way is to begin at the fountain-head with Gaius.

Mr. Holland's task has been very different. For the very reason that his predecessor had considered the student's approach to the Institutes of Gaius a fitting opportunity for initiating him into Roman, and to some extent into general, jurisprudence, Mr. Holland was relieved from the necessity of any didactic or discursive treatment, and indeed could not have entered upon anything of the kind without an appearance of rivalry which would be hardly becoming in two volumes published under the same authority and as parts of the same connected series. Accordingly, in dealing with the Institutes of Justinian he has strictly confined himself to the functions of an editor, though the volume of *Essays on the Form of the Law* by which he is already known is sufficient proof of his ability to do more. But there are many ways of editing a well-known book—many ways, we mean, apart from the fundamental difference between doing it well and doing it ill. Mr. Holland has chosen to edit the later Institutes with the special object of showing, by ocular demonstration, how far the compilers adopted the earlier work of Gaius. It is impossible for any one to read this edition of Justinian without having it impressed upon him at every page that his study will lose much of its use, and one may almost say the whole of its interest, if he omits to study Gaius too. It would be difficult to value too highly the importance of attaining this end; and it would not be so well attained by any system of notes as is done here simply by printing in thicker type whatever Justinian's commissioners retained from Gaius. Mr. Holland observes that Justinian's Institutes bear much the same relation to those of Gaius as do the Commentaries of Serjeant Stephen to those of Sir W. Blackstone (this of course without committing himself, as we should be very loth to commit ourselves, to putting Blackstone on a level with Gaius); and the analogy of the brackets by which Stephen marked off Blackstone's own words may help to make the arrangement of the present reprint of Justinian intelligible to the English reader. This arrangement, unpretentious as it is, and strange as it now seems that it should not have been adopted before, must yet have cost the editor an amount of minute and troublesome labour such as

* *The Institutes of Justinian.* Edited as a Recension of the Institutes of Gaius, by Thomas Erskine Holland, *D.C.L.* Oxford: Clarendon Press. 1873.

the reader will perhaps never fully appreciate; but a tolerable notion may be formed of it by any one who knows by his own experience what it is to work at parallel passages and cross references.

There is another operation, involving much the same kind of labour, and probably more difficulties, but certainly not less worth undertaking, which we hope may yet be performed by some English editor of Justinian. It is now pretty well known that the supposed independence of our Common Law, which has been so much exalted by the patriotism of English text-writers, must be taken with very large qualifications. It is true that the ways in which we have developed our principles have been independent enough; but the Roman elements in the principles themselves are more considerable than is perhaps even yet generally admitted. Thus it may be said with some confidence that the groundwork of our law of contract is essentially Roman. What little is said about contracts by Bracton and Britton is almost entirely from Roman sources. Even when Bracton contradicts the Roman law he does it deliberately and expressly. Thus in his chapter on Sale, in which he lays down a doctrine singularly opposed to the modern law of England on every possible point of difference, and to the civil law on most of such points, several sentences are constructed by the simple process of stating the propositions of the Institutes almost word for word in a categorical negative. And those features of our system from which this branch of our law now derives its distinctive scientific and practical merits were not settled till within quite modern times. For instance, the doctrine of Consideration, which is now so elementary that it might well be taken at first sight for immemorial, appears in our older books in a wholly vague and unformed condition, partly due to occasional attempts at applying imperfectly understood terms and ideas of Roman origin. Even as late as Lord Mansfield's time the probabilities were almost evenly balanced whether the fundamental distinction should be, as it now is, between contracts under seal and contracts not under seal, or between contracts in writing and contracts not in writing. Some at least of the judges seem to have been ready to give to all contracts in writing without exception the force and solemnity of the Roman Stipulation. This is of course mentioned only as one striking and obvious example out of many which we cannot now go into. Moreover, in addition to the identity of many leading principles, the Roman law has in sundry special departments been deliberately adopted by our Legislature, or has turned the scale in doubtful questions in our courts. The cases in which this has happened are too familiar to need dwelling upon; it will be enough to specify, as being both modern and important, the decisions on the rights of a landowner in respect of underground waters.

But we must return from a digression, for which the interest of the subject is our only excuse, to Justinian's Institutes. It seems to us that an edition so framed as to exhibit a comparative view of Bracton, and perhaps also of the analogies of our modern English law, might be of great service to scholars, and might also be a most useful encouragement to students to follow the historical and comparative method, which is certainly not less interesting and fruitful in law than in any other branch of learning, but which in this country is still too little applied to it. The way for such an edition as we imagine is already in some measure prepared by Güterbock's essay on Bracton; and the undertaking would be one not unworthy of either of our Universities.

As to the short introduction prefixed to this edition, Mr. Holland says, in studiously moderate language, that it contains "some information as to the mode in which the Institutes were compiled, and the object which their compilers had in view." But this information has been selected and put together with a degree of care and skill far exceeding that which is generally found in introductions to text-books. Exactly those points are brought out as to the sources, composition, and contemporary surroundings of Justinian's Institutes on which the reader will most want to be instructed; and much useful matter which a student will hardly find collected elsewhere in English is here condensed in a clear, compendious, and trustworthy exposition of some thirty pages. The only fault we have to find is that there are a few misprints, one of which is so plausible that it ought to be specially noticed. In the description of the Institutes extracted from the Procemium to the Digest we read "ex omni pene veterum Institutionum corpore *eliminatas*." This looks like an authority, though it would be a sorry one enough, for the slovenly use of the word *eliminate* by some English writers, who think it means extracting that which is wanted from out of that which is not wanted; whereas its real force, as we need hardly say, is the very reverse, and this for the good reason that the literal meaning of the word is simply to turn out of doors. But this *eliminatas* is a clerical error for *elimatas*, refined or polished—a quite different word, which seems indeed to have taken the fancy of Justinian's advisers, being several times repeated in the Constitutions eulogising his scheme.

One small point has struck us in Mr. Holland's account of the work of compiling the Institutes. He mentions that the actual drafting was probably done by Theophilus and Dorotheus, Tribonian having only the general superintendence of the work; but he says nothing of Huschke's ingeniously worked-out conjecture that the first two books were written by Dorotheus and the two last by Theophilus. A few words on this point might have added to the interest and individuality, so to speak, of the briefly told facts. But perhaps the matter was thought too doubtful or trifling to be introduced; and this is, after all, one of the details on which an editor must be allowed to follow his own judgment.

The announcements of the Clarendon Press show that Mr. Holland has in contemplation another work of a more original kind. We trust that this will fulfil the promise given by what he has already done, and that he will introduce English students to a general scientific understanding of legal principles as well as he has introduced them to the reading of the Institutes.

ARMSTRONG'S *KING SAUL*.*

MR. ARMSTRONG, whose tragedy of *Ugone* was noticed in these columns some while ago, gave evidence by that poem, not only of very considerable qualifications for dramatic writing, but apparently of the intention to work further in the same direction. A man of letters, with such an intention, could hardly fail to be attracted by the character of Saul; and, if we may judge by the announcement of "Part I." prefixed to the present volume, it is intended that *King Saul* shall not stand alone, but that a trilogy at all events shall be constructed by adding a dramatic analysis of the characters of the two succeeding kings. It is perhaps questionable how far the unique historic material drawn from the Bible can be satisfactorily treated in this way. For this is material which, no matter from what point of view it is regarded, will always hold a distinct place by itself in the hearts and minds of the generality of men, and upon which it is extremely hard—and perhaps impossible—to throw the light of complete critical illustration. However, be that as it may, this is not the first time that the material has been used, nor will it be the last; and, as we said before, the character of Saul in particular presents attractions of great force. It is instinct with intensely dramatic elements. He stands midway between an old world and a new, between the unbroken theocracy and the naturalism of the developed monarchy. To a devout adherent of the older system the impending revolution must have seemed likely to be even more complete than it ever in fact became; there must have been a well-grounded apprehension that the sacred nation would become merged and lost in the rest of the world to a degree which was never in fact realized. Fears such as these were doubtless "in the air" all through the lifetime of the first King, and largely contributed to the difficulties of his position. Besides which, there were a vagueness and irresolution, not only in his attitude towards the great office that had preceded his own, but in the grain of his character, which have had perhaps few parallels in the written records of real life, and which resemble, as a mere study of psychology, nothing so much as the embodied representation of doubt in the character of Hamlet. There is further the sense of isolation and estrangement which grew upon him, and entered largely into the moulding of his actions. To explain this as a form of madness would probably have seemed either unintelligible or nonsensical to the Hebrew historian. To him it was explanation enough that "the Spirit of the Lord had departed." And Mr. Browning, in a lyric which we should think will always rank among the most beautiful things he ever wrote, is contented to acquiesce in the same interpretation—the self-inflicted loss of a familiar intercourse and trusted guidance, the absence of which resulted in a permanently remorseful consciousness:—

> He is Saul, ye remember in glory—ere error had bent
> The broad brow from the daily communion.

Another conceivable interpretation of Saul's gloomy and depressing sense of estrangement would be to regard him as a man who revolted from the severe code and principles of the theocracy, and protested against them, and who writhed under a tyranny which he was still not strong enough to throw off. This way of looking at his character is conceivable, though the narrative supplies no adequate foundation for it. The position of Saul would, according to it, closely resemble that of the chorus in Mr. Swinburne's *Atalanta*, when it breaks out into the very rhythmical, but very raving, complaint against the Supreme rule:—

> Thou hast taken love, and given us sorrow again;
> With pain thou hast filled us full to the eyes and ears.

We should have felt freer to judge of the exact conception of this character which Mr. Armstrong has developed if he had not thought fit to choose, as a motto for his drama, the well-known passage in Lucretius about the mischiefs worked by religion—the lines which end

> Quod contra saepius illa
> Religio peperit scelerosa atque impia facta.

If the selection of this motto were intended to convey that Saul is to be regarded as the victim of a cruel and despotic national belief embodied in Samuel—that while the King, with a wise and genial humanity, would have spared Agag, the Judge "hewed him in pieces" out of the impulses of a religion of tyranny and terror, and that Saul fell at last entangled in his opposition to this system, and crippled by a superstitious dread of it which he could not shake off—we should not only differ from such a reading of the circumstances, but we should feel that a good deal of Mr. Armstrong's analysis would be out of harmony with it also. Yet, without some such reading as this, it is hard to see precisely what the motto is intended to convey. We prefer to do what we could sometimes wish that authors would more often do themselves—namely, to leave the motto alone altogether; and, considering the drama on its internal showing simply, we see

* *The Tragedy of Israel.* Part I. *King Saul.* By George Francis Armstrong, M.A., Professor of History and English Literature in the Queen's College, Cork. London: Longmans & Co. 1873.

reason for regarding Mr. Armstrong's treatment as one of genuine ability, of sound choice on the whole, and of very careful study.

It is quite true that in certain places he has seemed bent on making Saul the mouthpiece of sentiments which are excellent enough in the sphere of modernized society, but which would have been death and destruction amidst some of the struggles that accompanied the settlement of the Hebrew nation. Thus, when Agag is fawning on the King and pleading whiningly for his life, Saul answers:—

I am not thy God. Arise.
I hunger not for any flesh of men.
I would have love on earth; I cry for rest
From violent strifes. Thou poor and ignorant king,
I have not fought against thee for the glut
Of hate or wrath, or of mine own intent.
I love not blood-shedding or any pain.

And, to recur to the attitude of deliberate opposition mentioned above, in his rage after the execution of Agag by Samuel, the King breaks out:—

A world of ruin, of ruin, Thou hard God!
Is the deep earth so starved, and Thy dry dust
So hungered that Thou feedest clay with clay?
* * * *
I dream but of a dream. Another dawn,
This wave of life heaves, breaks, and one white wreath
Of foam to the wide surge of sea will cling
A moment, then Thy waters roll at play.
What hast Thou done that Thou shouldst cry for love,
Or any homage of the failing knees?

And, once more, in talking with Abner and Jonathan, he speaks of

The inevitable
Fierce God, my maker, and my enemy,
Against whose will suggestions of deep hell
Drive me to war with hate that hath no pause.

But that these utterances are not intended to convey the whole of the attitude of Saul is made clear by the forcible and well-considered development of the character of Samuel, and by the words that are put into his mouth. He is the champion, not of a blind and despotic superstition, but of law and order and obedience:—

Obey his hests,
Thou shalt not do aught ill. Ye are but fools,
Confusing Pain with Evil, Virtue's self
With Ease, and God with Man.
* * * *
He is most high who humblest at God's knees
Lies, loving God, and trusting though He smite.

The bright, soothing, and consolatory side of an absolute religious obedience is also brought into prominence more than once by David, and especially in the remarkable *rhesis* beginning

O King, I know not through what ways He moves.

Except, perhaps, in the last scene, when the final battle is over, David is never introduced without the impression of grace and dignity, and this speech in particular is deserving of quotation:—

I know
He liveth, and the worlds are all too mean
To hold His glory; and the worst is well.
And when the sweet winds fondle, lo! mine eye
Visions a Hand that cools my branded brows
For pity; when the sun on lonely hills
Drives back the night and cold, and fingers numb
Grow firm upon the staves, I dream of One
Who winds me in warm raiment from the frost
For pity, and I sing to Him for joy.
* * * *
So have sung strange songs
Of things that are or shall be, while I've heard
A voice not mine make music with the strings;
And so will live, obeying as He bids,
And drinking all the wonder of His world,
Until He draw me nearer, and I see
Hereafter that High Temple where He dwells:
And I am but an arrow in His hand
To pierce thine enemies, O King, and save
The glory and the soul of Israel.

Saul himself, while the last battle on Gilboa is pending, falls back upon the thoughts of earlier days, and asks for the solace and support that was once familiar, though later he again rejects the desire:—

O that one
Of all His prophets, priests, or sooth-sayers,
Might come, my deeds forgiven, and one hour
Counsel of life and death, and in my heart
Pour all the gathered treasure of long thought
The wise have laid together! Ah, mesecms
They know whate'er man may, and one late born
Searching alone, attempts a boundless realm.
And better far to lay the aching head
Upon their breasts who stand 'twixt God and men,
And drink sweet solace of their counsel kind.

And thus the character of Saul is delineated, powerfully and comprehensively when the drama is taken entire, as what it probably was in reality—a character of confusions, of energies not quelled, but stimulated from morbid sources, and utterly undirected. These were the confusions of conscious decadence; and the violent, but always unsuccessful, efforts of PHINEAS to find oblivion in a deliberate attitude of defiance, the sense of the hollowness of kingship when severed from the reality of influence, and the King's still eager love of his people, though blurred almost always by despair, and sometimes by the brute impulse of impotent jealousy against the fore-destined successor, have been taken up one after the other in Mr. Armstrong's drama in a really masterly manner. He has made great way since the publication of *Ugone*, and we can scarcely find a higher commendation for the tragedy of *King Saul* than to say that, in choosing his subject, its author did not overtax his legitimate strength.

It is indeed a subject which ought to stimulate any man capable of treating it at all. The central figure is itself so laden with interest that it is easy to overlook the dramatic power and vitality even of those which are quite subordinate. The somewhat wearied, but true and unswerving, loyalty of Abner is excellently illustrated in this tragedy. There is a great deal of skill in the treatment of the two daughters, Merab and Michal, and in the ready intuition with which, after the victory won against the Philistines, Saul penetrates the relations held by the two towards David.

SAUL. Merab!—Thou hast gentle hands,
My daughter; thou art faithful, fond, and fair . . . .
I rend the oath to pieces . . . thou shalt never
Fall to the goatherd's flat.
MICHAL. My father!
SAUL. What!
Thine eyes are like an harlot's, full of lies
And dear deceit. O, hide thee from my face!

The Israelites maintain the functions of a chorus throughout, sometimes in lyrical strophes, sometimes in ordinary metre, almost always in good keeping with the general effect, and never obtrusively. When Saul is at the height of rage after the execution of Agag, they announce his coming very much in the half-muttering manner of a Greek semi-chorus:—

ISRAELITES. Lo, hither cometh he! The King, the King!
Our hearts bow in us like the olive-woods
All one way in the wind, nor have we strength
To stand before that awful form inflamed
With wrath like thunders in the swollen rack.
Stay ye: incline the head; for God is here—
His hand is heavy on the stricken King.

The cool, hard persuasiveness of Doeg, goading the King into the false step of the massacre of the priests, is conceived and worked out with great care, and is one of the most powerful things in the book. And the absolute, self-regardless devotion of Jonathan at once to his father's enemy and to his father is drawn with real beauty and without a touch of excessive colouring.

The concluding scene, after the battle of Gilboa, is a disappointment compared with the finer work of the main portion of the drama. The laments of David, in particular, strike us as poor and tame by comparison; the real fact being, perhaps, that it was impossible to write anything at all on the level of the subject after studying the immortal dirge in the narrative itself. This scene reads as if it had been held by the author to be a necessary step of transition towards the next drama of the trilogy, if trilogy it is to be; and we are disposed to think that *King Saul* would have stood better without this appendage, ending with the end.

We have said enough to indicate our general belief in Mr. Armstrong's powers, and our appreciation of this particular work. We will leave the question of the motto in his own hands, only expressing a hope that, in any succeeding parts of the dramatic series, the genuine elements of tragedy may be as little as possible mixed up with real or imagined disturbances of modern thought in matters of religious belief or sentiment. He has genius enough and industry enough to write wisely and well and enduringly in the field where he has already begun to work with prosperous omens.

HUNT'S CONTEMPORARY ESSAYS IN THEOLOGY.*

IN considering Mr. Hunt's "Contemporary Essays" we must narrow our view much more than he has done in the Essays themselves. It will not be to our purpose to bear constantly in mind that he has written some large books of considerable ability and interest, and has attained the distinguished honour of a place in the Roman Index. We must take what he now offers us, and endeavour to ascertain how far it possesses real and independent value. When he gives a volume the title of *Contemporary Essays in Theology*, he means of course to indicate something more than the fact that most of its contents are reprinted from the *Contemporary Review*. In his brief preface he tells us that a new apprehension of the meaning of Christianity is imperative, and his essays must be regarded as a sincere, though confessedly imperfect, contribution to that re-shaping of doctrines and institutions which he holds to be necessary. It must be understood that we have nothing to do with them as articles which have appeared in the *Contemporary Review*, and not very much with them as representing a school of modern thought. Their really distinctive features will probably be brought out sufficiently in the process of considering them simply as a volume of collected essays.

There are exceptions to most rules, but collections of essays which have attained any wide success will be found generally to agree in the following particulars. They are finished compositions on a small scale, not intended to excite the passions, or to put a severe strain on the attention, but rather to be easily taken into the intellectual system, and be digested at leisure and with comfort. They may contain the results of much thought and learning; yet, as the thought is not exhibited in a painfully abstract form, so the learning wears a gentle and engaging aspect, if it does not hide itself behind a semi-transparent veil of general cul-

* *Contemporary Essays in Theology.* By the Rev. John Hunt, Author of "An Essay on Pantheism," "History of Religious Thought in England," &c. London: Strahan & Co. 1873.

ture. As a series they produce an impression in virtue of a tone or purpose running through them which carries the reader from essay to essay without sense of jar or disturbance, and leaves him at his journey's end with a contented feeling, like that of a traveller by railway who has gone a great many miles without being obliged to change carriages. Mr. Hunt may not appreciate this ideal; at any rate, he does not conform to it. He is rough, abrupt, and abounds in startling paradoxical suggestions. Having consulted many books, he makes, in a perfectly unaffected manner, a needless parade of his acquaintance. His essays are on a great variety of subjects, and their coherence, so far as they have any, is largely due to asperities of temper and feeling by means of which they stick to each other, and perhaps to the mind of the unsympathetic reader, like burrs.

A few of Mr. Hunt's *obiter dicta* will sufficiently illustrate his aptitude, if not his love, for paradox and extreme assertion. He tells us that "it is impossible now to receive the Mosaic accounts of Creation as more than the popular ideas of the time when they were written." Surely this is a needlessly startling way of stating a thesis which is dismissed in less than a page. If the Mosaic account embodies the popular idea, is it therefore certain that it embodies nothing more? The ground can be cleared, if necessary, for Mr. Darwin without any such depreciation of the first chapter of Genesis. If that chapter contains merely the popular idea, the Hebrew mind at the date of its composition may fairly claim to have been in advance of the English mind as we know it in the nineteenth century. The idea on the subject which is still popular among us is that creation means making something out of nothing. Unlike the writer of the first chapter of Genesis, half-educated people among us are unable to entertain at once the ideas of creation and development. They oppose the one to the other, and see something heterodox in the notion that life and order issued gradually out of chaotic confusion, and that the earth underwent a systematic education before it became a fit home for man.

Mr. Hunt deals as succinctly with ecclesiastical as with physical organization. Of ecclesiastical assemblies he remarks that they "may be useful for conference, deliberation, or administration of business; they may be mischievous, like the Councils of Nice and Trent; or they may be harmless, like the Pan-Anglican, which gave amusement to a multitude of profane people, and immortality to an Archbishop of Canterbury." The general admission here made of the possible usefulness of synods is abundantly qualified by the assertions which follow of their uselessness in particular and prominent instances. The whole question, of course, is open to discussion, but the novel feeling which arises when a clergyman of the Church of England frames a passing remark so as to include the Councils of Nice and Trent in the same condemnation is more likely to smother discussion than to promote it. We all know the curious sensation which runs round a dinner-table when some guest has blurted out, it may be unintentionally, an awkward remark which makes the rest of the party uncomfortable. A silence ensues, during which people look askance at each other or at their plates, and say nothing, because they really do not know what to say. Mr. Hunt is rather fond of introducing observations of this kind at his literary banquet. If he were in the flesh before us, we really should not know how to look him in the face when he tells us that "the Homilies indeed *contain* a godly and wholesome doctrine, but they are full of blasphemy both against the Pope and the Devil." In whose interest can this remark be made? in that of the Pope, or of the Devil, or of both? Since no praise can be meant for the Homilies, which are described as full of blasphemy, it would seem that the Pope and the Devil are somehow included by Mr. Hunt in the same apology, just as the Councils of Nice and Trent are included in the same condemnation. Perhaps if our plan allowed us to refer to Mr. Hunt's work on Pantheism, we might find some indication of his reasons for holding that black is not so very black, nor scarlet so very scarlet. But as mere readers of so many Contemporary Essays, he throws us into an unlimited sea of wonder. So, again, when he is dealing with what has been called the Westminster Scandal, Mr. Hunt asserts, without restriction or qualification, that on that occasion "the Dean of Westminster was right in every way that it is possible for a man to be right." This method of handling the subject may fairly be compared to that of the Scotchman who, when proposing to maintain in argument the superiority of Scotch over English grapes, began, "I maun premeese that I like grapes sour." Any moderate view of the Dean's conduct with regard to the Westminster Communion is thrown back at once with a sharp recoil on its propounders by the formula of Mr. Hunt. If we agree with his fundamental proposition, we are silenced; if we disagree, we have not an inch of common ground with him.

It would be more tedious than difficult to illustrate the inartificial manner in which Mr. Hunt sometimes uses his authorities, and more easy than amiable to bring out vividly his tendency to give a clearly one-sided treatment to subjects on which he writes with something like a personal interest. He objects to the present state of patronage in the Church of England, and he will carry almost all his readers with him when he insists on the scandals and abuses frequently connected with the sale of church livings. But he proposes a remedy which would be far worse than the disease when he desires that the patronage of all livings should be vested, as far as possible, in the parishioners. In his attacks on bishops he does not feel himself obliged to observe strictly the limits of fact or probability. Thus he says that if a curate were to ask an English bishop to help him to find a curacy, the episcopal answer would be written with a coldness which intimated that, not being a beneficed clergyman, the bishop did not consider him as particularly belonging to his diocese, or indeed to the Church at all. How far this is true depends on the individual bishop and, to some extent, on the individual curate; as a general statement, it is an exaggeration beyond the verge of caricature. Again, in comparing the value which is set, with that which ought to be set, on an English University education, he quite overrates the difference which the possession of an Oxford or Cambridge degree makes among the clergy of the Church of England. On these subjects Mr. Hunt has not the far-sighted calmness which we desire in an essayist. His tone is rather that of a somewhat excitable person who writes between two and four in the morning what must be published at seven.

Mr. Hunt's essays are not argumentative, and their style is unfitted for argument. He often indulges in a succession of short jerky sentences, which, if they are taken by threes, are, so far as reasoning goes, more like Welsh triads than syllogisms. The following example is given, as it comes, by chance, for it is the statement which it contains, and not any peculiarity of its form, which has led to its selection:—

> The principle on which the Reformed Church of England was established under Elizabeth is sometimes said to have been a comprehension; but this is an ingenious theory rather than a fact. The Thirty-nine Articles plainly speak the language of the Augustinian theology which was adopted by the Swiss Reformers. Many of the bishops in whose hands Elizabeth placed the government of the Church had been in exile, and were full of the theology of Calvin. The old priests who had conformed to the Roman Catholic religion under Mary were allowed to remain under Elizabeth, but only on condition of their embracing the Articles, and teaching the doctrines set forth in the Homilies. The Pope and the Pope's peculiar doctrines were excluded.

The first of the sentences here quoted points, it would seem, to a negative conclusion; but how that conclusion is supported by what follows must remain a mystery. Mr. Hunt apparently intends to urge in favour of it that the Thirty-nine Articles are full of the theology of Calvin; and to prove this, we must suppose, he observes that they were signed both by Calvinist bishops and by such Romish priests as were inclined to conform. But, unless Mr. Hunt can show that either Calvinists or old priests of the Roman communion, by signing the Articles, did what they were intended not to do, the facts which he alleges disprove the position for which he seems to be arguing, and favour the belief that the Church of England was established under Queen Elizabeth on comprehensive principles. But we are not sure that we have put Mr. Hunt's propositions together as he would wish. One thing, however, is clear, that they stand in his essay without much obvious cogency or relevancy to each other. Perhaps he may have been aware in the retrospect that the case he had made out was a weak one, for he thus returns to the charge in a later essay:—

> The only arguments ever advanced against the Calvinism of the Thirty-nine Articles are the two feeble pleas put forward by Archbishop Laurence. The first is that the Articles were compiled from the Augsburg Confession, which is simply begging the question that on these subjects the German reformers did not agree with Calvin. The second argument is derived from the rejection of the Lambeth Articles. But any one who reads the only authentic account which we have of the Hampton Court Conference will find it plainly stated that the Lambeth Articles were not rejected because they differed from the Thirty-nine, but simply because there was no necessity for them. King James, who decided on their rejection, was himself at that time a strong Calvinist, and the compiler of the Lambeth Articles, Archbishop Whitgift, was a member of the Conference, and a chief supporter of the King.

Surely Mr. Hunt goes on here a great deal too fast. He claims the right to call the Articles Calvinistic because on some points they state a view in which Calvin agreed with the German reformers. But, so far as Calvin and Luther agreed in the substance of the Seventeenth Article, they agree also with St. Augustine, who cannot be called a Calvinist without an anachronism and something worse. It would be strange indeed to call the Articles Romanist because they teach the same doctrine on the Trinity which is held by the Church of Rome. Their studied departure on some important points from the Calvinistic phraseology is clear beyond dispute. Again, we need proof that James was a strong Calvinist at the time of the Hampton Court Conference. According to Dr. Barlow, he maintained at the Conference the divine institution of episcopacy, and quoted with applause the aphorism, *No bishop no king*; a Scotch Presbytery, he said, as well agreed with a monarchy as God with the Devil. These are not exactly the sentiments of a strong Calvinist. Dr. Cardwell has observed that Archbishop Whitgift was too old and too infirm to take any active part in the proceedings at Hampton Court; indeed he was a dying man, for the Conference was held on the 12th, 16th, and 18th days of January, 1604, and he expired on the 29th of February. Some nine years before he had really wished to make the Church of England less comprehensive by introducing the Lambeth Articles; and Elizabeth was so far from admiring the proceeding that she threatened him and his friends with a *præmunire*.

On the whole, we must conclude that Mr. Hunt's essays are neither very good in themselves nor admirably adapted to further his wishes. His general views may be right; his longer books may be excellent; as the historian or philosopher of religion he may soar above ordinary criticism. But he has not the distinctive virtues of an essayist, and by collecting his essays he has not produced a volume which is of importance in contemporary theology.

CALIBAN, THE MISSING LINK.*

DR. DANIEL WILSON, Professor of History and English Literature at University College, Toronto, having studied with some care the doctrine of evolution as taught by Mr. Darwin and his disciples, finds, as many have found before him, a gap in the chain which ought continuously to connect the highest with the lowest organization. In his mind the very worst savage obstinately refuses to be hooked on to the very best monkey. Nor does the difficulty necessarily arise from the vast superiority of the savage, since superiority may in some instances be claimed by the gorilla. The gorilla in his native retreat is thoroughly natural, his fur is in good condition, his physical state harmonizes beautifully with the functions he is required to perform; and, while he is incapable of moral wrong, in every relationship that binds him to his species he fulfils his duties to perfection. Even Mr. Darwin, cited by Mr. Wilson, perceives that in some respects our semi-human progenitors must have been more advanced in natural ethics than some of their more highly organized descendants. "They would not," he says, "have practised infanticide; for the instincts of the lower animals are never so perverted as to lead them regularly to destroy their own offspring." These circumstances considered, we must agree with Mr. Wilson that, when the Australian Bushman, or any other savage of the basest type, is called brutish, the brute is wantonly and unjustifiably insulted. The gorilla is good as far as he goes, carrying out the apparent end of his being; the "filthy, unnaturally licentious, morally abject savage," not answering to similar conditions, is no more in a state of nature than the vilest *gamin* of a Parisian mob. "Man is most like the healthy, well-conditioned wild animal, when seen in a state of civilization; well-housed, cleanly, and in all instances obedient to the laws of nature, alike personally and in every social relation." The idiot, who is unquestionably a product of degradation, might be mistaken for a "manward" stage of progression from the ape; and a similar mistake, in Mr. Wilson's opinion, is made when the savage, or degraded man, is compared with the matured lower animal, for the purpose of showing that the former is but a development of the latter. Before we can say what is a state of nature for man, we must determine what the nature of man really is—establish, in the words of Fichte, "die Bestimmung des Menschen."

The suggestion that the doctrine of evolution fails because the very best man is not brought into close proximity with the very best beast seems, at the first glance, like one of those ingenious paradoxes with which Protagoras or Gorgias might have amused his hearers. But Mr. Wilson intends no paradox, and perfectly knows what he means, as the following passage clearly shows:—

> If that is the state of nature for the brute in which it is found perfect in form, in fur, or plumage, fulfilling the ends of life in healthful accordance with every natural instinct, the savage man, regarded as an animal, is in no such state. On the contrary, he exhibits just such an abnormal deterioration from his true condition as is consistent with the perverted free-will of the rational free agent that he is. He is controlled by motives and impulses radically diverse from any brute instinct. This very capacity for moral degradation is one of the distinctions which separate man, by a no less impassable barrier than his latent aptitude for highest intellectual development, from all living creatures. "A beast that wants discourse of reason" is Shakspeare's definition of the inferior animal when, in his *Hamlet*, he would contrast it with the unnatural conduct of rational man.

This is very acute reasoning. To complete the desired chain, we have not only to ascend from a lower to a higher intellectual condition—an ascent facilitated by the extreme docility and sagacity of certain animals—but we have to proceed from a being in which there is no moral element at all to another in which the moral element is so essential that it is susceptible not only of elevation, but of a degradation which of itself implies a deviation from the path prescribed by nature. The cleverest dog, if he bites the inhabitants of a whole village, is incapable of a crime; the stupidest man, if he has knocked his wife on the head, has committed one. Therefore, in moral capacity, though not perhaps in actuality, the man is the superior creature of the two—ay, superior to the faultless dog, who does nothing but watch his master's house and obey his master's whistle. The two bits of the chain not only stand apart, but pass over each other—a condition remarkably unfavourable when a juncture is to be effected.

The degraded man being in a certain sense worse than the perfect brute, it is desirable to find some positive attribute which may be assigned to human nature in general and not at all to the brute. To the opinion once so commonly entertained that all nations, even the most barbarous, have some notion, more or less rude, of a Deity, Mr. Wilson does not subscribe, and he shrewdly warns his readers that, in estimating evidence even on this point, too much confidence must not be placed in the reports of missionaries and other travellers, however honest the intentions of these may be. When two personages respectively belonging to two entirely different stages of civilization appear, one as questioner, the other as respondent, with reference to matters that lie beyond the sphere of that daily life which is common to them both, there is great difficulty in ascertaining how far the one understood the queries and the other the answers; and the verbal report of a conversation, however accurate, is of little value where the two speakers never attach the same meaning to the same word. The following anecdote is worth consideration:—

> We are told by a Christian missionary who had laboured for years among the Chippeway Indians, preaching to them at first with the aid of a native interpreter, that he was shocked when at a later date he listened to similar renderings of a young missionary's address into the language now familiar to him, to discover that nearly all the ideas most essential to the doctrines they sought to inculcate were lost in the process. The interpreter translated them into the Pagan notions of the tribe, and so the Christian element was well nigh eliminated, while the preacher complacently waited for the fruits of the seed he fancied to have been sown.

To illustrate still further the difficulty of reasoning from the results of a conversation on abstract or supernatural subjects, Mr. Wilson puts the case of a person not so diverse in culture from his examiner as the missionary is from the savage—namely, the case of an ordinary English peasant, unaccustomed to abstract thought, who is questioned on some of the more recondite points of Calvinistic theology contained in the "Shorter Catechism," which was written, be it remembered, for the use of children. The man is questioned in his own language, and has many ideas in common with his questioner; yet his answers will in all probability be extremely vague and intangible.

Mr. Wilson is willing to concede that the notion of a Deity is not universal among uncivilized mankind. The common attribute, in his view, is a belief in the supernatural, virtually involving the belief in an individual immortality to be predicated of some immaterial substance, which may be called soul or spirit; and in maintaining this view he encounters the assertion made by Captain Burton with reference to the negro, that he believes "in a ghost, but not in a spirit; in a present immaterial, but not in a future," with this addition—"the spirit is not necessarily regarded as immortal because it does not perish with the body." Logically Captain Burton is quite right. A belief that the soul might survive the body for some half-a-dozen years, and then perish, does not involve any *contradictio in adjecto*. Indeed Arthur Schopenhauer maintains the theory of a palingenesis, resulting in a Buddhist Nirvâna, which may be said to point in that direction. But negro Schopenhauers are doubtless scarce, and when we speak in reference to the lowest intellect, we cannot help agreeing with Mr. Wilson that Captain Burton has made a distinction without a difference, and that, "if the spirit is believed to survive after death, the very idea of its subsequent mortality can only be of a negative kind, the mere result of the incapacity to grasp with any clearness the idea of life immortal."

Instances are, of course, not wanting to illustrate the belief in an individuality continued often after death. The American Indian, we have been taught long ago, provides food and weapons for his dead to enable them to start properly equipped on their new stage of existence; the savage of North Australia will not go near the graves of his tribe at night or alone, and, if compelled to do so, carries a stick to keep off the spirit of darkness. So natural to unsophisticated man, in the opinion of Mr. Wilson, is a belief in the supernatural, that he finds a doctrine of annihilation among the hardest things to conceive. The belief that there is no resurrection or any other form of renewed life after death, that there is no spirit distinct from the material world, far from being natural, is a result of civilization. "The materialist creed belongs to a very different speculative stage of evolution" from that represented by the savage. It is curious how different results can by different minds be drawn from the same premisses. Mr. Wilson's ascending scale of intelligence is precisely the same as that of Auguste Comte. The theological view—in other words, a belief in the supernatural—is proper to the lower, positivism to the higher, civilization. So far they both agree; but what is to one a sign of advancement is to the other a symptom of moral decline.

With great power of reasoning Mr. Wilson urges the important truth that the fact of a belief is not to be disproved by the inability of the supposed believer to define it. He finds an apt illustration of his thesis in the old Scotch ballad, "Clerk Saunders." The clerk's ghost, appearing to his sweetheart, thus replies to her questions about the other world, and the lot there of women who die in childbed:—

> Their beds are made in the heavens high,
> Down at the foot of our good Lord's knee,
> Weel set about with gillyflowers;
> I wot sweet company for to see.
>
> O cocks are crowing a merry midnight,
> I wot the wild-fowl are boding day;
> The psalms of heaven will soon be sung,
> And I ere now will be missed away.

Questioned further as to his condition, he answers:—

> My bed it is full lowly now,
> Amang the hungry worms I sleep.
>
> Cauld mould is my covering now,
> But, and my winding sheet;
> The dew it falls nae sooner down
> Than my resting-place is weet.
>
> But plait a wand of the bonnie birk
> And lay it on my breast,
> And gae ye hame, my Margaret,
> And wish my saul gude rest.

Here, as Mr. Wilson observes, is a mass of confusion. Clerk Saunders seems at once to be in the paradise and purgatory of the other world, and decaying among the worms in this; his *ego* being now a mortal body, now an immortal soul, without any suspicion of inconsistency on the part of the poet. Nevertheless it is certain that, in spite of all contradiction, Saunders, in some shape or other, is believed to exist after death. Now, on the basis of this ballad, it might be plausibly argued that the Scottish peasants of the sixteenth or seventeenth century believed that heaven and the grave were one and the same place, which we know was

* *Caliban, the Missing Link.* By Daniel Wilson, LL.D. London: Macmillan & Co. 1873.

not the case. *A fortiori* it is vain to look for subtle distinctions or sharp definitions when we examine the creed of a savage.

But we find that, in endeavouring to set forth Mr. Wilson's general theory, we are gliding into a mistake comparable to the oft-quoted omission of Hamlet from the tragedy bearing his name. All the thoughts he expresses appear more or less in reference to Caliban in Shakspeare's *Tempest*, whom we have hitherto eliminated. The several positions of the brute and the savage having been ascertained, the point is to find something that is neither one nor the other, but a "missing link" that may be conveniently placed between them. Convinced that we must look elsewhere than in the kraal or lair of the Australian or Borneo savage if we would find that intermediate brute-man which, on any theory of evolution, must have actually existed in some early state of the world, Mr. Wilson fails to discover the "missing link" in the realm of reality. He wants a being superior to the very wisest ape in every reasoning power short of rationality, but inferior to the most anthropoid ape in those natural provisions for covering, defence, and subsistence which are the substitutes for the reasoning foresight and inherited knowledge on which the naked, defenceless savage relies. This being, not appearing in the realm of reality, Mr. Wilson discovers in the Caliban of Shakspeare, who, in company with the Caliban of Mr. Robert Browning, is carefully considered as a Monster, a Metaphysician, and a Theologian.

After a minute examination of the different passages in the *Tempest* which bear reference to Caliban, Mr. Wilson arrives at the conclusion that Shakspeare has presented the ideal of the highest brutish evolution which, though artificially or supernaturally endowed with the means of giving expression to its thoughts, is yet neither a man nor any link in the possible pedigree of mankind, a fellow-being of the jay and the marmoset, of the spotted ocelot, the blind mole, and the crane. Caliban reasons throughout from the merely animal point of view. His dam's god, Setebos, is simply an embodiment of power, not an object of faith or worship, or indeed a being with which he claims to have any personal relation. He is without that recognition of the supernatural which is proper to man in the lowest state of savage degradation, and which, in Mr. Wilson's opinion, belongs to the very essence of humanity; for Prospero, in the eyes of the poor slave, is, with all his magic, a material reality of the sternest kind,—somewhat too stern, in the opinion of our Professor, who seems to think that a long course of despotism has converted the banished Duke of Milan, originally a kindly person, into a sort of polished Legree.

But when his case is made out, Mr. Wilson virtually confesses that the title of his book is, after all, a misnomer. Shakspeare, he affirms, has supplied a link more consistent with any conceivable evolution of which the anthropomorpha are susceptible than any ideal based on assumed stages of the lowest degradation of savage man. "But"—and here is the grand result—"the lines of evolution of the anthropoid and the savage, according to such ideal, are parallels. They may admit of endless development, but they will not coalesce."

When I compare the most wonderful evidence of canine intelligence with the every-day operations of the savage or the child, they seem to have such an essential difference between them that I cannot conceive of the one changing with the other. They differ in kind; or, if not, the process is still wanting which shows them to be the same; and surely the enormous difference acknowledged on all hands is not to be dismissed as though it were the one missing link in an otherwise continuous chain. At best there seems in the highest animals but a scanty minimum of intellectual power, and no adequate initiative for anything bearing even a shadowy resemblance to the moral elements of humanity, out of which to evolve the being only "a little lower than the angels."

We have only given a one-sided view of the book; for the author appears in it not only as a speculative inquirer, but as a critic on Shakspeare's text, suggesting emendations and so forth. But we have said enough to show that the University of Toronto has reason to congratulate itself on the possession of a Professor so independent in thought, so eloquent, and so enthusiastic with regard to the highest English poetry, as Professor Wilson.

MILLY DARRELL, AND OTHER TALES.*

"THIS merriment of parsons is mighty offensive," said Dr. Johnson one day, when several clergymen, thinking they would appear to advantage in his eyes, assumed the lax jollity of men of the world. This vulgarity of women is mighty offensive, we might also say, as we come across the writings of authoresses who think that they will stand well with the reading public by assuming a coarseness which would be unpleasant even in a man. We should have thought that, at a time when there are so many male writers quite ready to push vulgarity to its utmost limits, and to trade in the very coarsest of wares, women might have had the wisdom to stand aloof from a market which would seem to be already overstocked, and where one would expect they must be surely overmatched. Unhappily this is not the case; and, running in close rivalry with the men, we find them dealing in the same disagreeable incidents, using the same vulgar words, and aping them in the same silly slang. How long this school of sensational writers, as they are called, will last it is impossible to say. It will not, we fear, have seen its downfall till it has done the English language a mischief that can scarcely be cured, and till it has gone far to render the minds of Englishmen as unhealthy as they once were sound. For, at the present time, it is the novel and not the song that forms the nation. What can we look for from a generation that feeds on unhealthy excitement and weak sentimentality, and that takes pleasure in seeing its own noble language twisted and abused? "Unsex me," we may well believe that many an authoress calls out as she begins to write. We have indeed happily many a woman writer who writes like a woman, and who is so utterly careless of woman's rights as not to try to imitate men in that wherein they are least worthy of imitation. We trust that none of them will be dazzled by the literary notoriety which those of their sex obtain who are most forgetful of their sex, or will be misled from their womanhood by any foolish hopes of aping manhood. For, after all, there are still "seven thousand left" who look upon fast men with contempt and upon fast women with loathing, and who, while despising slang in a young man, abhor it in a young woman; and we cannot but hope that the day is coming again for those who, when they write, never forget the respect that they owe to themselves and to their readers. The stage seems to have taken a healthier turn, and the stage is as good a gauge as we can have of the way the current of popular taste is setting. Meanwhile Miss Braddon and writers like Miss Braddon still have their day, and as yet have scarcely begun to feel the ebb of that tide which is, we trust, if not turned, at all events on the point of turning. When the tide once has turned, it will run strongly we have no doubt the other way, and will leave the whole mass of these sensational novels like so much refuse stranded high. The next generation will find it as hard to understand how one can read such stories as these as we find it hard to understand how the generation before us delighted in the high-flown sentimentality of the Minerva Press. *Lady Audley's Secret* will follow *Thaddeus of Warsaw* to the grocer's shop, and, like it, will be employed to wrap up "quidquid chartis amicitur ineptis."

Meanwhile those who delight in foolish and vulgar stories, told in language scarcely less foolish and vulgar, will surely find enough to content them in the thirteen tales which Miss Braddon here supplies. Some readers may possibly note a certain sameness in the incidents, though, happily for the writer, those who read such books as she writes are not likely to be troubled with much memory. In three of the thirteen stories, for instance, a father dies of a fit of apoplexy just as the plot requires a *deus ex machind*. Besides the three fathers who are thus cut off in the course of the story, two others had died in fits before the story began. There is certainly, therefore, a good deal to be said for having thirteen stories instead of one in the three volumes. For even Miss Braddon would have scarcely ventured, in one and the same novel, to kill off five people by fits, however much the interests of her lovers might require it. Then we have no less than four old family butlers, who give an aristocratic touch to the book by way of cleansing it from the stain of vulgarity which it has got from the murderers, robbers, coiners, adulterers, suicides, and ghosts who abound in it. In the first story we have "a grave, grey-haired, old butler," who, when the fit of apoplexy carried off his master, must have done all that "a grave, grey-haired, old butler" could do to inspire the survivors with resignation. In the fourth story we have "a grey-headed old butler who had been custodian of the collars and the massive old plate for the last thirty years," and who on a like melancholy occasion "opened the door, and received his new master with a solemn face." In the tenth story we have "a grave, elderly butler," who is not called upon for a solemn face, as happily before the scene opens his master was dead. And, lastly, in the eleventh story we have "Truefold, the old butler," who, "with a solemn, anxious face," brings in news that the heir of a family which was as old as the abbey in which it lived—and the said abbey had been built in the reign of Stephen—had been killed in a steeple-chase. As a night or two before there had been a ghostly apparition which, to those who properly understood it, portended the death of a member of this ancient family, this old butler was more justified than any of the four in the solemnity and anxiety of his face. Of all the thirteen stories there is only one which is not embellished by crimes or death. In this story—the tenth—the hero takes to nothing worse than pig-killing, till, by the pork-butcher's shop that he keeps close to her park gates, he shames his sister, Lady Talmash Brading, the mistress of "the grave, elderly butler," to consent to his marrying a young heiress of low origin, but with 50,000*l.* as dowry. To make up for the mildness of his actions, we are told, in language which does not read pleasantly coming from a woman, that—

He swore, it is true; indeed, his *répertoire* of bad language was considerably in advance of that of his fellows, being richly garnished with the choicest flowers from Billingsgate and Seven Dials, and strengthened by some very original blasphemies of his own composition; but the Queen's Trumpeters declared it was the funniest thing in the world to hear him give utterance to a lengthened string of blackguardisms which would have astonished any rough in St. Giles's, in the mildest tones, and with a most perfect placidity of face and manner.

Of the other twelve stories, the first is apparently the most after Miss Braddon's heart, and we cannot but admire her moderation in not spreading it out over three volumes. A stepmother is in love with the lover of her stepdaughter, and when, by the first of the fits of apoplexy, she is left a widow, she tries to poison off her rival. Happily she is found out, and by way of giving a cheerful ending to the story, puts an end to her own life by poison. The young people marry and live "a life of almost unchequered sunshine." In the second story the heroine is given to sleep-walking in a house said to be haunted by the ghost of a lady "slain in some fit of jealous fury." One night, "towards three o'clock, just as the moon was waning,"

* *Milly Darrell, and other Tales.* By the Author of "Lady Audley's Secret," &c. &c. 3 vols. London: Maxwell & Co. 1873.

she is surprised by a housebreaker, or rather surprises him, for he for a moment mistakes her for the ghost. "He dropped his stick with an ejaculation." Unhappily she is awakened by the noise, and by her scream shows the robber that it is no ghost. By good fortune her lover as well as the robber had been prowling about outside—"a great crash of glass sounded close behind him, and Frank Greenwood sprang through the open window, smashing the casement as he came." The third story has nothing to boast of but the faithlessness of a lover who is engaged to one girl and runs off with another, and his penitent death. The fourth story is given to horse-racing, and is enriched by the slang of horse-racers. We read of a "beggarly plater," and the hero, when ruined by the failure of the horse he had betted on, is inclined to "swear the brute had been got at." But happily a father dies of apoplexy, and allows his only daughter, a great heiress, to marry the ruined gambler. He, however, was ruined no longer; for in the five years in which, after his last race, he had disappeared from the world, he had made himself "one of the richest men in Sydney." To make up for the comparative dulness of the third and fourth stories, in the fifth we have a jealous husband, one Lord Deverill, who stabs his young wife and her half-brother, pushed on to do so by the heir. The sixth is given up to a band of coiners. The seventh can only boast of one of the fits of apoplexy; but to make up for this, we have in the eighth a full supply of horrors. A doctor one night is on the point of dissecting the body of a coiner who had been hanged that morning at Newgate, when, "before he had reached more than the preliminary stage of his labour," he detected, "weak and suppressed, but still palpable to the professional ear, the action of his heart." The coiner is so quickly restored to life that he at once sat up, "a stalwart, square-built ruffian of near six feet high, a man who could have annihilated the slim surgeon." The poor doctor is forced by him to supply him with clothes and money. However, the man proves grateful in the end, and after going on with his old trade of coiner for some years, went over to America, became respectable, made a large fortune "in the shipping line," and left it all to the doctor. We must do Miss Braddon the justice to admit that, after giving a full account of the reception of the supposed corpse, and telling us how the doctor, after he got it, "set to work in real earnest," she does go on to say, "There is no need to enter upon the details of that ghastly performance." We are glad to see that she draws the line somewhere. If it is drawn just short of the dissecting-table, it is better drawn there than nowhere. In the ninth story an adulterer, a captain in the army, is shot dead in a duel by the injured husband, a clergyman "of the most advanced Anglican school." A divorce is obtained, and the clergyman's oldest friend, a colonel in the army, falls in love with the guilty wife, who had in her penitence become a Sister of Charity. She, however, though in love with him, refuses to marry him, and soon after dies in a convent. He had been nursed by her in a most dangerous illness in the clergyman's house, and yet had managed so cleverly that neither "the elderly man-servant"—not a butler this time—nor his equally elderly wife, servants in the family, though they had known her for years, recognized her. The tenth story is given up to the captain who turns pork-butcher, while the eleventh is as silly as a ghost story can well be. In the twelfth story a lion-tamer is killed by a lion, who so mauled him that "there was a perforation of the lungs and hæmorrhage," and that, though "he breathed stertorously for about half an hour, he died without one ray of returning consciousness." The last story is called "On the Brink," and is nothing but an account of an attempt, which was all but successful, to seduce a married woman. The injured husband arrives in time to save his wife from running off, sends her lover down a flight of stairs with a dislocated shoulder, but is himself "fearfully mangled about the head and face by a gigantic tawny mastiff."

We must acknowledge that if Miss Braddon's language is often vulgar, and at times coarse, yet she does all she can to balance it by an excess of fine words. She is certainly well up in the slang of the day. She writes of "nameless cads," "the genus swell," "an hour and a half's spin" in a dog-cart, "the later Cæsars who were polished off so quickly," "the most duffing game," "loafing with a girl," "down any amount of pit," "up no end of a tree," "none of your ghosts or that kind of rot," and so on. On the other hand, we have "supernal splendour," "aureole of pale golden hair," "a scion of the house," "the châtelaine of the abbey," "the welkin ringing," "mental pabulum," while in the ghost-story we are told that "the light was as unearthly as the sound—phantasmal as the ignus (*sic*) fatuus that plays amidst the rigging of a ship upon a storm-swept sea." A lady's toilet is a ceremony, just as "remuneration is the Latin word for three-farthings." A room that was built in Stephen's time is said to have been "extant in the time of Stephen"; the cigar becomes "the social weed"; whenever there are roses there is "a wealth of roses," and soda-water and brandy are pleasantly disguised under the initials *s. and b.*

"In England," says the author of *the Citizen of the World*, "every man may be an author that can write, for they have by law a liberty, not only of saying what they please, but of being also as dull as they please." At the present day, not only every man, but also every woman, enjoys this liberty. Miss Braddon, however, has carried the liberty of saying what she pleases, and of being as dull as she pleases, to the very verge of license.

NOTICE.

We beg leave to state that we decline to return rejected communications; and to this rule we can make no exception.

THE SATURDAY REVIEW.

Price 6d.

The SUMMER TERM will commence on Thursday, May 1, and will end on Thursday, July 31. Special preparation for Public Schools, Competitive Examinations, Universities, &c. Honour Lists and further particulars on application.

ROSSALL SCHOOL.

THE NORTHERN CHURCH of ENGLAND SCHOOL at ROSSALL is now entering on the thirtieth year of its institution. Its success has amply justified the views of the original promoters. Having both a Classical and Modern Department it has produced a long list of Honours at the Universities, at the Military, Legal, and Medical Examinations, while the cost of the Education has been considerably below that of any school of a similar standing in England.

Situate on the Sea-shore and apart from any town or village, it enjoys an immunity from contamination, moral and physical, in which it stands pre-eminent.

The Council propose to raise the numbers from the present average of 300 to 350, to which number the School is to be limited.

Terms (inclusive): Clergymen's Sons, with Nominations, 47 Guineas—without, 57 Guineas; Laymen's Sons, with Nominations, 60 Guineas—without, 70 Guineas.

For further particulars apply to Rev. ROBERT HENNIKER, Head-Master.

BELSIZE MANOR, Hampstead.—An essentially High-Class School for the SONS of GENTLEMEN, preparatory to Eton, Harrow, &c. As no strongly coercive measures are adopted, none but gentlemanly, well disposed Boys can be received. The Domestic Arrangements are upon an unusually liberal scale, and as nearly as possible those of a Private Family. Inclusive Terms, 80 and 100 Guineas per annum.

EDUCATION in FRANCE (Private).—The PROTESTANT PASTOR residing at Arras desires to take ONE or TWO ENGLISH PUPILS. They will find a comfortable Home and every opportunity of learning the French Language. Excellent references in London.—Address, M. le Pasteur HORTH, Arras, Pas-de-Calais, France.

EDUCATION at ZÜRICH, Switzerland.—M. F. de BAUDISS, recently Assistant-Master at Wellington College, receives a limited number of PUPILS, and has now a FEW VACANCIES. M. de Baudiss's Pupils, besides receiving instruction in French, German, and English subjects, have the opportunity of working with an excellent Mathematical Tutor, and of attending the Lectures of the Polytechnic School, on Practical Mechanics, Engineering, Chemistry, and other technical subjects (without extra charge).—Terms, references, and particulars may be had on application to M. F. DE BAUDISS, Rubinstein, Seefeld, Zürich.

WOOLWICH, COOPER'S HILL, The LINE, CIVIL SERVICE.—Rev. Dr. HUGHES (Wrang. Joh. Col. Cam.), who has passed over 300, receives TWELVE YOUNG MEN directly for these Examinations, and in an entirely separate wing of his House TEN BOYS, who have the advantage of the same Tutors.—Ealing, W.

PREPARATION ABROAD for DIRECT COMMISSIONS.—A CLERGYMAN, late Fellow of his College, living in a pleasant town abroad, who has passed more than Two Hundred Candidates, can offer special advantages to STUDENTS preparing for the above. No Unsteady Pupil retained.—Address, Rev. M.A., 60 Upper Bedford Place, Russell Square, London.

A GENTLEMAN (formerly in the Army), Married, living on his own Estate, in one of the best parts of Hants, assisted by a Militia Officer of great Experience in Tuition, wishes to receive SIX PUPILS to prepare them for the University, Civil Service, and Competitive Examinations. Both Gentlemen well versed in Modern Languages, acquired abroad. Church of England. The Advertiser, from his position, can offer exceptional Advantages. Highest references given and required.—Address, C. C., King's Library, Alton, Hants.

PRIVATE TUITION.—UNIVERSITY, ARMY, &c.—An OXFORD M.A., who has successfully prepared backward Pupils for the above Examinations, will have ONE VACANCY after Easter. Healthy, bracing neighbourhood. References to Noblemen and others. Terms: under Sixteen, 120 Guineas; above Sixteen, 150 Guineas per annum.—Address, the VICAR, Ingleby Greenhow, Northallerton.

TAUNTON COLLEGE SCHOOL.—PHYSICAL SCIENCE DEPARTMENT.—A MASTER is REQUIRED immediately after Easter to conduct the Science teaching.—Apply to the HEAD-MASTER.

COMPOSITION and ELOCUTION.—Mr. F. NASH'S LESSONS in these Subjects, as given at various well-known Colleges for Ladies, are suited to the requirements of Senior and Junior Classes.—For particulars, address Mr. FREDERIC NASH, 28 Addison Gardens South.

ENGLISH LANGUAGE and LITERATURE.—Mr. F. NASH'S LECTURES, as delivered at some of the leading Colleges in London, are especially suitable for Students preparing for Examination.—Address, Mr. FREDERIC NASH, 28 Addison Gardens South.

TO CLERGYMEN.—The MANAGEMENT of the VOICE, DECLAMATION, INTONING, &c., TAUGHT by a former Member of a Cathedral Choir. Lessons by appointment. Terms moderate.—Address, F. F. C., Bury Cottage, Godalming, Surrey.

SINGING.—A MASTER of great Experience desires to Resume Practice in London. As Pupil of Sir George Smart, he offers special advantages to Persons anxious to qualify themselves for the higher class of Vocal Music—the Oratorios of Handel, Haydn, Mendelssohn, &c. Lessons by appointment. Terms moderate.—Address, F. F. C., Bury Cottage, Godalming, Surrey. Class Room in London.

ESTATE and LAND AGENT.—A Gentleman of very large Experience in the above capacities, including the management of Forests and Minerals, a sound practical Farmer, and well versed in the judgment and management of Live Stock of all kinds, and a practical Estate Accountant, is open to an ENGAGEMENT. The highest references will be given.—Address, in the first instance, to ESTATE AGENT, care of C. T. Foster, Esq., Solicitor, 14 King's Road, Gray's Inn.

TO WINE and SPIRIT MERCHANTS.—WANTED, in the Country, by a YOUNG GENTLEMAN, who has been some time in the Trade in London and the Country, a SITUATION where he may obtain further Experience in the General Trade.—Inquire of Messrs. HUNTER, Wine Merchants, Bury St. Edmunds.

COMFORTABLY FURNISHED APARTMENTS for One or Two GENTLEMEN in a quiet House, both airy and pleasantly situated; close to the Uxbridge Road, Metropolitan, and Great Western Stations. Trains to City and West End every Ten Minutes.—Apply to Mr. DEAR, Picture Dealer, &c., Southampton Street, Strand, W.C.

HYDROPATHY.—SUDBROOK PARK, Richmond Hill. *Physician*—Dr. EDWARD LANE, M.A., M.D. Edin. Turkish Baths. Consultations daily (Saturday excepted) at 7 Princes Street, Hanover Square, from Ten till Twelve.

INDIAN PARCEL POST.
Under Authority from the POSTMASTER-GENERAL of INDIA.
Parcels not exceeding fifty pounds in weight and 2 ft. x 1 ft. x 1 ft. in size, and £50 in value, are conveyed by the PENINSULAR AND ORIENTAL COMPANY from London to any Post Town in India at a uniform charge of 1s. 6d. per lb. Full Particulars on application at
122 LEADENHALL STREET, E.C.

BRIGHTON.—BEDFORD HOTEL.—Every endeavour is made to render this Hotel equal to its long-existing repute. Spacious Coffee Room for Ladies and Gentlemen. Sea-Water Service in the Hotel.—Communications to The MANAGER, Bedford Hotel Company, Limited.

THE GRANVILLE HOTEL, St. Lawrence-on-Sea.—Ramsgate the nearest Station on both Lines. One of the most elegant, commodious, and comfortable Hotels in the Kingdom. Hydropathic, Turkish, Ozone, Saline, Plunge, and other Baths in the Hotel.

POLITICS, LITERATURE, SCIENCE, AND ART.

No. 912, Vol. 35. April 19, 1873. [Registered for Transmission abroad.] Price 6d.

HOME POLITICS.

IN view of the general election which cannot be long deferred, some activity is beginning to show itself in English constituencies. It is there that the battle is to be fought which is to decide whether the Opposition shall be summoned to take office; for Scotland, as the Conservatives confess, is in a most hopeless state of Liberal darkness, beyond any chance of conversion; and Ireland will only send an increased number of members standing aloof from both political parties. Naturally the stir and movement in English constituencies is as yet almost entirely produced by the Conservatives, for it is they who are the attacking party, and it is they who hope to win by the election. In most cases Liberal members will offer themselves for re-election, and they have nothing new to say, nor any arts by which to revive the drooping spirits of electors. But the Conservatives have the delight of choosing new men, of hearing what the new men can say, and thinking over the delightful annoyance which the contest will give their opponents. It is always easy for Conservatives to find candidates. It is a gentlemanly, respectable thing to be a Conservative candidate, even if an unsuccessful one, and the party is very rich, and its members can afford to contest seats even when the seats are not to be won. A Conservative candidate need not think, or read, or weigh one thing against another. He has only to come to the conclusion that he is on the side of our glorious Constitution, and he has got to the end of his intellectual troubles. In this respect he has an immense superiority over a Liberal candidate, who has to worry himself as to the effect of lines of policy, the meaning of cries, the limits of desirable change. The happy man whom birth or conviction has made a Conservative can start at once, leave the details of policy aside, and devote himself to the business of the election, to making himself pleasant, to getting up local subscriptions and arranging local festivals, to impressing slowly on the minds of persons of various classes the gentle conviction that he is really very nice, if not bright. Such as he is, such are his Committee, his supporters, and his voters. They take without any trouble the position they assume, and hold it with a careless merriment. Anyhow they get the fight for their money, and therefore they may as well have the fight. A Conservative journal has recently published an elaborate electioneering prospectus stating what constituencies are sure to furnish Conservative victories, what seats are just worth contesting, and what seats should for the greater glory of Conservatism be contested without any real prospect of success. The great maxim of the party managers seems to be that everywhere there should be a contest, and that it is much better to bring forward two candidates than one. This implies that there are a great number of persons who are ready to play the part of Conservative candidate merely for the sake of being known as Conservative politicians, and this reckoning is probably sound. The Conservatives can contest seats very easily, for they have men and money, and as their political programme is purely negative, they avoid internal divisions. But, although the Conservative party has this advantage, and although in a time of political quiet like the present the advantage is a great one, yet it is not easy to say whether this facility and ardour with respect to the preparations for contest are significant of anything like a proportionate success. The Liberals hold the seats and are quiet; but it does not follow that they will be beaten; and even in the Conservative estimate there seems to lurk a hesitation as to the issue of a general election. That the Conservatives will win seats is undoubted, and that, although they may lose some, they will win largely on the whole, is probable; but they must win something like a clear balance of forty English seats to enable them to take office with credit, and their prospectus does not show anything like forty English seats where they have a fair prospect of success.

All that Liberals have to say at the present moment has been said by Lord KIMBERLEY at Ipswich, with much moderation and good sense. He reviewed the history of the Administration during the period of nearly five years during which it has been in existence, and he could truly point to great things which it has achieved, and to important principles which it has upheld. He said the most that could be said in justification of its policy where its policy has been questionable; and he judiciously left out of sight its blunders and shortcomings. A Minister is entitled to do this, and to ask the conduct of the Cabinet to be judged as a whole; and Lord KIMBERLEY, speaking to a Liberal audience, was justified in assuming that his hearers were ready to remember the great measures of the GLADSTONE Administration and to forget the Royal Warrant, the COLLIER scandal, Mr. AYRTON, Mr. BRUCE, and the Budget of 1871. But nothing that Lord KIMBERLEY could say tended to remove the two standing difficulties of the Liberal party. They have no programme for the future, and their leaders are wearied of office. Lord KIMBERLEY had plenty to say of what is past, but nothing of what is to come. If the end of the GLADSTONE Ministry had arrived, his account of what it had done might be taken as a fair account from the Liberal point of view. But he had nothing to put before his hearers by way of suggestion as to that which they should strive to accomplish. Even the Government measures of this Session, the Judicature Bill, the amendment of the Education Act, the scheme for readjusting Local Taxation, had evidently no interest for him, as he knew they would have none for his hearers. It is quite true that a Liberal Government is not bound to be always kindling the light of blazing measures. It may be merely a knot of persons whom the country wishes to hold office in a quiet way in quiet times. But then the Liberal leaders, and especially Mr. GLADSTONE, are used up by the labours and toil of office. They need rest morally and physically, and the burden of office is now so great that men of mature age would necessarily shrink from it unless by the changing fortunes of parties they were occasionally relieved from its weight. When the two things concur, when there is no room or occasion for Liberal legislation of great importance, and when the energies of the leaders of the party are exhausted, the time for a Conservative Government has come, if the constituencies will but permit one to be established. Nothing like real reaction is possible. A Conservative Ministry will not dream for a moment of reversing the recent policy of England towards Ireland, of denying the Ballot the opportunity of a fair experiment, of augmenting denominational ascendency, or of interfering with the reorganization of the army. The Liberals have not only done their work, but they have done it so effectually that it cannot be undone. They may therefore regard the incoming of a Conservative Ministry with the greatest equanimity. What can they wish more than that, as their opponents must come in occasionally in order that Liberal leaders may have rest, the Conservatives should take office at a moment when the successes of a Liberal Ministry have been secured, and when a season of political repose makes it easy that affairs should be administered by those who only ask that everything shall go on for a time as nearly as possible in the same way in which it is going on when they take office? Everything that Lord KIMBERLEY said was consistent with the real thought of the heads of the Ministry being that they are desirous to be relieved, although they also are desirous that their past career should be fairly judged.

But Conservatives cannot, at least publicly, content themselves with the modest lot of relieving their wearied adversaries, and doing nothing for a time, while the country is willing

that nothing should be done. They have to fight many little local battles, and local battles cannot be fought successfully in a spirit of serene humility. Those who hope to influence or win elections must indulge their genius, speak the passing thoughts of their minds, and abuse their enemies heartily. There have been several Conservative meetings this week, and most of the speeches made there would be very discouraging if it were the business of local Conservatives to provide the nation with political thought, or if the leaders of the party were likely to catch the spirit of their more obscure followers. In Yorkshire, Mr. STANHOPE enunciated the proposition that what was wanted in political life was a bit of blood, that the House of Lords was full of bits of blood, that the House of Commons was at present sadly deficient in this respect, and that the real thing to do was to fill the Lower House with bits of blood, and so make it in harmony with the Peers. Mr. RAIKES thought it a neat joke to echo the suggestion that what the Ministry would like would be to send the Marquis of RIPON to Spain to apologize for the *Northfleet* being in the way of the *Murillo*, and make the Marquis a Duke for his pains; and he ventured on a statement which, even coming from a minor Conservative member to a local Conservative audience, was astounding—that as to the new Budget, although there was a demand for the reduction of the Income-tax, yet the only proposal which the CHANCELLOR of the EXCHEQUER made was one to improve the profits of the grocer. At a Conservative demonstration in Lancashire the speakers appear to have been chiefly clergymen. One reverend gentleman informed his audience that if Mr. WILLIAM GLADSTONE had to try for a 50*l.* situation in competition with a Lancashire operative he would fail, and that if his father ventured to stand for the division of the county in which the meeting was held the Conservatives would not make mincemeat of him, "for no one wished to taste of such an unsavoury pie," but they would teach him a serious lesson. Another clergyman thanked GOD he was not a Dissenting minister, at which expression of opinion there were loud cheers. Such is the spirit of Conservative electioneering when seen at its worst, and it is not often that Liberal demonstrations reach such an extreme of vulgarity, acrimony, and petty spite; but even if these exhibitions of clerical folly could be paralleled by the utterances of the lowest Radical mob orators, something better may fairly be claimed at the hands of those who insist that existing institutions and the pre-eminence of bits of blood produce such admirable results that they ought to be suffered to endure with unimpaired force. It is the hard task of the Conservative leaders to defend Conservatism against their own supporters, and to reconcile the nation to the good of a scheme of things in which so much evil is mixed up.

THE AUSTRALIAN COLONIES.

THE Australian Colonies, like grown-up sons with incomes of their own, are certain to succeed in every successive contest against parental authority. The benevolent and experienced head of the family endeavours in vain to stipulate, for the good of his offspring, that they shall not commit excesses of smoking or drinking, or that they shall abstain from debt and gambling. When the power, and even the will, to exercise coercion is at an end, the measure of youthful or colonial independence is the inclination to disobey. The Australian settlements are governed by the delegates of universal suffrage, representing the extreme ignorance of prejudiced and half-instructed communities. No other source of power is possible; and it is idle to complain of the necessary results of inevitable causes. In Australia, as elsewhere, the uncultivated imagination more readily apprehends the one or two commodities which each man sells than the numerous articles of consumption which he buys in comparatively small quantities. For the purpose of enjoying a monopoly of production the colonist is content to be restricted in his choice of articles to be purchased. If economists attempt to teach him that the whole community and all its members lose by an artificial limitation of markets, the reply is ready, that the theories of a modern school ought not to prevail over the teachings of experience and the recommendations of practical men. The commonplace fallacies which are well known on the Continent of Europe and in the United States derive additional force from the jealousy which is provoked by any appearance of dictation on the part of the Mother-country. The Australians are enthusiastically loyal to the Crown, and not ill disposed to the Imperial Government and Parliament; but the condition of their allegiance, as of filial devotion in mature years, is that in all cases they should be allowed to have their own way. Lord KIMBERLEY, following in the steps of his predecessors, has vainly endeavoured to prevent the different colonies from imposing duties on articles imported from other Australian settlements. The Duke of BUCKINGHAM several years ago urged upon the colonists the expediency of forming a Customs Union, including the usual provisions for distributing the proceeds of the revenue on imports. The practical men rejected the advice of successive Secretaries of State, on the ground that each Legislature could not trust its neighbours to maintain protective duties on a sufficient scale.

As a judicious parent submits with a sigh to every fresh exaction on the part of emancipated children, the Colonial Office has introduced a Bill which might have recited in its preamble that, as the Australian colonies will not learn wisdom, they must be permitted to blunder at their pleasure. The Legislature of every Australian colony will henceforth have full power to impose or remit duties on the produce of every other colony. Reservations are added which must be abandoned in their turn, if further relaxation of Imperial control is demanded with sufficient loudness and persistence. The Bill provides that no duty shall be imposed on the importation of any article from any particular country which shall not be equally imposed on the like produce of any other country; and the colonial Legislatures are further required to comply with the stipulations of any commercial treaty. If a commercial treaty is ultimately concluded with France, it will be difficult to enforce on distant colonies the observance of provisions which will probably have been inserted without any special regard to their wants or opinions. Under the treaty of 1860 French wines were admitted at a low duty into England, where there is no competitive production. In some parts of Australia wine is produced in abundance, of so bad a quality that it urgently requires the protection of differential duties. If any Australian colony takes alarm at the possible influx of cheap and wholesome claret, it will be easy to excite a popular agitation against the extension of the treaty to wine-producing provinces. Local patriots will contend with plausible eloquence that the interests of England are directly opposed to those of New South Wales and Victoria, which have no cotton goods or hardware to send to France, while they have wine of their own which, from its disagreeable taste, is incapable of contending on equal terms with the favoured vintage of Bordeaux. If a duty is levied at Sydney or at Melbourne which is inconsistent with the terms of any commercial treaty, the Imperial Government will have no practical means of correcting the irregularity. It is also in the power, though not within the legal competence, of the colonies to impose differential duties on the respective products of different countries, nor is it improbable that they may avail themselves of their practical immunity from control.

It appears that fiscal jealousies are likely to prevent or postpone for an indefinite time the federal union of the Australian provinces. In that remote continent there is no foreign enemy to fear, as in the North American Dominion. If consistency in error is a virtue, the Australian Protectionists may claim superiority over the professors of the same creed in the United States and in Russia. It has never occurred to the Americans to interpose Customs frontiers between their several States; and the annexation of Canada or of Cuba would immediately produce unrestricted commercial intercourse between the old and new portions of the Union. Every American politician believes that the territory of the Republic will ultimately include the whole Northern Continent down to the Isthmus; and he is fully prepared to accept the consequence of Free-trade over one-half of the Western hemisphere. In the same way Russia is acquiring market after market in Asia for the purpose of extending indefinitely the circle beyond which a protective or prohibitive tariff will operate. In both countries economical selfishness is regarded as subordinate to political and territorial aggrandisement. The Australian colonies, on the other hand, having for the present no foreign political relations, are bent on keeping one another at arm's length, after the fashion of the French provinces before the days of TURGOT. If the doctrine of Protection is sound, there is no reason why it should not apply to every colony, to every county, to every parish. The people of New South Wales fear that they may be inundated with cheap importations if the tariff of Victoria is more liberal than their own, or if the ports of the neighbouring colony are more attractive to shipping and to trade. A Customs Union would put an end

to the rivalry of competing ports, but the risk that protective duties might be reduced by a preponderance of outside votes in a federal Assembly still furnishes a conclusive argument against the obvious plan of a Customs Union. The respective interests of Sydney and of Melbourne are not more incompatible than those of London and Liverpool, or than those of New York and Philadelphia; but again it must be admitted that, with true logical courage, the Australian colonies are not deterred from the prosecution of their theory by a mere reduction to the absurd.

The concession which is contained in Lord KIMBERLEY's Bill will furnish an additional argument to the politicians who depreciate the Colonial Empire as an obsolete fiction. Lord GREY, who administered colonial affairs a quarter of a century ago, has uniformly protested against the modern system of responsible government as an abdication of Imperial duty. It may be admitted that, in granting to the colonies all but exclusive control over their own affairs, the English nation was not performing an act of heroic or disinterested generosity. In many respects the Imperial Government is greatly superior in wisdom and political capacity to the ephemeral Cabinets of Australia; and all parties would have been gainers if Free trade could have been universally enforced in the wide range of English possessions. Nevertheless the relaxation or abandonment of control over the colonies was well judged both in substance and in choice of occasion. Virtual independence must sooner or later have been conceded in consequence of the impossibility of governing with efficiency and justice dominions removed from the centre of authority by half the circumference of the earth. It was far better that the partial withdrawal of the Imperial Government should not be preceded by bickerings or by open quarrels; and the colonies, as long as they belong to the Empire, should be retained by a voluntary bond. The Americans have now for nearly a century propagated by means of popular education and literature the animosity to England which first originated in a quarrel of which the merits were doubtful. It would be extremely inconvenient to encounter in Australia the spiteful feeling which has embarrassed all diplomatic transactions with the United States. The inconveniences which may result from the nominal possession of territories which are substantially independent were illustrated by the damages awarded, with questionable justice, at Geneva for an alleged miscarriage of the Melbourne police. The advantage of having a friendly population in the remote regions of Australia on the whole counterbalances the occasional vexation of unforeseen liabilities and of temporary misunderstandings. It is right to recognize the proposition that the limits of colonial independence must be from time to time defined at their pleasure by the colonists themselves. The residuary attributes of empire, though they may be subject to a gradual process of diminution, involve a corresponding reduction of burdens as well as of dignity and power.

DEMOCRACY AT NEWCASTLE.

THE large meeting of colliers and other working-men at Newcastle on Saturday last may perhaps have suggested unsatisfactory reflections to the other inhabitants of the district. The meeting seems to have been peaceable and even good-humoured, as might be expected when the assembled multitude had long been in the enjoyment of unqualified prosperity. It is said that the flags which were borne in procession were worth several thousand pounds; and all the persons present, except those who resided in the immediate neighbourhood, had paid their fares by railway. Some of the promoters of the movement recently received from Mr. GLADSTONE an encouraging answer to the proposal of extending household suffrage to county constituencies; and the same Minister has on more than one occasion expressed an opinion in favour of the more extensive demand of universal suffrage. To the assembled thousands it probably appeared just and reasonable that they should have an equal share of the privileges from which many of them have up to the present time been excluded; and if the suffrage were a mere luxury or a badge of honour, it would be difficult to say why a collier should not be put on a level with a grocer. It is only because political power is a constant quantity which can neither be increased nor diminished by the method of distribution that prudent politicians regard with alarm and repugnance the revolutionary changes which Mr. GLADSTONE so lightly adopts. The indiscriminate enfranchisement of the colliers and miners of Northumberland and Durham, and of the working-men of other trades, would involve the practical exclusion from political influence of all the manufacturers, merchants, tradesmen, farmers, and landowners of those two great counties. The classes which have hitherto controlled Parliamentary representation are divided among themselves in tastes, in interests, and in political opinions; and even defeated minorities can protect themselves with the aid of members returned by constituencies of a different character. Universal suffrage accompanied by a redistribution of seats would transfer the whole representation of the country to the class which lives by weekly wages, while the owners of property and the employers of labour would be absolutely deprived of all share in the government of the country. The dominant multitude would be absolutely homogeneous, and it would be unanimous in executing the will of the popular leaders who would administer irresistible power. The spoils of the vanquished would furnish demagogues with unprecedented means of influence and corruption. No similar Constitution has hitherto existed in the world; for in existing democratic communities property is for the most part widely distributed, and an English House of Commons elected by universal suffrage would inherit the attributes of the only representative Assembly which has really exercised sovereign authority. The American House of Representatives is the less considerable of two legislative bodies which divide supreme power with an independent President; and Parliaments on the Continent of Europe have always been overshadowed by the Executive power.

It is true that legislation against property might probably be suicidal on the part of its promoters, who would themselves form an essential part of a complicated economic organization. The most advanced material civilization has resulted in a division of functions which is invidiously described as the antagonism of capital and labour. The same process may be observed in the manufacturing districts of Europe and America; but it is in England the very foundation of society. There is no reason to believe that any imaginary system of universal co-operation would reproduce the economy of labour and the accumulation of material wealth which has resulted from the actual system of private or associated capital, of profits, and of wages. The Co-operative Congress which assembled at Newcastle simultaneously with the meeting to promote universal suffrage was professedly engaged in the legitimate experiment of superseding, by means of competition, the whole body of retail tradesmen, if not the manufacturers, the merchants, and the bankers. A shopkeeper is, in the estimation of Mr. HUGHES and his friends, a superfluous middleman, who levies an unnecessary tribute in the transfer of commodities from the producer to the consumer. If it is found in the long run that Co-operative Societies can undersell tradesmen, without any counterbalancing inconvenience in the conduct of business, the new method of distribution will ultimately prevail; and it must remain for future experience to show whether the recipients of dividends will be inclined to work for wages. One of the dangers of universal suffrage is that a democratic Parliament might anticipate the possible consequences of the co-operative movement by a frantic interference with the rights of property. The only political teaching to which the Northumberland colliers are likely to listen is that of the revolutionary clubs of London. The local promoters of co-operation at Newcastle were also the leaders of the agitation for universal suffrage. Those of them who were capable of learning may perhaps have derived a useful lesson from the differences of opinion which arise as soon as attempts at construction are substituted for simple demolition. On the Town Moor all was smooth and easy, for the assembled thousands had no doubt that it would be expedient to vest all political power in themselves. When it was proposed at the Co-operative meetings to secure for the same class the whole or the greater part of the proceeds of industries, difficulties arose even in the theoretical stage of the experiment. Mr. LUDLOW's doctrine that production is the divine element, and consumption the animal element, in co-operation seems not to exhaust the question. If it is a divine object to make shoes or hats, it is a human convenience to wear them; and the ultimate cause of shoes would seem to be the humbler or more terrestrial element. Another essayist defined profits as the excess of production over consumption which has hitherto for the most part resulted in an unprofitable glut of commodities. Several of the speakers denounced the distributive co-operation which has been celebrated with so much enthusiasm, as a vicious system "which its advocates mistakenly "denominate co-operative." The general feeling of the Congress seems to have been in favour of a scheme of co-operative production which is but vaguely defined. There is not the smallest reason why workmen should not invest their savings

in shares of Limited Companies, and they might naturally prefer the establishments in which they are themselves employed; but a shareholder is in that capacity a capitalist with an interest in keeping down wages as well as every other element in the cost of production. It would seem that in the North there is no immediate prospect of organizing productive co-operation. Some of the speakers praised the system of industrial partnerships which have been tried by a few firms, and especially by Messrs. Fox, Head, & Co., of Middlesborough. Mr. Head himself afterwards explained that in that establishment there was at present no arrangement for the workmen to invest their wages. "A clause to give the "workmen that opportunity was at first put into the articles "of agreement, but, as there was only one instance during "three years of a workman under the firm applying to invest "his savings, that clause was withdrawn." The firm naturally concluded that this part of their scheme was at least premature, and they contented themselves with promoting instead one of the Co-operative Distributing Societies which are so obnoxious to the Newcastle enthusiasts. Mr. Morrison was scarcely in accordance with the prevailing opinion when he warned the Congress that it would be unwise to limit the return on capital to five per cent. Such a restriction would at once put an end to productive co-operation by confining the supply of capital to private enterprises.

If it is impossible to exclude cant and idle declamation from discussions of a plausible and well-intended economical theory, the addresses which are delivered to enormous crowds collected in pursuance of a political agitation cannot be expected to be argumentative or moderate. The various orators on the Town Moor expressed unbounded confidence in Mr. Gladstone, and professed, perhaps sincerely, their inability to comprehend how a miner could be competent to work a coal seam and not competent to choose a member of Parliament. The rest of the community is perhaps not at the present moment deeply impressed with the self-sacrificing benevolence of the colliers; but the objection to universal suffrage and equal electoral districts is not that the output of coal has been artificially limited, but that a monopoly of political power exercised by the class which lives on weekly wages would probably subvert society. The display of numerical force at Newcastle may perhaps furnish politicians with an argument for yielding; but it also suggests the most conclusive reason for resistance. Notwithstanding the successful exertions of Mr. Disraeli and Mr. Gladstone, the English Constitution is still worth defending, if possible. The miners and workmen who met at Newcastle are probably for the most part honest, and many of them possess a respectable amount of intelligence; but if they succeeded in excluding the rest of the community from a share in the representation, they would be governed, not by themselves, but by the most worthless and venal of mankind, in the form of election managers of the type which is familiar to American experience. Political power is by the necessity of the case exercised by a few persons; and nothing worse can happen than that it should fall into the hands of demagogues and jobbers. The agitation which has suddenly been organized in the Northern counties is not the less formidable because it arose from a trivial cause. The miners within the new limits of the borough of Morpeth were, at the first registration after the Reform Act of 1868, excluded from the lists through accidental circumstances; and, although their names have since been placed on the roll, local demagogues have persuaded them that household suffrage furnishes a complicated and uncertain qualification. From a dispute with overseers or a contest before the revising barrister, the step to a proposed revolution has unfortunately been found easy.

THE ELECTION FOR PARIS.

AFTER a good deal of preliminary skirmishing, it seems at last to have been determined that the election for Paris shall be fought out. In the first instance neither party was at all anxious for a contest. M. de Rémusat would naturally have preferred to be elected without opposition; M. Barodet's friends put him forward rather against their will. M. Thiers is, in the main, responsible for this inconvenient state of affairs. Either he has been over-anxious to retain such intermittent support as the Right have lately thought fit to give him, or he has been over-confident that nothing that he could do would seriously offend the Republican party. It is the more surprising that he should have blundered about Lyons, because he has always shown himself keenly alive to the blunder of which the Assembly was guilty in separating itself from Paris. The fact that the Conservatives have made the capital their enemy might have served as a caution not to associate himself with their determination to make the second city of France their enemy also. Instead of profiting by this warning, M. Thiers accepted the Bill for depriving Lyons of its municipal independence as a Government measure, and thereby made it a point of honour with the Republicans to show him the evil of his ways. It was an unfortunate coincidence that a Cabinet Minister should at that moment have been a candidate for Paris. The Republican leaders seem themselves to have regarded it in this light. They wanted to place M. Barodet in the Assembly in order to give the Right the annoyance of having for a colleague a man whom the Assembly had incidentally declared unfit to be a municipal officer. But they did not want to place him there instead of M. de Rémusat. A convenient vacancy in the representation of Lyons seemed to offer a way out of the difficulty. The Government had the power either to hold the election at once or to put it off for six months. If M. Thiers would take the former course, and at the same time authorise M. de Rémusat to issue a Republican address, M. Barodet might stand for Lyons instead of for Paris, and the Paris Republicans would feel themselves at liberty to vote for M. de Rémusat. M. Thiers has in the end resolved to take both steps, but their utility has been greatly lessened by his taking them in the end and not in the beginning. By the time that M. de Rémusat's address had been made public, and the decree fixing the election for Lyons on the 11th of May had appeared in the Official Journal, M. Barodet's candidature had become of too long standing to be easily withdrawn. The consequence is that a section of the Republican party finds itself committed to oppose a Government which it really wishes to support, and a Cabinet Minister runs some risk of being beaten on an unusually conspicuous stage. This is all that M. Thiers has gained by his sacrifices to the Right. He has been obliged to give up the hope of retaining their good will, but he has delayed the surrender so long that it only half conciliates the party in whose interest it is made.

As regards general politics, the addresses of the two candidates are hardly distinguishable from one another. It is true that M. de Rémusat does not mention the dissolution of the Assembly, while M. Barodet puts it at the head of the demands which he intends, if elected, to make in the name of his constituents. But M. de Rémusat clearly means dissolution, though he does not say it. He declares that he recognizes no Government as lasting which does not derive its strength from the confidence of the country; he claims for M. Thiers the glory of having made the Republic stable and reassuring; he defines the object of the Bills about to be introduced in the Assembly to be the organization and consolidation of the Republic by means of regular institutions founded on the integrity of universal suffrage. M. Buffet himself would not assert that the existing Assembly possesses the confidence of the country, if the words are taken as equivalent to the confidence of the majority of Frenchmen. If it possessed this, a dissolution would be eagerly called for by the Right. The triumphant re-election of the existing members by the bulk of the constituencies would shut the mouths of the Radicals, and a new Assembly, as orthodox as the present is, and as strong as the present ought to be, would restore the ancient Monarchy and make France a respectable nation. In the present state of the constituencies, however, to possess the confidence of the country would, in the estimation of the Right, be the worst possible title to power. They are almost all in the hands, not of the French people, but of the great enemy of the French people—the Radicals. This transfer of power has been effected by M. Thiers, and that he has thus made the Republic a stable Government is the worst of the many crimes of which he has been guilty. The effect of the forthcoming Bills, if the majority are true to themselves, will be to restrict universal suffrage and to provide France with institutions calculated to promote the ultimate interests of Monarchy. This is what the majority in the Assembly would say if they had the courage to speak their mind, and this being the case, M. Rémusat's declarations are tantamount to an admission that nothing more can be got out of the existing Assembly. He says the same thing in another form when he pronounces France to be calm, free, and perfectly competent to decide her own destiny. If so, why should not she be allowed to make her decision at the earliest possible moment? The present provisional form of Government is not a convenient system on which to carry on the administration of a great country, and the motive for retaining it ceases to operate as soon as the nation is in a position to give permanent shape to its institutions. M. Barodet's address

is really less to the purpose than M. DE RÉMUSAT's. He assigns no reason for hostility to the Government beyond the importance of testifying to the solidarity which not only unites the great cities in defence of their rights, but also attaches to the cause of municipal liberty the humblest communes of France. This is a somewhat narrow ground on which to oppose M. THIERS in the person of the Minister who has had most to do with the liberation of French territory from foreign occupation, and its insufficiency has already been admitted by some influential members of the Left. In a circular addressed to the electors of Paris, they point out that the situation has changed since M. BARODET became a candidate. At that time Paris was about to elect a representative, while Lyons was not. Now Lyons is free to lift up her own voice, and consequently there is no need for Paris to speak in her name. This paramount obligation being removed, the Paris Republicans are free to consider what will be the effect of M. BARODET's return. That effect can best be judged, they say, from the fact that the newspapers most hostile to the Republic are most anxious that M. DE RÉMUSAT should be beaten. So far as M. BARODET's supporters have any real love for the Republic, they will listen to this counsel. Many of them, however, regard the Republic according to M. THIERS as practically indistinguishable from a Monarchy, and they will perhaps be ready to make common cause against it with any allies that may offer themselves. Extreme parties are usually the aptest at forming temporary coalitions, because they are never troubled as to how these coalitions are to be dissolved when they have served their turn. A combination of Extreme Right and Extreme Left to return M. BARODET rather than M. DE RÉMUSAT implies nothing more than a common willingness to hurry on the happy time when the stronger of the two shall be free to cut the throat of the weaker. It is still uncertain, however, whether the electors who take this view of their duty are numerous enough to return their man. The Parisians have so much to hope from M. THIERS that they can hardly wish to deal him a blow which might turn him once more towards the Right. Weak as the Right is in the country, its strength would be greatly increased by the definitive adhesion of the PRESIDENT, provoked as it would be by the deliberate resolution of the Paris Republicans to break altogether with the Government.

That M. BARODET's return would have this effect upon M. THIERS is highly improbable; but it is as well that the electors of Paris should believe that it would, if they will be thereby induced to vote for M. DE RÉMUSAT. Now that the Foreign Minister has made up his mind to stand, it is of great importance that he should be returned. If Paris were to prefer M. BARODET, the Right would be provided with a weapon which would be of the utmost use to them in a general election. It might not win them many votes, but it would ensure a large number of abstentions; and in the present state of France, abstentions are almost as serviceable to the Right as votes. So long as abstentions are numerous, it is difficult for the Republic to maintain that it has satisfied the country of its ability to found an ordinary Government. When Frenchmen are at ease upon this point, they go to the poll like so many sheep. If the statistics of the general election show that only decided partisans have voted, and that the great body of the electors have remained impassive, it will be an indication that their confidence has not yet been gained, but is still reserved as a prize to be won by some adventurer. M. BARODET's return would tend to increase the probability of this being the case. M. THIERS has again and again stated that in his hands the Republic has become Conservative; that the fears which Paris used to inspire in the minds of sober Frenchmen have no longer any foundation; that the insurrection of the Commune brought the peccant humours of the capital to a head, while its suppression finally dispersed them. To return M. BARODET in the teeth of M. DE RÉMUSAT would be to give the lie to all these assurances, and to undo much of the work which M. THIERS has accomplished with so much difficulty.

BRIGHAM YOUNG AND MORMONISM.

BY the resignation of his secular office at Utah, the head of the Mormon community, though he still reserves his spiritual supremacy, seems to acknowledge that he is worsted in his conflict with American institutions. To compare small things with great, and things partially disreputable with traditions venerable by reason of antiquity, BRIGHAM YOUNG leaves his capital, as PIUS IX. might perhaps retire from Rome if he were ten years younger. With remarkable spirit the Mormon leader proposes to settle among the Apaches of Arizona, either in the desperate hope of bringing them within the pale of civilization, or for the purpose of establishing in their midst an industrious and civilized community. The machinery of emigration which has provided a constant stream of proselytes from England and Wales is still to be maintained; and credulous European disciples will have no means of distinguishing between Utah and Arizona; yet the experience of the past bodes ill for the prospects of the Mormon organization. It is as impossible to escape from the power of the United States in the wide regions between the Atlantic and the Pacific as it was to pass beyond the reach of the Emperor in the countries bordering on the Mediterranean in the time of the CÆSARS. Wherever adventurers can found a settlement, the cellular growth of the township, the county, and the Territory or State will proceed; and the Mormons have reason to know that the universal toleration of American theory has its limits in practice. Arizona has already a partial or nominal political existence; and the Mormon exodus of forty years ago cannot now be repeated. The resolution to found a colony at the age of seventy-two argues an indomitable resolution; but BRIGHAM YOUNG can scarcely hope to see the fruit of his new labours; and it is not known that he has any capable successor ready to take his place. According to some accounts, he has, in preparation for his departure, divided his vast possessions among his numerous families of wives and children; but if he really proposes to establish a new and distant settlement, he probably needs all the material resources at his disposal. Some at least of his community will remain in their former home; and Gentile purchasers might easily be found for thriving farms and comfortable homesteads. Different visitors to Salt Lake City have varied widely in their accounts of the result of Mormon institutions; but all agree that a flourishing district has been created in an unpromising wilderness.

But for the construction of the Pacific Railway, Mormonism might perhaps have thriven for some years longer; but with the influx of an alien population the system was doomed; nor was it difficult to anticipate the kind of persecution under which it now seems likely to succumb. In the remoter parts of the Union Federal judges are always to be found who will not shrink from any amount of chicanery to acquire popularity, or to effect the objects of their political patrons. A pettifogging lawyer on the bench in Utah discovered in a local law against conjugal infidelity an instrument for assailing its authors. The statute had been enacted at the instance of polygamists, but the Court held that its provisions were violated by the existence of a plurality of wives. The deliberate perversion of law and justice was generally condoned in consequence of the natural antipathy which had been provoked by the most characteristic or most notorious of Mormon institutions. The founders of the American, Federal, and State Constitutions would probably have legislated against polygamy if it had occurred to them that such an abuse could be introduced among a modern community of European descent. Their successors supply the omission by straining the law to prohibit a moral scandal which happened by mere accident not to be illegal. There had previously been a growing schism among the Mormons themselves. Some of the younger members of the Church of Latter Day Saints repudiated the institution of polygamy, asserting at the same time, after the fashion of all religious reformers, that they were themselves not promoters of innovation, but champions of the pure and original doctrine. The orthodox party, if orthodoxy means the doctrine of the dominant portion of a sect, might have relied on the theory of development; but it was sufficient to assert that in the eyes of the world they represented and maintained the distinctive article of the common creed. If polygamy is once surrendered, Mormonism will rapidly disappear in default of any special reason for its continued existence. It is well known that Quakerism has declined since the members of the Society of Friends began to discontinue their peculiar uniform and their singular abuse of pronouns. The Mormons will not be held together by an affected belief in the ridiculous forgery of the Book of Mormon.

It is highly probable that considerations of political expediency and of economic convenience coincided with personal inclination in causing the adoption of polygamy by BRIGHAM YOUNG and his adherents. The consciousness of national or religious unity was stimulated by the knowledge that the Latter Day Saints were an abomination to the Egyptians of America and Europe. The new and anomalous custom at the same time corrected the inconvenient results of one of the most obstinate of American prejudices. If housemaids and dairymaids were called wives, there was no longer any difficulty in procuring the advantages of domestic service.

Neither the calculated pursuit of ostentatious singularity nor the economic recommendations of the novel form of household constitute an apology for the indefensible practice which they may partially explain; but any system which has attained to temporary existence and prosperity may become an object of reasonable curiosity. JOSEPH SMITH proved that a kind of religion may be deliberately founded on the basis of a transparent falsehood; and BRIGHAM YOUNG has continued his enterprise with the aid of a grossly immoral institution. As thriving institutions can scarcely derive their prosperity from the mere violation of natural laws, it may be presumed that the Mormon leaders have either appropriated some fragment of sound principle, or given form to a reaction against prevalent and popular errors. The Mormon theory had at least the merit of rejecting the modern figment of a separation between the respective spheres of religion and of government. BRIGHAM YOUNG's Church was also his State; and his sermons were professedly, like the discourses of the Hebrew prophets, political and practical discussions of the topics of the day. The doctrinal element of his system seems to have resembled the creeds of some of the best-known Protestant sects; for, though he never formally discarded JOSEPH SMITH's pretended revelation, the Book of Mormon appears to have been tacitly dropped. Like many other religious bodies, the Mormons were taught to attribute to themselves the privileges which are assigned in the Old Testament to the chosen people, and perhaps their prophets may have brought into even unusual prominence the corresponding duty of hating and despising Gentile unbelievers. The living force of their religion consisted in the fact that their spiritual advisers were also the administrators of their daily affairs. The majority of the faithful were immigrants who had found during their voyage and on their inland journey the advantages of a provident organization which secured them as far as possible against the hardships which ordinarily beset new comers. On their arrival in the sacred territory they were provided with suitable employment by a patriarchal Government which uniformly strove to prevent any department of industry from being either stinted of labour or unduly crowded. The anti-American virtues of trust and obedience were diligently cultivated, and the material results of the system show that it was administered by persons of more than ordinary capacity for government.

The temporal abdication of BRIGHAM YOUNG proves the impossibility of establishing in the United States, or perhaps in any other part of the world, an organized society which can maintain itself against the steady and inevitable inroads of democracy. Modern America is extremely unlike any Utopia which could approve itself to the judgment or imagination; but solid facts have a tendency to prevail over dreams. The ingenious author of *Casimir Marcman* and philanthropists of his school may abandon the fancy that even in the central wilds of Paraguay it will be possible to organize a community except on the foundation of universal selfishness and universal suffrage. The Mormon Church was not altogether a pleasant object of contemplation; but it possessed in its religious constitution, and even in the perverse eccentricity of its most flagrant practice, conditions of unity and vitality which will not be easily reproduced. The American continent seems to afford no home for authority or for obedience. Universal acquiescence in the government of the vulgar and venal is, in the circumstances of the case, found to be compatible with unprecedented material prosperity. If the various Governments are bad, they have happily little power; and alone among political communities the United States are absolutely exempt from the danger of revolution. Conflicting local organizations are merged in the uniform system of democracy, as a healthy body imperceptibly absorbs a casual tumour or other morbid formation. The prevalence of American institutions has little grandeur, but it produces the impression of unequalled magnitude.

RELIGIOUS CORPORATIONS IN ROME.

THE Italian Government has now held possession of Rome for two years and a half, and if its new conquest has given it some trouble, it has given it much less trouble than might have been expected. After Sedan and the establishment of the French Republic, there was no difficulty in the way of the occupation of Rome; but it is only because things have gone smoothly with Italy lately that we conceal from ourselves how many embarrassments the occupation might have entailed. Italy is the luckiest of nations. It has thriven by the blunders and misfortunes of others, as well as by its own audacity and good sense. If a danger threatens it, something is sure to happen, which no one could have expected, to save it. The POPE never lets his quarrel sleep for an instant, and the POPE might have made himself very unpleasant to Italy if he had but had any external support. But while Germany kept down France and Austria so as to make them unable, if they had really been willing, to befriend the POPE, the policy of the POPE suddenly took the form of extreme hostility to Germany. As Prince BISMARCK lately said, it formed no part of the Imperial plan that Germany should become the ally of Italy against the Papacy. Italy had not been disposed to court the favour of Germany during the war. The KING was desirous of sending his troops to aid the French, and although his Ministers had sense enough to stop the perpetration of so fatal a blunder, they did not, or could not, prevent GARIBALDI from going to kill as many Germans as he could lay hands on, in the name of the Universal Republic. The new German Empire cared for nothing except to consolidate its unity; and Prussia had for years been on the best terms with Rome, and had made every possible concession so as to avoid any opposition on the part of its Catholic provinces to the central Government. Prince BISMARCK did not want to have the Rhine provinces stirred to disaffection, intrigues revived in Polish districts, and religious differences set blazing to scare Southern from Northern Germany. If the POPE had been willing, he might have had very good friends and protectors at Berlin; and although force of arms would not probably have been used to turn the Italians out of Rome, yet the POPE in all the disputes which the occupation of Rome has excited would have had a backing which the Italians could not have afforded to disregard. Most fortunately for Italy the POPE chose to quarrel with Germany, and the Ultramontane party set itself to revenge 1870 by the disruption of German unity. The consequence has been that Italy has not been hampered in dealing with the POPE by any external difficulties. It has been at liberty to take its own course, and its course has been to treat the POPE respectfully and kindly, to care little for abuse and calumny and curses, and gradually to establish in the minds of friends and foes the fact that Rome is now a part of Italy, that Italian law must prevail there, and that when the interests of Italy at Rome and the interests of the religious body or hierarchy conflict, the former are to prevail. Whether the decision to make Rome the capital of Italy was wise or not, whether the physical evils of the place and neighbourhood can be surmounted, and whether the population of Rome is suited to form the material in which the centre of Government resides, are questions which cannot properly be answered for years to come. But there can be no doubt that Italy has derived one immediate advantage from the transfer of the capital to Rome. There has been no choice but to fight boldly with the pretensions of the Papacy, and to carry out the doctrines of modern Italian policy to their legitimate conclusions. If Rome had been subjected to the authority of the KING, but had been left as a city apart, following its own customs and virtually governed by its own laws, while Florence engrossed the national attention, there would have always been a non-Italian spot in the midst of Italy. Being fixed at Rome, the Legislature has had no option but to resolve that in coming there it shall be found to have brought Italy with it.

Italy has been for centuries the home of ecclesiasticism in all its forms, and religious bodies of many kinds have nestled and flourished there. The statesmen of modern Italy had at an early date after the establishment of the Kingdom to consider how they would deal with these religious bodies, and they gradually worked out three propositions. The first was that the buildings destined for the use of such bodies must be held to be as much liable to be expropriated and applied to purposes of public utility as any other buildings. The second was that religious bodies must not be allowed to hold land, as the resources of the country were wasted, and the population encouraged to live under subjection to masters possessed by a spirit alien to that of modern society. The third was that religious bodies must, in order to be allowed to exist at all, have some recognizable character of practical utility. They must not be merely collections of persons retiring from the world to lead a saintly life. When the Italians got hold of Rome, they naturally found a very vast field for the application of these principles. Rome is ill built, ill drained, very dirty, and very inconvenient. If it was to be improved, many of the buildings belonging to religious corporations must disappear in order to let in light and air, and to make new streets possible, and to give accommodation to the legion of national officials. A large portion of the district round Rome is held by these corporations, and

they possess much urban property. The number of persons leading a purely monastic life is of course considerable in the capital of Catholicism. The Italian Government had, however, no hesitation in applying its principles to all Roman religious corporations that were of a merely local character, assemblages of persons who are now Italians settled on what is now Italian soil. But many of the religious corporations of Rome consisted of foreigners, had been founded by foreigners, and formed the chief machinery by which foreign adherents of the POPE associated themselves with the life and work of the head of their faith. How to treat these foreign corporations was a puzzle which for a year baffled the wits of the Ministry, and at last they could arrive at nothing better, in proposing a Bill to Parliament, than an enactment that during two years the corporations should be at liberty to make proposals to the Government, and, if those proposals were not satisfactory, then that the Government should be at liberty to negotiate on the subject with the foreign Governments interested. A Commission was appointed by the Chamber to consider this Bill, and it is only after the lapse of some months that the Commission has been able to arrive at a conclusion. Those who served on it have had the merit of really thinking over the matter which they had in hand. The Commission could not satisfy itself with the vague and timid proposal of the Government. It asked itself what was the basis on which the Italian Parliament proposed to deal with these corporations at all. This basis was that these corporations were established on Italian soil, possessed Italian lands as their property, and formed part of Italian society. No foreign Government could have a right to say that any of its subjects were entitled to live on Italian soil, hold Italian lands, and form a part of Italian society, if they thereby prejudiced the interests or evaded the law of Italy. The Commission, therefore, decided that the bold line was the only line that could be taken, and that foreign Governments must be held to have no claim to negotiate with Italy as to these corporations. It will be advisable to correspond with the Governments interested in the subject, but this ought to be done unofficially, and merely as an act of courtesy. The corporations are to be dispossessed of their buildings if public utility so requires. Their lands are to be sold, and they are to hold the proceeds invested in the funds; and they are to have two years in which to make proposals to the Government as to the purposes which they are henceforth to serve, and the rules to which they are to be subjected. If these proposals are not satisfactory, the Government will, at the end of two years, have power to make schemes for them.

These recommendations of the Commission are bold and logical, but statesmen have got to think of something else than of being bold and logical. They have to think of safety and prudence, and of not running their country into dangers greater than those from which boldness and logic propose to relieve it. The irresolution of the Italian Government arose, not from their hesitation as to what they would like to do, but from their hesitation as to what they could dare to do. Would foreign Governments be disposed to allow that Rome was merely an Italian city like any other, and that a new body of law should be imposed on their subjects who had for generations been encouraged to hold a position in harmony with a totally different system? It is certain that unconquered France, even if the original ideas of the late EMPEROR had been carried out, and the Italians had been permitted to occupy Rome, would never have tolerated the treatment which the Commission wishes to see applied to these corporations. Even now it is nothing but the quarrel of the POPE with Prince BISMARCK that gives the Italians a chance of uniting safety with boldness and logic. A year ago Italian statesmen might well hesitate, for they could not tell how far this quarrel would proceed. Even a few months or a few weeks ago it was not easy to say whether domestic opposition might not cripple the action of Prince BISMARCK. The Commission has the advantage of making its Report at a moment when it is known that the policy of Prince BISMARCK has been successful, that he has made the Prussian House of Lords bow before his will, and accept the ecclesiastical changes he has proposed; and that the nature of these changes is such as to make it impossible that there can be a reconciliation between Germany and Rome. How strong the measures are which the Prussian Parliament is now willing to accept will appear every day more clearly when they come to be applied in practice. They aim at nothing less than at making the Romish hierarchy in Germany subject to German laws, controlled by German officials, and imbued with German training. The State is to be paramount over the Church, but it is obvious that this question of supremacy is everywhere a question of degree, unless either the State is subject to the Church or will not allow the Church to exist at all. "A free Church in a free State" is said to be the maxim of Italian policy; but the maxim, if it is to correspond with facts, ought rather to be "A Church as free as is compatible with the freedom of the State." When the State proceeds on such principles as these embodied in the Report of the Commission, it is a mere misuse of words to talk of the Church being free. The Church is being controlled by positive law in a manner which the Church exceedingly dislikes, and which it thinks inimical to its highest interests. What the Italian maxim really means is, that Italian statesmen, in dealing with ecclesiastical matters, wish to act circumspectly, and to give no unnecessary offence by harsh language or acts of petty tyranny. They have adhered to this policy, and they now reap the benefit of it: for it has enabled them to protract their quarrel with their clerical enemies until a happy opportunity has occurred, and they see those enemies deprived of effectual assistance.

THE AMENDMENT OF THE EDUCATION ACT.

LOCAL taxation has procured a reprieve for Mr. FORSTER. Had it not been for the threatened motion on this subject, he would have had to introduce his Bill to amend the Education Act immediately after the discussion of the Budget. It is almost impossible that any change which Mr. FORSTER can propose will conciliate those who impugn the law. It does not follow, however, from this that he ought to propose nothing. The position into which the controversy about the payment of fees in voluntary schools has been brought by the wrong-headedness of a factious minority is one in which it cannot well be left. The Town Councils of Birmingham and of a few other boroughs have refused to obey the precepts of their respective School Boards, and no money can be raised in these towns for educational purposes, except under the authority of the Court of Queen's Bench. The education of the poor cannot long be provided for in this way. If every school-rate is to be resisted by the municipal authorities, and only paid as the last step in a contested legal process, the purpose for which the rate is levied will soon be forgotten in the excitement of the party contests growing out of it. When first the cry against the payment of fees in voluntary schools was raised, it was easy to foresee that the authors of it had the game in their own hands, if they held education sufficiently cheap to play it out. In these days a few resolute men may sometimes get a law altered by persistently disobeying it, and taking the consequences. In the present case the dislike to strong measures which makes this expedient possible is reinforced by a consideration of real weight. For our own part, we could bear without discomposure to see the Birmingham Town Councillors subjected to distraint, or undergoing imprisonment. But we fear that this equanimity would not be universally maintained; and if once the victims of their own illogical obstinacy were regarded with pity or sympathy, the educational system against which they fought would become proportionately unpopular. A system of national education which does not command the good will and co-operation of all classes will never succeed in extending itself over the whole country. There is an unanswerable argument for making concessions in the fact that without concessions of some sort the Act will be in danger of becoming unworkable.

Still the necessity of conceding something does not make it any easier to determine what shall be conceded. This is the problem through which Mr. FORSTER has somehow to find his way. If he listens to the Education League he will be told that there is no real difficulty in the matter. The repeal of a portion of the 25th Clause will put everything straight. As the law stands, in cases where parents are too poor to pay for their children's schooling, School Boards have the option of either remitting the fees charged in their own schools, or paying the fees charged in voluntary schools. All the mischief at Birmingham and elsewhere has arisen from the School Boards possessing this dangerous liberty of choice. If they were empowered to remit fees in their own schools, but not to pay them in voluntary schools, the Secularist conscience would be appeased. To some it may appear that the passage in the 25th Clause which has been so fiercely objected to is not particularly worth fighting for. At the meeting of the Education Union on Monday a resolution was passed to the effect that any amendments of the Education Act ought to recognize "the paramount "right of the parent to select the school for his "child." If this right really existed, except in large towns,

it might be important to maintain it unimpaired. But as a matter of fact, it does not and cannot exist, except here and there. Let us take the case of a Liverpool Roman Catholic, compelled by poverty to apply to the School Board for the cost of his children's schooling. If the 25th Clause were repealed, the School Board would refuse to pay the school fee at a Roman Catholic school, and compel him to send his child to the School Board school. In this way no doubt the paramount right of the parent to select the school for his child would be infringed. But it is equally infringed in the great majority of cases now that the 25th Clause is in force. What is the value of a Roman Catholic parent's paramount right to send his child to a Roman Catholic school if he lives in a country village, or in a town where the Roman Catholics are not numerous enough to support a school of their own? The paramount liberty of the parent comes when examined to little more than this—that indigent parents belonging to the Church of England shall have the right of having the fees paid for their children in Church schools, instead of being forced to send them to School Board schools. If the principle were to be rigidly applied, Roman Catholic or Nonconformist schools would have to be set up at the public expense wherever there might be a Roman Catholic or Nonconformist parent desirous of exercising his paramount right to select a school for his child. At the same time, where Denominational schools exist it does not seem an unreasonable demand that parents should have a right to ask that their children should be educated in them. Moreover, the repeal of the 25th Clause, even if it would get us out of one difficulty, the hostility of the Secularists, would only land us in another, the hostility of the Denominationalists. They would see in it the first battle of a campaign against religious education, and they would be proportionately resolute in their opposition. It is by no means certain that the enfeebled Liberal Government would be strong enough to carry their Bill through the House of Commons. It is perfectly certain that they would fail to carry it through the House of Lords. Mr. DIXON may think that defeat in his company would be a nobler fate for the Government than victory with Conservative allies; but Mr. FORSTER has hitherto preferred the baser alternative, and, unless adversity has opened his eyes to Mr. DIXON'S merits, he will perhaps continue to prefer it. Nor is it only the Conservatives and the Denominationalists with whom a Government which simply repealed the 25th Clause would have to reckon. Behind both, as we have often insisted, stands a larger and more formidable force—the ratepayers. The ratepayer's conscience has occasionally proved troublesome under the operation of the 25th Clause, but if the 25th Clause were out of the way the ratepayer's pocket would prove more troublesome still. If at any future time compulsory education should be adopted, either School Boards will be universally established, or some existing authority will be armed with similar powers. If the authorities are not authorised to pay the school fees for children attending voluntary schools, how are the children of indigent parents in parishes where there are none but voluntary schools to be educated? They must have separate schools provided for them. In other words, the ratepayers must be taxed to build unnecessary schools, because the conscience of the Education League will not allow School Boards to buy secular teaching in the cheapest market. It is impossible to imagine that any Government will commit itself to such a project as this. One week of office would serve to convince Mr. DIXON himself of the impracticable nature of his own demand.

Whatever is done with the 25th Clause, it is to be hoped that Mr. FORSTER will not retain the words which declare that the payment of school fees shall not be deemed to be parochial relief given to the parents. The experience of the London School Board is alone sufficient to show what mischief this unwillingness to call things by their right names is doing. Inability on the part of parents to provide necessaries for their children is pauperism, call it by what name you will, and the investigation of cases of pauperism properly belongs to the Guardians of the poor. The transfer of this duty from incapable to capable hands might not get over the religious difficulty; and, if so, nothing would be gained by proposing, by way of compromise, an arrangement which it has been ascertained beforehand would not be accepted in that character. Whatever course the Government may take as to the payment of fees in voluntary schools, it ought to propose that, whether fees are paid in voluntary schools or remitted in School Board schools, the payment or the remission shall be left to the Poor Law authorities. They have the means of testing the genuineness of that plea of poverty which in the early years of a compulsory system is certain to be largely put forward. There will be the same unwillingness on the part of an able-bodied man to apply for parochial relief in the shape of schooling for his children as in the shape of loaves for himself. And though this unwillingness may not be nearly so great as it ought to be, it will at all events not be broken down by the creation of a habit of contentedly receiving relief under another name. The Bishop of Manchester gave a much needed warning when he insisted on the "imminent peril of fostering pauperism." There are many well meaning persons to whom this seems an imaginary danger, so long as the thing fostered is not called pauperism. They will even oppose the transfer of the payment of school fees to the Board of Guardians, on the ground that pauperism is fostered by an arrangement which makes a pauper of every man who is too poor to give his child education. They do not see that a man in this condition is nothing better than a pauper, and that, when once this is granted, the danger consists in depriving the road which leads him to this condition of the warning signals which the very mention of parish relief supplies.

THE KINSALE RIOTS.

TOO much perhaps has been made of the Kinsale riots, but there can be no doubt that they are very unfortunate for Kinsale, and not only for Kinsale, but for other Irish fishing-places. The fishermen are necessarily dependent on the buyers, and the buyers have apparently been frightened away. It is stated that a few who remained agreed unreservedly to the fishermen's terms, but it is to be feared that buyers generally will now be disposed to give Kinsale the cold shoulder. According to one account, when the majority of the fish-buyers departed from Kinsale, "the fishermen blew "them a farewell on their fog-horns"; but most people will be of opinion that the fishermen must have been decidedly in a fog as to their own interests when they indulged in this premature rejoicing. They have apparently yet to learn that fish cannot be sold unless there are people to buy them, and that unsold fish are not a profitable commodity. One of the Cork papers published a telegram from Queenstown, dated Wednesday week, stating that five Liverpool tugs had just put into Queenstown Harbour, "having fled from Kinsale in fear of being fired upon "by the fishermen during the riots;" and it is added that "one "of them towed in twenty yawls with their crews who had "taken flight on the same account." Perhaps it may be some time before these tugs and yawls will again venture to place themselves at the mercy of the Kinsale fishermen. As to the merits of the original dispute, it would be idle to attempt to say which side was in the right. It appears that it turned on a question of prices, and that it was the fish-buyers who proposed a change in the ordinary terms. The buyers announced that they would require a discount of sixpence in the pound on the value of the fish sold during the rest of the season. Their justification for this demand was that they were put to expense in sending out boats to meet the fishermen and collect their fish, and that if the fishermen came in to land the fish and to offer them by auction, they would find that they had lost both time and money. The fishermen denied that there was any ground for this demand, and of course they were perfectly entitled to do as they thought proper, either in agreeing to or rejecting it. Father DUNLEN, a Roman Catholic priest, advised the men to accept arbitration and to go to sea in the meantime. It was calculated that 2,000*l.* worth of fish would be lost if the boats remained in another night, and he thought it would be better that they should go to sea, even if, when they came back, they had to give the fish away in charity. The men were willing to agree to arbitration, but not to go to sea until the question was decided. All attempts to arrange matters between the buyers and the fishermen failed, and in the evening some of the latter met a cartload of fish coming into the town. It was ascertained that the fish had been sold by some Frenchmen to a buyer, and the mob at once broke open the boxes and destroyed the fish. Then they marched through the town, called on the different fish-buyers, and coerced them into signing a document promising to pay the old rates for fish. There was some doubt as to whether one of the buyers had signed this paper, and the mob went to his lodgings, and, on being refused admittance, threatened to break open the doors. The buyer in a moment of excitement fired his pistol over their heads in order to frighten them, but this only made them more furious. The police were pelted with stones in defending the house, and would probably have been overcome but for the arrival of the troops. One of the fishermen, a Manxman, was killed by a shot from the police, and he was honoured with a public

funeral attended by all the fishermen. There has been no further rioting, and, as we have said, such of the buyers as were not afraid to remain at Kinsale have withdrawn their demand for discount.

For the present it may seem as if the victory rested with the fishermen, but it is a victory of a very ruinous kind. The fishermen may not think so, but they might almost as well have driven off the fish that swarm round their coast as the people who come to buy them. Buyers will henceforth be rather shy of going near Kinsale, and other Irish fishing-places will suffer from the evil reputation of the Kinsale fishermen. Indeed every incident of this nature inflicts a serious blow on Irish industry generally. Industry cannot thrive without capital, and capitalists are the most timid people in the world. People at a distance will naturally be tempted to put the case of the fish-buyer whose house the fishermen try to pull down about his ears because he will not pay them just what they choose to demand for their fish, along with the case of the landlord who is shot at from behind a hedge because he prefers a tenant who pays his rent to one who does not. The fishermen were certainly not bound to agree to the discount imposed by the buyers, but all they had to do was to find some other means of disposing of their fish. All this is simple enough; but we are afraid that the Kinsale fishermen will be confirmed in their error by the victory which they flatter themselves they have obtained. It is true that the fishermen are not exclusively Irishmen. Kinsale is the headquarters of a great fishery business, and boats come there not only from different points on the Irish coast, but from England, Scotland, and France. It has been suggested that the population of Kinsale is rather Spanish than Irish, and the balconies of the houses in the Spanish style are cited in proof of this assertion. It is less doubtful that Kinsale was at one time famous as a haunt of daring and successful smugglers, and something of the hereditary spirit may perhaps still cling to it. We do not know, however, that much light is thrown on the affair by going into the past history of Kinsale. A fishing population such as is gathered there, poor, ignorant, struggling, and of mixed nationalities, may be expected to be somewhat rough and disorderly. The demand which was made on the fishermen by the buyers was novel and unexpected, and some allowance must be made for the exasperation which it produced. It would be unfair to make too much of this riot either against the fishermen of Kinsale or against the Irish generally; but it certainly supplies an obvious argument against the proposal of the Irish Fishery Commissioners to assist Irish fishermen by loans for the purchase of nets, boats, and fishing-tackle. In the first place, it is natural to ask why Irish fishermen alone should require this assistance when it is worth the while of English, Scotch, and French fishermen to come from a great distance to catch the fish which the Irish find at their own doors; and, in the next place, there is reason to fear that fishermen who do not hesitate to resort to violent measures in order to compel fish-buyers to pay them what they think a fair price for their fish, would be apt to offer a somewhat warm reception to any one who came to them to request payment of old debts. Fishermen are not always clear reasoners, and there would be considerable danger of a loan being regarded after a certain time as a gift. The administration of Ireland is not at present altogether so smooth and easy as to render it desirable that it should be further complicated by advances of Government money to needy fishermen which would have to be recovered periodically at the point of the bayonet.

It is pleasant to turn from the painful and disheartening scene at Kinsale to an incident of a very different kind which took place at Dublin on Tuesday, when a spacious new dock was opened in the presence of the LORD-LIEUTENANT, after whom it has been named. The Spencer Dock is entirely a work of private enterprise. It has been constructed by the Midland Railway Company at a cost of some 60,000*l.*, without any assistance from the public funds. Large docks built in a similar manner have lately been opened at Belfast, and it is satisfactory to find that some at least of the Irish people prefer to trust to their own exertions rather than to the wild and delusive promises of Home Rule agitators. On every side there are symptoms of the thriving condition of the country. It appears that the tonnage of the shipping of Dublin has doubled within the last twenty years, and the new works which have just been constructed will afford increased facilities for the growing traffic between Dublin and the English ports. What only a short time since was a dismal swamp, desolate and untenanted, is now a fine range of quays lined with warehouses and offices. Railway communication has been provided from one side of the country to the other, while the network of lines is connected at Dublin with the shipping trade of the kingdom. There would be plenty of capital ready to be poured into Ireland if capitalists were only satisfied with the security of their investments. The substantial prosperity which Ireland is now enjoying is due to the more settled condition of the population, and to the increasing confidence of those who supply the resources of enterprise in the social progress of the country. It is unfortunate that such incidents as the Kinsale riot should occasionally occur to disturb this confidence, but it may be hoped that at least they will not be without their warning.

SOCIAL CHANGES.

A POPULAR writer has lately given it as his opinion that social science is unsociableness reduced to a science; that progress in comfort and convenience, and all the facilities which make life easy, conduce to isolation; that the more snug people are at home the less they like to leave it; that sofas and easy chairs have knocked hospitality on the head; that serials and magazines have superseded gossip by word of mouth; that the imagination receives and entertains through novels; that, in short, society in our day is best figured by the *Lady of Shalott*, the newspaper being the shield through which we see the world. And this tone falls in quite naturally with the feeling, or rather the habits, of the day. A man is out of harmony with his age who descants on the pleasures of society. No modern authority professes frank enjoyment in the company of his fellow-creatures. A sensation of musty antiquity pervades every avowal of the sort. Such sentiments as "The hours we spend in conversation are the most pleasing of any we enjoy," "That part of life we spend in company is the most pleasing of all our moments," tell their own date, and cannot certainly be less than a hundred years old; as they are, in fact, some score years more, being found in the *Tatler*. Nobody ever tells his dream now with the prelude "Methought I was in the midst of a very agreeable company." Every picture of the sort recalls the days of formal dresses and uneasy furniture. We are not sure that any divine of our day would own to Philip Henry's vindication of a town life—that it was always a pleasure to him to see a good man pass along the street. There are two ways of solacing ourselves in fatigue or weariness of spirit—either by repose of head and limb, or by counter excitement and the exercise of other faculties. When dress was a restraint and bodily comfort was not viewed as an art, the best resource was the stimulus of company, talking, dancing, card-playing. And it is still the case in many countries that the peasants who work all day dance late into the night; voluntary movement is their rest. Home to them offers few attractions; meaning, it may be, a stool by a smoking or fireless hearth, a place to shun till supper-time or bed-time comes. People in such circumstances are ready for any form of amusement. It is no new thing to like one's ease; but the arts and habits of life have advanced slowly in this direction; with their advance comes independence of external aids. Relaxation, which once was social, now affects the hermit. We grow more sensitive to the annoyances of intercourse, and find it answers best for our immediate ends to consult self only. Of old, ennui interfered with this selfishness; but ennui is not the universal enemy it used to be. Time is not so often nowadays called "the enemy." The idlest of us have more resources than idleness once found ready to hand. Reading is an enormous power of spending time lazily and unprofitably which used to be simply yawned away. We have a literature which needs so little intellectual effort that even the family of Osbaldiston would not have been driven to pitch and toss, cutting cudgels, or biting their thumbs, as the sole occupations of leisure. Nobody, even in poetry, proposes the absurd and impossible indulgence of lying under a tree, like the Eugenios and Lysanders of our antiquity. We can loll to our satisfaction indoors, and we resent interruption with much more genuine ill-humour than it was the part of those uncomfortably reclining dreamers or students to put on. We see that the poets and essayists were thrown upon their invention for such images; the world about them took life from another point of view; it was their office to show the intellectual uses of retiring into self, and the diversion which a superior mind might find in its own company.

When social intercourse was assumed to be the highest pleasure of man, it may be observed that generally speaking this intercourse was of men with men. Good company in the old essayists generally means the gathering of wits and men of intellect in clubs and coffee-houses, where conversation was carried on as a sort of game in an arena with observers and listeners. The ladies' tea-table makes a poor figure by the side of the tavern. Society now means the intellectual intercourse of the two sexes—a much more fatiguing thing, though no doubt affording some keen pleasures which the other lacks; but not for long spaces of time. Easy talk can be kept up for an indefinitely longer period where the sexes are out of hearing of each other, though the excitement is greater when they mingle. We see this in all gatherings where inexperience or want of breeding leaves men to the guidance of their instincts. They assemble in knots. The ladies gossip to one another. In a lower class there is still the same natural separation. The women "neighbour" with each other, the men collect in groups or herd in the public-house.

Progress and refinement have brought society to its most diffi-

cult period, though literature and fiction take no notice of this. The pictured case of Mr. Disraeli's novels, those dinners of witty men and women where the feminine intelligence draws out the masculine, are among the rarest of social successes. For once when such contact has hit off some brilliant or charming or soothing effect, it misses ten times or twenty. And the annoyance is greatest in having been dull or stupid in each other's company, and the exposure more telling; when often repeated, it results in a settled disinclination for the scene of such discomforts. People do not always know the origin of this sense of flatness, but we may take for granted that nobody has any fixed aversion to effort in what he excels in. Of course half the grumbling about society is simply an echo; it is only a minority that is able to arrive at an unbiassed judgment in any personal question of likes and dislikes. As matters at present stand, the opportunities for grumbling are twofold. The people who grumble at the prospect of a social gathering to which they are committed would grumble even more querulously at the want of society. There is in most circles an understood distinction between visitable people within reach and "society" as they understand the word. Every country neighbourhood is found deficient in eligible acquaintance; and in this thickly populated world it never was so common as it is now to hear people complain of the dulness and meagreness of society—"of knowing nobody" within an attainable distance. It may throw some light upon the causes of this grievance to discover where it is least prominent. One social influence of a cheerful, cordial kind will harmonize many incongruous elements; but such an influence tells most powerfully where there are the physical hindrances of mileage or locomotion to force people into content with circumstances. While there is an imaginary porcelain Paradise, all sense, wit, and grace, within tantalizing distance, it is only in human nature to hang aloof from the ordinary clay of which near neighbours are generally composed; but once realize that the lot is cast among them, that it is this or none, and Hobson's choice will develop many unexpected points of sympathy and companionship.

Something of all this may be due to modern habits of self-analysis, much assisted by the tone of our social literature—to a growing study of sensations which disturbs the swing imparted by external action and events. The diversion to be found in company, as such, used to be taken for granted; people did not review their own experience after each taste of it. Now things are changed, and this form of amusement is put upon its trial, and charged with the onus of proof like any other. The mere trouble and cost of it seemed once to argue that it must be worth its price; as Professor Wilson said of horse exercise, that riding held its ground as a pleasure because it was expensive, and purchased pain is by idiots thought pleasure. The thinkers of the last century did indeed begin to speculate on the matter; one excellent woman we find rebuking herself for a splenetic fit of dissatisfaction with society in the words of Epictetus:—"But you are wretched and discontented; be pleased and make the best of everything. Call society an entertainment and a festival." And the wits made discoveries. When Mrs. Montagu saw "our maccaronic beaux and coterie dames" go into the country to pass the winter holidays in traditional gaieties, she prophesied failure. The world she considered past its youth, and the people who went to their dreary mansion to keep their Christmas she foresaw would not laugh till they got back to London again. But whatever the feeling towards country visiting, solitary ease and snug comfort were as yet nobody's ideal, either as a pleasure or a virtue. This fine lady, who felt it to be a misfortune that few pleased her, drew the inference that she must enlarge her circle of acquaintance. She could bear with twenty disagreeable people better than with one; and when she loses friends, she accepts the "mechanic help" of numbers as aids to flagging spirits and vivacity. And of course it is in large centres that society still holds its own. Sydney Smith liked London because it needed two or three millions of people to produce a perfect society embodying the quintessence of mind and manners. But on a different ground great cities are the theatres for society. It can be conducted more continuously, and with fewer rude disappointments. All pleasures in the long run depend upon habit. People really like best what they are used to, whatever it is, unless there is perpetual mental or bodily pain involved in it. The only way to like society is to mix habitually in it, till a cessation of social intercourse, and being thrown upon self for relaxation, brings something of a blank; to be so engaged in it that there is no custom to fall back upon when a week or a month comes without a prospect of change, or any alternative to the dozing solitude of the study or the quiet serenity of the domestic hearth which hold out such charms to a jaded fancy. Of course the study and the hearth are the proper homes—workshops, so to say—of the fancy if the mind exercises itself there; but mental activity is, we suspect, the exception in lone winter evenings passed in the strictly domestic circle where no interloper makes a demand on the general energy. And people used to be more aware of this than they are now, and more tolerant of interruption.

The immense increase of writers in this age accounts in some degree for the falling-off of good talkers. In the circles where we look for examples in this subject we shall frequently find some busy intellect that needs rest and quiet after the labour of his pen, and to whom the necessity of talking would be an injurious strain on overtasked powers. Writing has become a recognized profession only within the past century. The tone towards the press before that time indicates how little share it had in the distinctions of society; and ladies, hospitable to all beside, can deride "hireling scribblers" as a "hungry crew," without a thought of satisfying nature's cravings at their own tables. If a friend is criticized by the journals, it is explained that "the scribblers get a dinner by it." "It would be cruel to grudge them their morsel," and an unpopular or political leader is expected to "fatten many starving authors." When good talking would at least get a man a dinner in good company, nobody would throw himself on his pen for a meagre support till he had failed or proved himself unfit for social successes, including a patron and the chance of a pension. Things are changed since the time when it was the boast at Bulstrode that the paper used to remain unopened day after day. Those who would have entertained the world by their talk in the eighteenth century now mirror society to us of the nineteenth, and through a different medium. We do not deny that it is some compensation for the old flash or flow of wit, but it is very far from being all gain if it helps us to do without each other's company.

Looking through the country as a whole, we doubt if ever since society framed itself sociability was so much out of fashion as it is now; and there are causes at work which seem more likely to extend the breach than to solder it up. For there is a growing resentment of patronage, an assumption of equal terms in all familiar contact, which threatens to convert every invitation to dinner into an act of humiliation or of self-assertion. It is pleasant enough to entertain inferiors as such, but pride takes the alarm when advantage is taken of its condescensions; and the more grades multiply and the scale of precedence refines itself, the more contracted will be even the possibilities of genial social intercourse.

THE LEGEND OF BERKELEY.

It is wonderful to follow the gush of antiquarian learning which is sure to burst forth whenever any spot which has the least pretension to historic celebrity receives what, in the dialect of the penny-a-liners, is called a "royal visit," or "a visit from royalty." In English a "royal visit" would mean a visit from a King or Queen; what a "visit from royalty" may mean we do not profess to know. "Royalty" is a quality or abstraction, and we know not in what sense it may be said to visit a man, unless it be by settling on him and making him a King. These points are too hard for us; abstractions are beyond our powers of reckoning; so, for aught we know, a visit from the Prince of Wales may be a "visit from royalty." All that we say is that a visit from a man who is not a King is not, save in the dialect of newspaper flunkeys, a "royal visit." No one would call a visit from a Duke's eldest son a "ducal visit," and the case is exactly the same. However, the castle of Berkeley and the city of Bristol have lately been visited by the Prince of Wales, and those whose trade it is to go into ecstasies about such things have gone into ecstasies at the "royal visit." Quiet people may perhaps think that the visit, royal or otherwise, might as well have been left alone; they may be inclined to wink at races and steeplechases where they have gone on always, but they may think it rather a pity to go and set them up in new places. But of course a "royal visit" sets to work a crowd of pens, and not the least the pens of those who make it their business, when anything happens now, to look up anything at all like it, or anything that has to do with the same place or the same family, which happened long ago. Now at Berkeley several real, and more mythical, things have happened, and of course, now that a "royal visit" has been added to one class or the other, many tongues are naturally unloosed to talk about the former history of the place. This would be all very well if only people would be satisfied to go to the right quarters to find out something about either Berkeley or any other place. But the people who rush off to chatter in the newspapers will not stop to look either into the original authorities or into those modern writers who have dealt with the original authorities in a critical fashion; their whole notion is simply to pick up the local legend, tradition, or invention, to tell it over again with a great air of research, and perhaps to trick it out with some new ornament in the fresh telling. Hence, whenever there is a "royal visit" or anything else that is at all exciting to the penny-a-lining mind, a flood of exploded falsehood is at once poured forth as a matter of course. Mythical pedigrees of course claim a large share. Nothing is so easy to invent as a pedigree, and nothing is so pleasant to those in whose supposed honour a pedigree is invented. May we also believe that in some mysterious way the invention affords pleasure to the inventor? We fancy that the people who talk about "royal visits" and such like somehow feel that they themselves come nearer to being royal by talking about them; and so we believe that those who invent pedigrees for Grosvenors or Berkeleys feel as if, not only the Grosvenors or the Berkeleys, but themselves also, are somehow drawn nearer by the process to the great personages, real or mythical, whose names they seem to stick in at random.

The connexion between Berkeley and Bristol is one of old standing, dating at least from the middle of the twelfth century. It has sometimes been hostile, sometimes friendly; but in one form or another it has gone on from then till now. Berkeleys have in one age or another been burghers of Bristol, tyrants of Bristol, representatives of Bristol, Lords-Lieutenant of Bristol. Here then is a real piece of history. A city which has stood in these varying relations to a neighbouring Lord, and which once was able for a moment to get rid both of the neighbouring Lord and of the

King himself, comes nearer than most English towns to the position of the independent cities of the Commonwealth. The history of Bristol—and the history of Bristol almost carries with it the history of Berkeley—is a real historical subject, which it wants a critical historian to write, and which, far more than most pieces of local history, would quite repay a critical historian for the writing. We wish however just now to discharge a humbler duty, to point out a few of the romances of early date to which the later "royal visit" and the accompanying steeplechases have given a renewed currency. We confess that we have failed to watch one great authority. We failed to mark whether the *Daily Telegraph* has made the occasion an excuse for any special eloquence, and especially whether it has traced up the pedigree of the Lords of Berkeley to the Sassanides. The feat would have been a noble one, and it would have had the great advantage that the new pedigree would be not a whit more untrue than the old one. While one is inventing, it is just as easy to say King of Persia as to say King of Denmark; and we have no doubt that, for the proper fee, the intermediate links in the chain might be as readily found in the one case as in the other.

Failing this, we lighted on some curious matter in one of the illustrated papers—curious, that is, as showing how people will go on for generations telling the same impossible story, one after another, without ever stopping to think whether there is any evidence for it, or whether there could be any evidence for it. We know not whether it ever fell to the lot of any of our readers to hear a local Gloucestershire antiquary hold forth on the glories of the house of Berkeley. It has been our lot more than once, and the process is a very singular one. You are always told how Robert Fitz-Harding, the founder of the house of Berkeley, was son of Harding—about which, so far, there can be no doubt—and that Harding was Mayor of Bristol, Governor of Bristol, son of "the King of Denmark," and a follower of William the Conqueror. You perhaps mutter that the two callings of Mayor of Bristol and son of a King of Denmark sound rather incongruous. You perhaps gently ask what son of what King of Denmark, and hint that so remarkable a fact as that of a son of Sven Estrithson serving under William—that is, serving against his father—should at least be made out by some contemporary evidence. Your teacher goes on to tell you that Robert Fitz-Harding married the heiress of "the Saxon family of Berkeley de Dursley," and you perhaps gently murmur that this French-sounding territorial description is something, to say the least, unusual in the case of a "Saxon family," and indeed that "Berkeley de Dursley" is a rather odd description of any family of any race. You ask at least to be shown the place in Domesday on which all this genealogy is founded; of course you ask in vain; of course all such unreasonable cavils are thrust aside. There is the story, the true story that always has been, and it certainly will not be the fault of the penny-a-liners if it does not go on to be for some time to come.

The queerest form which the Berkeley legends have just now taken is to be found in the *Antiquary*, a paper whose curious contents we have had occasion to mention once or twice, and which tells us in its motto, "We want nothing but facts." As the *Antiquary* wants facts we will give him some, but the facts will be the clearer if we first borrow a little from his own store of fiction. After mentioning the visit of the Prince to Berkeley, and giving his general impressions of the town and castle, the *Antiquary* plunges into his antiquarianism and enlightens us as follows:—

> In the Domesday record Berkeley is styled a royal demesne and free borough; and in the reign of Edward the Confessor it is said to have had within its bounds a nunnery, which the inmates forfeited by their dissolute conduct. There is a tradition to the effect that the crafty Earl Godwin passing that way, left his nephew at the nunnery, under protence that he was ill, and that by this means he succeeded in corrupting the majority of the inmates, including the abbess herself, whose conduct the subtle earl afterwards reported to his sovereign. This resulted in the dissolution of the nunnery, and in its possession being granted to the Earl.

Now, most certainly Berkeley is not called a "free borough" in Domesday, nor is it called a "royal demesne" in those words, though of course it was such, and its being such is of importance to the story. It is indeed said, "ibi unum forum"—that is, a market-town—"in quo manebant xvii homines et reddebant censum in firmâ." Out of this the "free borough" may possibly have grown. But the story of the nunnery, which, as it is here told, any one would think was found in Domesday, is a mere story of Walter Map, which has probably grown out of the story of Swegen and Eadgifu at Leominster, mixed up with the real destruction of an abbey at Berkeley which is incidentally mentioned in Domesday under the head of Woodchester. All this has been long ago worked out by critical writers; but people who write this sort of thing no more look to modern criticism than they do to the original authorities themselves. Then we go on:—

> The conqueror afterwards bestowed the manor on Roger, surnamed De Berkeley, one of the chieftains of his invading army. Roger, his grandson, who took part with Stephen against Henry II., was deprived of his lands, which were given by the king to Robert Fitzhardinge, Governor of Bristol, in reward for his eminent services. This gentleman, as the old chroniclers tell us, was descended from the kings of Denmark, and with the posterity of this renowned knight the extensive manor of Berkeley, one of the largest in England, has ever since remained, the present noble owner, the Right Honourable Francis William Fitzhardinge Berkeley, second Lord Fitzhardinge, being the twenty-sixth in direct descent from the above Robert Fitzhardinge, the founder of the family. According to Mr. S. C. Hall, it appears that in the time of Edward the Confessor, a "De Berkeley" possessed the adjoining manor and castle of Dursley; and his descendant might probably have joined the Conqueror on, or immediately after, his invasion, and thus retain the possessions until the domain was, during the wars between Maud and Stephen, consigned to Henry, afterwards Henry II.

If the Conqueror gave the manor to Roger, it must have been after the Survey was made, for he appears there not as holding the manor, but simply as the King's reeve, holding it to farm. But in that profitable calling he seems to have feathered his nest not a little, as he appears over and over again in the local history of Gloucester (Historia et Cartularium Monasterii Sancti Petri Gloucestriæ) as a benefactor to the Abbey. That Cartulary contains the names of various other persons described as "of Berkeley," out of which it is likely that any one who thought it worth the trouble might put together a real pedigree of this first Berkeley family. But there is nothing in Domesday, or in the Cartulary, or in Wace, or anything else, to make us think that Roger the "præpositus" was "one of the chieftains of the invading army." Still less does any "old chronicler tell us" that Robert Fitz-Harding was "descended from the kings of Denmark." It has been shown more than once that there is strong presumptive evidence, though no positively direct proof, to show that he was the son of Harding, the son of Eadnoth the Staller, who held high office under Edward, Harold, and William, and was killed in withstanding the landing of Harold's sons on the coast of Somerset. In short, the Berkeley pedigree is not merely mythical, like most other pedigrees, but the myth actually displaces a piece of highly probable history. We do not at all know how things may be "according to Mr. S. C. Hall," from whom, we suppose, comes the statement a little further on that "Roger de Berkeley held the manors of Berkeley and Dursley by grant from his kinsman, Edward the Confessor." We need hardly say that there is no trace of all this impossible rubbish in Domesday, where Dursley simply appears without the mention of any particular tenant, as one of the members of the vast lordship of Berkeley. As for the unbroken succession of the manor, people seem to know as little of the state of things in the sixteenth century as in the eleventh; for in Henry the Seventh's time William Marquess of Berkeley, by a singular provision, made over the castle and manor to Henry the Seventh and his heirs male, with remainder to his own heirs. The manor was therefore held by Henry the Seventh, Henry the Eighth, and Edward the Sixth, on whose death it went back to the heir of the Marquess, more than one Lord Berkeley in the meanwhile having held the castle, not as a freehold, but as a Constable and Porter under the Crown. Yet a "modern writer," whom the *Antiquary* goes on to quote, when he gets inside Berkeley Castle, finds his fancy

> scarcely taxed to behold again, seated on the dais, its powerful lords—mirrors of chivalry; we seem almost to hear the minstrels recite the praises of descendants of the royal Dane, who fought and conquered by the side of the Conqueror; we behold his successors, in one unbroken line for centuries, surrounded by their vassals, holding regal sway.

The descendants of the royal Dane and the unbroken line of his successors are just as much creations of the fancy as the "regal sway," which assuredly no subject held in the realm either of King William or of King Henry.

We have of course a great deal about Edward the Second. Next to his birthplace in the tower of his own building at Caernarvon may come his death-place at Berkeley, where we are shown the Elizabethan bedstead on which the deed was done, and the seventeenth-century rapier with which it was done. But we are sure that the *Antiquary* must be misrepresenting Mr. Parker when he says:—

> Mr Parker considers it still a doubtful point whether this was the room in which the murder of King Edward was committed. The bedstead, which is known not to be very ancient, he says was an old Jacobin one, while the rapier is one of about the time of James.

A "Jacobin bedstead" is beyond us. It suggests "principles of 1789;" only perhaps those who deposed and slew a King may in some sort be looked on as Jacobins before the time. And as for the rapier of the time of James, an ingenious showman might improve the hint, and say that it had been wielded by Santiago of Compostella in some battle against the dogs of Paynimrie. One scrap more; in the Answers to Correspondents we find another curious notice in the days of Roger of Berkeley:—

> *A.J.*—The curfew was the general name for a law made by William the Conqueror, and enforced by severe penalties, that at the ringing of a bell at eight o'clock in the evening, all persons should put out their lights, cover or rake out their fires, and go to bed.

The details are so minute that we must really ask for chapter and verse of the enactment; meanwhile we will cap the question and answer with another question and answer from a Report of the Endowed Schools Commissioners:—"What was the feudal system?"—"The ringing of a bell."

Surely a patriotic prince would rather always stay at home than go about paying royal visits, if this prodigious splutter of antiquated rubbish is always to follow on them.

FACILITIES OF WORSHIP.

A PRIVATE members' Bill, with the large object of promoting facilities of worship within the Church of England, has had the good luck to reach the House of Lords in the early days before Easter. To be sure this is the third year of Mr. Salt's championship of his measure, and he has on the present occasion merited his success by having had the good sense to listen to the objections made by friendly critics to his scheme in its original form, and to modify it accordingly. Two years since Mr. Salt

succeeded in passing a Bill with the limited but useful scope of allowing the bishops to license private chapels in schools, colleges, hospitals, and similar institutions which could show a homogeneous congregation and claim specific ministrations, to which Bill, as it emerged from the Commons, a very odd clause was appended, enacting a free trade in Church of England chapels, which would have been simply destructive of any parochial system. The Lords made short work of this proposal, but passed the remaining Bill. In 1872 accordingly the proposal reappeared in the expanded form of a Bill "bristling" with the same kind of delusive "safeguards" as Mr. Morgan's Burials Bill, but effectively providing for the conversion of every parish in England into the cockpit of all the parties, High, Low, and Broad, Ritualistic, Latitudinarian, and Evangelical, into which the Church can be divided and subdivided. By it every incumbent might have found himself compelled to tolerate the antagonistic ministrations of a spiritual squatter, strong in the possession of a licence, which the Episcopate was to have been almost terrorized into granting. This Bill was destined to be read a second time, and to be no more heard of till the present Session, when it again appeared in a modified shape. In spite of the dangerous character of its general provisions, there were certainly some genuine safeguards contained in the recast, while the general case might claim to rest upon admitted grounds of grievance, where the helplessness, stupidity, or temper of an incumbent inclined him to play dog in the manger, and to refuse those additional ministrations for which a respectable portion of his parishioners were suitors. So the opponents of the actual Bill did not attempt to obstruct the second reading, while they moved for its reference to a Select Committee. In this they were not successful, and they put down for Committee the qualifying amendments which would convert it into a measure which would be harmless if not useful. Mr. Salt, thus brought face to face with criticism which was *bonâ fide* intended to mend and not to mar his measure, recognized its force, and, by consenting to incorporate the main suggestions into his clauses, secured the rapid and unostentatious progress of the Bill through the remaining stages. The measure as originally drawn, while professedly a Bill for giving additional "facilities of worship," was easily pervertible by a lazy, a cowardly, or a partisan bishop, playing into the hands of parochial agitators, into an engine for the persecution of quiet incumbents. Subject to certain limits of distance and population, ten inhabitants could have claimed a Church of England chapel in spite of the parson, and the bishop was compelled to grant their wish, after a preliminary inquiry before a Commission, of which he was to name three members and the threatened vicar two.

The weakness of the proposal obviously consisted in the circumstance that it might, at the will of any fussy fanatic, be turned into a propaganda for troubling a parish with alien services and bellicose sermons, however contented and well supplied it might be with means of worship. Ten signatures were easy to get even in a single household, and the petition to the bishop had only to allege that further facilities were required, while the onus of disproof was thrown on the incumbent, who had to place himself in the invidious attitude of seeming to resist a movement for the encouragement of devotion. With a partisan bishop the case would be even worse, for the promoters might really be the Church Association, or some analogous body on some other side, whose game he was playing, and the whole investigation would then resolve itself into a mock trial of the pre-condemned clergyman. Besides, nothing was said in the Bill as to the nomination of the new chaplain, who might either be the choice of the promoter or an episcopal emissary deputed to break down the legitimate influence of the parish priest. These various dangers have now been provided against in a series of amendments. The minimum number of petitioners has been raised from ten to twenty-five, and so the risk of collusion has been notably diminished, while the Bill is only operative in parishes of more than a thousand inhabitants, or where there is a hamlet of twenty houses more than a mile from any church. Then the petition is bound to embody certain precautionary particulars. It must contain the name and address of the clergyman proposed to be licensed, a proviso which plainly defines the patronage as belonging to the petitioners, and operates as a check upon the conspiring powers of clerics on the loose who may covet a lodgment and not be ambitious to have their antecedents scanned. It is also to contain other even more important information, for it must state the existing facilities for worship in the parish, and the additional facilities which the petitioners desire to obtain. After this the bishop's freedom of action is guaranteed in more explicit terms than by the first draft of the Bill. He may disbelieve in the whole movement, and veto it accordingly. On the other hand, the incumbent may really be promoting the scheme, either warmly because he considers it the simplest and cheapest form of Church development open to him in a parish of which he still desires to remain incumbent, or critically because he recognizes the existence of persons with whom he cannot altogether agree, but whom he is willing to tolerate rather than by sheer resistance to drive them to the disastrous extremity of cutting up the parish and constituting a new and petty district which never can be reabsorbed. With a willing incumbent a few formalities conclude the whole matter. But neither contingency may come to pass. The bishop may think there is something in the claim, and the incumbent may not be ready to surrender at discretion. At this point comes in what we consider the most valuable of all the amendments. The petition, as we have explained, is bound to state what are the additional facilities which the promoters claim. Before anything more can be done, the incumbent has the option of himself offering to supply the desired ministrations within a reasonable time; and if he does so, or makes a fair approximation, the movement collapses. This provision supplies a self-acting corrective to the gravest dangers of the new liberty, for it compels the progressists to work in silken halters. Where the clergyman is hopelessly lazy, indifferent, or contradictory, they will in all probability carry the day to the advantage of their fellow-parishioners. In other cases they might simply succeed in more firmly rooting the system which they were planning to circumvent, and in stirring up energies which were dormant only because there was no irritant to give them the proper stimulus. In the meanwhile, whether the party triumph lay with the Evangelical or with the Ritualist, the parish as a whole would be the richer for as many more additional services or sacraments as the petitioners had claimed on their own behalf. In a word, the Bill has become one for increasing the quantity of worship throughout our parishes, and not, as originally framed, one for vexatiously disturbing its quality.

Clearly an engine so liable to run round and give a back blow to those who were working it for private ends would not be set going without sufficient cause. But even if the bishop was of opinion that the incumbent had no case, he is not to be allowed to administer Turkish justice; for the petition of the promoters, including both the name and the address of the proposed clergyman, and the required additional services, is to be placarded for thirty days upon the doors of every Church of England place of worship in the parish, after which the whole matter has to be heard by a Commission of five, of whom the bishop is to name three, the incumbent two, and the promoters none at all. After all these processes have been gone through, but not previously, the bishop may license the new chapel, subject to the demand on the part of any ten inhabitants to reconsider the step, and with the power of himself suspending the licence for causes sufficient to himself. In the meanwhile, the offertory, unless the ordinary direct otherwise, is to go to the parish church; no marriages are to be celebrated in the chapel, and all baptisms are to be duly recorded in the parish register. It might have been desirable towards the absolute perfection of the safeguards, that the promoters should have been bound to provide some minimum stipend for their nominee; but, considering that the bishop's approval is purely optional, the greatest alarmist may make pretty sure that no prelate would be foolish enough to commit himself to the invidious position of licensing a stray clerk to starve on the confines of the rich pasturage of a hostile glebe.

A clause is found in the middle of the Bill, which has no very necessary connexion with the remaining provisions, enabling a bishop to license a domestic chapel in any private house containing more than twenty inhabitants. We believe that the remaining Bill, in addition to existing facilities, would have met most of the reasonable cases which could have been brought under this clause. It would very certainly, as originally proposed, have been open to many abuses; for under it the purse-proud owner of a big house would have had the parson continually under his thumb by the threat of opening a chapel and driving his dependents (perhaps the entire parish) into its fold. Accordingly it has, like the rest of the measure, been reconsidered, and the amendments give the bishop entire discretion of refusing, limit the admission of any but the immediate dependents of the house by certain rules of distance and population, and allow the incumbent an appeal to the archbishop against the licence.

Such is Mr. Salt's Bill as it came into the House of Commons, and as it has gone up to the House of Lords. As originally framed, it was a very risky experiment, but in its amended form we are inclined to think that it will be a useful measure. There can be no doubt that the Church of England, if it is to hold its own for the future, must learn to assimilate the parochial and the congregational systems. The division into parishes, involving the territorial office of incumbent, and his exclusive tenure of the church and churchyard, is necessary both for the theory of a national Church, and as the only machinery for the general diffusion of the various opportunities of spiritual and temporal good of which such a Church is the accredited dispenser. On the other hand, the variety of allowable opinion in matters both of doctrine and of ritual within the Church of England demands the generous toleration of very differently constituted centres of worship. This is chiefly the case in towns, but the demand undoubtedly exists all through the land. The combination of order and license is confessedly a most difficult problem, and we are far from saying that Mr. Salt's Bill in its amended form (for of that alone we are thinking) is the best solution. At all events it is an honest, and we believe a safe, attempt; and it has what is in our eyes the great merit of offering a scheme of religious extension alternative to the miserably wasteful and disheartening one of perpetually cutting up parishes, constructing mean district churches, and founding pauperised incumbencies, instead of seeking the co-operation of more men to work in the existing parishes, and offering there additional opportunities of worship, without the intervention of building committees, conveyances of site, speculative contracts, and final extras. On the whole, therefore, we shall be well content to see the proposal put upon its trial.

TRADE-UNIONIST HEROES.

THE present generation has sometimes been reproached with its want of appreciation of heroic qualities and conduct; and this indeed has been suggested as a reason why there are so few heroes. If heroes, it has been said, received more encouragement, there would probably be more of them; but, as it is, the age is really so cold and callous to great deeds that there is not much encouragement to perform them. It may be doubted whether this reproach is altogether justified in regard to any class, but there would seem to be at least one section of the community to which it can hardly in fairness be applied. It would appear that working-men, or at any rate those of them who are Trade-Unionists, cannot be accused of any backwardness in paying generous homage to those who have accomplished what they consider to be noble and heroic achievements. A remarkable illustration of this sympathetic recognition of true greatness has just been given at Maidstone. On Tuesday last what is variously called by the reporters "a public welcome," an "ovation" (and there were, no doubt, eggs at the breakfast), and a "reception," was given by a large body of Trade-Unionists to five distinguished working-men. The ceremony took place at Maidstone under the auspices of the Maidstone Trades' Council. Deputations of Unionists came from London, Canterbury, Chatham, and other places, to do honour to the occasion. The "representative working-men" of course were there, and all the most eminent democrats and agitators from town. Mr. Odger appeared as an embodiment of the London Trades' Council, Mr. George Potter represented the mysterious junta known as the Bolt Court Committee, while Mr. Bailey, who was lately fined for rioting in Hyde Park, figured under the imposing title of the Democratic League. Early in the morning the deputations, together with the general body of Unionists, assembled at the door of the building in which the heroes of the day had for some time been residing, and when the gallant fellows appeared on the threshold, "all looking in excellent health," they were received with immense enthusiasm. Amid "tremendous cheering" they were placed in a carriage and pair and driven in triumph through the town. At the "Sun" inn they were entertained at a "substantial breakfast," with speeches afterwards, and they certainly had no reason to complain, if we may be allowed the expression, of any want of butter. Mr. Potter, who presided, assured them that public sympathy was with them, and Mr. Odger added some equally flattering and encouraging observations. One of the heroes was so touched by these remarks that he declared himself more attached than ever to Unionist principles, and said "he hoped to strive, as he had hitherto done, to improve the moral and social position of his fellow working-men." Then in the evening there was a public meeting in the Corn Exchange, where addresses of a similar character were delivered; and altogether justice seems to have been fully done to the virtues and achievements of the five working-men. It need hardly be remarked that a demonstration of this kind serves two objects. It not only rewards the noble fellows who have already done great things, but it encourages them to fresh exertions, and tends to stimulate and develop the latent heroism of the community. How far these effects will be produced in this instance of course remains to be seen, but the five working-men may have reflected as they went back to town that their heroism, though attended with some drawbacks, had at least been the means of securing them a handsome subscription and a vast deal of applause.

One can imagine a stranger of an inquiring turn of mind arriving in the midst of the Maidstone fête. He would of course be deeply impressed by the procession, the cheering, the eloquent speeches, and other marks of enthusiasm; and he would naturally desire to know what these men had done in order to command such striking proofs of sympathy and admiration. His own conjecture might possibly be that, when some calamity was impending over the public, they had interposed at great peril to themselves to avert it. Happy country, he would be tempted to say, in which there is to be found not only such gallantry, but such spontaneous public gratitude. He would be somewhat surprised to find that the promoters of the demonstration were rather shy of going into particulars on the subject, and preferred to gloss over the conduct of their heroes in general terms. He would be told that these men had suffered for their devotion to Unionist principles, and he would next ask what their Unionist principles had led them to do. His feelings may be imagined when at length he ascertained that the heroism which was being honoured in this enthusiastic manner consisted in a concerted attempt to throw a great city into darkness, and to expose a vast number of innocent and helpless people, not only to painful inconvenience, but to dangers of the most serious kind, and that the only object of this conspiracy was to try whether they could not obtain a small pecuniary advantage for themselves. It was no doubt natural that this part of the gas-stokers' story—for, strange as it may appear, the heroes of the Maidstone demonstration were no other than the ringleaders of the gas-stokers' strike just released from gaol—should be rather kept in the background during the proceedings of Tuesday last. Mr. Potter glided very gently over this delicate ground. "It might," he said, "be a matter of opinion whether the gas-stokers had conducted their late movement in the most discreet manner." Mr. Potter does not himself go so far as to say that a treacherous and malicious breach of contract, with a view to inflict great public injury, is an indiscretion; but he says he can conceive it possible that other people might perhaps think it not quite discreet. As the ringleaders were caught and punished, there is one obvious sense in which their proceedings may be pronounced to have been indiscreet. It might be considered indiscreet to do an act for the public advantage if the person who did it was likely to suffer for it. Mr. Potter did not explain whether his suggestion of the indiscretion of the gas-stokers went beyond the personal risks of their enterprise. We have some recollection that in the early days of the Sheffield inquiry there was a similar disposition in Trade-Unionist circles to admit that perhaps Mr. Broadhead had not always conducted his operations in the most discreet manner, and Mr. Broadhead himself has probably since come round to this opinion. In none of the reports which have reached us do we find, either in the speeches or resolutions, any trace of even the faintest expression condemnatory of the conduct of the gas-stokers, except Mr. Potter's mild hint as to its questionable "discretion." If the stokers had fully succeeded in their design, there might have been loss of life as well as loss of property. It is impossible to exaggerate the danger to a city like London of being suddenly plunged at nightfall into absolute darkness, with all the accustomed lights extinguished in the streets and railways. Yet this is just what the stokers had in view. And the strongest thing which the Trade-Unionist delegates and wire-pullers can find to say about the matter is, that perhaps it was not altogether "discreet," or at least that some prudish people might think so. Mr. Potter said "he was sure no working-man would consider that the gas-stokers had suffered any degradation by the imprisonment they had undergone," and it would appear from the honour paid to them that no degradation is supposed to attach to the offence which brought that punishment upon them. According to this code of Unionist morals, it is not thought to be disgraceful for a working-man to break a contract with his employer. We are reluctant to believe that this is a fair representation of the sentiments of working-men generally.

It is stated that the gas-stokers when they came out of Maidstone Gaol and found themselves conducted amid "tremendous cheering" to the triumphal chariot prepared for them, "seemed for a moment bewildered by the warmth of their reception." They were perhaps not aware that, in persuading their fellow-workers to desert their employment, they had been engaged in such a glorious and noble enterprise; but it probably did not require much argument to convince them that they had really done nothing to be ashamed of, but rather indeed something to be proud of. There is an innocent audacity in a man who has just completed a sentence of imprisonment for conspiring to injure his employers and the public proclaiming that "he hopes to strive, as he has hitherto done, to improve the moral and social position of his fellow-workmen." We have no hesitation in saying that this demonstration is disgraceful to all connected with it. We find no expression of regret, not a syllable of contrition, but every mark of honour and respect heaped on working-men whose only title to distinction is that they left their employment without warning, and incited others to do the same, at a moment when they knew that this breach of contract would entail a heavy loss on their masters, and injury on the public. If there was not an open attempt to justify their crime, there was at least an impudent proposal that the law should be altered, so that henceforth it might be committed with impunity; for this is really what the demands of the Unionists come to. The original sentence on the stokers was severe, but, in the eyes of the Unionists, the four months to which it was commuted was in principle quite as monstrous and unjust as a year's imprisonment. The stokers, in their opinion, ought not to have been punished at all.

Nobody will say that the present state of the law of conspiracy is satisfactory. It is loose and confused, and might, as laid down by Mr. Justice Brett, be stretched to include almost all the ordinary combinations of social and commercial life. But it does not necessarily follow that a clean sweep should therefore be made of the law of conspiracy. The gravity of an offence depends to a certain extent on the consequences flowing from it, not of course purely accidental consequences, but such consequences as may be reasonably expected and foreseen. What might be a very small matter when done by only one man becomes a very serious matter when carried on on a great scale by a large body of men acting together. In the present instance the gravity of the desertion of the gas-makers lay in the number of men who were acting in concert, and the combined effect of their misconduct undoubtedly tended to aggravate their crime. As the law now stands an ordinary breach of contract is punishable only by a fine, but it becomes a criminal offence when it is associated with aggravated injury or misconduct. The gravity of the crime may be further increased when there is a conspiracy to practise it on a large scale. It is impossible to leave out of account the intention and consequences of such an act. There is a wide and obvious distinction between a single workman throwing up work without notice, and a conspiracy of all the workmen in a factory to do so, as the injury to the employer is of course enormously increased. And, again, there is an equally obvious distinction between men withdrawing from work when engaged in any ordinary operation, such as building a house, where the result would be simply inconvenience and delay, and men going off suddenly when in charge of railway points or signals, or anything else on which the safety of life and property depends. The gas-stokers' strike was one of the worst forms of

breach of contract, and included every conceivable aggravation of the crime. Great injury was done to the employers, public interests were affected, and the conspiracy was on a large scale, and had a deliberately malicious intention. The effect of the changes in the law which are advocated by Mr. F. Harrison and the Trade Unionists would be simply to remove an act of this kind from the catalogue of criminal offences altogether, and to enable it to be performed with practically complete impunity. It would then be treated as subject only to a fine. The offenders would be fined, and the fines would be immediately paid out of the funds of the Union, or by a subscription among the trades: and practically this would of course be no punishment at all. In dealing with questions of this kind, it must be remembered that the object of all punishment is simply to put a stop to certain evil practices. And it is evident that, if such a breach of contract as that of the gas-stokers were to be made punishable only by fine, society would have no real hold on the offenders whatever. This is a state of things which of course cannot be contemplated seriously for a moment. The idea of the Unionists and of their advocates seems to be that the Masters and Servants and Criminal Law Amendment Acts are unfair, because they do not press equally on all classes of the community; but the reason why they do not press equally is simply that working-men are almost the only people who commit the offences against which they are directed. It is held to be unfair to punish working-men for rattening and picketing, because employers are not punishable for sending out black lists. Of course the men can send out black lists, too, if they choose, and the only reason why this is not punishable is because it does not involve violent coercion, as picketing does. No doubt if the Trade Unionists could show that employers are guilty of malpractices for which they ought to be punished, but for the punishment of which no provision is made, that might be a very good reason for remedying this deficiency. But it is absurd to argue that it is unfair and invidious to punish working-men for offences which they are in the habit of committing because other classes, not being in the habit of committing these offences, are not similarly punished. The idea seems to be that every working-man who is sent to prison should be balanced by an incarcerated capitalist, and that the object of the criminal law is not so much to check crime as to distribute punishments so that each class of society may come in for an equal share in the course of the year. Those who take this view appear to forget that the law is directed, not against persons or classes, but against acts. The demonstration in favour of the gas-stokers supplies the strongest possible argument against the demands of the Unionists: for it shows that their only object in seeking a relaxation of the law is that they may be enabled to resort with impunity to violence and fraud.

THE *DAILY TELEGRAPH* ON GOOD FRIDAY.

WE have long been familiar with the exuberant piety of the *Daily Telegraph* at the sacred season which has just drawn to a close, and certainly it cannot be said that on Good Friday last our contemporary was not equal to himself. But still a change has come over the spirit of his dream. We have no longer the weeping, but the laughing, philosopher to instruct us: or, as he might himself express it, the tears of April have given place to its sunny smiles. He has discovered that cheerfulness may be combined with devotion, and "a solemn religious memory with a great popular playtime." In fact, to adopt his own epigrammatic summary of the situation, "the great Christian festival of Good Friday" is "at once holy day and holiday." To be sure we had supposed in our ignorance that Good Friday was regarded by the Church, or, as our contemporary words it, by "rigorous ecclesiastics," and "well-intentioned and serious folks," as the most solemn fast of the Christian year. And while it is very easy, as experience abundantly testifies, to turn a fast into a holiday, it does not at first sight seem easy to combine the two. But the *Telegraph* has devoted a column and a half to expounding how this may be achieved; and although to those who are not more familiar than ourselves with the revelations of the great prophet his exposition may seem dark with excess of light, it would be ungrateful not to do our best to profit by the lesson thus solemnly conveyed. And the more so as it is not obscurely hinted that, "for those who would assist this age" in understanding Christianity, a mastery of these "imperishable and irresistible truths"—whatever they may be—is absolutely essential. In the first place, then, it must be remembered that Good Friday usually falls in April, "when with such weather as we may fairly expect this morning"—but certainly did not have—"the country has become a beautiful natural cathedral, roofed with azure and floored with emerald," to say nothing of primroses, violets, and "crimson clouds" of apple-blossoms. Under these circumstances tens of thousands of happy people will issue forth from towns and cities "to hear the chorister lark, in preference to more formal services," although serious folks have placarded the walls with invitations "to remember the meaning of the occasion." We have not the least doubt that a great many people went to Epping Forest or the Crystal Palace instead of going to church on Good Friday; what we fail to understand is, how they were in doing so exhibiting the highest religious observance of "the great Christian festival." Our contemporary, who is not less at home in the mysteries of art than of religion, proceeds to explain his meaning by a parable.

"Not long ago a famous modern artist, Jean Léon Gérôme, was commissioned to paint the Crucifixion." We suppose we must be less familiar than the *Telegraph* with "the power and resources of the Frenchman's pencil." We were not therefore aware that he is the equal of "the great Masters themselves"—Rembrandt is the only great master mentioned by name, but "the Italian artists" in general are airily swept into the reckoning—"in terror, sublimity, pathos, thrilling delineation of anguish and horror," and their superior in "graphic realism," though "he must have remained" (why, is not stated) "inferior in pious sentiments." Gérôme, however, though he might have equalled or excelled all the old masters in painting the Crucifixion, generously resolved not to press his advantage. In short, he painted the Crucifixion much as another famous artist is reported to have painted the Passage of the Israelites over the Red Sea, by depicting a stormy ocean and a murky sky, and explaining to captious critics that the Israelites had all passed over and the Egyptians were all drowned; in other words, he did not paint it at all. "In his fine canvas of the Crucifixion you saw no cross at all, no sufferer, and no sick throes of agony." All you did see was a wide landscape with "the *shadows* of three crosses" stretching over it, and these shadows—emblematic apparently of the combination of "holy day and holiday"—are somehow at the same time "luminous," especially the central one, and also "long stripes" (why not streaks?) "of gloom." So far we quite understand that M. Gérôme's way of painting the Crucifixion was to paint a part of the hill of Calvary where the Crucifixion did not take place, just as the other great artist already referred to painted the Red Sea when the Israelites were not passing over it. What follows is less easily intelligible. "It was enough! the imagination of every sensible spectator gladly accepted the liberty given, and conceived the details of the Hill" (of the Cross?) "better than by repulsive representation, the more so as the moral of the story was hinted so well in the rest of the canvas." But what *is* the moral? The painter himself, it appears, did not understand it, though he was unconsciously "inspired" to suggest a possible reconciliation between the old and new way of looking at "this sublime but painful narrative." The artist, we are reminded, "is oftimes inspired as well as the prophet," and evidently, though the *Telegraph* is too pious expressly to say so, much better than the Evangelist. For when Gérôme considered how the Crucifixion should be described, "he withdrew the grim and *vulgarizing particulars*," recorded by the four Evangelists, "in which the ancient masters revelled," and thought it best only "to lay, soft and restrained across the foreground, the shadow of the deed which baptised Christianity in blood." Still there is something to be said in excuse for the Evangelists, though not for the mediæval artists. "In the first ages of the faith" there was a reason for dwelling on the "awful physical and local circumstances" of the Passion, for otherwise "a thousand martyrs" might have been unequal to the demands on their endurance. But "when the ethics of Christianity conquered, as they finally did," the case became very different.

And here the *Telegraph* writer passes, with light fantastic tread, from the regions of theology and Christian art to the equally familiar domain of Church history. There has never been anything so curious, he assures us, as the elevation of the Cross into the Labarum. It beats the achievements of the Sassanides and "the tail of the Thibet ox." So it was, however, that "in three hundred years from the deed commemorated to-day, the *crux* was raised to Imperial dignities, and Tertullian could write"—and then follows a well-known passage from Tertullian, in which "the *crux*" is not remotely alluded to. The fact evidently is, that our learned instructor had heard at one time or other of a passage from St. Augustine, written about the end of the fourth century, where he speaks of "the Cross which our enemies trampled on being worn on the brow of kings"; but he had forgotten the passage and the name of the author, and, happening to stumble on a trite extract from Tertullian which figures in every manual of Church history, on another subject, and written two centuries earlier, he thought that would do as well. And as he had just been talking about Constantine and the Labarum, and probably thought "the Fathers," as well as "the great masters," were a sort of close corporation, who lived about the same time and were all very like one another, he put down Tertullian, who died in 216, as waiting three hundred years after the Crucifixion. From Tertullian we pass to "the monk Telemachus," and from him to "the cross upon the red ensign of England upon the African seas," and so at last we are brought back to the moral of the story, which is this time negatively explained. "The old conventional type," it appears, is "too gross for that ideal sacrifice of love which it commemorates"—which ought to mean, if it means anything, that "the solemn religious memory" is no more than a beautiful myth. But then a few lines before it was a deed which baptised Christianity in blood, and nerved the martyrs to bear their torments. Nor is the matter greatly elucidated by another elaborate eulogy on Gérôme's wonderful "picture of the Crucifixion without the Cross," at the close of which we are bidden to "search more faithfully and boldly for the signification behind the parable, the fact behind the phenomenon." But how can a parable be a phenomenon? and if the Crucifixion be only a phenomenon, what is the fact behind it? All we can clearly ascertain is that we are not to impose "an impossible identity of dogmatic belief"—we presume about the Crucifixion—but to cherish "these fundamental and imperishable truths," unexplained, "which"—we must really

apologize for finishing the quotation—"are more to us now than the passing pangs of that memorable Death in Syria." To be sure our instructor had told us before that every one must interpret for himself the mysterious story of Good Friday; but still it is mortifying to be so little able to penetrate "the signification" of these "imperishable truths," which he has been at such pains to impart to us. Fortunately for all whom it may have more directly concerned, his practical counsels are not equally recondite. As he began with advising his readers to prefer "the beautiful natural cathedral" of the woods and fields to "more formal services," so he winds up by assuring them that "there is no manner of wrong in going a-Maying this Eastertide"—where however it is necessary to observe that the "Maying" is to be done in April, and that "Eastertide" means Good Friday. That lesson, at all events, is sufficiently simple, whatever may be its religious value, but one hardly sees why a column and a half of ostentatious display of theological, artistic, and historical blundering should have been required to enforce it. Meanwhile, if any "well-intentioned and serious" readers of the *Telegraph* were scandalized this year by the altered tone of its Good Friday meditations, they must have been consoled by the returning piety of its recollections on Easter Eve. Notwithstanding its pronounced preference for "the beautiful natural cathedral," the *Daily Telegraph* evidently went to church on Good Friday, and indeed to many churches. For it devoted several columns the next morning to a gushing description of the Ritualistic functions, which were indeed copied closely from Romish models, "but why not?" These touching ceremonies "have been too long monopolized by one section of the Catholic Church." The natural cathedral on Good Friday, it is true, was without its azure roof, and perhaps that is one reason why "the chorister lark" had to give place to his surpliced rivals at All Saints and St. Alban's. At all events, it is gratifying to note our pious contemporary's early return to the paths of orthodox belief. There is still some balm in Gilead.

THE AMERICANS AND THE INDIANS.

THE war of extermination which has been waged so steadily against the Red Indians of America is likely to receive a fresh impulse from the catastrophe which has been just reported from Southern Oregon. For several months past desultory accounts have reached us of a small campaign carried on against the Modocs. The Modocs are scarcely to be dignified by the name of a tribe; they seem to be a mere handful of people, mustering some two or three hundred fighting men. But, as it happened, their situation made them formidable out of all proportion to their numbers; they had been driven out of the plains into strongholds in the neighbouring mountains, where the friable lava rock is everywhere honeycombed in a labyrinth of caverns. Their chief, "Captain Jack," made the most of these strategical advantages. Having been forced to retire, not altogether ingloriously, before the white settlers who had hunted him from the open country, he made good these rocky fastnesses against greatly superior forces of regular troops. How he victualled himself in his mountain quarters is somewhat of a mystery; but the Indians scattered through the ranges of the Alleghanies and Sierra Nevada, although they gorge themselves like gluttons on the rare occasions when they have a chance, can live like anchorites when necessity compels them. Be that as it may, Captain Jack had held his own, and seemed likely to hold it. He and his red braves had suffered severely in their actions with the enemy, but the losses he had inflicted on the whites had been greater still. Not only had the rank and file of the regulars been cut up, but a good many of their officers had fallen likewise. As so much depends on the prestige of the troops that are detailed for Indian service, the considerations must have been very urgent which induced the American Government or its agents to consent to send Peace Commissioners to Captain Jack before the memories of former defeats had been washed out in Modoc blood. The Commissioners were appointed, however, and went on their errand. According to despatches, everything seemed to be going on highly satisfactorily. The Indians had listened to the counsels that came from their great father at Washington; they had consented to expatriate themselves from those hunting grounds which latterly had been anything but happy and comfortable, and which were being steadily shifted towards the West and the barren mountains. Having admitted the preliminaries of the bargain to which they were expected to assent, they seem to have met the Commissioners ostensibly for a discussion on details. What passed at the interview we have only learned vaguely by telegraph. We cannot guess whether the assent of the Modocs to the treaty and to the meeting concealed a snare from the first; or whether long-smouldering revenge at the wrongs that have been done them blazed up of a sudden, when, forgetting themselves like wayward children, as they are, they yielded, regardless of consequences, to the mad impulse of the moment. It is surmised, with considerable reason, that Captain Jack was under the strong impression that he had offended so deeply as to be excluded from any amnesty, in spite of pledge and promise. At any rate he is said to have given the signal for the slaughter by shooting the Chief Commissioner dead on the spot; the rest of his party followed suit; only one of the white envoys escaped the massacre, and he was dangerously wounded.

We can understand the feeling which the news has excited throughout the Union, and to a certain extent we can sympathize with it. Indeed, we have only to read our own Indian history to revive the impression created in England when a similar occurrence was the prelude to the outbreak that ended in the retreat from Afghanistan. We can scarcely be surprised that the President, although he has usually expressed himself and acted with praiseworthy moderation in all Indian matters, should have hastened to issue a proclamation breathing the sternest vengeance. The first victim of the massacre was a general distinguished in the campaign in which General Grant re-established the Union, and nothing short of the most summary measures would satisfy the spirit that has been excited throughout the Union. These unlucky Modocs rang the death knell of their tribe when they fired that volley on the Government Commissioners, and it is pretty certain that, as a tribe, they will soon be obliterated, if they are not absolutely exterminated. Yet it is impossible not to commiserate their fate, when we remember what has been the history of the Indian from the days when European settlers and refugees first landed on the shores of Northern America. These very Modocs, if they could plead their history before some supreme tribunal of equity, might urge a good deal in excuse or extenuation of their crime. Let us only read the terms of submission that were tendered to them by the light of a Red Indian's nature, with its habits and traditions. We do not say that the American Government has not behaved with sufficient moderation and generosity all through this business; indeed many people are of opinion that it might have been better for the Modocs in the end had the Government not encouraged them to believe in its weakness by offering them easy terms prematurely. If it be so, it only shows the very false relations in which the civilized whites and the red barbarians stand to each other. The terms offered by the Government were these:—The Modocs were to surrender themselves in a body. They were then to be shipped provisionally to an island in the bay of San Francisco, and thence transferred to defined allotments in Arizona, as soon as arrangements could be made for their reception there. The heroic Indian chieftains of Cooper's novels may be myths, and the last of the noble Mohicans may have been the ideal creatures of a novelist's fancy. But whatever the red man's faults, with all his treachery, cruelty, selfishness, and laziness, it is certain that he has a profound affection for the country he has been used to wander over, while his attachment to the roving life of the hunter is so strong that his conception of the perfect joys of paradise is limitless prairies where the game is plenty. Those hunters, after being driven off the plains and pursued up into the mountains, are told that they must prepare themselves for wholesale transportation to some remote and unknown prison where they are to be rigidly circumscribed within fixed boundaries. Ignorant as they are, they can guess little of the lot that awaits them, and if they could guess more of it, it is possible they would like it the less. What they do know is that they are to place their fate absolutely at the disposal of the whites, towards whom they have been guilty of endless outrages, and whose tender mercies they have experienced in a long course of remorseless warfare. Of course they cannot be expected to draw nice distinctions between philanthropic Commissioners deputed direct from a responsible statesman at Washington and the miners and squatters who have shot them down like vermin whenever they had the opportunity. So, from a Modoc's point of view, the temptation to murder those defenceless whites must have been strong indeed if he forgot at the moment the retribution that must inevitably follow.

There is no help for it, and the barbarian must be improved out of the way when civilization is moving steadily across a continent rich in its soil and richer still in its minerals. We suppose that even the supreme tribunal of equity which we have fancied could suggest no system of legislation that would do impartial justice between the aborigines and the intruders. Yet not the less melancholy is the Indian's fate, regarding it from the Indian point of view, and by the light of the hereditary instincts that dominate Indian nature. The fate of the Modocs, at best but an insignificant and feeble sept, keeping within reach of the mountains for the sake of protection, is but a reflection of the fate of the great and powerful tribes that have almost disappeared in the last twenty years, and left little but a name and a memory behind them. Can we imagine the Indians doubting that they had all the rights of the quarrel, when the white man first came to disturb the forests that had belonged to their fathers from time immemorial? The silent twang of the bowstring scarcely disturbed the game, as the hunter glided stealthily through the underwood. The noisy firearms of the new comers soon drove the elk and deer out of the woods, spreading starvation round wigwams where there used to be more than plenty. So it was beyond the Missouri and the Mississippi, when the white strangers with their ill-omened colour first made their appearance from the great settlements. The herds of buffalo that were the wealth of the wild man were scared away at once and for ever. Any casuist in the world would have told the original occupants of land which was being steadily wrested from them that nothing was more just than to wage a patriotic war, defensive and offensive, and kill down all those invaders who came preceded by famine and desolation. All is fair in Indian warfare. The braves surprised their enemies when and where they could, and butchered them by households when it was not convenient to reserve them for torture. To Indian ideas, all their practices were perfectly honourable and legitimate. It was equally natural that the pioneers of the white advance should pay them back in kind, and show just as little mercy; and so the Government, in the interest of its subjects, had the option of exterminating or reclaiming these erratic scourges of white society. There was a great deal

of extermination, no doubt; all the more that the Indian instincts were absolutely antipathetical to reclamation. There are isolated instances of Indian settlements, it is true, where the red men have been taught to till their fields in the week and go to the meeting-house on the Sunday. But these exceptions only prove the rule that the Indian, generally speaking, is not to be reclaimed. In a domestic state his wild roving inclination remains with him, and when he is debarred from the war trail or the chase he exhibits a wonderful aptitude for turning loafer. He is as madly fond of the fire-water as the white traders found him in his savage state, and when he takes to lounging about the white settlements he has far more frequent opportunities of obtaining it. The rough backwoodsmen and miners only know him in one of two aspects; either he is the savage prowler, as bloodthirsty as the wolf or bear and far more crafty; or else he is their degraded and despised hanger-on, more given over to drink and low debauchery than themselves. They detest or despise him, or they do both one and the other. How can the Government interpose to much purpose in the circumstances, even if it is actuated by the best and most philanthropic intentions? The circumstances are inexorable, and the inveterate habits of the Indian's nature play into the hands of his enemies. So this Modoc massacre can hardly fail to give an impulse to the course of events which seemed inevitable in any case, and, however much we may regret the imminent extinction of the Indians, we confess we can hardly see how the American authorities are to avert it.

THE PROSECUTION OF MR. ARCH.

THE magistrates of Faringdon have had before them a complaint against Mr. Joseph Arch and other persons for obstructing a highway, by holding a public meeting in the market-place of Faringdon. A meeting was held, and a considerable number of persons attended it, but the question whether the market-place was obstructed is a question of fact with which the magistrates were competent to deal. They have dismissed the complaint, and we have no desire to canvass their decision; but it may be conjectured that the legal advisers of Mr. Arch told him that he had better be cautious about doing the same thing again. If he and his associates "wilfully obstruct the free passage of any highway," they will be fined, and we should think that the calling of public meetings in market-places was a likely method of arriving at that result, although it appears that at Faringdon there is, in the opinion of the magistrates, who are the best judges, room for Mr. Arch and his friends, as well as for everybody else whom business or pleasure brings to that quiet little town. It is possible that there may have been a disposition to use the Highway Act as a means of suppressing Mr. Arch, and this would of course be improper. But at the same time it is obvious that public meetings could not be held generally in market-places without inconvenience. The Superintendent of Police for the district of Faringdon stated that a large crowd was collected in the market-place. There was a waggon containing the whole of the defendants standing in the highway. It was about a yard and a half from the footway, which was "completely obstructed." The crowd which caused this complete obstruction allowed the witness to make his way with no apparent difficulty to the waggon when he desired to speak to those who had places in it. The chairman of the meeting told the officer of police that, if he wanted the waggon moved, he must move it himself, and added that he and his friends were there to test the legality of holding meetings. We are not aware that any clause of the Highway Act imposes a penalty for talking nonsense in a market-place, and it would be a very forced construction to hold that Mr. Arch and his friends were playing at a game within the meaning of the Act. Besides the evidence of the officer of police and an assistant, there was some slight evidence of obstruction. The number of persons present was stated on one side at 2,500, and on the other side at 1,000 or 1,200. The legality of such proceedings is altogether a question of degree. If the town and neighbourhood were very populous, and if Mr. Arch's speaking or his subject were very attractive, he might produce an undeniable obstruction, or at any rate such an obstruction as would enable unfriendly magistrates to convict him. The act of bringing a waggon into a market-place and declining to remove it on request might easily be regarded by an adverse Bench as a wilful obstruction of the highway. But in all such cases it is expected that magistrates will act with fairness and common sense, and we think that the Bench at Faringdon have answered this expectation.

Reference was made, on behalf of Mr. Arch, to the case of Vincent and others, who were found guilty of holding unlawful assemblies at Newport in 1839. A witness at that trial stated that he went to an open place in the town of Newport which was about one hundred yards long and fifteen yards wide. He found there about three hundred persons. A stage was erected against a lamp-post, and Vincent was addressing the meeting. He also described other meetings, and the movement of crowds about the streets. A crowd accompanied Vincent to the packet-station, and he made them a speech before going on board the packet. The witness also stated that, in his judgment, these meetings were calculated to lead to a breach of the peace, and to injury to persons and property, and that they caused much alarm. There was a good deal of evidence by this and other witnesses as to the language of the defendants. Mr. Baron Alderson, in summing up, told the jury that any meeting assembled under such circumstances as, according to the opinion of rational and firm men, are likely to produce danger to the tranquillity and peace of the neighbourhood, is an unlawful assembly. The jury ought to take into consideration the way in which the meetings were held, the hour at which the parties met, and the language used by them. "Every one has a right to act in such cases as he may judge right, provided it be not injurious to another, but no man or number of men has a right to cause alarm to the body of persons who are called the public." The jury would consider whether firm and rational men having their families and property there would have reasonable ground to fear a breach of the peace; for the alarm must not be merely such as would frighten any foolish or timid person, but must be such as would alarm persons of reasonable firmness and courage. The jury found that the meetings were illegal; but it follows from the charge of the learned Baron that meetings temperately conducted would be legal. If a meeting of inhabitants of a town is to be held, convenience suggests that it should be held in some open space in or near the town, and, if the public has the right to go over such a space, either the whole or part of it is probably a highway. The market-place being central, and, except when occupied with stalls of goods or pens of cattle, open, naturally suggests itself as a place of meeting. At a borough election the candidates usually address crowds from the windows of their committee-rooms, which are probably in the principal hotels fronting to the market-place. There is always obstruction on such occasions, and sometimes so much noise as might possibly frighten a horse. But nobody probably ever heard of the blue party in a borough summoning members of the yellow party for wilfully obstructing a highway by standing under the windows of an hotel listening to a speech. Yet if on the morning of market-day a candidate and his friends were to bring a waggon to a point where traffic would usually be busy, and were to take out the horses and proceed to organize a public meeting, and if, on being requested by an officer of police to remove the waggon, they were to answer that they were afraid that the officer, if he wanted the waggon moved, must move it himself, we should apprehend that the candidate and his friends would be in danger of a conviction under the Highway Act, and that the enunciation of the most beautiful principles of devotion to our glorious Constitution in Church and State would not save them.

We have had the advantage of perusing a report of a speech of Mr. Arch, and he appears in it as a harmless enthusiast whom only persecution could render formidable. He told his hearers that the charge had been freely laid against the labourers, that if their wages were raised and hours shortened, they would take the money to the public-house. Certainly this charge has been freely laid, and many persons think that it is well founded. Mr. Arch, however, has been able to satisfy himself that never before has there been so little drunkenness known in districts where he has made inquiry. This particular meeting was held in a building, and it finished with a collection towards defraying the debt upon a chapel of Primitive Methodists, to which body Mr. Arch apparently belongs. His friends claim for him that besides representing the Agricultural Labourers' Union, he is a Primitive Methodist preacher, and a Christian man. The meeting at Faringdon was held in accordance with a notice "to advocate the claims of the labourers to the right of holding public meetings," and it appears that a previous meeting had been held at a neighbouring village, and some labouring men had been fined a nominal amount for causing an obstruction at this meeting. We know nothing of the circumstances of this case, but it would rather appear that in a small town like Faringdon there could be little, and in a neighbouring village nothing, in the shape of business to obstruct.

In considering this case one cannot but remember that the complaint constantly heard in every country town is that "there is nothing going on." The arrival of any sort of preacher, lecturer, or showman is welcomed with delight by the greater part of the population; and even magistrates are disposed to wink at obstructions of thoroughfares and other irregularities, particularly if they have a tendency to alleviate the prevailing dulness. Our old friend Punch is an inveterate offender against the Highway Act, and furthermore he habitually treats constituted authorities, such as the Devil and the Hangman, with contempt. Some commentators have, we believe, regarded the characters whom Punch knocks about the head as emblematic of Church and State, and if this be a correct exposition, the offence of Punch almost approaches the gravity of that for which Vincent and others were convicted. The only difference would be that the one used signs and the others words to express their meaning. Yet Punch is applauded by the mob and tolerated by the police in every town, and he has even found aristocratic patrons, as appears by the well-known case of the nobleman who bought him and carried him home, and was greatly disappointed to find that the power of speech had departed, and that there remained only a dumb image in place of an animated companion. It might easily be proved that constables or even justices had allowed their stern visages to relax under the genial influence of Punch, and yet we fear that Punch's master could hardly escape conviction under the Highway Act if a prosecution were pressed against him. There was a case in which a person was convicted for playing football in a market-place, and it was proved that large numbers of persons enjoyed the game, and the constable who laid the information would have been delighted to join the game if official dignity would have permitted. Yet, as there was some evidence of annoyance by the frightening of a horse, the

magistrates felt bound to convict, and the conviction was upheld by the Court of Queen's Bench. The specific mention of football in the Highway Act probably points to the existence of a general practice of playing that game at or before the passing of the Act. It used to be common in the West of England to play fives against the wall of a church or any other convenient public building, and on ordinary days many persons were amused and nobody was harmed by such a proceeding in a small town with little business. The arrival of a troop of jugglers, or a wild beasts' show, in such a town, is still welcomed with delight; and it may be conjectured that exhibitions are held in places and under circumstances interdicted by the Highway Act. But either no prosecution is instituted in such cases, or it is discreetly dealt with by magistrates who sympathize with the universal demand of human nature for amusement. We cannot ascribe to this feeling the decision of the magistrates of Faringdon; for a meeting to advocate the right of meeting is likely, in the absence of interruption, to be a dull affair. We hope that the "free liberty" of agricultural labourers will not be hastily interfered with, and, above all, that magistrates will not make too much fuss about Mr. Arch.

THE SALMON FISHERIES.

A COMPANY is advertised for establishing swimming-baths in the Thames, and a system is to be adopted by which "a continuous flow of clean water" will be produced in a floating-bath to be stationed off Somerset House. It is satisfactory to find that the London Swimming Club contemplates the possibility of filtering and purifying the water of the Thames, so that it may be fit for bathing. A few years ago this would have been manifestly impossible, but the river has now ceased to be the common sewer of the metropolis, and, although far from clean, it is not so irreclaimably filthy as it used to be. The protection of rivers from pollution is likely indeed to receive increased attention. There is hardly any limit to the quantity of fish that might be obtained from our rivers under proper management, but we must choose between the comparative advantages of a river and a drain; for, if we send refuse down a stream, we cannot expect salmon to come up it. The Inspectors of Salmon Fisheries, in their Report for 1872, show that much remains to be done for the preservation of rivers from sewage and other matters still more poisonous. We are told that upon the Trent large works have been erected for the manufacture of artificial manure. The quick fence of the neighbouring fields and some of the trees had been killed by the fumes of these works. But it was not the duty of the Inspector to investigate the effect of these works upon the adjoining land. He, however, received evidence that the river was rendered filthy by the discharge from these works. The same Inspector describes the condition of the Wear, which rises in a district rich in lead ore:—"Its tributaries have generally the appearance of a greyish pea-soup, and their consistence is at times so thick as to allow birds to rest upon their surface." Not only liquid, but solid, refuse is cast into the Wear, which was lately employed to carry away the matter excavated from a tunnel a mile long. Besides the washings of lead-mines, the sewage of the district is poured into the Wear. "The river at Bishop Auckland, which a few years ago was a beautiful trouting stream, now trails its course in appearance as a black snake." A few miles further down a pleasing variety is afforded by a brook, which enters the river, "presenting the red appearance of rusted iron." This is caused by the water pumped from a colliery, which is so thick and foul as to destroy all animal life. Cattle will not drink its waters, and this once beautiful stream is quite useless to the country it passes through. The same remark applies to the stream which enters the river at Chester-le-Street, although a few years ago this stream abounded with fish of the salmon kind. At Durham the inhabitants make the river-banks the depository of their building-rubbish, and many families cast their ashes into the stream. Indeed, the practice of using the river as an economical scavenger is extensively carried on both above and below the city. Chemical works also add their refuse to poison the water. Thus this unhappy river is either grey or red or black in colour, besides being everywhere filthy; but it is hoped that the formation of a fishing district may put some check upon pollution. The other Commissioner, Mr. Buckland, adds a few touches to the picture. The Wear is, he says, a very rapid river, and a great many lead and other mines use the bed of the river as a convenient channel to get rid of the refuse of their works. "The consequence is that the stones in the river, instead of being a bed of natural gravel, might be taken for an abnormal geological formation of a most unusual character." The natural spawning-beds in the river are almost entirely destroyed, for even if the fish were able to find a good spawning place and lay their eggs in it, the first flood would either uproot the bed altogether, or else cover it over with several feet of stones of all sizes and kinds. But in spite of all these disadvantages salmonidæ are by no means extinct in the Wear. There are but few salmon proper, but bull trout are pretty plentiful. Mr. Buckland thinks that something might be done towards purification, but he does not expect much. The Wear and the South Tyne, he says, are rivers given up to the commercial interests of mine-owners. The stock of fish required to populate these waters costs nothing, as the fish come of their own accord from the sea; and it seems a pity to impose a barrier between them and the localities to which nature prompts them to ascend for the purpose of spawning. Possibly some of the ova and fry may be killed by the pollutions, but if the floods and other conditions are favourable, it is, on the other hand, possible that a certain part of them will survive. For these reasons Mr. Buckland hopes that the gentlemen living on the banks of the Wear will form the river into a fishing district, and thus give it the chance hitherto denied to it of producing many thousands more fish than heretofore.

The general subject of the obstruction and pollution of rivers becomes yearly more important. It is absolutely necessary to prevent alike the poisoning of water and the destruction of watercourses. When this has been done, and proper salmon-passes have been constructed on all our rivers, we may expect that the supply of salmon will be largely increased. Even in Australia the price of cattle is said to be rising, and fish has at least one advantage over flesh as food, that to a large and increasing extent it imports itself. The number of salmon caught with the net in the Tyne, or rather at its mouth, in 1872 was close upon 130,000. Mr. Buckland thinks that more fish than are due to the Tyne ascend that river in the spawning season. But if they do this in spite of the pollutions of which Mr. Buckland complains, the manufacturers of Newcastle may regard his complaints as unimportant. He probably means, however, that the salmon do ascend the river, but not so readily or so far as they would if it were pure throughout its course. He says that the salmon fisheries in the upper part of the river are fully aware of the barrier placed between them and their due share of fish by the pollution poured into the river at Newcastle. The prosperity of these upper fisheries appears to be dependent upon copious floods which render the chemical refuse of Newcastle comparatively innocuous. The disposal of this refuse otherwise than by pouring it into the river is of course possible at some increased expense to the manufacturers who produce it. Some additional profit to these manufacturers is in fact gained by the loss of those interested in the fisheries above them. The question is whether the country gains more by polluting rivers than it would by keeping them clean. If it does not, the pollution ought to be stopped by general legislation, instead of trusting to the local and partial operations which these Inspectors describe. If this subject were thoroughly understood, we believe that the result which the Inspectors desire would be attained. To make it understood, there is need of lectures with illustrations, and we are glad to observe that a museum formed by Mr. Buckland is part of the International Exhibition. The "food of the people" question need not be allowed to remain the exclusive property of political agitators.

The pertinacity with which salmon force themselves up suitable rivers was well shown last year in the Axe. It is stated that two farmers saw a large salmon cross the turnpike road which was flooded by the Yarty Bridge, about a mile from Axminster. The statement of these farmers is communicated to the Inspectors by a gentleman who adds that he found a salmon of ten and a half pounds weight in a field near his garden. "It had been spawning with many others in the little Corry river, which is a tributary of the Yarty," which flows into the Axe below Axminster. It must be remembered that these Devonshire streams, flowing through an unenlightened country, are not polluted by the proceeds of chemical works. A pass lately constructed on the Yarty weir is reported to be a decided success. There are several miles of excellent spawning ground available for salmon above the town weir at Axminster. This, says Mr. Buckland, is a very formidable weir. Salmon try to jump it, and fall back. The making of passes at this and the weirs higher up the river is a mere question of expense, but the proprietors of land on the river do not seem to be agreed as to the advisableness of incurring it. Some of them say that they do not want the salmon, as they would spoil their trout angling, which is now excellent. Mr. Buckland thinks that the upper proprietors would not get enough salmon angling to reward them for their expenses, as in all probability the salmon would not, except in extraordinary seasons, ascend so high during the present open season as to give them much sport, unless, indeed, the angling were prolonged into November. He thinks this privilege might be granted to the Axe. It seems a pity that "some of the best spawning ground in England" should be left unproductive.

Turning again to the North, we find that a curious question exists with regard to the Solway. This, say the Inspectors, ought to be for their purposes an English estuary, because there are only two salmon rivers that flow into it—namely, the Esk and the Eden, and "the first is by statute and the second by nature an English river." But the centre of the low-water channel of the Solway is the boundary between England and Scotland. Fishermen on the Scotch side pay no licence duty, while they participate in the benefit derived from the expenditure of the money levied on fishermen on the English side. This may be true, but we should be surprised if Scotch landowners could be induced by any argument of justice or expediency to consent to be united to an English district. They would probably answer to their own entire satisfaction that Parliament was at liberty to make all the tributaries of the Solway, for purposes of conservancy, Scottish rivers. The salmon-spearing and smuggling of the Solway furnished Scott with some of the most vivid scenes of his novel of *Redgauntlet*. The smuggling has ceased under the influence of fiscal changes, and the fishermen, at least on the English side, must be a more quiet and reasonable race than they once were if they pay licence duty to be expended in prospective and perhaps questionable advantages. They might say, There have always been salmon in the Solway, and we do not care for their increase in the Eden. On

the whole, it would appear that the Acts for the preservation of salmon have been fairly carried out. There is no doubt a good deal of poaching, and sometimes of a violent kind, as the pitmen are or were apt to help themselves with a strong hand to the produce of neighbouring rivers. But now that they get whatever wages they choose to ask, they ought to be above such depredations, or at any rate they ought to show their enlightenment by only poaching during the legal season. They are at any rate capable of understanding that the operations of nature, if uninterrupted, are bountiful almost beyond computation.

The next river to the Tyne in the North is the Coquet, in which the bull-trout are irrepressible. The salmon and the bull-trout cannot satisfactorily co-exist, and an attempt has been made to kill down the inferior for the sake of the superior kind of fish. But the result of the experiment has been to incline Mr. Buckland to abandon the Coquet to the bull-trout, and to look to the Tyne and other rivers for the salmon. He says that in October last, when he visited the Warkworth trap, the water was let off, "and I waded about in the trap some inches over my knees in a solid mass of struggling living bull-trout, some of them of very large size." He says that the bull-trout will fetch nearly, if not quite, as much as the salmon in the public markets. There have been taken at Warkworth in six years close upon 72,000 of the so fish, and after all this "killing down" they were last year more numerous and larger than ever. The drainage on the Coquet is now so good that a heavy "spate" or flood runs off in two days. It follows that the weirs are higher, as far as salmon are concerned, than they were forty years ago, while the bull-trout, which is a much stronger fish, manages to jump the weirs, or, being endowed with a superior intellect, gets up the passes. Energetic efforts are being made to restore the salmon in the Coquet, but Mr. Buckland, although not discouraging these efforts, would evidently prefer to let nature have her own way and leave this river to the bull-trout. Speaking generally, he says that our rivers have now been under protection for eleven years, and he feels convinced, though it may seem a heresy to say so, that in some of them there are too many breeding fish. The natural remedy would be to open up as much spawning ground as possible. It has been shown how this may be done in the Axe, and similar opportunities might be found elsewhere. But even this, says Mr. Buckland, will not be quite sufficient, and he inclines to allow, upon due inquiry and consideration, some extension of the open season in special cases. It is very satisfactory to have got to this point in eleven years.

ANTIQUITIES AT THE BRITISH MUSEUM.

IT is perhaps not yet sufficiently known, even among that increasing number of persons in all ranks who believe in the usefulness of acquiring and studying ancient objects of artistic and archæological value, that a collection of antiquities of the very highest importance is now within our grasp. Gathered from various quarters, the choicest gems of many a private cabinet and the carefully selected results of many an excavation, these objects are now for the most part in this country, and in charge of the authorities of the British Museum, where, on application, they may be seen. The list is a long one, but we should find a difficulty in mentioning any single item which is not to be desired even by that rich treasure-house. It includes some twenty pieces of marble and stone sculpture; over a hundred terra cottas, not reckoning more than a hundred and fifty fictile vases: forty works or so in ivory, and twenty-five in amber, while the bronzes number about a hundred and seventy-five. We have named these last, though, after the manner of the lady's postscript, among them the most important matters may be found.

Foremost in rank is the bronze head supposed to be of Aphrodite. Of this work we had heard before its recent arrival in this country. Found, as it would seem, in Thessaly, but under what precise circumstances we know not, it was brought to Rome, and we sincerely trust that it may never be allowed to leave England. In this we have an undoubtedly original and cardinal work by one of the great sculptors of the greatest period of Grecian art. Later than Phidias, it is possibly a masterpiece of his great pupil Alcamenes; or, if we are to assign it to so late a time as the commencement of the transition (*circa* 400 B.C.), it may be by the elder Cephisodotus, a great sculptor of statues of the gods and worker in bronze; but this is at present mere conjecture. The head inclines to the left, with full open eyes (wanting, alas! from their vacant sockets), and lips the beauty of whose lines passes conception, which, slightly parted, are arching with an expression of the most kindly sympathy towards the object whom the goddess regards. A diadem, probably of gold, once crowned the brow, as is proved by the points for its attachment, which still remain, and by the solid circlet of bronze which formed its lower rim. The head of Apollo, on the famous type of the coins of Amphipolis (*circa* 400 B.C., according to Rhandis) is very similar in general artistic character to the great work before us. This noble embodiment of a glorious ideal of female majesty, sublime as a conception of sympathizing Deity in human form, is grand without severity; perfect in the outline of the features, in their expression more than beautiful. It is no subsequent copy by weaker hands, or of Roman times, nor a mere part of an architectural enrichment, as is the matchless Phidian frieze, but the head of a goddess statue, sublime occupant of no mean shrine. Of such great works how little do we really know! When we speak of the masterpieces of Phidias or Scopas, we talk of dreams, flitting fancies of the perished past, the feebleness of which is proved by such a reality as that before us.

Another bronze of much smaller size, found at Tarentum, is a recumbent figure, by some likened to the Theseus of the eastern pediment of the Parthenon; but it strikes us that the pose is more like to that of the headless Cephisus of the western gable. This is perhaps the very finest work of its size that has come down to us: the head is a gem of art enhanced by the charm of a rich patina. Again there is a small figure of Minerva, with diamond eyes (literally) and silver-inlaid robe; a choice but earlier work. Nor must we forget two most important inscriptions on tablets of that metal. One is the celebrated "Tavola d'Agnoni," incised with names of the Oscan divinities, corresponding with the Greek, in characters of the former language, a sort of litany appealing to the various gods, as deciphered by Mommsen. The other is a record of the college of priests of Tiber, illustrated by Henzen, and found at Ostia. Nor should we pass over the wonderful votive strigile found at Præneste, with admirably modelled female figure to form the handle; the only object found, except a marble *alabastron*, in a huge sarcophagus some two-and-twenty feet beneath the surface. A perfectly preserved portrait-bust of Ælius Cæsar, with enamel eyes, found in Sicily, is an object of great rarity. The bear deserves notice, as do many statuettes, some helmets, horse trappings, &c., of bronze, not omitting an exquisite little bust from Præneste, inlaid with silver.

First among the marbles is the noble head of Hera, found at Agrigentum, a grand Greek work only second in value to the unequalled Aphrodite from Thessaly. A portrait of the young Augustus is finer than that in the Vatican, and in a better state of preservation, possessing that rare member, its own nose, perfectly intact. And this is only one of a series of Imperial portrait-busts. A life-size female figure, finely draped, somewhat after the manner of the Artemisia, may be the portrait of a priestess, or of Livia. It is a noble work, perhaps of the Augustan age.

The Etruscan Sarcophagus of terra-cotta is perhaps the most important which has been discovered in that material. It is of the largest size, and the cover is surmounted by a male and a female figure reclining together as at a banquet. The former is but slightly draped, and the peculiar character of the head, purely Etruscan, may be regarded as analogous, rather than as having affinity, to some of the Cypriote sculptures. Mark the not unsuccessful effort at modelling in the torso, and the peculiar management of the joints of the lank limbs. The lady is draped in a closely-lying dress of a striped material, evidently of thin texture, which might well have been of similar make to the gauzy silks of Brousa. Corresponding in size to that in the Campana collection at the Louvre, this is probably of a somewhat earlier period, anterior to the Roman Conquest; it is from Cervetri. In the Louvre specimen the Sarcophagus is merely ornamented with a Greek honeysuckle or palmette bordering, but on this a frieze of many figures in rilievo occupies the front and sides. At one end, the two goddess-born heroes, Achilles and Memnon the beautiful, armed for the fight, are taking leave of their mothers and female friends. Each bears a shield, on which his, so to speak, armorial insignia are blazoned. On that held by (presumably) Achilles a panther's head is represented, in relief, holding a serpent in the mouth; on the shield of the other warrior is a flying eagle. It is interesting to note the use of these heraldic emblems on a monument of such importance and early date; their not unfrequent occurrence on painted vases is well known. On the longer front the fight is represented in the centre; the golden balance has sunk to Memnon's scale, and he is falling beneath the victor's spear, aided by a panther which attacks his lower limbs. On either side are friends, and on that of Memnon a genius is flying upwards. The wailing Eos and her companions are represented at the other end, while the back is occupied by what appears to be the picture of the funereal feast; but these claim further study. Moreover a long inscription in the Etruscan character is painted round the upper edge. This inscription, at present only partially read, would seem to denote that the sarcophagus was occupied by a lady, TANNIA.VELIA.MATTINA.IVNATA. And it may perhaps be inferred, so far as, without more careful consideration and study, we may be permitted to conjecture, that both the personages represented *en ronde bosse* on the lid were members of the VELIA family. The execution of these rilievi is rather flat, but very able, minute in the details, but not wanting in modelling and action. So with the larger figures; there is observant knowledge displayed in the treatment of the muscles, and in the way in which the form is made apparent beneath the drapery of the female figure. Sandals in darker-coloured clay are on the lady's feet, and a kind of diapering pattern on the skin, extending some way above the ankle, may indicate a sort of thin sock or lining, the silken or fine gauzy linen hose of that remote day. The necklet she wears is, in fashion, the counterpart of some of those now in the Jewel-room upstairs. Siren-formed feet support the chest at each of its four angles. Also of terra cotta are the unique impersonations of the Pantaloon, the Glutton, the Parasite, and the Thief—the four leading characters of antique comedy, most curious and extremely droll.

We cannot dwell on many more of these Etruscan works, but must mention the important carvings in ivory and amber before we pass on to the fictile vases, among which are many of the greatest beauty and interest. An early archaic jug (œnochoe), with hawk or eagle head, is without a rival; the Rhytons would be matchless were we not assured that others far finer are now

upon the road to England. The preservation of the original colouring and gilding upon some is very remarkable; we must note also the flask or *lekythus*, formed as a lion, and in a state as though it had been made yesterday. Last, but not least, is the vase of Eleusis, found at Capua, and representing the personages of the Eleusinian mysteries. Winkelmann had declared that the major divinities were present at the mysteries, an idea rejected by other archæologists; but he maintained his belief, asserting that sooner or later the discovery of some monument would prove the correctness of his opinion. And here it is—a drinking-vase, used perhaps at the rites, figured with the greater and the lesser gods, from Zeus downwards, all inscribed with their names, including Eumolpos the founder, and an impersonation of Eleusis. The artist has also given us his own, scratched upon the handle of the cup.

We have only ventured to touch upon the leading objects of this rich collection, the result of years of assiduity aided by consummate judgment on the part of its owner, Signor Alessandro Castellani. Much was said about the loss of the De Cesnola gatherings of Cypriote sculptures, and grave charges of supineness were brought against those who advise the powers that be as to what should and what should not be purchased for the British Museum. We are always glad to see such signs of discontent, for they prove the existence of a growing public interest in the enrichment of our archæological collections. It is, however, only fair to remember that the Museum authorities have to weigh relative claims of importance in acquisitions, and are fettered by economical considerations in the expenditure of a too limited annual grant; and when an entire collection or series of objects, the result of some special excavation or the accumulation of some expert devotee, is offered for purchase, a special grant must be asked for from a sometimes too parsimonious Treasury and Parliament. Such a case is that now before us. We have the chance of securing a collection of objects far more valuable than the Cypriote remains, and the possible acquisition of which may well have been deemed more worthy of consideration in the interests of art and of antiquity. All lovers of art in its highest phase and all true archæologists will join us in the hope, which has been already expressed in various quarters, and, it is said, supported by the recommendation of the Trustees, that this precious collection may not be lost to England.

REVIEWS.

STEPHEN ON LIBERTY, EQUALITY, AND FRATERNITY.*

MR. STEPHEN'S Essay on Liberty, Equality, and Fraternity is one of the most valuable contributions to political philosophy which have been published in recent times; but it presents some difficulty to reviewers who generally agree with Mr. Stephen's conclusions. A capable adversary would, as Mr. Stephen says of Mr. Mill's *Essay on Liberty*, naturally prefer the ablest, the most reasonable, and the clearest statement of the doctrines which he might attempt to confute; and a more or less sympathetic writer has an equal interest in the lucid and forcible presentation of opinions which are partially his own; but it is neither easy nor profitable to abridge condensed propositions, or to select and detach from their proper place separate links of a consecutive argument. Even quotation of epigrammatic phrases would produce a false impression of the character of the grave and weighty treatise in which they are occasionally interspersed. The general result of Mr. Stephen's inquiry into liberty is that, according to circumstances, it may be good, or bad, or neutral. "People who have the gift of using pathetic language ought not to glorify the word liberty as they do, but ought as far as possible to ask themselves, before going into ecstasies over any particular case of it, Who is left at liberty to do what, and what is the restraint from which he is liberated?" If every man has a right to be on an equality with every other man, "you certainly give a very distinct sense of Equality and Fraternity, but you must absolutely exclude Liberty. Experience has proved that this is not merely a theoretical, but also a practical, difficulty. It is the standing and insuperable obstacle to all socialist schemes, and it explains their failure." Mr. Stephen thinks that Mr. Mill's estimate of average human nature is unduly low, and he wonders how "a man who thinks thus of his fellow-creatures can with any degree of consistency be the advocate of liberty in the sense of a negation of all government, and of equality in any sense at all. Given a herd of stupid fools who are never to be coerced, and who are to keep every one from rising above their own level, and what will you ever get to the end of time except a herd of stupid fools? Mankind upon this system would be like a set of what Strauss calls the Ur-Affen, or primeval apes of Mr. Darwin's theory, with just sense enough to defeat the principle of natural selection. Their one maxim would be to single out every ape who had got a few rudiments of human qualities in him, and, instead of making him their king, stone him to death." On the whole, Mr. Stephen concludes that "equality, like liberty, is a big name for a small thing." "What little can be truly said of equality is that, as a fact, human beings are not equal; that in their dealings with one another they ought to recognise real inequalities where they exist as much as substantial equality where it exists." Fraternity commends itself, if possible, still less to Mr. Stephen's taste and understanding than either of the two other component parts of the popular triad. "So far from joining in Mr. Swinburne's odd address to France, 'Therefore thy sins, which are many, are forgiven thee because thou hast loved much,' it appears to me that the French way of loving the human race is the one of their many sins which it is most difficult to forgive." "As to calling all human creatures indiscriminately my brothers and sisters, I will do no such thing. I have far too much respect for real relations to give these endearing names to all sorts of people of whom I know, and for whom I practically care, nothing." "It would want the clearest of all imaginable revelations to make me try to love a considerable number of people whom it is unnecessary to mention, or affect to care about masses of men with whom I have nothing to do." "The real truth is that the human race is so big, so various, so little known, that no one can really love it. You can at most fancy that you love some imaginary representative of bits of it, which when examined are only your own fancies personified. A progress which leads people to attach increased importance to phantoms is not a glorious thing, in my eyes at all events. It is a progress towards a huge Social Science Association, embracing in itself all the Exeter Halls that ever were born or thought of. From such a religion of humanity I can only say, in the deepest tones of alarm and horror, 'Good Lord, deliver us.'"

From Mr. Mill's theories of the true relation of women to men Mr. Stephen utterly dissents. In his judgment the absolute equality of husband and wife is inconsistent with the institution of marriage. If the marriage contract excluded the relation of authority and obedience, the only effective remedy for a breach of the agreement would be found in facility of divorce; and it is evident that the laxity of the bond of marriage would in the great majority of cases tend to the disadvantage of the woman, as having fewer resources, and as losing her power of attraction earlier. As long as marriage is permanent and independent of the caprice of either party, the question of equality is not to be solved by discussion, but by the inevitable facts of the case. Although there are many exceptions, arising sometimes from the real superiority of the wife to her husband, and more often from the coincidence of perversity on her part and of weakness on his part, as a general rule every man is, as he ought to be, master in his own house. The large powers over domestic and social arrangements which are commonly exercised by the mistress of the house are held by delegation. The admission of women to political functions is the idlest demand which has ever been made the subject of political agitation. It may be true that women are for the most part naturally Tories, though on extraordinary occasions they might be prone to revolutionary and anarchical excesses; but at all times they would be really controlled and instigated by men. Ineradicable dissimilarity is an unsafe foundation of equality. When babies are recognized as free agents and as the equals of their parents, the reversal of the natural relation between the sexes will become a hopeful enterprise. As Mr. Stephen observes in connexion with another branch of his subject, Mr. Mill and his followers assume that "the power of society over persons in their minority is, and ought to be, absolute, and minority and majority are questions of degree, and the line that separates them is arbitrary." The extreme theory of toleration or non-interference is perhaps sufficiently confuted by the exceptions which are necessarily admitted by its advocates. Mr. Mill allows that communities may be advantageously ruled by beneficent despots until they become sufficiently civilized to regulate their affairs by the result of free discussion; yet comparative civilization and the prevalence of public opinion are more arbitrary distinctions than the line between majority and nonage. As Mr. Stephen says, political feeling and action are seldom determined by argument, and only a fraction of any population either forms or is entitled to form an independent opinion on any general question. Governments and Legislatures must for many purposes take it for granted that they are themselves in the right, and impose their will on the general community. Mr. Stephen holds that, theoretically at least, their competence extends to the prohibition of attacks on moral and religious doctrines, and to the discouragement of systems which are believed to be false. His Indian experience has suggested to him a forcible illustration derived from "the action of the British Empire, which governs, not indeed on the principle that no religion is true, but distinctly on the principle that no native religion is true." The Government sincerely desired to exercise perfect impartiality, but "they found, as every one who has to do with legislation must find, that laws must be based on principles, and that it is impossible to lay down any principles of legislation at all unless you are prepared to say, I am right and you are wrong, and your view shall give way to mine quietly, gradually, and peaceably; but one of us must rule and the other must obey, and I mean to rule."

Some of the most valuable parts of the Essay deal with the relations of government to morality, and of both to religion. For the modern figment of a separation between the spiritual and the temporal power Mr. Stephen has not the slightest respect. A free Church in a free State, if the doctrine were sincerely accepted, would imply an abdication by the Church of all practical influence on the most important affairs, and a tacit assumption on the part of the State that the creed of the Church was false, or useless, or perhaps only doubtful. While he of course abstains from theological discussion, Mr. Stephen asserts that, as a fact, European morality has been founded on religion," and the destruction of one

* *Liberty, Equality, Fraternity.* By James Stephen. London: Smith, Elder & Co. 1873.

must involve the reconstruction of the other. Many persons in these days wish to retain the morality which they like after getting rid of the religion which they disbelieve." "Many persons in these days appear to me to think that they can reconcile the morals of Jesus Christ with the theology of Julius Cæsar by masquerading in the Pope's old clothes, and asking the world at large to take their word of honour that all is well." Eclectic systems of religion or of religious ethics are, for the most part, but round-about processes of negation or destruction. The numerous theorists and philanthropists who have undertaken to separate the butter from the honey are like a man who peeled an onion in the hope of finding the flesh and the kernel. When he had peeled off the outer rind, there was another skin beneath it; and again another and another till there was nothing left but a strong smell of onions which clings to his fingers to this day. There are sufficient practical arguments against religious persecution, but absolute indifference to religious truth or falsehood ought not to be erected into a principle. The Government of the United States, in utter disregard of the Constitution and of phrases which were universally accepted as long as they had no immediate application, is bent on suppressing the questionable institutions of Utah. If a new sect in England or in any other civilized country were to establish human sacrifices of voluntary victims, the first priest who performed the operation would assuredly be hanged; yet, on Mr. Mill's principles, it would be wrong to prevent suicide by force, and consequently the punishment of accessaries to an act which was not in itself unlawful would be unjust. Mr. Stephen undertakes to show, by a hypothetical apology for Pontius Pilate, that in less extreme cases a ruler might be justified in forcible interference with a creed which, like all genuine creeds, had a political bearing.

If Mr. Stephen were a professed defender of established institutions, his criticisms of liberty, equality, and fraternity might perhaps be equally forcible, but they would be much less novel. Although his subject has no immediate connexion with practical politics, he avows himself a utilitarian and a disciple of Locke, of Bentham, and, to a certain extent, of Mr. Mill. In the earlier stages of the controversy utilitarians were popularly regarded as cold-blooded analysts, while it was supposed that sentiment and association were exclusively invoked by their adversaries. The attempt to raise social benevolence into a religion has in some degree reversed the positions of the disputants. As the Jacobins of the first French Revolution and their modern successors bear a strong resemblance to religious fanatics, preachers of a fantastic enthusiasm of humanity propound a dogmatical creed which necessarily provokes sceptical comment. The more rational followers of Comte reject the religious chimeras of his later years; but his mimic Popery was perhaps only an absurd and necessary consequence of his less extravagant social theories. Mr. Mill expresses, in a passage quoted by Mr. Stephen, the belief that it is possible to give "to the service of humanity, even without the aid of belief in a Providence, both the psychical power and the social efficacy of a religion; making it take hold of human life, and colour all thought, feeling, and action in a manner of which the greatest ascendency ever exercised by any religion may be but a type and foretaste." It is impossible to define the limits of artificial sentiment and of organized imagination. If a great community had, under the influence of some powerful teacher, become convinced of the transcendent excellence of devotion to the service of humanity, every effort would be made to educate the next generation in a firm belief of the popular creed. The original enthusiasm might be maintained and propagated for a longer or shorter period, notwithstanding the absence of the personal motives which have operated in support of other religions. After a time sceptical inquirers would dispute the validity of the arbitrary dogma of universal benevolence; nor could they fail to arrive at the conclusion that the foundation of their faith was an amiable fiction. The utilitarian doctrine at the utmost prescribes only impartial justice. A reasonable man will respect the rights of others as equal to his own; but he is the proper trustee of his own interests and happiness in a sense in which he is not charged with the duty of providing for the general welfare. To idealize mankind or humanity into a pauper demigod, the object at once of charity and of veneration, is a fanciful amusement. The political sects which have from time to time endeavoured to establish the doctrine of fraternity have for the most part been exceptionally intolerant and cruel, not because they were votaries of humanity, but because they were fanatics. Their successors may perhaps desire to abstain from direct persecution, but they will use any power which they may acquire to exemplify their own theories of happiness, and not to gratify the inclinations of their disciples or their subjects. To the irrepressible self-assertion of heretics who claim the right of raising themselves above the common level, the dominant representatives of the religion of humanity will ultimately have to present the old alternative of fraternity or death. Equality and the affectionate relations which are supposed to accompany it can only be maintained by force. Liberty of thought permits disbelief in the religion of humanity, and liberty of action would imply possible rebellion against a system of fraternal equality.

As might be expected, Mr. Stephen feels little enthusiasm for progress; or rather he rejects the assumption that motion is necessarily advance. On the whole, he thinks that the tendency of modern changes is to render men more susceptible, more sympathetic, less ambitious, less vigorous, and less manly. If Mr. Stephen's opinion is well founded, there is little use in deprecating a change which has been already accomplished. A reaction against indiscriminate zeal for progress may be traced in popular literature. It may be doubted whether the shallowest sentimentalist of the present day would be capable of stating, as the late Mr. Douglas Jerrold announced thirty years ago, that a "spirit was abroad which believed in the universality of the human heart." Mr. Dickens spent his life in preaching the same windy doctrine; but it is fast going out of fashion. Mr. Stephen is indifferent to the universality of the human heart; nor is he an implicit believer in the efficacy of universal suffrage. His theoretical scepticism extends to the Parliamentary form of government, though he has no alternative system to recommend. It is true that affairs might often be better managed by a few of the most competent persons than by a numerous assembly; but the merit of constitutional government is not that it secures perfect administration, but that it provides an ultimate power exempt from question or appeal. An absolute monarch possesses the same advantage as long as his authority is unquestioned; and in both cases government is administered by Ministers or other official persons. The appointment of Ministers in England, not by direct choice, but by a process of natural selection, has, whatever may be the defects of the system, produced an extraordinarily high standard of official ability. The Ministers and leaders of Opposition of the last thirty or forty years have included in their number nearly all the conspicuous politicians in the country; and the errors which they may have committed in legislation or in government would scarcely have been corrected by any change of persons. The question is only discussed by Mr. Stephen as an episode; and happily the English Parliament, except when it has been invited to recognize the claims of flesh and blood, has not hitherto concerned itself with equality or fraternity.

FLAMMARION ON THE ATMOSPHERE.*

In the art of making the truths of science intelligible and attractive to unscientific readers the French are without a rival. The writers of no other nation can compare with them for methodical arrangement, clearness of exposition, or grace of style. And of these popular expositors who so abound in our day not many are to be set above M. Camille Flammarion, who not only enjoys a considerable reputation in his own country, but has appeared with success on this side of the Channel in English dress in his agreeable work on the *Heavens*. The recent translation of his book on the *Atmosphere* may be expected to have as cordial a reception, coming before the public as it does under the auspices of an editor so competent as Mr. Glaisher. In not a few respects the version before us has indeed gained by the able revision thus brought to bear upon the work in preparing it for a new public. By a process of judicious compression it has been reduced in bulk to one-half the size of the original; one or two whole chapters in particular, which were thought with reason to have too remote a connexion with the atmosphere, those on the Respiration and Alimentation of Plants, having been left out. Besides this, a great deal of that exalted or sensational style of writing in which M. Flammarion is wont to indulge to the full as much as his countrymen generally when treating of purely scientific subjects, has been with a severer and sounder taste retrenched, though traces enough of these occasional rhapsodies will be found, Mr. Glaisher allows, to betray the French origin of the book. Nor is this all. While modestly disclaiming all pretension to the universal knowledge needed to secure absolute accuracy in dealing with so great a variety of subjects, Mr. Glaisher has the advantage of that special strength on his own ground which has enabled him to check or modify, in not a few particulars of importance, the facts or figures given by his author.

As the aëronaut, for instance, who has taken part in the three highest ascents ever attained, Mr. Glaisher has brought his experience to bear on many points on which M. Flammarion speaks from hearsay, from mere general impressions, or from defective observation. Instead of confirming the popular notion, probably arrived at *à priori*, and endorsed by the French writer, that on reaching regions where the air is much rarefied the limbs swell, and the blood has a tendency to force its way through the skin, in consequence of the want of equilibium between its own tension and that of the external air, Mr. Glaisher quietly remarks that he has neither experienced any of these symptoms himself nor observed them in others. Effects of the kind have, however, been observed in animals under the vacuum of an air-pump, and the experience of mountain travellers from Humboldt downwards tells in the same direction. Of the diminution of atmospheric pressure, as shown by the barometer, no one can speak with the emphasis of Mr. Glaisher, who, with his companion Mr. Coxwell, saw the mercury sink to 7·0 inches, denoting an elevation of 37,000 feet above the earth. With this remarkable observation for one limit, M. Flammarion shows in a diagram the scale of diminishing pressure at different heights, and endeavours by calculations partly based thereupon to arrive at an estimate of the total range of the atmosphere. The calculation is, however, by no means so simple as it might appear at first sight. The law of diminution is far from being the same over all portions of the earth's surface, and is not to be represented simply on paper by a curve or a tint. The barometric reading is constantly lower at the Equator than between the Tropics, yet is

* *The Atmosphere.* Translated from the French of Camille Flammarion. Edited by James Glaisher, F.R.S., &c. With 10 Chromolithographs and 81 Woodcuts. London: Sampson Low & Co. 1873.

far from increasing uniformly as we approach the Poles. At the Equator it is about 29·28 inches, increasing thence up to about the 33rd degree of latitude, where it is 30·16 inches. It then decreases until 43°, where it is 30·0 inches, from which point it becomes stationary to about 48°. Thence it continues to decrease as far as 64°, where it stands at 29·65 inches. Lastly, it again increases from that point as far as the highest latitude explored, standing at Spitzbergen (latitude 75°) at 29·84 inches. There is, therefore, between the pressures at 33° and 64° a difference of half an inch. These variations are laid down by M. Flammarion in a curve, of which the ordinates show the atmospheric pressure at the sea level from the Equator to the North Pole, with the maximum and minimum at the points we have mentioned. These quantities, it must be observed, are by no means dependent upon latitude alone. They have not only their local elements of variation, but they are far from being permanent in themselves. They are beyond doubt affected by the trade winds and other currents of air set in motion by solar heat, and affecting the whole mass of the atmosphere. There are anomalies of a local kind which are less easy of solution. That the latitude should exercise some influence upon the pressure of the air we may well conceive, the conditions of temperature and rotary motion varying with it. But why should the longitude have any such effect? It is certainly strange that the average pressure of the atmosphere in the same latitude is found to be 0·14 inch greater in the Atlantic than in the Pacific Ocean. There is much still to be accounted for in this distribution of atmospheric pressure. Amidst the perpetual changes of barometrical readings, certain mean lines have been pretty generally determined, showing the distribution of equal barometric pressure over large surfaces of our planet. These isobaric lines no more conform to the lines of latitude or the configuration of sea and land than do the lines of equal temperature, though entering in the same way and to a great extent as co-efficients in the result. They are at first, M. Flammarion shows, pretty well distributed from N. to S., running from W.S.W. to E.N.E. The isobaric line of 29·96 inches passes through the South of England and Holland, that of 30·02 inches near Tours and Nancy. But the centre of France shows a very remarkable line of pressure, the isobaric line of 30·04 inches crossing France diagonally, passing close to Strasburg, Chaumont, Dijon, Clermont, and Toulouse. On the other side, towards the S.E., the pressure diminishes, and attains a minimum not less remarkable in the Gulf of Genoa, where the pressure is about 29·98 inches. There is a maximum of pressure in the Atlantic, attained in lat. 35° N., and a minimum at 5° N.; a maximum being found at 16° South of the Equator, near St. Helena, and the lowest pressure in the world, not exceeding 29·33 inches, to the south of Cape Horn. Upon the Asiatic continent the distribution is altogether different; Siberia showing a maximum of about 30·24 inches between Nertchinsk and Bernaoul. A difficulty in calculating altitudes is introduced by the varying level of the sea. Not to speak of the diurnal tides, there is the centrifugal force in the zone of the Equator, the pressure of the wind, and change in expansion under solar heat, with the banking up of water in land-locked gulfs. Eliminating, as far as may be, all incidental or disturbing conditions of whatever kind, we may come to some approximate expression for the total statical pressure of the earth's aërial envelope. In his curious little *brochure*, *Combien pèse la masse entière de tout l'air qui est au monde*, Pascal made out the weight to be about the $\frac{1}{1100000}$ part of the weight of the earth, or that of a copper ball sixty-two miles in diameter.

In determining the height of the atmosphere above the earth's surface, experiments upon the duration of twilight, from the time of Kepler, and the laws of compression in gases, first determined by Mariotte, have been brought to bear in aid of those upon barometrical pressure. Nothing at all definite can be said at the present moment to have been arrived at. The observations of M. Lisis, taken during an Atlantic voyage, yield, as a minimum, 180 miles, and as a probable height even 204 miles; those of M. Bravais from the summit of the Faulhorn 71½ miles. M. Quételet's conclusion is that the atmosphere does indeed extend much higher than the 38 miles or so generally assigned to it since Kepler's time, but that the upper strata are of a nature different from those nearer the earth, being of an ethereal kind, highly rarified, and unaffected by the movements of the winds or the changes of season. In this lofty and attenuated region it is supposed that the shooting stars are seen which afterwards disappear in reaching the lower and denser atmosphere. We are not surprised to find the existence of this hypothetical medium, which M. Flammarion seems prepared to endorse, gravely doubted by his English editor, although the opinions of Sir J. Herschel, De la Rive, and Hansteen are brought in as encouraging the idea of an upper atmosphere of the lightest gases above ours of oxgyen, nitrogen, and vapour of water, the sphere of the aurora borealis, and of magnetic phenomena in general. As regards the chemical components of the air our author is more practical in his mode of treatment, and more definite in his results. The different methods of analysis employed by Lavoisier in the first instance, and carried on by Gay Lussac and Humboldt, and since then by Dumas and Boussingault, are explained and illustrated. The extreme delicacy to which quantitative analysis has been pushed in modern times has enabled our chemists to define with minute precision the constituents of air, whether pure or impure, and to detect the presence of elements not before known to exist therein. From the calculations of Dalton, the lower atmosphere has been shown to contain about the 0·0142 part of its weight in water, from which the upper strata are nearly free. M. Boussingault was able to prove by precise experiments the presence of a hydrogenous gas or vapour equal at the most to the 0.0001 part of its volume. Analysis has brought to light the presence of iodine in all but certain unhealthy countries traversed by deep valleys, in which goitre is greatly prevalent. And the discovery of ozone by Schönbein has, within the existing generation, opened up a totally new chapter in the development of both chemical science and of practical hygiene.

In his chapter on Sound and the Voice, M. Flammarion is by comparison short and flimsy, deeming the subject, it may be, amply enough treated of late for all popular purposes by his countrymen MM. Guillemin and Deschanel. Nor is his treatment of Light in its optical relations at all to be compared with that of which we have spoken in recent notices as forming one of the chief merits of both those works. It is in the picturesque aspect of the subject that our author most distinguishes himself, and finds scope for his characteristic powers. He has here been ably seconded by the artists who have brought in the resources of chromolithography to eke out to the eye those aërial effects to which the descriptions of science can at the best do scant justice. "Sunset at Sea" and "Sunrise from the Righi" are among the best specimens of the series. The glow of light and the delicate grades of colour are represented with a truth and beauty which it is hard to conceive the result of a mechanical process. Not less impressive or faithful to the effects of nature is the "African Mirage." In the "Storm," on the contrary, the sky and clouds strike us as hard in outline, inky, and opaque. We scarcely see the need of exemplifying scenery so familiar as the "Summer and Winter" landscapes, and in the rainbow we are conscious of a want of truth owing to inadequate admission of the blue and violet rays. A certain hardness and metallic sharpness of outline is doubtless inseparable from the nature of the vehicle employed in pictures of this kind, but in the "Lunar Rainbow," seen from Compiègne, the metallic glitter seems to us to be carried beyond bounds. Nor are we able, from the impressions we ourselves retain from a single instance of that rarely seen phenomenon, to endorse so much as M. Flammarion would convey to his readers regarding the lunar spectrum. Not only does the tinted landscape here given assign to the iris cast by the moon an amount of blue and yellow rays which has no place in our recollection of the ashy pale or absolutely colourless phenomenon in question, but his description of it as "analogous to the solar bow, only less intense," seems to bespeak for it an identity of hues with those of direct sunlight such as on no theory of colour can be held compatible with the double process of reflection through which the rays have passed since leaving the sun. In what he has to say of halos, both solar and lunar, our author keeps more strictly, it appears to us, within the bounds of fact and the conclusions of science, while we have no further fault to find with his illustrations than such as arises from the sheer impossibility of rendering phenomena so impalpable and evanescent by means of any fixed and opaque medium whatever. In his explanation of the halo, parhelia, and cognate phenomena, M. Flammarion follows the theory of M. Mariotte, based upon the formation of crystals of ice in the shape of equilateral prisms in the air. When a triangular prism of glass is submitted to the action of the sun's rays, part of the light falling on it is reflected from the surface of the prism as from a mirror, and another part penetrates into the glass and leaves it in a direction different from that by which it entered, producing an image formed of different colours. Ice prisms of this form may be widely diffused at all possible angles in the atmosphere, some of them being in such a position as to produce the absolute minimum of deviation of the rays of light, these rays entering by one of the three lateral surfaces of the prisms, and traversing one of the other two in their way out of it. At an angular distance from the sun of 22°, or that of minimum deviation, M. Mariotte has shown, a brilliant circle is formed, which is the ordinary halo. If from some cause or other all the prisms become vertical, the halo is replaced by two parhelia. The tangent arcs seen near the ordinary halo, the halo with a radius of 46°, and the parhelion circle, have been explained by Young on the hypothesis of the prisms being so situated that their axes are all horizontal. In all cases the halo may be considered due to the refraction of the solar or lunar rays upon crystals of ice falling slowly in a still atmosphere, the different positions of the crystals being the causes of the diversity of the resulting arc. Observation combined with theory has shown that the arc is never to be seen when the sun is less than 12° or more than 31° above the horizon. The apparently ecliptical shape assumed by the halo is but an illusion on the part of the spectator, due to the same optical cause as the diminishing disc of the sun or moon as the luminous body rises above terrestrial objects. The angle of deviation on which depends the series of luminous impressions, though taken approximately at 22°, is not the same for all colours, the rays being variously affected by the angle at which they leave the prism. M. Flammarion gives the result of calculation in coincidence with observation as 21° 37′ for the red, which is the least refrangible colour, 21° 48′ for the yellow, 21° 57′ for the green, 22° 10′ for the blue, and 20° 40′ for the violet. The red is inside, then come orange, yellow, green, these colours gradually becoming weaker under the influence of the prisms which are not in the position of minimum deviation. The red is the last to remain visible. The sun, however, not being a luminous point, but each portion of its disc contributing

to the production of this phenomenon, the various colours become thus partially blended and never very clearly defined, the halo appearing in general as a bright ring with a reddish tint on the inside, 2° or 3° in width, and enclosing a circular area of which the sun occupies the centre. The diameter of the second halo which frequently surrounds it is in general about double that of the first. The prisms of ice which are horizontal in the atmosphere give rise by means of a further series of reflections and refractions to tangent arcs on each side of the halo, often intersecting the lower or primary circle, and producing the complex figure seen in Norway (fig. 38 *f*) and others of a rare and highly defined character specified by Lowitz, Bravais, Martins, and other observers. Of the whole series of atmospheric phenomena which make up M. Flammarion's able and attractive volume, and which are too numerous and complex for more detailed notice, this is the portion which is likely to strike the reader as at once the most original and the most replete with interest.

THE BATH ARCHIVES.*

THE success of the two volumes of Sir George Jackson's diaries and letters which were published last year has induced his widow to prepare another couple of volumes, made up of a further selection from Sir George's correspondence. This brings us down to 1816—four thick volumes for some fifteen years—and, as Sir G. Jackson lived an active and busy life for many years afterwards, and no doubt kept up an equally copious correspondence and diaries, we shall probably have yet further selections from the same abundant source. At this rate the *Bath Archives* threaten to become rather a formidable library. The two volumes now before us might with great advantage have been compressed into one. We have not only Sir George's own diaries and letters, many of which are of purely domestic interest, but his brother Francis's letters, his mother's letters, and a great many other odds and ends of correspondence, all swelling out the bulk of the collection without adding to its value. Indeed the quantity of idle padding is a serious drawback to the reader's enjoyment. It takes the edge off one's appetite to have to wade through so much dull verbiage before coming to the good things. We have already (*Saturday Review*, April 27, 1872) followed George Jackson's diplomatic career down to 1809, when he was engaged as one of the Secretaries of Legation to Mr. Frere's mission to the Spanish Junta. He left Spain in the hope of being appointed, through Lord Wellesley's influence, Secretary at Washington, whither his brother Francis had already gone as Minister Plenipotentiary. In this expectation, however, he was disappointed. His brother took high ground with the Americans, and the Government found it convenient to recall him, and George was kept for two or three years dangling about the Foreign Office, tantalized by promises of employment which somehow never came to anything. He was a captain in a cavalry regiment, and began seriously to consider whether he would not have to renounce diplomacy and stick to the army. In 1813, however, he obtained an appointment as a *chargé d'affaires* to the Prussian Court, and had an opportunity of observing pretty closely some great events and some rather remarkable people.

Down to this period his letters, though always sprightly and genial, are chiefly made up of mere personal gossip and second-hand news. Still we get some interesting glimpses of social life in England in those days. His regiment was stationed at Hull, whose great business was then the whale fishery. The society consisted "almost wholly of merchants, who, during the summer, remove to their villas to avoid the heat and the smell of the blubber." York was still a little capital, all the county families meeting there for the winter season, and life was "very gay," dancing every night, and "invitations for a month to come." The rivalry of Bath and Brighton comes out amusingly in some of old Mrs. Jackson's letters. She was loyal to the old seat of fashion, and disparaged Brighton as not only "windy," but light-minded and extravagant. "Old women, petticoat waiters, and tallow candles are held very cheap by the fashionable people at Brighton;" at Bath there is "more neighbourly friendship, and we think the society of a more moral tone; at all events, it is more staid and steady, though by no means dull." The respectable society of Bath was greatly exercised in mind on the subject of waltzing, but the young people carried the day, and the light ways of Brighton were transferred to the West. Mrs. Jackson records with something like horror that at the York House, Bath, "there was a ball where there was nothing but waltzing, and no one was allowed to leave before ten in the morning; and another at which only four chaperons were admitted; so I suppose they will soon be excluded altogether. Alas! for the manners of the age! All this comes from the examples that are set in high places." At Brighton George Jackson used occasionally to drop into Mrs. Fitzherbert's little afternoon parties, admission to which was granted "only to persons of much discretion," and not without reason. "You get a cup of tea, and hear the scandal of the day," and it was permitted to speak very freely of the sayings and doings "of a certain illustrious, but always nameless, personage." Indeed the First Gentleman in Europe does not seem to have inspired much respect in his own day. "Every man and woman one meets," says George in a letter from London, "has some ridiculous tale to tell of which a *very great man* is the object, or, I may say, rather the laughing-stock." The remark of the Princess of Wales was greeted with much approval, that "they should let out the old one"—George III. was then in confinement—"and shut up the young one." Later on we have another bit of scandal. Being dull one night and wanting some variety, the Prince "sent his carriage to the King's Bench for Colman, who is shut up there, to come and make sport and amuse him." They sat up till six in the morning, "when his Royal Highness was carried to bed in an apoplexy." Jackson was at one of the Prince's great fêtes at Carlton House. The Queen and Princesses would not come, and the Princess of Wales was not asked, and Mrs. Fitzherbert sent an excuse when she found that she was not to take her usual place at the Prince's table; so "the two wives sat at home by themselves." Louis XVIII. and the French Princes were present, and were received with marked respect. The French King was attended to and from Carlton House by an escort of hussars. For a time he declined sitting, saying he was only Comte de Lisle; but the Prince of Wales, placing a chair for him, replied, "Ici votre majesté est roi de France." Jackson confirms the impression of the Princess of Wales's vulgarity and indiscretion:—"She makes herself perfectly ridiculous, and wherever she goes the chief subject of remark is her lavish display of her protuberant beauties." As a young man who went everywhere Jackson of course went to Holland House, and his portrait of the hostess may be put beside Macaulay's:—

> Her ladyship, as she always is, capricious both in speech and manner—now very civil and polite, then unexpectedly confidential, and her conversation tinged with a warmth that exceeds even friendly interest. Anon, she is distant and cold, or assumes a kind of patronizing, dignified air; in short, very chameleon like. As she says, or pretends she says, everything that comes into her head at the moment, she often says foolish things, which, being laughed at, pass for witty ones—at Holland House.

It was rather the fashion at this time in the society in which Jackson moved to consider the populace savage and disaffected, and it is impossible not to suspect some trace of this colouring in his description of the mob cheering the murderer of Perceval, and clinging to the coach-wheels to shake hands with him. Jackson was hardly surprised to find that there was a strong personal resemblance between Bellingham and Burdett.

Jackson's Diaries enable us to understand the feeling of depression and despondency which was creeping over the English mind in contemplating the prolonged struggle with Napoleon. Even Wellington's success in holding off the French in Spain was welcomed chiefly as a means of coming to honourable terms. Jackson, who was the very reverse of a peace-at-any-price man, thought it would be well to give Napoleon the line of the Ebro if he would only evacuate the rest of Spain. A Russian war was threatened, but such was the faith in Napoleon's power that it was expected he would "make a short campaign of it, and return to the Peninsula with such accumulated strength, both in men and reputation, as we should be unable to resist, and probably deprive us of Portugal as well as Spain." The retreat from Moscow produced a more cheerful state of mind, and the first day of 1813 was "a day of especial rejoicing, the commencement of a new era, as some people think." Bonaparte's escape to Paris, and the bold front he showed after his disasters, somewhat qualified these hopes, and a subscription for the Russians went on rather slowly. "Perhaps John Bull's feelings are a little worn," it is suggested. Napoleon was still a formidable enemy, and our allies were timid and wavering. The Russians were moving very slowly, and throwing most of their energy into an endeavour to obtain supplies from England. Each Power was thinking more of what was to be got than of the means of getting it, and England clogged her mission to Prussia with "a pitiful, peddling stipulation about Hildesheim, &c., for Hanover." Jackson arrived at Dresden just before the battle of Lutzen, which brought out clearly Napoleon's military superiority, and the weakness of the allied generals. Napoleon boasted that he would fight a general battle without cavalry, and he did so by drawing the Allies on to the ground he had chosen for attacking them. The Emperor of Russia and the King of Prussia were present, and gave orders independently of each other and of the general nominally in command. "We are told," says Jackson, "that the Allies gained a victory, whilst everything around us bears the appearance of the most complete defeat." Everybody was getting ready to start at a moment's warning for Bautzen and Breslau—the only road likely to be open. And next day the *sauve qui peut* began. It seemed clear that Napoleon's star was again rising, and Jackson suspected that the English successes in Spain alone prevented the Allies from signing a peace with France, and leaving England to follow her own course. "There has been a great deal of underhand work going on in the negotiations of Prussia and Russia with Austria, while both Powers were availing themselves of the supplies of money, ammunition, and clothing furnished by Great Britain to get a decent army on foot." Towards the end of September the Allies had their headquarters at Toplitz, and were celebrating the anniversary of the Emperor Alexander's coronation by a magnificent banquet in camp. Then followed the investment of the Emperor with the Order of the Garter. Jackson was shocked that this great ceremony should be treated "as a sort of farcical entertainment":—

> The Emperor was in a little nutshell of a room with his brother, the Grand-Duke Constantine, both of whom wore a broad grin the whole time. With difficulty the Emperor had been persuaded to wear shoes and stockings, and the whole ceremony consisted in Count Golowkin reading the commission

---

* *The Bath Archives.* A further Selection from the Diaries and Letters of Sir Geo. Jackson, K.C.H., from 1809 to 1816. Edited by Lady Jackson. 2 vols. London: Bentley & Son. 1873.

in Latin very badly, and in the Commissioners then buckling on the garter. The next day a party of twenty English dined with the Emperor. He made his appearance with the blue ribaud and star, and the garter round his thigh above his great boot.

A still more singular use of the garter, however, is mentioned in the Diaries. Lady Castlereagh, it seems, had a fancy for wearing her husband's orders, and appeared at a fête at Vienna with the garter encircling her brow like a tiara.

The battle of Leipzig brought back fortune to the Allies, and they again turned westward. At Weimar Jackson was lodged at Goethe's house, but was not particularly impressed by his distinguished host:—

> The charm of his conversation, in my humble opinion, is somewhat marred by an air of pedantry which is probably due to the adulation he is accustomed to receive from his many worshippers. People here seem to hang, as it were, upon his lips, and listen for his words as if an oracle were about to hold forth. For my part, I like Goethe for his good humour and pleasant manners; for I think that a man inferior in genius, and of less genial nature, would have become insufferable in society if constantly dosed with flattery as he is; and that much credit is due even to *him* for being so little spoiled by it.

After a flying visit to England, Jackson rejoined the Allies during their march upon Paris. He found the people all execrating Bonaparte, yet mortified at his defeat, and at first by no means disposed to welcome the Allies as deliverers. "The general feeling seems to be that of intense mortification; of wounded vanity; of disappointment." Great distress prevailed, but the murmurings were not against him who had brought it on them, but against those who asked for supplies for the allied armies. Everywhere he found the greatest poverty and misery, and an intense desire for peace. "For the rest, they are like weathercocks, to which every wind is welcome. But for peace the cry is universal, and they would receive it from the hands of Old Nick himself." When the allied Sovereigns rode into Paris they were received with tumultuous enthusiasm. The Emperor Alexander was in especial favour, but even the King of Prussia never met with such a welcome in Berlin. It was computed that between sixty and seventy thousand bottles of champagne were broached in honour of the day, and everybody was intoxicated either with joy or wine. Jackson accompanied the King of Prussia to England, and afterwards to his own capital. Here, again, there were great rejoicings. The Court tailor was ordered to prepare new liveries for the Royal household, and many of the nobility began to consider whether they should not do the same. But Napoleon's escape from Elba promptly decided the question. The new Court liveries were put away, and the King was blamed for his hasty extravagance. "He was premature in giving his orders," said the cavillers, "and set a bad example to his subjects." At any rate, Jackson remarks, he did a good turn to the poor tailors. At Berlin and Vienna the ladies pledged themselves to discard silks, velvets, jewels, and ornaments, and to wear nothing but dresses of the most homely materials and sober hues until Napoleon was finally subdued. The correspondence and diaries break off abruptly while Jackson is still at Berlin; but we presume it is intended to produce further selections from the *Bath Archives*—so called from their having been treasured up by old Mrs. Jackson at Bath. There is much keen, sprightly observation and amusing gossip in these two volumes; but the editor has certainly done her best to render them tedious and disappointing by overweighting them with worthless matter.

FREEMAN'S HISTORICAL ESSAYS.*

ALTHOUGH the articles in this Second Series of Mr. Freeman's essays are mostly earlier in date of composition than those in the First Series which we reviewed a year ago, they are no whit below the latter either in substance or in style. Mr. Freeman is in some respects at his best when writing a review article, for he is forced to command his learning and restrain his exuberant power of illustration within narrower limits than those which are called for in an independent historical treatise. Nothing that he has written pleases us better than some of these essays, particularly those which deal with Roman history. The views advanced are clear, forcible, and comprehensive; the style is full of sustained energy; there is a lively sympathy for whatever is noble and good, a singular power of discovering and using historical parallels without being carried away by them, a fairness and temperance in judging of the men and events of the past which is all the more admirable because he realizes them so vividly, and feels not less interest in them than people in general do in their own contemporaries. If Mr. Freeman could only attain the same sort of sobriety and the same truly historical attitude when he refers to the men of the present, we should have nothing but unmixed praise to bestow on him. This unhappily he does not always do. There is often rather too much of a personal element about his writing; there are references in notes, for instance, which had better have been omitted, to his own previous opinions or to comparatively trivial occurrences and feelings of the hour. We regret, too, the tone of asperity in which he sometimes allows himself to speak of others from whom he differs, who may very probably be wrong and deserve to be censured, yet hardly to be censured with so much iteration and so much vehemence. His own position as a public writer and historian is now so high as to require from him a larger measure of judicial gravity and calmness than he sometimes displays. And in the interest of his own reputation and influence, which are now so deservedly great with the learned as well as with the less learned public, we cannot but wish that he would not enforce small points with quite the same earnestness as that wherewith he enforces great ones. Not all sins are mortal, and if the venial sin (often, to the thinking of some of us, not a sin at all) is so hardly dealt with, our horror of the mortal sin is lessened. A doctrine, moreover, however valuable, may be preached too often and too long. It is quite true, for instance, that all history ought to be regarded as one, and as far as possible studied as one, but there are limits to this possibility, and for many purposes ancient, mediæval, and modern history may be treated of and worked out apart. Admirable service has been done in mediæval history by men who knew very little either about Athens under Pericles or about Massachusetts under Governor Andrew. Mr. Freeman's views are sometimes so broadly expressed on this matter that we feel inclined to ask him whether he finds that his ignorance of the early history of Egypt and Asia Minor—countries which certainly had a great influence on Greece—prevents him from understanding and enjoying Homer and Herodotus.

As respects this doctrine of the Unity of History, the truth, we take it, is that two things are necessary to make a man a real historical student or a useful historical writer. One is, that he should have a just view of history as a process of constant change and development, a conception of human institutions as the concrete expression of the always varying powers, needs, and beliefs of mankind—which conception of course implies a certain general knowledge of the great events and changes of the last three thousand years. The other is a thorough mastery of some particular period of history, founded on a knowledge of the original authorities which tell us of it sufficiently minute and critical to give him a comprehension of the principles of historical evidence and the power of applying them. He who wants the second of these two requisites may be a mere theorist, without the means of testing an hypothesis, without the faculty of grasping the significance of details. He who wants the first, on the other hand, cannot be a philosopher; he either will not speculate at all, or will speculate wildly, applying what he knows to be true of the period he is familiar with to other periods where it may not be true at all. Both must be possessed together in order to enable one to recognize unity in diversity, the co-existence in history of the permanent element which is given by the identity of the nature of man with that boundless variety in his social and political institutions which is produced by the variety of the circumstances and conditions, physical and economical, under which he finds himself, and by the influence on each generation of the thoughts and deeds of its predecessors. All this is obvious enough when one comes to consider it; we mention it only for the sake of remarking that it is quite a different thing from knowing all history, or even a large part of history, thoroughly and minutely, which Mr. Freeman's language might be taken to require from any man who is to do worthy historical work.

Having thus relieved our soul, we can go on with pleasure and satisfaction to speak of the substance of this volume. The essays that compose it cannot well be criticized as a whole, for they are very various in their subjects and dimensions. If some seem much more interesting and original than others, that is partly because Mr. Freeman himself and other eminent writers have made familiar and popular what was sufficiently new ten or fifteen years ago. This is, to some extent, the case even with so admirable an article as "Ancient Greece and Mediæval Italy," a comparison full of ingenuity, penetration, and that sort of discriminating power which complete mastery of a subject gives, between the city republics of Hellas and those of Italy in the twelfth and three succeeding centuries. In the articles on Alexander the Great and Greece during the Macedonian period we are brought upon less trodden ground. Mr. Freeman disputes Grote's view that Alexander was substantially a barbarian, and maintains that he was not only an extraordinary military genius (which is indeed beyond question), but also for most purposes really a Greek, with Greek interests and sympathies, regarding himself as the leader of united Hellas against the Persian Empire, the avenger of the invasions of Darius and Xerxes, and animated by the desire of spreading Greek ideas and Greek culture over the East. Forcibly as he argues his case, he does not quite convince us. That Alexander had a warm feeling for Greece, and particularly for Athens, is, we think, undeniable. That he felt and acted as the champion of the Greek nation against the Great King, and that a large part of that nation held him to be really such, must also be conceded. But there are points in his character, touches of ferocity and brutality, to which we find no parallel among the great men of historical Greece, and hardly even among those Homeric heroes whom it was Alexander's pride and glory to imitate. The story of his treatment of Bessus, for instance, at Gaza—a story which Mr. Freeman has no right to dismiss in the cavalier way that he does—is of a piece with a good deal more in Alexander's life, and belongs to an Oriental or barbarian rather than to a Greek character. As to that great Hellenization of Asia which changed the whole course of the world's history, which paved the way for the spread of the Roman dominion and the diffusion of Christianity, which gave that curiously composite and half-Greek character to the peoples of the Eastern Mediterranean which they still retain, no one has ever denied that it was the direct result of Alexander's conquests. But it is not the same thing to give him the credit of having deliberately contemplated it and

* *Historical Essays.* Second Series. By E. A. Freeman, M.A., Hon. D.C.L., late Fellow of Trinity College, Oxford. London: Macmillan & Co. 1873.

recognized it as what the Germans would call his "world-historical" mission. What traces are there of any purpose on Alexander's part to diffuse Greek ideas, Greek manners, Greek literature and science, Greek forms of political or social organization? Few indeed, and far from unmistakable. On the contrary, he himself lapsed more and more into Orientalism, and would probably, had he lived, have striven rather to Orientalize Greeks and Macedonians than to Hellenize those Eastern subjects who were far more willing to acknowledge his divinity.

The essays which we have found the most interesting of all are the last two, on Lucius Cornelius Sulla, and on the Flavian Cæsars. Mr. Freeman is never more happy than in a biographical study—witness his description of William in the *History of the Roman Conquest*, and that of St. Thomas of Canterbury in his previous volume of *Historical Essays:* and his picture of Sulla's character, with its singular contrasts of energy and luxurious sensuality, cool-healedness and superstition, cruelty and good nature, consistent devotion to the same political principles and the most unscrupulous recklessness in the choice of his means, is a very powerful and admirable piece of work. We extract a short passage from its conclusion:—

> Why is it that these two names, Sulla and Cæsar, call up such different feelings? Of the two Dictators, one is never spoken of without abhorrence, the other is never spoken of without some degree at least of admiration. Yet there is much likeness in the two men, and there are points in which Sulla has the advantage. Sulla and Cæsar alike were at once generals, statesmen, scholars, and profligates. On the military details of their campaigns military men must decide; but the results of the warfare of Sulla were assuredly not less than those of the warfare of Cæsar. If Cæsar conquered Gaul, Sulla reconquered Greece and Asia; if Cæsar overthrew Pompeius, Sulla overthrew Pontius Telesinus. The political career of Sulla is far more honourable and consistent than that of Cæsar. . . . As private men there is little to choose between the two; both were steeped in every vice, refined, accomplished, scholarlike debauchees. Why, then, do we hate Sulla, and in a manner love Cæsar? Success may have something to do with it; Sulla's aristocracy passed away, Cæsar's empire fell for a moment, but it had strength enough to rise again under his adopted son, and to live on, we may almost say, till the present hour. The other Dictator has left no such memorials before our eyes and ears; no month is called Cornelius, no modern potentate calls himself Sulla as his proudest title. But this is not all; the real difference lies much deeper. Cæsar, with all his crimes and vices, had a heart. He was a man of battles, but not a man of proscriptions. He was a warm friend and a generous enemy. In one point of view Sulla's was the wiser policy. Sulla never spared or forgave, and he died in his bed; Cæsar forgave, and he died by the daggers of those whom he had forgiven. Sulla really had in him more of principle than Cæsar; but Cæsar was a man. Sulla was like a destroying angel. Cæsar we might have loved; at Sulla we could only shudder; perhaps we might have shuddered most of all at the careless and mirthful hours of the author of the proscription. Great he was in every natural gift, great, we might almost say, in his vices, great in his craft of soldier and ruler, great in his unbending will, great in the crimes which human wickedness never can outdo. In his strange superstition, the most ruthless of men deemed himself the special favourite of the softest of the idols with which his heaven was peopled.

This explanation is, we take it, the true one. Cæsar no doubt strikes our imagination much more than Sulla does, partly because the theatre of his exploits was larger, partly because with him the Roman Republic (in the popular sense) ends and the Roman Empire begins, partly on account of that magnificently tragic death scene in the Senate-house to which history supplies no parallel. But in the main we feel tenderly towards Cæsar because we see in him a man who was capable of the softer feelings, who had his ardours, his imprudences, his generosities, his moments of tenderness and genial self-forgetfulness. Sulla, on the other hand, gives the impression of a hard, cold, collected nature, self-centred and self-absorbed, with no desire to inflict suffering, but no reluctance to inflict it when it suited his purpose, and no remorse afterwards. He repels almost as much as he overawes, like those two others with whom we may in many respects compare him, though the one was less and the other more redeemed by virtue—the terrible Cæsar Borgia and the iron-hearted Frederick the Second of Prussia.

We have left ourselves no space to speak adequately of the article on the Flavian Cæsars which winds up the volume, and which is in its way a model of clear writing and vigorous thinking. It may perhaps be held that Mr. Freeman, like Mr. Goldwin Smith, is a little too hard upon the Empire. The Senate, for instance, over whose fate he drops a tear, had become by the time of Augustus a body so selfish and so unscrupulously partisan that there was really nothing more to be hoped for from it. That extinction of political life in the provinces which he seems to charge upon the Empire was in most of them complete before it absorbed them into its vast body, destroying, it is true, any present hope of a revival. Nor is it at all correct to say, "Of the great legacy of Rome to later times, the legacy of the Roman Law, the best parts were simply inherited by the Empire from the days of the Republic." As Mr. Freeman must surely know that the first two centuries of the Empire were the really great age of Roman Law, the age when the development of a harmonious and equitable system of rules went on most quickly and most perfectly, and that this was effected by the absolute sway of the Emperors with a completeness and consistency which it could not have attained under the Republic, we can only suppose that he means to say that the leading principles of the law had been formed under the free Republic, and therefore bear less trace than might have been expected of the corrupting influences of despotism. This is true enough, but his way of saying it is rather odd, and indeed open to misconstruction. It need scarcely be remarked that the Roman Law, as we have it, is entirely the work of the jurists of the Empire. These blemishes, however, are scarcely worth noticing where there is so much that is thoroughly good and useful. Commenting on the singular position of the earlier Emperors, as in theory nothing more than citizens of the first rank, the perpetual magistrates of a free Republic, Mr. Freeman makes a remark which seems to us new, true, and ingenious:—

> The peculiar hidden nature of the Imperial power had some very practical results. As compared with acknowledged kingship, we shall hardly be wrong in saying that it made the rule of a good Emperor better and the rule of a bad Emperor worse.

The absence of an Imperial Court, of the pomp and circumstance of royalty, enabled a ruler like Titus or Trajan to live on terms of easy and almost equal intercourse with the best citizens, and, while directing the whole administration of the State, to leave the semblance of freedom, the old respect for the laws and for the Senate, for the traditions of the ancient commonwealth, still unviolated. But it also removed many restraints with which a sense of his unique and exalted position, a feeling of his position between ancestors who have reigned and descendants who will reign, even indeed the mere etiquette and ceremonial observances of his Court, will always surround a hereditary and legitimate King:—

> The worst King commonly retains some regard for the dignity of his person and office; even a Sultan finds his caprices checked by various conventional forms which it is not easy for him to escape from. A King who cannot set foot in public without being surrounded by a certain degree of ceremony, cannot play off before the world the utterly mad freaks of the worst of the Roman Cæsars. He may be cruel, he may be lustful, but the very necessity of his position drives him in some degree to moderate, or at any rate to veil, both his cruelty and his lust. The will of the Roman Cæsar was practically unrestrained; and precisely because he was merely Cæsar and not King, he was set free from the moral restraints of royalty. That lack of Court etiquette which enabled Vespasian and Antoninus to live on terms of equality with virtuous senators, no less enabled Nero and Commodus to live in a partnership of unutterable vice with the very vilest of mankind.

HINDOO TALES.*

THE *Dasa-kumāra-charitam*, the Sanskrit original of these *Hindoo Tales*, is a work to which a Sanskrit student may well devote his attention, but it is difficult to understand why any one should wish to turn it into English, or how any one could conceive it possible to make it popular by means of a free translation. Mr. Jacob remarks that the text was printed in England more than twenty-five years ago, but that it has not been translated into any European language. He might have added that neither has it been translated into any of the modern languages of India; or, if it has, it has never become popular like the *Vetāla panchavinsati*, or Tales of a Demon, which has been turned into every language of India, and by its grotesque drollery often wins a laugh even from European readers.

The original work was written in the decadence of Sanskrit literature, about the tenth or eleventh century A.D., when the language had long ceased to be spoken. Its style is very turgid and artificial; but it is one of the few prose works of Sanskrit light literature, and so is of some value in a linguistic point of view. It was the late Professor H. H. Wilson who published the text, and he prefixed to his book a full analysis of the work, which gave as clear an account of the story as it is possible to give, and pointed out the few points of general interest which are to be found in it. While we appreciate Mr. Jacob's desire to give the world some benefit of his studies, we heartily wish that he had selected some other work more deserving of his labour and more certain to be acceptable.

We shall not attempt to give anything like an outline of the stories, for they are as artificial as the language in which they are written. There is hardly a touch of nature in the work from beginning to end, and there is so little of character and individuality that the reader is constantly in confusion as to who's who. The writer himself was in one instance so far bewildered with his own creations that he has rolled two persons into one, by confounding their names. Though it is scarcely possible that any reader should find the book interesting, still it gives us some insight into the state of Hindoo society eight centuries ago, a period just preceding the inroad of the Musulman conquerors, when Hindoo institutions had become effete and society corrupt and dissolute. It would not be fair, however, to take the pictures drawn by this writer as exact and accurate, for they are evidently of his own invention; still his mind must have been influenced by the manners of the time and the scenes in which he lived, and his descriptions and the settings of his stories must have been somewhat in accord with what was passing around him. As Professor Wilson observes, "the portrait is not flattering; profligacy and superstition seem to be the characteristic features; loose principles, lax morals, and implicit faith in the power of occult rites and magical incantations."

The chief personage in these stories, the centre round which they all are drawn, is a prince of the kingdom of Magadhā. His father the King, having been vanquished by the King of Mālwa, took refuge in the forests of the Vindhya mountains. Here his son the hero was born. The exiled monarch had with him three hereditary Ministers, and their descendants, seven in number, with two sons of a friendly King, make up with the prince the "ten youths," for *kumāra* means youth rather than prince. Several of

---

* *Hindoo Tales; or, the Adventures of Ten Princes.* Freely Translated from the Sanscrit of the Dasakumaracharitam, by P. W. Jacob. London: Strahan & Co. 1873.

these children were lost and recovered in most marvellous ways. However, they were all brought together and educated along with the prince, and a very curious education it was. Acquaintance with languages, skill in arms, and in the management of horses and elephants, a knowledge of tradition, polity, rhetoric, logic, and music are accomplishments worthy of princes; but to these are added the more abstruse subjects of metaphysics, law, the Vedas and medicine, and astrology, magic, skill in gambling, and dexterity in thieving. With such a curriculum of study there can be no wonder that the baser arts predominate in the adventures of the various personages. Unscrupulous lying and deception, ready and specious invention, craft, cunning, and cheating, theft, robbery, and murder, pervade the whole; and all this is not only described without one word of reprobation, but is rather held up as justifiable, and even admirable, in the pursuit of success. Supernatural beings, sometimes beneficent, but more often malevolent, frequently appear in the narratives, and supernatural powers acquired by penance and magic arts are constantly employed—all forming a picture of depravity, credulity, and superstition which is relieved by only a few amiable touches. Some traits of courage and boldness, love for relations, fidelity to friends, and tenderness for the objects of their affections, however easily and irregularly won, relieve the darker shades. As to the ladies, the most remarkable feature in them is the readiness with which they give and declare their love, even when unasked, and the openness with which they describe their sensations, both mental and physical.

On the prince and his friends approaching manhood they are allowed to go off together to see the world. The prince is soon afterwards induced by a stranger to leave his friends and go with him, and help to recover his sovereignty of the infernal regions. He succeeds in his enterprise; but on his return he finds that his companions have disappeared. They have dispersed in order to search for him, and come together again after considerable intervals. Their adventures, as told to each other upon their reunion, are the ten stories. In the course of his wanderings the prince resides for some time at Ujayin, where he falls in love with the princess, the daughter of his father's conqueror. She is equally smitten, but a regular marriage being out of the question, the prince employs the aid of a friendly magician. This man gives an entertainment at Court, and after the exhibition of some marvellous performances—

> Turning to the King, he said, "It is desirable that the performance should end with something auspicious; I propose, therefore, to represent a Royal marriage, and one of my people will act as your daughter, another as a prince endowed with all good qualities. But first I must apply to your eyes this ointment, which will give you preternatural clearness of vision." To all this the King consented. Meanwhile the princess had contrived to slip out unobserved, and stood among the conjuror's people. The prince also stood ready, and the performance began. Thus, under the disguise of a piece of acting, the conjuror, being a Brahmin, was able to complete the marriage with all proper rites and ceremonies without any suspicion on the part of the King that it was his own daughter whom he saw before him; and the others, also unsuspecting, only admired the skill of the conjuror in making the actress so like the lady whom she represented.

Troubles follow, but in the end all comes right.

In another of the stories a courtesan is a prominent character. One of the wandering youths goes to a celebrated hermit, whom he finds in a state of great dejection. It seems that the hermit's great austerity had led to his being made the test of the fascinating attractions of a celebrated courtesan, who wagered that she would overcome his sanctity and lead him into folly. She succeeds, persuades him to dress in gay apparel, conducts him into the town, parades him in the public places, and then, having enjoyed her triumph, she says, "Reverend sir, you have favoured me with your company a long time; it will be well for you now to attend to your own affairs. . . . . I have won my wager, and have now no further occasion for you." This story, as Professor Wilson observes, "presents a curious picture of the pains taken with the education of such women. Not only were their health, their physical development, and personal beauty attended to; not only were the graces of deportment and elegance of attire and ornament sedulously studied, but their intellectual training was an equal object of vigilance; and they were taught a variety of subjects calculated to heighten their fascination and strengthen their understanding. Dancing, music, and acting formed their profession, and they were also taught to paint, to dress delicate dishes, to compound fragrant perfumes, and to dispose tastily of flowers; to play various games, to read, to write, and to speak different languages; and they were instructed superficially, it is said, in grammar, logic, and metaphysics. A remarkable picture is also drawn of the devices resorted to in order to bring them into public consideration, many of which may find a parallel in the contrivances by which public performers in European countries are sometimes forced into popularity." The hermit's young visitor is piqued with the conceit of this frail beauty, and determines to humble her. He proceeds into the city, and the first person he meets is another of her victims, a Buddhist mendicant, but formerly an opulent merchant. Next he enters a public gaming-house, where he was "amused by watching the players and observing their tricks, their sleight-of-hand, their bullying or cringing behaviour to each other; the reckless profusion of the winners, the muttering despair of those who had lost." He sits down to play, and wins sixteen thousand dinārs, half of which he keeps, and half he gives away to the keeper and visitors of the gaming-house. Soon afterwards he sallies forth one night determined on robbery by breaking into a house in the usual way by a hole made in the mud wall. He takes the following curious equipment:—"A dark dress, a short sword, a spade, a crowbar, a pair of pincers, a wooden man's head, a magic candle, a rope and grappling-iron, a box with a bee in it, and some other implements"—the wooden head being intended to be pushed through the hole in the wall to receive any blow that might be aimed at the robber, and the bee to be let loose to put out any light that might be burning. He goes through a variety of adventures, and falls in love with the younger sister of a courtesan; but the mother and sister oppose their union in consequence of his poverty—a somewhat strange objection, seeing that he carries on successfully his occupation of housebreaking. He overcomes their scruples by stealing from the King an inexhaustible purse, a purse of Fortunatus; and he avenges his friends upon the courtesan by persuading her that the purse is useless until she makes restitution of the property out of which she has cajoled them. The theft is discovered, the purse is restored, and an innocent person suffers for the offence. For the courtesan hypocritically states that it was a gift from one of her admirers, whom she dislikes because he is rich and niggardly. The hero gets into prison through a mad attack upon the city guard, who declare him to be "the robber." A complicated intrigue is carried on under his direction by the agency of his wife's mother, the mercenary mother of the courtesan. The governor of the prison is in love with the princess of the city, and he is persuaded to make a surreptitious entrance into the palace. To accomplish this he seeks the aid of his prisoner, the "skilful housebreaker." The fetters of the latter being taken off, he proceeds to form a tunnel under the walls into the palace. When it is complete, and the governor is about to make his entrance, the prisoner murders him, and goes on the adventure himself. He finds the princess asleep, and describes her charms, which are such that, although he has not been long married, he falls in love with her. Upon the wall of her chamber he draws a portrait of the princess as she lay, and of himself, kneeling at her feet. Under it he wrote a Valentine's Day kind of couplet, exchanged rings with her, and then left. She is of course attracted to her unknown admirer, and he obtains an interview with her, and deepens the impression. Soon afterwards the city is besieged and taken, and the conqueror is about to force the princess to marry him, when the hero of the tale, who has slipped into the palace, gives him a mortal wound with a sword, and defends himself against those who endeavoured to seize him, until he is rescued by the friendly help of his prince, who now makes his appearance, and to whom he tells his story. Well may the prince declare that he has "shown wonderful ingenuity and courage" worthy of his position, and well deserving the hand of the princess, whom we are left to infer that he won.

Another of the adventurers falls in love with a Queen who feels injured by the infidelity and dissolute manners of her husband. At the instigation of her lover she persuades her husband that by bathing in a certain lake, with some mystical rites, he will be transformed into a paragon of beauty. Meanwhile the lover has dug a hole in the side of the lake in which he hides himself, and when the King takes the prescribed bath, he dives under him, pulls him down, stifles him under water, and hides his corpse in the hole. Then the murderer comes forth as the metamorphosed King, to the great satisfaction of the Queen, and, let it be added, of the people, for the dead King was a great villain. "Truly," says the prince, "our friend here has committed great sins, but how can I blame him when his motives were so good?"

Another of the stories turns upon the amours of one of the adventurers with a princess who has to perform a very singular service. Her father, when he was childless, prayed to the goddess Durgā for offspring. She granted him a son and daughter, but the son was to be subject to the daughter and her husband whenever she married. The girl moreover was to have free choice in selecting her husband, pointing of course to the hero of the tale. In return for all this once a month she was to perform in public the "ball dance" in honour of the goddess. This performance is described in one of the most elaborate passages of the work and with the most minute detail, as if it were a matter of great importance. So curious is this passage that Mr. Jacob has given a literal rendering of it at the end of his book.

These are a few of the marvels, horrors, and absurdities of the stories. We gladly leave them to notice two or three points of some little interest which are to be picked out of them. The allusions to the Buddhists show that their religion still held a position of some importance, possibly even a predominant one in particular localities at the time the work was written. Another point of interest is that a King of Andhra, on the east of the peninsula, is represented as "sailing with a large fleet," and this can hardly be taken as a pure invention of the writer's. Indications also appears of the commerce with the Arabs on the western coast, but of this we know more from better sources. Professor Wilson was inclined to place some value on the geographical indications in the work, for it contains the names of many different cities and countries. Several of the cities or their remains are still known. The names and localities of the territorial divisions are the well-known ones that are found in the oldest authorities. These territorial names were familiar to the writer of the book, but it by no means follows that because he assigns kings to them they were then separate independent kingdoms. The little we know of the state of India at the time is adverse to the supposition. Some of them were real political divisions, but the kings of others were in all probability creations of the writer's fancy.

We are very sorry that Mr. Jacob has wasted his labours on

this unprofitable book. He is evidently capable of better things, and we hope to meet with him again upon some more worthy subject.

THE CHEQUE-BOOK OF THE CHAPEL ROYAL.*

THIS record is chiefly interesting to us from a side which its editor may not have thought of. The history which it contains is an example of the way in which institutions are not made but grow. The body of clergymen and others who are attached to the Royal Chapels cannot be said to be a foundation; they are not a corporation; they are not attached to any particular place; they do not seem to have any regular permanent statutes; they are simply part of the Royal household, attached to the Royal service for a particular purpose. We conceive that the whole constitution of the body depends on the personal pleasure of the Sovereign. Individuals may have vested interests, but there is no foundation with any real corporate being, like, for instance, St. George's Chapel at Windsor. But the records here published show that the body whose nature seems to be so precarious came, we suppose, by usage, to take to itself many of the attributes of a corporation. The meetings of the body are called Chapters, and they act in many points like a real Chapter. They seem to exercise a certain measure of authority in the choice and admission of members of their own society, and to make, if not formal statutes, at least rules and orders which are clearly meant to have a binding force on their own members. But all this is closely analogous to the way in which the Cathedral Chapters themselves grew up, and it is still more closely analogous to the way in which the colleges of Vicars grew up alongside of them. The Chapters, at first the mere following of the Bishop, gradually grew into bodies independent of the Bishop; the Vicars, at first the mere hired deputies of the Canons, gradually grew into bodies which for many purposes are independent of the Chapters. In these cases, however, the change was crowned by a regular foundation and endowment, giving the bodies which had grown up the legal *status* of corporations. But the Chapter of the Chapels Royal has never received any such foundation and endowment; as part of the King's household, existing solely for the purpose of keeping up divine service in the King's chapels, it hardly could have received such a character. In two cases indeed—the suppressed College of St. Stephen at Westminster and the still existing College of St. George at Windsor—a Royal chapel has received a foundation and endowment, and has thus become an independent collegiate church. But those foundations are local; it is of the essence of the company attached to the Chapels Royal that they are not local. It is merely by a custom dating from the beginning of the last century that they are attached to the particular chapel at St. James's. The King has, as part of his household, a body of clergy and singers, ready to follow him about like the rest of his household, and to perform divine service in the chapel of any of his Royal houses in which he may be dwelling. The two chief members of that body, the Dean and Sub-Dean, are Dean and Sub-Dean of "Her Majesty's Chapels Royal" in the plural, and their authority extends over the Royal chapels at Whitehall and at the Savoy just as much as over that at St. James's. In the present volume we find the Dean in the days of George the First and Second acting as Dean in the King's French, Dutch, and German Chapels, of which the last two seem, though we are not quite sure, to be distinct places. The office of Dean of the Chapels Royal is in no way attached to the see of London, though of late the Bishop of London has commonly held it. Quite lately Bishop Blomfield, after he had resigned the Bishopric, still kept the Deanery of the Chapels, and in former times the Deanery was held by whomever the King chose, very often by a Bishop of some other see. An illustration of the ambulatory nature of "the body of the Chapel Royal" is found under George the First. On January 20, 1715, there was a public thanksgiving at St. Paul's, when the Sub-Dean and Gentlemen of the Chapel attended and officiated, the Cathedral "being the King's chapel on this occasion." The same principle, it will be remembered, was followed, though not quite with the same results, at the Thanksgiving of last year. But nine years later, in 1724, "when His Majesty King George designed to be present at divine service in the collegiate church of Windsor within the Castle," the Sub-Dean and others of the Chapel Royal proposed to accompany him thither, "alledging it," as the Sub-Dean says, "as our duty and our right so to do." A subtle distinction was drawn in answer:—

> Mr. Vice-Chamberlain acquainted me that his Majesty intended to be present at Divine Service in the above mentioned Collegiate Church as Soveraign of the Garter onely, and to present the offering requir'd of the Knights of that noble Order, and that the performing Divine Service at that ceremony belonged only to the members of that church. Had his Maj. honor'd that church with his royal presence at Divine Service as King on any other occasion, our claim of discharging our several duties before his Majesty would have been allow'd as in a Royal Chappel, and the whole function committed to the charge of the Officers and Gentlemen of the Royal Chappel onely.

We are told in the preface, on the authority of Dr. Jebb, that the same rule was carried out within living memory when George the Fourth caused his Chapel—as the phrase would have been in earlier times—to follow him to Brighton.

The Society of the Chapel Royal has naturally been rich in eminent musicians. In the days of the Tudors the Sovereign had the full pick of his kingdom to draw upon at his pleasure. Boys with good voices were pressed for the King's chapel, as in earlier times masons were pressed for building his castles, or as in later times sailors were pressed for manning his navy. This practice is spoken of by Dr. Rimbault in his preface, and it comes out, along with the wandering character of the duties required of the King's ecclesiastical servants, in some verses of Thomas Tusser, which we quote from memory:—

> For sundry men
> Had placards then
> Such child to take.
> The better breast
> The lesser rest;
> To serve the quere
> Now there, now here.

A great number of the most famous English composers of the last three centuries have filled one post or another in the Chapel Royal. Of these musical worthies, whose names are to be found in every anthem-book, Dr. Rimbault has given us biographical notices in the notes at the end of his volume. Such, among others, was the famous Thomas Tallis, the great English musician of the sixteenth century. Like Bishop Kitchen of Llandaff in his own day, and like the real or mythical Vicar of Bray at a later time—we might in truth say, like the great mass of contemporary Englishmen, both clergy and laity—he kept steadily at his post through all changes. Appointed Gentleman of the Chapel under Henry the Eighth, he sang on under Edward and Mary and down to the day of his death, twenty-seven years after the accession of Elizabeth. But it should be noticed that he was not, strictly speaking, organist. In his day there was no such distinct office as that of organist in the Chapel Royal, any more than there still is in the Old Foundation Cathedrals. In theory every Vicar or Gentleman of the Chapel is supposed to be fit to play the organ; in practice the duty is given to some one who by virtue of some other office, as Sub-Chanter, or Master of the boys, is clothed with the authority which modern practice requires to be put in the hand of an organist. It is at a time a little later than that of Tallis that we begin to hear of the organist as a distinct officer. Tallis, as we have seen, seems to have soared above the storms of theological controversy; but one of his pupils, William Bird, though appointed a Gentleman of the Chapel under Elizabeth, got into trouble on account of his real or supposed Popish leanings, and was, along with his wife, denounced, with what result does not appear, as a recusant and a seducer of others to Popery. These are followed by a crowd of other names of more or less note—Purcell, Gibbons, Boyce, and most of the best known composers of English Church music having at some time of their lives held some post in the Chapel Royal. This makes the book valuable and interesting, as amounting almost to a history of the most eminent English ecclesiastical musicians.

We note a few curious points as we go along. In the days of the British Solomon, if not at any other time, places in the Chapel Royal were sold; two such cases are entered in 1605 and 1609. And it was common for a man to be appointed and sworn in, though his pay was not to begin till the death or other removal of some one already in possession. Such promotion might sometimes come earlier than could have been reckoned on in the regular course of things, when we read how

> Mr. John Cave, one of the Gentlemen of his Majesties Chappell Royall, goeing home to his lodgeing upon the 30th of January, about 7 or 8 of ye clock in the evening, about the new Exchange, was by one James Elliott, a Scott, run through the body, of which wound he departed this life the 16th day of February following 1663.

Some of the acts of the Chapter are curious. A great many orders are made against people asking for this and that without the general consent—a good illustration of the position of a body which acted as a kind of corporation by sufferance. Thus, in 1592, William Phelps was

> admitted by our generall consent (*quoatum in nobis est*) by corporall othe, an extraordynarye man into our companye, with this proviso, that he shall not at any tyme hereafter, he shall not by any means whatsoever, private or publick, secrett or open, make suite or obteyn to be ordinarye or to receive waiges with us without the special consent in Chapter of the Subdeane or Substitute in his absence, and the consente of soche, or the moste parte of soche, the ordynarye gentlemen as then shal be present for that cause or other in chapter then assembled.

The qualification in brackets, the italics in which belong either to the original document or to Dr. Rimbauld, recognizing in the body a qualified, but only a qualified, voice in the choice of their comrades, marks a stage in the process by which the colleges of Vicars and Minor Canons have come to have some share in the election or appointment of members of their own body. In another act of the same year we find a process exactly opposite to that of the *congé d'élire* and letter-missive. The Chapter petitioned Queen Elizabeth to elect and admit Anthony Anderson as Sub-Dean, which her Majesty accordingly did by her special grace. On the other hand, in 1603, after the accession of King James, we find strict orders which seem designed to check any pretensions on the part of the members of the body to a voice in filling their own vacancies. The Sub-Dean is especially ordered by the Lord Chamberlain to swear in Edmund Sheregoulde "extraordinary in the chapple," "the which accordinglie was donne in the presence of these gentlemen of the chapple whose names are here under written, without their approbacon, or allowance of the sufficiency of the said Edmunde for that place, their

---

* *The Old Cheque-Book, or Book of Remembrance, of the Chapel Royal, from 1561 to 1744.* Edited by Edward F. Rimbault, LL.D. Printed for the Camden Society. 1872.

opinions for the same beinge neyther required nor commaunded." Yet in the next year William West was sworn in "at the especiall request of dyveres of the gentlemen of the chappell whose names are under written," but on the condition that he "shall not suie by any meanes, directly or indirectlye, as by freindes ore otherwise, to com to be sworne into ordinarye in his Highnes sayde chappell untill he be firste called and approved fitt for the same by the Deane, Sub-Deane, and the majore part of his Majesties Chappell."

Other orders of the Chapter touch the good discipline of the body and the better performance of divine service, and sometimes impose punishments on refractory members, as, for instance, in 1618, in a Chapter called by order of the famous Bishop Andrews, then Dean, Cuthbert Joyner, Sergeant of his Majesty's Vestry, received a sentence, the nature of which we do not fully understand:—

> For sunderie contemptes made againet the said Lord Deane and his commaundmentes (to whom he is sworn to obey), for the same his contemptes an admonicõn with a prick was sett uppon his head, as is used in his Majesties house in such lyke cases, intendinge heerby his amendment and reformacõn.

This last is like the practice of the Ecclesiastical Courts, which do everything for the soul's health of the offender; but in the case of Cuthbert Joyner, it seems that disgrace was less powerful than an appeal to the pocket, for he is presently charged with a great number of new offences. "For all these thinges it is comaunded by the Lord Deane that he shal be checked the some of forty shillinges to be staied to his Majestes use out of wages next growinge and due to him." Another order is made in 1724 for the removal of all doubts and disputes about "a play-week or week of vocation from all choir attendance," which had been always allowed after the holidays of Christmas, Easter, and Whitsuntide. This play-week is not unknown in some other choirs and places where they sing, though there are others of a robuster nature which contrive to get through the year without any break in their duties whatsoever. There are also a good many entries bearing on other matters than the mere constitution of the body. Amongst others, there is a description of "the Princely comminge of her Majestie to the Holy Communion at Estre," 1593, in which Sub-Dean Anderson enlarges on the Queen's inward devotion in a strain which makes us understand the frame of mind of those who put together the opening of our present Prayer for the Queen's Majesty. It is much too long to quote, but it is almost worth getting the book on purpose to see it. The wonder to our mind is, how one, who after all was mortal, could do anything which could be called an act of worship while she was so worshipped by her fellow-worshippers.

There are some cases of marriages and publications of banns. Among these last we find "I aske the banes of matrimonie betweene the two great Princes, Fredericke Prince Elector Count Palatine of Reine of the one partie, and the Lady Elizabethe her Grace, the only daughter of the highe and mightie Kinge of Great Brittanny [*sic*] of the other partie." We find also the entry of the first marriage of Lady Frances Howard, and also "the banes of matrimony betweene the Right Honorable personages, Roberte Earle of Somersett, of the on [*o*] partie, and the Ladie Francis Howard, of the other part," and the formula goes on as usual, "if any man can shewe any just cause why these may not lawfully be joyned together, lett him speake." Later on there is the entry of her marriage with Somerset.

There are a good many cases illustrating the lingering on of old customs and titles. Incense was used in the reign of Charles the Second, and, if we rightly understand, as late as the coronation of George the Third. There was the Epistoler, the Gospeller, the Deacon, the Confessor of the Household, some indeed of which offices, if not all, exist still. There does not seem to have been so wide a distinction as now between the Priests in Ordinary and the Gentlemen of the Chapel. The style, so to speak, of the body seems to be Dean, Sub-Dean, Chaplains, and Gentlemen; but many of the Gentlemen are in holy orders. This again is just like the way in which the distinction between Priest-Vicars, Vicars, and Lay-Vicars grew up in the Vicars' colleges of the Cathedral churches. At the coronation of Charles the First the whole body, whether clerical or lay, seems to have worn both surplices and copes.

THOMSON ON FRUIT CULTURE.*

THAT Mr. Thomson, of whose *Handy Book of the Flower-Garden* favourable notice was taken some years since in these pages, is qualified by skill, experience, and opportunities of observation for the large subject which he takes up in his present volume, may be inferred from his labours at Drumlanrig Gardens, as well as from his able treatise on the culture of the Pine-Apple. The scale of operations which he has to conduct in the exercise of his craft is, as those are aware who have visited the valley of the Nith, commensurate with the other pretensions of the finest ducal residence in the South of Scotland. Out of the fulness, then, of his practical knowledge Mr. Thomson has undertaken to furnish a succinct body of hints on fruit culture under glass, including the culture of pine-apples, peaches, nectarines, grapes, figs, and strawberries, and likewise of melons and cucumbers. His volume will be welcome to a large number of readers for its sound and useful suggestions. "Pine-apple culture" may be left to experts; but the parts of the book which treat of grapes, melons, and cucumbers will possess an interest both for amateurs and professionals, while those who have hitherto looked upon forced or glass-grown peaches, figs, and strawberries as inaccessible luxuries, may be tempted by what Mr. Thomson sets forth to try to grow them in this way. A great inducement to do so is the uncertainty of our climate, which is apt to disappoint the fondest hopes of those who look for any of these fruits from outdoor beds and borders. In the case of strawberries, which are often failures out of doors from the coldness or damp of the soil, and the fickleness of the sun, culture under glass in pots, without extending to the six thousand pots annually of some large forcing establishments, may recommend itself to the modest possessor of a greenhouse or a pit, or to one who is induced to build a strawberry-house (such as is figured in p. 239) by the consideration that, if the back stage of such a house is moveable, its room and the back bed may be used for other purposes when the strawberry season is over. With regard to other fruits Mr. Thomson's instructions are equally serviceable.

The antiquarian reader who grows no cucumbers, and makes no pretence to his own vine or fig tree, will find in this *Handy Book* a good deal of interesting information; for the author prefaces the pages devoted to each fruit with curious attempts to trace out its origin. Thus he surmises that the Phœnicians introduced vines into Britain at the time when they carried away tin as back-carriage; he tells us of the early success of vineyards at Arundel Castle (he should have said in *Sussex*, not *Norfolk*), where, in 1763, seventy pipes of home-grown wine lay in the cellars; and he fixes 1718 as the date of the first application of artificial heat to the vine at Belvoir Castle, by the medium of flues in the walls. The peach and nectarine he traces, with Decandolle, to China rather than Persia; and *à propos* of the melon and the cucumber, he notes the Mosaic mention of both, and the popularity of the former in Imperial Rome. Our modern taste for cucumber with salmon reminds him of the regrets of Israel in the wilderness for "the fish with the cucumbers, and the melons, which they did eat freely" in the house of bondage (Numbers xi. 5). We believe that fish and cucumbers are also abundant and popular in modern Egypt. The Roman culture of the melon and the cucumber began with Tiberius. Cucumbers were served every day at that Emperor's table, his gardeners, we are told by Pliny, wheeling the plants out into the sun on moveable frames in fine weather, and in winter placing them under the protection of glass. This glass or talc bore the Latin name of "specularia", which is applied to a hot-house for forcing fruit and vegetables in an epigram of Martial (viii. 14), where it is said to admit clear suns and fogless day ("sine fœce diem"), and to have faced the south. In that early day vitreous substances for such a purpose must have been scarce and dear.

Our space will not allow us to do more than glance at one or two of the divisions of this work; and we turn to the vinery as a topic of most general interest. In choosing a site for a vinery, we are bidden to seek a south slope sheltered from the north and east, but not shaded, and to avoid a low damp situation with the chance of stagnant water—inimical to all fruits—as a bane only equalled by the dry gravelly subsoil which suffers most and quickest from drought. Lean-tos are recommended for early forcing, in which the heat process begins in October or November with a view to grapes in March or April. This form of house presents its whole surface of glass to the sun. Large panes and light woodwork, painted white, should also subserve the purpose of attracting the sun to the tender vines. A system of hot-water pipes over the concrete and covered in a shallow chamber by pavement, over which the drainage is placed, is a great advantage in applying artificial heat to the soil. As to ventilation, the object of it should be to avoid the ingress of cold air currents, and to introduce air of a suitable temperature into the body of the vinery. Mr. William Thomson's plan is quoted at p. 57 as most efficient for this object. For midsummer grapes a span-roof house is best, running north and south, because it gets the sun longest, and catches it all the day round. We observe that Mr. Thomson is strongly in favour of large and airy vineries, as well as melon and strawberry-houses, as most promotive of flesh and flavour, and also because they can be "fired to a given temperature more steadily than small ones." "A thin wedge of iron is sooner heated and cooled than a thick one." The directions for drainage, which are very minute, depend as to their stringent observance on the subsoil and rainfall. A healthy gravel will not require the same precautions as retentive clay, or a rocky or over-dry soil. The rule to be observed is based on the vine's need of moisture, but strong objection to stagnant moisture. Very full directions are given as to the composition of vine borders, with an eye rather to continuance of crops than production of monster bunches. The deep retentive over-rich border is not the one to promote such longevity as the French and Italian vineyards boast; and the constitution of those Scotch and English vines which Mr. Thomson cites as from eighty to one hundred and fifty years of age has not been made what it is by large and ill-advised infusions of manure, still less by "carrion borders," but by the choice of a rather strong but friable loam, a medium between the light sandy soil and that which has too much clay in it. The best soil for vines, as for peaches also, is a calcareous turfy loam, the top spit, to the depth of six or seven inches, of an old pasture field. This should be taken up when frozen, in order to avoid the tenancy of the wire-worm; should be stacked for some months before use in the compost yard; and should eventually be chopped

* *Handy Book of Fruit Culture under Glass.* By David Thomson, Author of "Handy Book of the Flower-Garden," &c. &c. London and Edinburgh: William Blackwood & Sons. 1873.

up and mixed in stated proportions with lime rubbish, charcoal, bones, horn-shavings, and horse-droppings.

Amongst varieties of vines for early use a marked favour is justly shown to the Black Hamburg, whilst in the case of later grapes the honours are divided between Lady Downes and the Muscat of Alexandria. As to the time and manner of planting, Mr. Thomson lays greater stress upon the latter. You must not plant too thick, and your aim must be to make the roots take firm and equable hold of their new soil after transference from the pots. This is attained by washing the roots clean and clear in tepid water, spreading them out with care, and taking pains with their repacking in their new earth.

Into the details of the treatment of vines, the aim of which ought to be the largest amount of well-ripened wood and roots, so as to get vines in the second season which shall yield first-rate grapes in the third, it would be idle to attempt to enter. Rubbing off buds, watering, temperature, training—these are the heads of the first year's work; whilst the second is concerned with careful pruning, repression of luxuriant lateral growths, guarding against over-dryness of root, and watch and ward against the red spider. Into the third and fruiting year, besides the questions of temperature and ventilation, crowd the peculiar anxieties connected with the coming crop. You must not syringe whilst the grapes are colouring, but supply the need by moderate steaming and sprinkling. You must, as they colour and ripen, admit more and more air, though at a good many points, and in small quantities. Then there is the earlier thinning at the shoot-tying time, and the later and final one when they are out of bloom, not to speak of the mysteries of weight of crop, of disbudding, spur-pruning, and training. As to the last, our author prefers a compromise between the one rod and the extension system, and thinks that a vine limited to two main rods is more under the control of the cultivator, and best adapted for early forcing. Valuable hints are given as to keeping grapes in the vinery through the winter. Circulation of air and avoidance of damp are the main cautions; but we suspect that many a country gardener of the double-debt paying school will stare at the very rational demand that, with an eye to keeping out damp from the inside border when grapes are beginning to colour, "not a pot plant requiring moisture be kept in the house." Full mention is made, with approval, of the long debated feasibility of preserving cut bunches of grapes through the winter, with their stems inserted in bottles of water having a few pieces of charcoal inserted in them, these bottles to be racked in rows in a room at an even temperature of forty degrees. Mr. William Robinson advocated this plan some years since in his *French Gardens*, at a time when it was generally discredited; but now, besides the testimony in its favour contained in Mr. Thomson's volume, we have that of Mr. Tillery of Welbeck, in the first volume of Mr. Robinson's valuable and elegant weekly, the *Garden*, which promises to become a most serviceable *Notes and Queries* to the horticulturist. Mr. Tillery at the time of writing had from 400 to 500 bunches of grapes in bottles of water, which had kept as well as if they had been still hanging on the vines. Another subject of interest is the pot-culture of grapes, which our author deems a very good substitute for the first month's supply of early sorts of grapes in March or April. By means of these the constitution of the permanent vines is husbanded and recruited, and they come in usefully if vines and vine borders want renewing. Sufficiently dwarf, they form a pretty table decoration, and their culture does not differ from that of permanent vines, save in the need of constant watering and feeding with mulching and manure water at the root. For improvement or variety, *inarching*, or striking an eye from a graft of a young ripened vine, and working it on to another (see p. 110), is an interesting and successful process; and there is much to be learnt from Mr. Thomson about setting up grapes for exhibition. On the pests incident to vines, too, he discourses learnedly; and though we regard his comparison of the "Phylloxera vastatrix pest" with the "rinderpest" as a bit of gardener's rhetoric, yet, considering the ravages of this army of mischievous strangers—no bigger than cheese mites—in foreign vineyards and home vineries, we are bound to accord him high praise for his supplement, from personal experience, to M. Planchon's paper in the Comptes rendus de l'Institut. Like the red spider, this insect thrives with drought. It swarms at points where the roots are driest. It cares little or nothing for other leaves, roots, or fruits, than those of the vine. It does not mind tobacco smoke, and the difficulty of extirpating it is enhanced by the depth of soil to be acted upon. Mr. Thomson thinks there is nothing for it where it appears, but to burn the vines, remove all the soil, salt the site of the border thoroughly, and wash and paint everything connected with the vinery before fresh soil is put into it. The ravages of the red spider, however, and of the diseases known as *shanking* and *scalding*, are almost trifles in comparison with the phylloxera, which is only met by stamping out.

There is much attraction in the subject of peach and nectarine culture under glass, in reference to which the same hints as to houses, light, soil, and so forth apply as to vines; one hint to be borne in mind with regard to the soil being that limestone districts produce the finest stone fruit both in and out of doors. In this country the stocks for budding peaches and nectarines on are the Mussell plum, or the Brompton or Mignonne plum. In France the kindred almond is a more suitable stock, though it would not do in our climate. The French also use the St. Julien pear as a peach stock. Mr. Thomson prefers fan-training to any form of cordon; and he is against root-pruning in the cases of peaches and nectarines. Moderate forcing produces finer peaches than rapid forcing, and the peach dislikes a close stagnant atmosphere; so that there is need of caution in watering and syringing and avoiding the extremes of undue moisture and dusty dryness. We do not see that Mr. Thomson anywhere pronounces an opinion upon the glass wall protectors, such as that patented by Mr. Ayres and described in the *Garden*, vol. 1, p. 476, which, it should seem, would be a great resource for peach and nectarine culture where a wall already exists; though, of course, with a wall to build, span-roofed houses would probably be cheaper and more profitable in the end.

The pages upon melon and cucumber culture are singularly interesting on account of the modern alternative which they recommend to the old-fashioned dung-bed system. Both are now cultivated largely in houses, on trellises near the glass, and raised off the soil—a process which better ensures the due setting of the fruit, and renders less precarious very early or late crops. "Nothing is so hurtful to young melons as an over-close moist atmosphere at night, with too much heat," and it would seem that this caution is more easy to observe in the melon-house, than when the fruit is produced on the old fermentation plan. The impregnation of the fruit also is less often a failure in the houses than in the frames and hotbeds. By the observance of Mr. Thomson's minute and practical directions, the melon-house, we conceive, would become a delightful and instructive place of resort, and those who visit it would be free from the trouble of lifting and closing the sashlights as in a melon-frame. There is, too, as our author suggests, some advantage in having the melon-house—a lean-to—for earliest and latest crops, and dung-frames or pits for the summer interval. The directions as to soil, watering, and setting the fruit, will be found intelligibly and simply detailed in pp. 215-20. The cucumber-house is indeed a very modern appliance, which revolutionizes our old-fashioned ideas, and the more so as we get very good and shapely cucumbers out of the old pit or frame. Indeed Mr. Thomson by no means ignores these; but, on the contrary, gives directions for the supply of cucumbers from March to November by means of the brick pit heated with stable-litter and leaves, as well as in the more substantial houses of which the beautiful structure figured in p. 263 is an excellent and captivating type. The old dung-heated pit for the growth of cucumbers from October to July he regards as "one of the best illustrations of being penny wise and pound foolish." It should be added that a calendar of operations concludes the volume, and that there is an index which, though brief, is quite sufficient for the purposes of the practical reader.

CHESTERLEIGH.*

WE concede the merit of a good sensational plot to the author of *Chesterleigh*, so far indeed as sensationalism run mad can be good; but we cannot say much for the workmanship. It is not given to every one to bend the bow of Ulysses; and those who try to walk in the footsteps of Miss Braddon and Mr. Wilkie Collins may chance to find themselves lost in bogs and jungles which the technical skill of those veteran sinners against probabilities enables them to avoid. This has certainly happened to the author of this book.

Chesterleigh is the record of the fortunes, or rather misfortunes, of the noble house of Wentwood, and of Mr. Edmund Worsley, the tutor and assumed biographer. The title of the book is the name of the place; and the family consists of Lord and Lady Tenby, their two sons—Lord Usk or Evelyn, and George Wentwood—and of one daughter, Lady Grace Wentwood. We would remark, however, before we go further, that we cannot understand why the younger son is only plain George, while his sister is Lady Grace; or why they all become Evelyns at the end. Had they two names—Evelyn as the family, Wentwood as the titular, surname? Lord Usk for the second title and Lord Tenby for the earldom we can understand; but the confusion between Evelyn and Wentwood, and the partiality which gives the title of Lady to Grace, and not that of Lord to George, are mysteries beyond our power of solving. Of these two young men, Lord Usk or Evelyn is the author's darling. He is wonderfully handsome, and "Mr. Worsley" dwells on his personal beauty with the rapture of a love-sick woman. Besides being handsome—with the regulation dark grey eyes, aquiline nose, and short upper lip consecrated to *les jeunes premiers*—Lord Usk is clever but odd, cherishes vague bold thoughts about things, which the author however mentions only as a fact and does not make manifest in detail to the reader, is given to fainting fits, and has a heart disease. George, plain George, is stronger and more manly. He is free with his hands and his tongue on occasion; and, though by no means a paragon of literary skill, is more healthful and less sickly than his sentimental brother; while Lady Grace is her brother Usk in petticoats, only "less fragile and shadowy," although she too "is tall, and slight, and bending." The Earl is a gigantic man. "Great height set off by remarkable size and strength of limb, united with handsome, strongly marked features, to render him by far the finest man I ever saw," says the biographer. But he turns out to be as wicked as he is gigantic; not very unlike one of those queer hybrids who used to play the part of "demon lovers" to silly women in olden times, proud, silent, self-willed, unforgiving, and daunted neither by danger nor by sin.

* *Chesterleigh*. By Anstey Conyers. 3 vols. London: King & Co. 1873.

Persons of the most unlikely kind are mixed up in the affairs of the great Earl. For the one part, a half-witted old gardener, or odd man about the place, belonging to Mr. Worsley's clerical father, knows more of my Lord than he thinks wise to tell. By way of preface to the sequel, he goes off into a fit when he hears that Master Edmund is "goin' arter the almighty of the earth," and that those almighty are Lord Tenby and his family; and from that time forward he will not speak to nor look at the young man. For the other part, a South Devon farmer and his family hold some mysterious hooks which find as mysterious eyes in the recesses of Chesterleigh; of which Mr. Worsley the tutor is made the depositary. We have a death-bed scene, wherein the most important and damaging documents are handed to the tutor, and where "a loud sudden crack in the woodwork towards the door," and afterwards a "dull grating sound, as if the branch of some neighbouring tree, bowed by the wind, was sweeping down the wall," and the sight of "one of the men creeping round the low outbuildings that abutted on the house" prepare the reader for eavesdroppers, with consequences, after the manner of *No Name*. But indeed the book abounds with eavesdroppers. They swarm through the pages thick as gnats on a summer's evening. Like Macbeth's witches, they start up apparently out of the ground, and vanish by the way they came. Every one concerned is always hearing voices in unaccustomed places, with apparently no bodies belonging to them; and every one sees men and women of solid substance walking in the sunshine or creeping in the shadow, who, when they are looked for, are nowhere to be found. This trick is repeated again and again till the reader wearies of the stale device. It recalls Mr. Wilkie Collins by its too evident imitation; but it lacks the touch of the master-hand; and a well-worn trick feebly repeated is not the kind of thing to ensure respect. Poor Mr. Worsley is especially persecuted by these gnat-like creatures of mystery and easy disappearance. Having come to the knowledge of certain nefarious proceedings which have been perpetrated by the great Earl in times past, he is "wanted" by the other side; and every kind of engine is set to play against him, from the fascinating ways and marvellous eyes of scampish little Mrs. Vivian Carbery, to the temptations, bullyings, and threats of Mr. James Copestone. Mr. Worsley, however, keeps the secret till it is wrested from him by other means: proving his loyalty to his employer at the expense of his regard for truth, and shielding his beloved Evelyn and his adored Grace as long as he can from the righteous consequences of their father's sin. But, with all his tenacity, Mr. Edmund Worsley is emphatically what schoolboys would call a "duffer," and acts more like an hysterical girl than a man of ordinary nerve and understanding.

The amount of crying which the men of this veracious history get through in the course of their paper lives is something prodigious. Mr. Worsley leans on a table and bursts into tears because he finds his father has gone to Oxford when he gets home on a summons from his mother, and his mother cries too for sympathy. In Isaac's story the great Earl, this demon-lover kind of person, "fell on his knees and laid his head upon the table, weeping and wailing like an infant, because his father had not turned him out for the beggar he was, instead of bringing him up to what was not his own"—that is, when he goes to discover by the registry whether he is illegitimate or not, and, finding that he is, determines to mutilate the registry and destroy its evidence; a manner of action which one would have thought demanded stronger nerves than a weeping man possesses. Mr. Worsley again "pours out hot tears" because Evelyn, or Lord Usk—"Child of my toils, my anxieties, my cares, my sorrows, and my love!" as he calls this well grown young man who cannot be more than three or four years his junior—tells him he is going to die when he finds out that his father is not legitimate, therefore not the Earl of Tenby, and that he is in consequence not Lord Usk. George cries bitterly when his brother dies, which is perhaps more natural, but not pleasant; and old Mr. Worsley "weeps with joy" whenever Grace, now his daughter-in-law, "made some apt remark upon a favourite author, or requested repetition of some knotty point, the elucidation of which had cost him many an hour's labour." They are a miserably maundering and low-spirited set throughout; and in all they have to do they never forget that such is life, and that we walk in a vale of tears. When the crash comes Mr. Worsley and his family befriend and shelter Mrs. and Miss Evelyn as the ex-Countess of Tenby and Lady Grace are called. That crash, by the way, has been a tremendous affair. Lord Usk finds out his father's infamy, and dies sweetly; Lord Tenby drowns himself in his own pond; and Harold Wentwood and his artful little wife take possession, as they had the right to do. Then Mr. Worsley dares to love and hope. "To stand and gaze upon her face when she was perhaps unconscious of my presence, to hear her voice, though her words were given to others, was joy to me," he says. But immediately following the next paragraph, which dilates on the "scarcely real world of happiness" that seemed open to him, and how he "felt that with her his weary, wounded spirit would find its long last rest," he adds the well-known words of Mr. Toole, "And yet I was not happy."

If the framework and certain circumstances of *Chesterleigh* remind us of Mr. Wilkie Collins, the characters have an echo of Miss Braddon. The Lady Audley of Anstey Conyer's brain is Mrs. Vivian Carbery. She is a kind of female Count Fosco for the ease with which she can be in two places at once, and the penetration that can see through stone walls and understand the remotest meaning and consequence of the most unimportant deed. She is a beautiful little widow, with small hands, a caressing manner, magnificent eyes, and a heart as black and hard as a coal. It is darkly hinted that she had had a hand in the murder of her first husband, and that she had led an improper life in the regiment; while the amount of iniquity vaguely schemed by her in the Tenby affair is illimitable. But the author has made out this part of the picture insufficiently. It is good to have something left to the imagination, but not too much; and to be constantly asking oneself what does it all mean, and never getting an answer, is an exercise of the understanding that becomes at last more fatiguing than profitable. There is a certain mad gallop which Mrs. Vivian has with Lord Usk, culminating in a desperate leap; does the author mean that she hoped to kill him then, as one of those who stood between her and her beloved hopes? And does the fighting scene, where George uses his fists "cleverly," point to the same result? Her incessant oglings and dark sayings showered down on Mr. Worsley, dark enough at the time, become more intelligible as the story advances, and the drift is at last made visible. Else one puzzles oneself in vain to make out the target at which these dusky arrows are aimed. We think, however, that we can discern one point—namely, that Mrs. Vivian Carbery tries to work on Mr. Worsley's love for Grace, and on Lord Usk's love for Hester Clive, to induce the tutor to tell the truth, bring down the family to his own level, and make themselves all as happy as they could be among the ruins. It takes a long while to discover this; but we present our readers with so much of a key to this sketchy, confused, and entangled book. Mr. Worsley, being of the feminine type, as feminine in his own way as his beloved Evelyn, whose "soft brown hair" he fondly smoothes from his pale pure brow, and whose beauty he is never tired of admiring, occupies himself greatly with Mrs. Vivian Carbery's little child Bobby. Such a tutor as he would indeed be an invaluable blessing to mothers. He plays at bricks with the little fellow, carries him about, puts him to sleep with cradle songs, retails his conversations, and expatiates on his wan face and large uncanny eyes with all the nursery fondness and experience of a mother or of a spinster aunt. The name on the title-page of *Chesterleigh* has a manly echo with it, but we read it with a doubt; for never in our own experience have we come across a young fellow of three and four-and-twenty, as Mr. Edmund Worsley was, who, after a creditable college career, cries like a girl on small occasions, maunders about the lovely face of his grown pupil, nurses and cradles a child like a woman, and finds every trial of life, no matter under what shape presented, almost more than he can bear at all—certainly more than he can bear with dignity or manliness. We do not of course presume to put any limit to the "womanliness" of certain men; but we confess that Anstey Conyers seems to us to go far towards proving himself an impersonation of masculinity only after the manner of Bottom's line. Add to other characteristic traits slipshod diction and doubtful grammar—"It was certainly not him!" is an example by no means solitary of its kind—and we think that *Chesterleigh* will have to be relegated to the special limbo appointed for the reception of feminine failures in three volumes.

GERMAN LITERATURE.

KING LOUIS I. of Bavaria* hardly belongs to the class of sovereigns whom one takes seriously; an air of comedy, not to say burlesque, is inseparably attached to the memory of his reign. Yet that reign was long and not devoid of usefulness; in one respect at least it was highly distinguished; and while it is impossible to resist the impression to which we have referred, it is by no means easy to justify it by dispassionate argument. The case is probably an exemplification of Goethe's profound remark that all men are identified in our minds with the circumstances under which they take their last leave of us. The inextinguishable ridicule attaching to the King's final disappearance from the political scene under the auspices of Lola Montes has impressed upon his career a stamp of absurdity which could not have applied to it if the affair had been an episode instead of a catastrophe. As delineated in Herr Heigel's partial, but by no means adulatory, pages, Louis seems to have possessed many of the attributes of a king. His abilities were fair, his intentions excellent, the circumstances of his reign were not exceptionally difficult, and allowing him a large stock of foibles, it is still certain that many sovereigns of far worse hearts and heads have contrived to make a creditable figure. His great defect would seem to have been a want of discernment, an inability to accommodate means to ends, to appreciate public feeling, or to penetrate the character of the persons about him. Nothing was probably more sincere in him than his moderation and tolerance in religious matters: yet he acted in such a manner as to incur the imputation of subserviency to the Jesuits, which indirectly occasioned the loss of his crown. Without, apparently, any intention of infringing religious liberty, he allowed himself to be committed to an unpopular course of policy by an Ultramontane Minister, and when at last he wished to retrace his steps, the royal prestige was too deeply impaired to be restored. It must be said that he was not the man to restore it; without being precisely an undignified, he had always been an unkingly, sovereign. The vivacity of his temperament, the purely æsthetic character of his taste, his

* *Ludwig I., König von Bayern.* Von C. T. Heigel. Leipsig: Duncker & Humblot. London: Williams & Norgate.

geniality, candour, and *bonhomie*, were all excellent qualities in a private man, but in a monarch needed reinforcement by others of which he was entirely destitute. His biographer, in giving him ample credit for all his virtues, seems to admit that these were in no way intimately connected with the discharge of his royal functions, and that he gained in real dignity as well as in peace of mind by his descent to a private station. If he lost anything, it was by the cessation of his ability to promote the public works which have made his capital what it is, and for which his biographer justly awards him the highest honour. Merit is also claimed for the warmth of his national patriotism, which, however, neither seems to have surpassed the emotion natural to a young volunteer in the War of Liberation, nor to have distinguished his subsequent government from that of any other average German sovereign. In fact, it did not prevent his treating some of the more indiscreet champions of the national idea with meanness as well as harshness, for which he is justly condemned by his historian. As a political history, Herr Heigel's work is clear and almost impartial, and it will also be found valuable as a record of the more memorable artistic achievements of King Louis's reign.

Franz von Sickingen * affords a good converse illustration of the *vixere fortes ante Agamemnona*. It is at best questionable whether, but for Goethe, he would have attracted so much attention from historians, who, however, notice being once directed to him, find him a picturesque figure in a stirring time. As the supporter of Luther and the friend of Ulrich von Hutten, he combines in a manner the religious and the humanistic aspects of the great reformatory movement of his age; while the independence of his turbulent career is a powerful comment on the disintegration of the German Empire even then. The numerous unpublished sources of information consulted by Dr. Ulmann do not appear to have materially modified the current estimate of his hero's stormy and passionate character, although they have added somewhat to our knowledge of various incidents of his life, especially his exertions to secure the Imperial Crown for Charles V. Apart from his encouragement of the Reformation, his principal claim to the gratitude of his countrymen, in his biographer's opinion, is his constant endeavour to impress a national character upon the Emperor's policy.

The historian of the disputed succession to the German Imperial Crown between Otho IV. and Philip of Suabia † prefaces his narrative with the remark that this is in every respect one of the least satisfactory periods of German history. It is that of the crumbling away of the monarchy of the Hohenstaufen, of the culminating point of the rival spiritual power, of civil war and famine in Germany—worse than all, of national degeneracy, and an almost total dearth of distinguished qualities among the princes and leaders of the people. To this latter remark, in Herr Winkelmann's opinion, his hero Philip afforded a conspicuous exception; his rival Otho is represented as a mere soldier, endowed with the characteristic bravery, rashness, and levity of his Norman blood, and always ready to sacrifice the interests of the State to his private objects. Although, however, the period offers little to gratify a patriotic German historian, it is full of movement and incident, and Herr Winkelmann's treatment of it indicates not only considerable narrative power, but a clear insight into the springs of political action.

The history of the movement towards the national unity of Germany ‡, up to the time when Prince Bismarck took it under his powerful direction, is scarcely more gratifying to national pride than that of the civil broils of the Guelphs and the Hohenstaufen. It is natural, and even praiseworthy, to forget this long series of melancholy failures in the final triumph; while in view of Prince Bismarck's signal services it would be ungracious to dwell overmuch on the fact of his being about the last kind of man to whom a thinking and cultivated nation would have chosen to owe its deliverance, could it have had a choice in the matter. The lessons of the sterile and abortive pre-Bismarckian era remain, and may be studied with advantage even in so uninviting a book as that which Herr Klüpfel is devoting to them. If humiliating in one respect, they are full of encouragement in another; for there can be no doubt that the level of political capacity has risen immensely in Germany since the days of the Frankfort Parliament.

Herr G. Schneider § calls himself a German publicist, by which term he apparently denotes a German newspaper correspondent. He takes credit, and not unjustly, for having remained at his post in Paris throughout the whole of the war, and now enjoys the reward of his tenacity in the opportunity of reprinting a digest of his letters and journals, in four thick volumes, from Napoleon III.'s experiment at constitutional government in 1869 down to the fall of the Commune and the initiation of another "essai loyal." A minute account of so remarkable a period cannot be devoid of interest, but its claim to notice is certainly not based upon literary merit, political insight, or access to exceptional sources of information.

Travellers in the Philippines have usually confined their attention very much to Manilla. Herr Jagor * has visited, and to a considerable degree traversed, all the important members of the group, with the exception of Mindanao. Though primarily a naturalist, he has devoted much attention to the social, industrial, and ethnological circumstances of the Archipelago, and his opinion on all these points is evidently of importance. He has consulted early historians and voyagers, and has been permitted to inspect the public archives. The chief drawbacks to so many advantages are a certain looseness of arrangement, and the fact that his visit is now twelve years old. In some respects his picture of the Philippines is flattering. Travelling is easy and safe, the inhabitants are hospitable and obliging, the authorities courteous and helpful, the beauties of nature inexhaustible, and the facilities of collection such that the naturalist can readily make his trip a source of profit. The relations of the Spaniards and the native population are also excellent, the latter being thoroughly domesticated by their adoption of the religion, and in some degree the manners, of their conquerors. On the other hand, the administration is faulty, corrupt, and overrun with placehunters; the industrial resources of the island are undeveloped, public works neglected, finances embarrassed; worst of all, Europeans and natives alike are given up to an indolence which will cost them dear when exposed to a competition with a more vigorous race. The Spanish system of monopoly and exclusion cannot endure much longer, and upon its fall the island may, we are told, be expected to pass to the United States, or in any event to be overflowed by an immigration of Chinese, who are only kept in check at present by a system of severe restriction. The author's sketches of scenery and manners are always attractive, and their effect is heightened by numerous spirited illustrations. Some of the facts incidentally mentioned, such as the occurrence in sepulchres of ancient Chinese vases, now prized as talismans, and the method of iron-working practised by a secluded race of mountaineers, are highly interesting. The appendix contains a paper by Roth on the geology of the Philippines, and one by Virchow on the native skulls brought over by Jagor and other travellers.

The German Arctic Expedition of 1869 † consisted of two ships, the *Germania* and the *Hansa*. They separated on the 20th July, owing to a misunderstanding of signals, and while the *Germania* pursued her course to East Greenland, the *Hansa* became entangled in ice, and was exposed to great danger. These embarrassments seem to have occupied not only the winter of 1869, but the working part of the following summer also; and the vessel ultimately returned without, as the voyagers admit, having added anything to our geographical knowledge. They take credit, however, for a courageous endurance of hardship which the readers of their adventures will readily accord them. Their voyage occupies the first volume of an extensive work, the second part of which will comprise the more important, though, we suspect, not very important, explorations of the sister vessel; while subsequent sections will be devoted to the scientific results of the expedition. The present volume is eked out by a history of geographical discovery in East Greenland, by Dr. Konrad Maurer, which is probably the most valuable portion of it. The narrative of the *Hansa*, however, is not uninteresting, is drawn up with clearness and modesty, and is copiously illustrated. The work indeed is admirably got up in every respect. The lack of decisive geographical results is unfortunate in every way, since it is these alone that can in general relieve the inevitable monotonous similarity of all histories of Arctic exploration.

Herr Otto Schneider is merely a tourist ‡, an observant and sensible one, however, who can describe what he has seen with point and clearness. The most interesting part of his little volume is that regarding Tunis, a city where the picturesqueness of the old Moorish type is happily blended with many of the conveniences of European civilization.

"Christ's Conception of His Return to Earth," by Dr. W. Weiffenbach §, is an essay on the connexion of this idea in the Gospels with the idea of the Resurrection, of which we can only say here that it is marked by abundant learning.

We are not sufficiently versed in masonic lore to know whether the late Dr. von Trentowski ‖, belonging to a "reformed lodge," had any right to speak in behalf of the body in general. We find him dissuading Masons from the employment of the mystical symbols inseparably, perhaps erroneously, associated in the popular mind with the essence of their craft. The book was avowedly undertaken as a reply to the anathemas of sundry Roman Catholic prelates; which, however, always supposing Dr. von Trentowski to speak with any authority, would seem to be amply explained by his own account of the liberal organisation and tendencies of Freemasonry.

A Swiss teacher, Herr Joseph Bühlmann *, has made the round of Germany to examine into the organization of its public schools, especially those under municipal administration. His attention has been especially directed to practical arrangements, such as sanitary matters and school furniture.

Victor Hehn †, the author of an excellent work on the acclimatization of plants and domestic animals, has extended his researches to the mineral kingdom in a very agreeable essay on the traces, chiefly philological, of the early employment of salt.

The more poetical subject of the rose has provided Dr. Schleiden, known as a popular writer on astronomy, with materials for an interesting volume. The rose is so thoroughly entwined with the poetical literature of every people that it is easy to form a literal anthology of charming passages respecting it, while its connexion with manners and customs, and the part played by it in history, are equally suggestive. With all these advantages, it is no wonder that Dr. Schleiden should have been able to produce a very agreeable compilation, conveying many picturesque glimpses of life in classical, mediæval, and oriental periods, and with sufficient reference to the kindred themes of "women, wine, and song" to satisfy Dr. Martin Luther himself.

The sixth volume of Turgenieff's select works § contains two novelettes, "A Village Lear," and "Spring Freshets." The first of these, a Crabbe-like picture of some of the most unattractive details of Russian rural life, scarcely possesses sufficient depth of poetic truth to redeem its painfulness. The other, though also tragical, and in too morbidly subjective a fashion to be altogether lofty or salutary, interests nevertheless by its accurate analysis of the feelings of a noble but erring man, who has fallen under the spell of one of those callous sirens whom M. Turgenieff delineates with such singular insight into female character in its most repulsive aspect.

The picturesque and significant legend of "Goodman Death" ‖ affords scope enough for a fantastic drama. We are not sure that Otto Roquette has made the most of it; the characters are not strongly outlined; Death in particular is rather commonplace, and the general conception of his character as man's misconceived benefactor, an idea capable of exquisite treatment in skilful hands, remains but obscurely indicated. The scenes, too, are loosely strung together; the relevancy of several of them to the main action is not apparent; and only one situation, the temptation of the hero by the fair and passionate Duchess, excites any profound interest. The powerful catastrophe of the old legend loses its impressiveness by being transferred from the end to the middle of the story, and leading to nothing. With all these defects, Herr Roquette's diction is so fluent and melodious, his thoughts are so clear, and the pervading spirit of poetry in his verse, though by no means potent, is so genuine and refreshing, that his work may be read with real pleasure.

Werner Hahn¶ is very sure that the Norse sagas are the common property of the entire Teutonic race, and that they are capable of being made as familiar to Germans as the Bible or Schiller's ballads. Both propositions may be regarded as somewhat contestable; true however or false, they have prompted Herr Hahn to a creditable and well executed task, the reproduction of the mythological Eddaic lays in a form which, while preserving many of the characteristics of the original, approaches the genius of modern poetry nearly enough to have a chance of becoming popular. Herr Hahn's reproductions will find little favour with Icelandic scholars, nor will they acquire the renown of the still freer version of Oehlenschläger. They have nevertheless enough of taste and of poetical spirit to count as a substantial contribution towards the end proposed by the author. The accompanying commentary has the defect of omitting almost all reference to kindred systems of mythology.

A selection from the three chief classical writers of Germany—Lessing, Goethe, and Schiller **—edited for the Clarendon Press Series by Dr. C. A. Buchheim, deserves especial commendation for the clearness and copiousness of the commentary, which leaves no verbal or grammatical difficulty unnoticed, and for the genial and sympathetic spirit of the biographical notices and introductions to the particular works, prefixed by the editor. The pieces selected are respectively *Minna von Barnhelm*, *Egmont*, and *Wilhelm Tell*. We should like to see the series extended, especially by a selection of the best lyrical poems of Goethe and Schiller; both of which, as must be the case with the productions of voluminous writers, suffer from their association with inferior matter in the complete editions.

The *Russian Review* * continues its useful course, and the latter numbers are particularly important from containing the Imperial Budget for the current year. A paper on railway communication with the Caucasus also possesses much interest in the present state of politics. The contribution of most attraction to general readers is a full account from contemporary sources of Catherine the Second's memorable journey to Southern Russia and the Crimea. The expedition was evidently in the main a great imposture upon the world and the Empress, and the problem is whether the Empress discovered it or not. In either case her cheerfulness, affability, and magnanimity throughout display her character on its most favourable side.

The two excellent series of popular disquisitions † which we have so frequently had occasion to notice are continued with unabated activity. The most generally interesting of the recent numbers is an essay on the Vienna Exhibition, by Dr. A. Oncken.

* *Russische Revue. Monatschrift für die Kunde Russlands.* Herausgegeben von C. Röttger. Jahrg. 2, Hft. 1, 2. St. Petersburg. Schmitzdorff. London: Siegle.

† *Deutsche Zeit- und Streit-Fragen. Sammlung gemeinverständlicher wissenschaftlicher Vorträge.* Berlin: Ludewitz. London: Williams & Norgate.

NOTICE.

We beg leave to state that we decline to return rejected communications: and to this rule we can make no exception.

The SATURDAY REVIEW *is duly registered for transmission abroad.*

The publication of the SATURDAY REVIEW *takes place on Saturday Mornings, in time for the early trains, and copies may be obtained in the Country, through any Newsagent, on the day of publication.*

Nearly all the back Numbers of the SATURDAY REVIEW *may be obtained through any Bookseller, or of the Publisher, at the Office, 38 Southampton Street, Strand, W.C., to whom all Communications relating to Advertisements should likewise be addressed.*

Now ready, VOLUME XXXIV., bound in cloth, price 16s. *Cloth Cases for Binding all the Volumes, price* 2s. *each. Also, Reading Cases, price* 2s. 6d. *each. May be had at the Office, or through any Bookseller.*

Copies of the SATURDAY REVIEW *Bill of Contents will be forwarded every Friday Evening by post, prepaid, to any Newsagent in Town or Country on application to the Publisher.*

THOMAS WODEHOUSE }

Office, 32 Rackville Street, W.

QUEEN'S COLLEGE, Ireland.—The PROFESSORSHIP of CIVIL ENGINEERING in the Queen's College, Belfast, being about to become VACANT, Candidates for that office are requested to forward their testimonials to the UNDER-SECRETARY, Dublin Castle, on or before July next, in order that the same may be submitted to his Excellency the LORD-LIEUTENANT.

The Candidate who may be selected for the above Professorship will have to enter upon his duties in the month of September next.

Dublin Castle, April 15, 1873.

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS. Two, £50; Six, £40; Four, £20. Election, Second week in May.—Apply to the SECRETARY, The College, Cheltenham.

UNIVERSITY COLLEGE, LONDON, SCHOOL.
Head-Master—T. HEWITT KEY, M.A., F.R.S.
Vice-Master—E. R. HORTON, M.A., Fellow of St. Peter's College, Cambridge.

The SUMMER TERM 1873 will begin for new Pupils on Tuesday, April 22, 1873, at 9.30 A.M.

The School is close to the Gower Street Station of the Metropolitan Railway, and only a few minutes' walk from the Terminal of several other Railways.

Prospectuses containing full information, respecting the Courses of Instruction given in the School, Fees, and other particulars, may be obtained at the Office of the College.

JOHN ROBSON, B.A., *Secretary to the Council.*

THE LONDON INTERNATIONAL COLLEGE.
Principal—Dr. L. SCHMITZ, F.R.S.E., late Rector of the High School, Edinburgh. The SUMMER TERM will COMMENCE on Monday, April 28, 1873. Applications for Admission should be addressed to the PRINCIPAL, at the College, Spring Grove, near Isleworth, Middlesex.

TRINITY COLLEGE, Glenalmond, Perth, N.B.
Warden—Rev. R. THORNTON, D.D. Oxon.

A School on the model of the greater Public Schools of England. Terms (including every necessary expense), 80 and 90 Guineas, according to age. There is also a Theological Department, for Candidates for Holy Orders. Particulars may be obtained from THE WARDEN.

OXFORD DIOCESAN SCHOOL, Cowley, near Oxford.
Visitors.
The Lord Bishop of WINCHESTER.
The Lord Bishop of OXFORD.

Inclusive Terms, £42 a year.

A Prospectus and further particulars may be had of the Principal. The next Term begins April 29.

ROSSALL SCHOOL.

THE NORTHERN CHURCH of ENGLAND SCHOOL at ROSSALL is now entering on the thirtieth year of its institution. Its success has amply justified the views of the original promoters. Having both a Classical and Modern Department it has produced a long list of Honours at the Universities, at the Military, Legal, and Medical Examinations, while the cost of the Education has been considerably below that of any school of a similar standing in England.

Situate on the Sea-shore and apart from any town or village, it enjoys an immunity from contamination, moral and physical, in which it stands pre-eminent.

The Council propose to raise the numbers from the present average of 300 to 350, to which number the School is to be limited.

Terms (inclusive): Clergymen's Sons, with Nominations, 40 Guineas—without, 57 Guineas; Laymen's Sons, with Nominations, 60 Guineas—without, 70 Guineas.

For further particulars apply to Rev. ROBERT HENNIKER, Head-Master.

THE LADIES' COLLEGE, Grosvenor Square, SOUTHAMPTON, Founded by the Hampshire Association for Promoting Female Education. *Patron*—The Bishop of WINCHESTER; Viscount EVERSLEY; Lord NORTHBROOK. *President*—The Right Hon. W. COWPER-TEMPLE, M.P. The SPRING TERM commences May 1. Applications for the Prospectus and for Entries may be addressed to the HONORARY SECRETARY, or to the Lady Principal, Miss DANIELS.

HIGHER EDUCATION.—COLLEGE for LADIES, 26 Regent Square, W.C.—PUPILS prepared for the Cambridge Local Examinations; also for those in Science and Art in connexion with South Kensington. Senior and Junior Term commences April 24.—For Prospectus, address LADY PRINCIPAL.

BLACKHEATH PROPRIETARY SCHOOL.
President—The Rev. JOSEPH FERN.
Principal—The Rev. J. KEMPTHORNE, M.A., late Fellow of Trinity College, Cambridge.
Second and Mathematical Master.
The Rev. R. J. PEARSON, M.A., Fellow of Oriel and Caius College, Cambridge.
Assistant Masters—Mr. T. BATSON, M.A., late Scholar of Lincoln College, Oxford; Mr. ALFRED TOCKER, Magdalen College, Cambridge; Mr. E. E. SUTTON, B.A., Trinity College, Dublin; Mr. W. E. BURGESS, B.A., Queen's College, Oxford.

SPECIAL DEPARTMENT.
Head Master—The Rev. J. MORGAN, LL.D., Trinity College, Dublin.
Assistant-Master—Mr. M. SMATTOON, B.A., Pembroke College, Cambridge.
Instructor in Physical Science, Chemistry, &c.—Mr. H. WOLFFRAM.
English and Writing Master—Mr. H. EARLAND.
French Masters—Mr. R. SUBUR; Mr. F. ORLANDER, R.D.
German Master—Mr. F. ORLANDER, R.D.
Drawing Masters—Mr. L. J. STERLE; Mr. JOHN AULD.
Geometrical Drawing Master—Mr. H. WOLFFRAM.

Exhibitions of £50 each, tenable for three years, are awarded every year to pupils proceeding to the Universities.

Classical and Mathematical Scholarships of £10 are also awarded every year.

The next TERM commences Friday, April 25.

Particulars as to the mode of Admission, Terms, Boarding-houses, &c., may be obtained on application to the PRINCIPAL, or by letter to the Secretary, J. E. PASTEL, Esq., Proprietary School, Blackheath, London, S.E.

N.B. Parties desiring the admission of Pupils are requested (if possible) to send in their applications to the SECRETARY on or previous to April 22.

THE ABBEY SCHOOL, Beckenham, Kent.—Careful PREPARATION for the PUBLIC SCHOOLS; age from Eight to Fourteen; number about Forty. Boys above Twelve have each a separate sleeping apartment. Large playground and detached infirmary. Beckenham is half an hour by rail (London, Chatham, and Dover) from London, seven minutes from Crystal Palace, and on gravel. Boys met, if desired, at any London station. Summer Term begins May 1.—Address, Rev. T. LLOYD PHILLIPS, M.A.

HIGHFIELD SCHOOL, Weston-super-Mare.—Conducted by a Wrangler, assisted by a Graduate in Classical Honours. Terms, £81. Specially adapted for delicate Boys.—Address, GEORGE HUGHES, M.A.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon (formerly Principal of the Elphinstone High School, Bombay), will continue, with the Assistance of a Cambridge Honours-Man, to prepare PUPILS for the Universities, Indian Civil Service, Woolwich, and all Competitive Examinations.—Terms and References on application.

BELSIZE MANOR, Hampstead.—An essentially High-Class School for the SONS of GENTLEMEN, preparatory to Eton, Harrow, &c. As no strongly coercive measures are adopted, none but gentlemanly, well-disposed Boys can be received. The Domestic arrangements are upon an unusually liberal scale, and as nearly as possible those of a Private Family. Inclusive Terms, 80 and 100 Guineas per annum.

A GENTLEMAN (formerly in the Army), Married, living on his own Estate, in one of the best parts of Hants, assisted by a Militia Officer of great Experience in Tuition, wishes to receive SIX PUPILS to prepare them for the Universities, Civil Service, and Competitive Examinations. Both Gentlemen well versed in Modern Languages, acquired abroad. Church of England. The Advertiser, from his position, can offer exceptional Advantages. Highest references given and required.—Address, C. C., King's Library, Alton, Hants.

AN OXFORD M.A., First Class in Classics, taking Two Pupils to read for University Examinations, Matriculation, &c., has a VACANCY. Good fishing near the house.—Address, N. M., The Vicarage, Loddiswell, near Kingsbridge, Devon.

PRIVATE TUITION.—UNIVERSITY, ARMY, &c.—An OXFORD M.A., who has successfully prepared Backward Pupils for the above Examinations, will have ONE VACANCY after Easter. Healthy, bracing neighbourhood. References to Noblemen and others. Terms: under Sixteen, 120 Guineas; above Sixteen, 150 Guineas per annum.—Address, the VICAR, Ingleby Greenhow, Northallerton.

A CLERGYMAN (High Wrangler, Scholar, and University Prizeman), late Master in a Public School, and of great experience and success in Tuition, prepares SIX PUPILS, age not under Seventeen, for the University or Competitive Examinations. Several have lately gained Scholarships. Terms, 150 guineas per annum. Address, REV. M.A., Christchurch, Hants. Two Vacancies after Easter.

OXFORD.—A COLLEGE-LECTURER (Unmarried) has room in his house for ONE or TWO PUPILS reading for Matriculation or the Pass Classical Examinations.—Address, CLERICUS, M.A., Union Society, Oxford.

PRIVATE TUTOR.—A GENTLEMAN is DESIROUS of placing his SON in the house of a Married Man where two or three Pupils only are received (as special attention is required), to be PREPARED for MATRICULATION at Cambridge in the next October Term. Apply by letter, with terms and references, to A. M., Universities Club, Jermyn Street, St. James's.

COMPOSITION and ELOCUTION.—Mr. F. NASH'S LESSONS in these Subjects, as given at various well-known Colleges for Ladies, are suited to the requirements of Senior and Junior Classes.—For particulars, address Mr. FREDERIC NASH, 26 Addison Gardens South.

ENGLISH LANGUAGE and LITERATURE.—Mr. F. NASH'S LECTURES, as delivered at some of the leading Colleges in London, are especially suitable for Students preparing for Examination.—Address, Mr. FREDERIC NASH, 26 Addison Gardens South.

TO MEMBERS of PARLIAMENT and OTHERS.—WANTED by the Advertiser, aged Twenty-seven, an Engagement as PRIVATE SECRETARY, or in any similar position requiring fair education and address.—Address, W. P., Norris Lodge, Hoddesdon, Herts.

HYDROPATHY.—SUDBROOK PARK, Richmond Hill. *Physician*—Dr. EDWARD LANE, M.A., M.D. Edin. Turkish Baths. Consultations daily (Saturday excepted) at 7 Princes Street, Hanover Square, from Ten till Twelve.

OVERLAND ROUTE.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels by their Steamers for

	From Southampton.	From Venice (calling at Ancona).	From Brindisi.
GIBRALTAR ..... MALTA	Every Thursday, at 2 p.m.	—	—
ALEXANDRIA ..... ADEN ..... BOMBAY	Every Thursday, at 2 p.m.	Every Friday Morning.	Every Monday, at 5 a.m.
GALLE ..... MADRAS ..... CALCUTTA ..... PENANG ..... SINGAPORE ..... CHINA ..... JAPAN	Thursday, April 10 and 24, at 2 p.m.	Friday Morning, April 18 and May 2.	Monday, April 21 and May 5, at 5 a.m.
AUSTRALIA ..... NEW ZEALAND .. (Cargo only)	Thursday, April 10, at 2 p.m.	Friday Morning, April 18.	Monday, April 21, at 5 a.m.

Abatements are made in favour of Passengers returning by the Company's Steamers within Six or Twelve Months of their arrival.

THE

SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

No. 913, Vol. 35. April 26, 1873. [Registered for Transmission abroad.] Price 6*d*.

THE CLAIMS OF WHIG GOVERNMENT.

THE *Edinburgh Review* contains a manifesto addressed on behalf of the present Ministry to the constituencies, in view of an election which cannot be long deferred, and which had better come as soon as possible if the notion propounded by the writer is true, that the present Parliament is effete and incapable of serious legislation. The object of this article is to show that what it calls Whig Government has an indefeasible claim to govern England in perpetuity. England, it is urged, is a very great country, and it is to the Whigs that it owes its greatness. A Revolution was made once for all in 1688, and, having at that early period closed the era of violent change, the country has since gone on in the true way. We have every blessing we can want—a monarchy which hurts no one, and is loved by everybody; an aristocracy into which entrance is easy, and which has no privileges; an Established Church, combined with a reign of religious liberty; and a debt that scarcely presses on us, as we are so rich. For all these good things we have to thank the Whigs. Sometimes the Whigs see that activity is wanted, and then, as in the earlier years of Mr. GLADSTONE'S Government, they are beneficently active. Sometimes they see that quiet is all that the country requires, and then they can be beneficently quiet. But the right kind of quiet, as well as the right kind of activity, is only to be got from the Whigs. In the present state of the world it is even more necessary than usual that the Whigs should be in office. The earth, we are told in a highly metaphorical passage, is now in a condition of extreme fermentation; railroads and telegraphs have made fissures in it, and it has pleased Providence that this little island should be a sort of crater continually throwing up eruptions of intelligent power. To manage such a crater properly is, it will be confessed, a work of some difficulty and such as demands the superintendence of very good and clever men. But the best and cleverest men are always Whigs, and so they must keep an unceasing watch over the crater, or there is no knowing where the lava may go. This disposes of the notion that a Liberal Ministry which has no striking Liberal measures to propose is no longer wanted. The crater is always there, bubbling up English intelligence for the benefit of the world at large, and somebody must attend to it. The Whigs, when they have no call to do anything else, have a call to carry on the ordinary business of the country. Their first claim to have this task confided to them is their inherent and abiding personal fitness. Of course the Reviewer must only be taken to be speaking generally, and as a man who makes a wide survey. He would probably himself smile if he heard Mr. BRUCE at the Home Office described as a person directing the eruptions of intelligent power. He means us to look at Whig Cabinets and Whig history as a whole, and then he is sure every one will agree with him. The next claim of the Whigs is that resting on the gratitude due to them. They have done much for the country, and the country ought to do a little for them. They have preserved, and possibly invented, the English Constitution; they have made England rich, they have stuck the Crown, the aristocracy, and the Church into precisely the right niches. It is not much that in return they should be invited to manage public affairs. Lastly, the Whigs may fairly claim to hold office, because their holding office is the only signal and convenient way of punishing the Tories which the country can adopt. While the Whigs have been always right, the Tories have been always wrong, and if ever men deserved to reap as they have sown, and to be kept eternally on the Opposition bench, those men are the Tories.

There are points in this description which seem open to some criticism, and there is an air of high colouring about it throughout. We feel, while we read it, as if we were at a wedding breakfast, and Whiggery was the bride, and was having her health drunk; and we also feel that, without disputing her amiability or beauty, we should not be sorry when the process was over. But if we only look at the primary intention of the writer, and suppose him to be insisting that the Liberal party during the last forty years has carried a great variety of useful reforms, and that the immunity of England from violent change during that period has been principally due to the fact that those reforms have been carried, no statement can be more unexceptionable. Nor is it to be contested that the country may often do very wisely in leaving those who have carried great reforms to manage public affairs without demanding from them constant legislative experiments. But then this manifesto of Whig claims is addressed to the constituencies on the eve of an election, and the real question is, what is its value as a means of determining the votes of waverers? Steady partisans will of course vote with their party, but there is a considerable body of persons who are not steady partisans, and are liable to be swayed this way or that, and the next election will probably be held under circumstances which will make this body an unusually large one. The new difficulty which the friends of Whig Government have to face is that, whereas they appeal to the public as moderate Liberals, the Conservatives do exactly the same. In his speech made on the occasion of the late crisis Mr. DISRAELI unfolded, what in American language would be called this new departure of the Conservatives. There is no use, he said, in going back on the past. The Conservatives opposed, but they now accept, Free-trade, as in the same way they accept the disestablishment of the Irish Church and the Ballot. The Conservatives have been beaten or educated into moderate Liberals, and in real life there is no perceptible difference whatever in the opinions of the great bulk of moderate members of the House of Commons, although they sit on different sides. The Conservatives accept what has been done, and all they urge is that the country does not need any more serious changes at present. But this is exactly what the apostle of the Whigs says. He laughs at the fantastic notions of Republicans of Mr. MIALL and Mr. MILL, and scouts the idea of Whigs having anything to do with them. The Whigs, he says, have no programme, for they want none. Their task at present is to keep quiet and watch the crater. But the Conservatives also have no programme, are perfectly ready to keep quiet, and wish to have their turn of watching. The contest is between two sets of moderate Liberals, each of which proposes to do nothing in particular. So far the elector may reasonably think that there is not a pin to choose between them. But he may foresee that some day an attempt to disturb this reign of quiet will come, and so he asks himself which party is most likely to welcome such an attempt. If he fancies that he should be in favour of change in the course of time, he will lean to the party of Mr. GLADSTONE; if not, he will lean to the party of Mr. DISRAELI. It is impossible to see any signs of a Conservative reaction in the sense of a growing desire to reverse any portion of the policy to which moderate Liberalism has carried us; but it is not hard to see that there are many persons who, out of two sets of moderate Liberals equally professing to do nothing, incline to select those whose wish to do nothing is likely to last the longest. It naturally contributes to the growth of this feeling that the only changes proposed by any set of politicians are of a very crude, extreme, and vague kind. As the Whigs have no programme, those who judge them suppose that the next time they get a programme they will borrow it from the Radicals. The Conservatives, on the other hand, have the singular luck to be free from allies whose folly compromises them. There may be Conservatives on an humble provincial stage who advocate real re-

action and dream of undoing past Liberal triumphs. But they are lost in obscurity, and the party remains uncompromised by them.

There is another way of looking at the matter, and that is to ask whether a change of Government would be likely to be in any way beneficial to the nation. Very few electors will practically give their votes in order that remote national benefits may flow from their decision; but it is possible that some may, and the Reviewer turns the attention of his readers in this direction by concluding with an entreaty that the constituencies will elect, not only Whigs, but a proper number of clever young Whigs, so that the traditions of statesmanship may be carried on to another generation. There is, as he truly says, a great dearth of rising young men on both sides. This is more conspicuous on the Conservative side, because it has happened that three of their most prominent leaders have inherited peerages, and have been kept out of the House of Commons at a comparatively early age. But it is quite true of both parties. Nor have we any real hope that a new election will do anything to remedy the evil. The rage is all for local men. There are plenty of young Liberals with at least high hope and ambition who would have been very glad to contest the seat now vacant at Bath if they could but have got a chance; but the Liberals of Bath had far other views, and could not abide the notion of being represented by any one but their own Mr. MURCH. To try to get into Parliament without local influence is now very often to waste money and thought and the best years of life; and, if possible, a seat is harder to retain than to get by politicians who aspire to be the sort of men whom the Reviewer asks the constituencies to return for the benefit of the nation. Year by year and Parliament by Parliament the House of Commons tends to become more and more an assembly of men who in their different districts have power or wealth or name. It will perhaps become more and more like Colonial Legislatures. But if this is to happen, and if the dearth of statesmen is likely to become a serious evil, it certainly seems a great waste of power that, in deference to Whig claims, the country should have to lose for ever the services of the leaders of the Conservatives. Between two sets of moderate Liberals equally proposing to do nothing, the imaginary elector longing to benefit his country might be tempted to give the preference to that set who could bring new physical strength and new intellectual power into the Government. To have two bodies of men trained in office and fairly competent to hold it must be better for a country than to have one. Candid men of both parties would probably allow that Lord GRANVILLE and Lord DERBY would make equally good Foreign Secretaries, but what the advocate of Whig claims urges is, that Lord GRANVILLE ought always, and Lord DERBY ought never, to be in office. To some extent the feeling that it is fair now to give the Conservatives a turn of office may be expected to operate at the next election, and within limits the feeling seems not only a natural but a legitimate one. At a period when local candidates bar so stoutly the way into Parliament to men who aspire to be statesmen, the argument that a change of Ministry will increase the stock of official strength and experience in the country is not without weight.

SPAIN.

THE disturbance in Madrid, and the consequent abolition of what remained of constitutional authority, are necessary steps in the process of fermentation of the original rose-water of the revolution. When the KING retired, it was with reason alleged that all legal power necessarily devolved on the Cortes, who in their turn accepted the form of government which was imposed upon them by an active minority. It was arranged that the Republicans and the Radicals, as they are called, should divide between them the Ministerial offices, and that both parties should govern under the authority and by the support of the Cortes. A few days afterwards the mob of Madrid compelled the Radical members to withdraw, but the fiction of Parliamentary government was still maintained. The majority has since on more than one occasion attempted to assert its rights, but it has again and again been deterred from action by the threat of an insurrection. When the Cortes adjourned, their functions were vested in a Permanent Committee, which has on more than one occasion differed from the Ministers. The result of the conflict has been the violent overthrow of the compromise, and the establishment of the Republican Ministers in power as a revolutionary Committee or Provisional Government. The transactions which led to the ultimate rupture are but partially intelligible. It is asserted that a body of volunteers opposed to the Republic commenced an insurrection against the Government, and that they were defeated by the Republicans. It is at least equally probable that the provocation came from the opposite quarter, and that the Conservative volunteers acted in defence of the legitimate rights of the Cortes and the Permanent Committee. Whatever may have been the immediate cause of the quarrel, a revolutionary movement was inevitable. The progress of anarchy has, since the abdication of the KING, been rapid and uninterrupted. The principal towns are in the hands of demagogues avowing the wildest doctrines; and in some places the formal partition of property has begun. The army is almost dissolved, and it is only through the contemptible character of its opponents in the field that the Republic retains, even nominally, the character of a Government. In the impending elections the Conservatives and Radicals, who form together the bulk of the nation, will probably take no part, and a revolutionary Cortes will command no respect, except perhaps from its own adherents. As soon as any party succeeds in organizing a regular force, some successful military leader will become master of Spain.

The Spanish Government has derived one advantage from its political and military weakness. The utter inability of the Carlists to profit by their unexpected opportunity conclusively proves the hopelessness of their enterprise. They could scarcely have expected, at the renewal of the insurrection several months ago, that troops would refuse to march against them on the pretext that the establishment of the Republic implied the abolition of compulsory military service. The present Government, through policy or timidity, has all but recognized the adherents of the Pretender as ordinary political opponents. More than one Carlist newspaper published in Madrid records with ostentatious sympathy the real and imaginary exploits of the rebels in the North, but the Carlist leaders provide their supporters with but a meagre supply of victories. The official accounts of successes achieved by the Republican troops may probably be exaggerated, but it is certain that the Carlist chiefs have neither made any considerable progress, nor elevated the insurrection into the rank of a regular war. Their predecessors, in the time of the first Don CARLOS, frequently met the Government forces in the field, and under ZUMALACARREGUY they at one time attained a superiority which seemed to render possible the restoration of absolute monarchy. The insurgents of the present day can only levy tribute on unarmed villagers, even at a time when the commanding officers of the Republican forces are sufficiently occupied in promoting or checking mutiny and desertion. It is difficult to understand how the Carlists procure money or arms since the French frontier has been more rigidly guarded. The English subscription the favour has apparently collapsed, notwithstanding the indulgent opinion of the law officers; and it is satisfactory to learn that Mr. GLADSTONE was erroneously supposed to regard it with indifference or approval. Perhaps even political and religious enthusiasts are beginning to understand that, whatever may be the case in a regular civil contest, encouragement of partisan warfare is essentially immoral. Armed bands levied by insurgent leaders can only maintain themselves by plunder, and they are strongly tempted to practise cruelty for the purpose of inspiring terror. The Carlists have no reasonable prospect of ultimate success, except in the event of the establishment of a loose Confederation, which might possibly leave them a portion of the Northern provinces for their share.

The Alfonsists, who will sooner or later be the most formidable opponents of the Republic, have for the present judiciously effaced themselves. Their best chance depends on the probable failure of the Republican experiment; and any hope which they may have entertained of immediate accession to power must have been disappointed through the progress of disaffection in the army. The mutinous soldiers object not to the Republic or to Monarchy, but to discipline, to obedience, and in general to military service. SERRANO, who, if he could have counted on the army, might perhaps have attempted a restoration, has on more than one occasion been consulted by the Provisional Government; but it would seem that his influence over the troops is no longer paramount, and it is reported that since the last struggle in Madrid he has fled or concealed himself. The Republican Government is at the same time embarrassed and secured against immediate danger by the former success of the party in demoralizing the army. FIGUERAS and CASTELAR require the aid of regular troops to maintain public order; but a disciplined and efficient army might perhaps not be altogether at their disposal. The extreme demagogues of the great towns, though they may complain of the moderation of the Government, hesitate to break into open revolt against the Republican leaders.

There is reason to believe that the great majority of the nation, including nearly the whole of the upper and middle classes, is opposed to the Republic; but in the absence of regular troops physical force always rests with the rabble. Occasional excesses committed at Barcelona or at Malaga gave temporary aid to the Government, by depriving its opponents of all temptation to undertake the task of restoring order, but the revolution has now passed beyond the control of moderate Republicans. The so-called Radicals of the Conservative Opposition were partially aware that it would be impossible for any but the Republican party to administer the existing Republic. A courageous majority of the Cortes might, on the abdication of the late KING, have assumed supreme power, with the professed object of maintaining the Constitution which was lawfully established; but when they allowed the occasion to pass, by acquiescing in the proclamation of the Republic, they transferred to their adversaries the legitimate control of public affairs. The Republican leaders are in their turn learning by experience the valuable lesson that it is easier to impede the operation of government than to govern. CASTELAR, a congenial disciple of MAZZINI, whose dreamy theories were never tested by practice, is by this time in a condition to correct the doctrines of his master.

Although it is thought necessary for every successive Government to pledge itself to the maintenance of the national dominion, thoughtful Spanish statesmen cannot but recognize the increasing difficulty of pacifying and governing Cuba. In the colony the Republic inspires neither sympathy nor confidence; for the dominant Peninsular party suspects the tendency of the Republicans to emancipation, and the disaffected Creoles desire to throw off Spanish supremacy, by whatever party it may be exercised. Even if the mutinous propensities of the army at home should, in spite of probability, not extend to Cuba, it will be impossible to provide reserves and reinforcements on the customary scale. The report of a military insurrection in Porto Rico, though it has been contradicted, probably indicates the existence of insubordination among the troops in the colonies. The higher officers in Cuba enjoy opportunities of enriching themselves which may probably reconcile them to temporary exile; but the duties of the men are in the highest degree irksome; and although their enemies may be contemptible, they are exposed to serious risk from exposure to the climate. The preservation of the colony would probably involve the maintenance of slavery, which the Republicans are pledged to abolish. On the other hand, the emancipation of the slaves would inflict ruin on the colonists of Spanish birth, who would no longer have any motive for struggling against the demand of the natives for independence. The irritation which was provoked by the menacing language of the American Government has subsided; and perhaps the PRESIDENT and the SECRETARY of STATE may have reconsidered any design of annexation which they may formerly have cherished. General GRANT, indeed, announced in his Message to Congress his opinion that extension of the area of the Union was in general expedient; but fuller acquaintance with the state of Cuba will not have made the acquisition of the island appear more desirable. Even if the PRESIDENT retains his ambitious designs, he can scarcely count on the support of the Senate or of the Republican party. There are few Americans settled in the island; and the Creoles and the negroes would be equally unacceptable to the American people as fellow-citizens, while no machinery has been provided for governing them as subjects. The result of negro suffrage in the Southern States of the Union has been highly unsatisfactory, and many of the slaves in Cuba, unlike their coloured neighbours on the mainland, were born African savages.

There seems to be no hope of the termination of the rebellion in Cuba, either by force or by an amicable settlement. The revolt is even less respectable than the Carlist insurrection; for, after continuance during several years, it has not produced an army or an ostensible leader; yet it is favoured by the majority of the population, and only resisted by the population of Spanish birth with the aid of the regular army. The Spanish Volunteers, who seem to exercise nearly all the powers of Government, display remarkable spirit and energy; but their constant demand for reinforcements from home shows that their own resources are not adequate to the task of keeping the island in subjection. The stake for which they play is not insignificant; for the enormous profits of sugar cultivation render the continuance of slave labour for each successive year in a high degree important to the owners. The capital represented by the slaves themselves is so large that the interest on the amount, added to the cost of maintenance, is probably equal to the wages of the same number of free labourers; but the great advantage of class labour is not that it is cheap, but that it may be counted on with absolute certainty. Free negroes or hired coolies would sometimes refuse to work; and their absence for a limited time might perhaps involve the loss of an entire crop. The present slaves, if they were emancipated, would probably, like the freedmen of Jamaica, procure a sufficient subsistence from the land, without troubling themselves to work for wages. The conductors of one of the most profitable kinds of industry in the world may be pardoned for regarding with repugnance the destruction of their own fortunes, especially as it would involve the probable ruin of the island. The active opposition which was offered in the Spanish Cortes to the emancipation of the slaves in Porto Rico can only be excused by the obvious probability that Cuba will be compelled to follow the example of the neighbouring colony. All parties concerned are in different degrees entitled to the good will and sympathy of foreign observers. It can scarcely be said that the slave-owners, the creoles, or the Spanish colonists, are wholly in the right or absolutely in the wrong; nor is the Republican Government in Spain responsible for the colonial complications which aggravate its domestic difficulties. Political revolutions, though they are for the most part unmixed evils, penetrate less deeply below the surface of society than social and economical conflicts. At present the prospects of Cuba are, if possible, even darker than those of Spain.

THE BUDGET DEBATE.

THE debate on the Budget was necessarily ineffective and desultory; for, except on rare occasions, the House of Commons accepts the financial proposals of any Government which commands the confidence of the majority. The notorious project of the Match-tax and the Succession duty proved to be too much for party devotion; but the present Budget, though it includes some questionable proposals, is not bad enough to be rejected. It is possible that a bolder and a better scheme might have been introduced if the Cabinet had contained fewer financiers. The simultaneous reduction of the Income-tax and of the Sugar duty seems to indicate a compromise; for Mr. LOWE declared two or three years ago that he intended to leave the Sugar duty as it stood; and he informed a deputation in the course of the present year that there would be no considerable surplus, or, in other words, that the American damages were to be paid out of current revenue. The change in the Sugar duties is the more unexpected because it is evidently intended as a step towards total abolition. It is not worth while to interfere with an important trade and manufacture, except for the sake of a large addition to the national income. Both importers and sugar-refiners will now be able to establish a strong case for entire relief, and if Mr. LOWE retains office for another year, he will probably have established one-half of that "freedom of the breakfast-table" which he has so often ridiculed. The reduction of the Income-tax is popular, but in spite of Mr. GLADSTONE's high authority, a million and three-quarters of surplus revenue might have been more advantageously applied to the redress of special grievances and anomalies. It is now admitted that the licence duty on brewers is indefensible, and the exceptional tax on third-class passengers by fast trains involves wanton and irritating harshness. The extension of the exemptions and deductions allowed to small incomes would have been strictly consistent with former legislation. The diminished value of money tells most severely on the recipients of small incomes, which are necessarily expended in the purchase of articles of consumption. The reduction of the tax will perhaps be justifiable if it has the effect of checking the agitation of malcontent tradesmen.

Mr. WARD HUNT was justified in commenting on the excess of the actual surpluses during the last two or three years over the successive Estimates; but, as Mr. LOWE showed, Mr. HUNT committed a singular oversight in complaining that the opposite error of an unduly narrow margin had been introduced into the present Budget. It is true that the estimates of revenue and expenditure are closely balanced; and it is possible, though not probable, that there may be a slight excess of payments over receipts; but a year hence, if Mr. LOWE's calculations are approximately realized, he or his successor will start with a prospective surplus of 1,600,000*l.* arising from this year's provision for payment of one-half of the *Alabama* damages. The amount will be tempting to official or non-official financiers who may be inclined to abolish the residue of the Sugar duty. It is not likely that any change will be immediately made in the rate of Income-tax, which indeed is

already sufficiently low, if it is to be maintained at all. If the year is prosperous, another large surplus will perhaps give the opportunity of dealing at last with the Malt-tax. The best characteristic of the present Budget is that it exhausts the surplus, leaving nothing for Sir Massey Lopes or Mr. Goschen. No more careless financial proposal was ever made than Mr. Lowe's offer of two years ago to surrender the House-tax to the ratepayers. In a few days it will be known how far local taxation is to be increased or readjusted; but happily it will be too late to transfer any portion of the burden to the National Exchequer. Sir H. Selwin-Ibbetson and Mr. Bentinck referred but hesitatingly to the resolution of last year, which their party in general have perhaps by this time recognized as a conspicuous blunder. The Government will quote the majority of one hundred in support of its scheme of local taxation; but good care will be taken not to defer to the expression of Parliamentary opinion as far as it was opposed to the Ministerial policy. If it had been intended to assume on the part of the Treasury a large portion of the expenses of lunatic asylums, or of other local establishments, the Estimates for the Civil Service must have been increased; and the surplus would have been reduced to the same extent. Captious critics have hinted that the actual Budget has, since the Ministerial crisis, been modified for the purpose of acquiring popularity with the constituencies. Any contribution from the public revenue to local expenditure would have been a more transparent bribe.

As there was no serious attempt or wish to disturb the arrangements of the Budget, the House, or some of its more active members, were at liberty to engage in collateral discussions. Mr. Rylands naturally took occasion to reproduce his favourite doctrine that taxation on real property ought to be increased. In common with many projectors, he commences with conclusions, and then proceeds to devise reasons for his opinions; and it now appears that an Income-tax of twenty per cent. ought to be placed on landowners because the National Debt is a mortgage on their property. It is true that no Minister or Parliament ever dreamed of pledging the land to the public creditor except as a part of the national substance. The contract with the fundholder is that the annuity which he has purchased shall be regularly paid, and that Parliament shall provide by taxation the necessary means for the purpose. If it were possible to raise six-and-twenty millions by a tax upon the utterance of idle nonsense, the money might, as properly as any other produce of revenue, be applied to the payment of the National Debt. It would be unjust to the other speakers in the debate to place them on a level with Mr. Rylands; but it cannot be said that Mr. Childers directed any portion of his elaborate discourse to the defence or elucidation of the Budget. Mr. Ward Hunt, in conformity with a tradition which might be abandoned without practical inconvenience, undertook to prove that his own Administration had been not less frugal than that of his successors, although he had not been equally fortunate in profiting by a season of unusual prosperity. It may be natural that Mr. Ward Hunt should, as he said, never forget Mr. Gladstone's Lancashire speeches, which consisted in a great measure of denunciations of the extravagance of Mr. Hunt and his colleagues. Whatever may have been the justice or unfairness of Mr. Gladstone's charges, they were made between four and five years ago, and many things have happened since. That the Estimates of the present year are or are not, after due deductions and additions, larger or smaller than the Estimates of 1868, is a matter of infinitesimal interest. The House of Commons of the day is, in both cases, responsible for the expenditure which it sanctioned; and if Mr. Gladstone or any other statesman at any time maintained that reduction of expenditure was necessarily expedient, he affirmed an unsound proposition.

The best excuse for Mr. Ward Hunt's formal attack upon the Government is that it must have been expected by Mr. Childers, who had armed himself with the most elaborate calculations for the defence of himself and his colleagues. Mr. Childers is an able man, and a laborious student of the statistics of finance and administration; but perhaps between the hustings at Pontefract and the House of Commons he repeats the same speech unnecessarily often. The expediency of reducing taxation or of paying off debt is in no degree affected by the proof that so much has been saved on army expenditure, or that another branch of the Estimates has been cut down. In the result it is not easy to diminish the total cost of government at a time when the prices of all articles are rising, and while new demands for administrative improvements are constantly pressed on the Government. In some of his comparisons Mr. Childers took the superfluous trouble of going back twenty years, and he reminded the House of the familiar fact that the cost of the collection of the revenue was formerly not included in the Estimates and returns of public expenditure. Although the change was effected by Mr. Gladstone, it seems that Mr. Childers almost regrets the new system of bookkeeping, because it makes the public expenditure apparently larger. The preponderance of authority is in favour of the insertion of all the items on both sides of the account; but no principle is involved in a formal arrangement of figures. It is remarkable that none of the speakers in the conversation of Thursday night recurred to the more important question of reducing debt, although occasional reference was made to the doubtful provision for the *Alabama* damages. Mr. Ward Hunt professed to think it strange that the Government should ask for a contingent power to borrow money, in a year which produced an unprecedented surplus. It would have been consistent with principle to borrow the whole of the money for the American demand, and to make the large reduction of taxation which would then have become possible. The actual proposal of the Government is open to criticism on two opposite sides, and Mr. Lowe abstained from defending a scheme which was probably adopted at the last moment in deference to his colleagues. A more uninteresting debate on a Budget has never been held.

THE PARIS ELECTION.

THE opinion of Paris has suddenly come to be of something like its old importance in France. The contest between M. de Rémusat and M. Barodet is watched with keen interest by the whole country. If the Minister is defeated, the policy of the Government will be understood to have sustained a serious check. If M. Barodet is defeated, M. Thiers's position will be regarded as materially strengthened. It was by M. Thiers's free choice that Paris has thus been raised from its low estate. A little time ago all parties in France seemed to have agreed to put Paris out of their calculations. The majority of the electors were known to be Radicals, and suspected of being Communists. The recent triumphs of the Republican cause have all been won in the provinces. Paris was treated as a thing apart, a difficulty which all Governments, whether Monarchical or Republican, would have to make the best of. In the natural order of events, therefore, the election of an extreme Radical to the vacant seat would have been of no moment. The Parisians might have returned M. Barodet, and no one would have thought of attaching any political significance to the event. Paris is an hereditary Irreconcilable as regards all settled Governments, and a very large discount has to be made for this fact in estimating the value of a Paris election. The appearance of M. de Rémusat as a candidate entirely changed the position of affairs. It proved that M. Thiers had determined to submit his policy to the judgment of the electors of Paris, and after this it will be impossible to treat the expression of that judgment with indifference. A Government cannot go out of its way to provide a test for its own popularity, and then throw discredit on the accuracy of the test it has itself chosen. M. de Rémusat's appearance in the field can have but one meaning. It is a declaration that M. Thiers believes that the fruit of his policy is ripe for picking, that the alliance between moderate Republicans and moderate Conservatives is at last secured, and that even in Paris, the chief centre and focus of extreme Republicanism, the leaven of moderation has so far done its work that the election of a Minister may fairly be counted on. It is plain that if M. Thiers proves to be right in his calculation, to-morrow's election may be a turning-point in the fortunes of the Republic. The return of M. de Rémusat will show that the Radical wolf has been tamed by M. Thiers's influence, and is now prepared to dwell peacefully with the Conservative lamb. This is the point upon which the Conservative lamb has hitherto been troubled with so many doubts. He has been comforted by M. Thiers's assurance that the millennium is really on the stocks, and has, on the whole, supported the Republic with praiseworthy zeal. Now M. Thiers no longer asks him to accept the fact on his unsupported testimony. He proposes to call the wolf himself into the witness-box, and to allow the lamb to judge by his behaviour whether the greatness of the change in him has been exaggerated.

It is not to be supposed that M. Thiers made up his mind to this bold stroke of policy without counting the cost beforehand. Yet it is difficult to believe that in his preliminary survey he attached as much weight as it deserved to the

peculiar position of his Government at the moment of M. DE RÉMUSAT's coming forward. Three months ago he might have done so with an almost certain prospect of success, for at that time it was the cue of the Left to support the Government against the reactionary hostility of the Right and the Right Centre. Since that time M. THIERS has given serious displeasure to the Left by his apparent desire to conciliate the Conservative Opposition. The policy of which M. DE GOULARD is regarded as the representative has been in the ascendant, and this fact has been made evident in a way peculiarly displeasing to the electors of Paris. They have not yet so entirely given up the hope of regaining their own tail as to wish to see other cities as tailless as themselves. A member of a Cabinet which had just joined in attacking the municipality of Lyons had therefore special obstacles to encounter in canvassing Paris. If this was fully taken into account by M. THIERS in the anxious meditations which must have preceded M. DE RÉMUSAT'S definitive appearance as candidate, his decision must have been based either on the reported temper of the electors or on the hope of coming to terms with M. BARODET'S supporters. In the latter case his calculations have come to nothing. Down to the beginning of the week there seems to have been some hope that M. BARODET might withdraw, but even the announcement of M. GRÉVY'S intention to vote for M. DE RÉMUSAT failed to shake the extreme Radicals. It is not impossible that M. THIERS'S persistence in putting M. DE RÉMUSAT forward as a candidate has been partly prompted by another motive than the simple belief that his man would win. It has all along been his custom to advance in the direction in which he wishes to sail by means of alternate tacks. From the moment that he had taken the decided step of depriving Lyons of its municipal government he would naturally be in search of a favourable opportunity for taking an equally decided step in the opposite direction. He had gone to one extreme to gratify the Right. It was now the turn of the Left to come in for their share of favour. The Assembly was not sitting; so that nothing could be done by means of a speech. M. DE GOULARD'S dismissal would have had the effect he wanted; but M. THIERS has never liked to tie himself down to choosing his Ministers from one section of the Assembly. And, with M. DE GOULARD gone, the Right would be without any representative in the Cabinet. If M. DE RÉMUSAT became a candidate for Paris, there would be an obvious occasion for making a fresh Republican declaration. Even the Conservative supporters of the Government would see the necessity of doing all that it was possible to do in order to conciliate Republican votes, and in this way M. THIERS would be able to unsay a good deal that has lately been said by M. DE GOULARD and M. DUFAURE, without giving them the annoyance of an unprovoked contradiction.

This is the explanation of the phrase, "the integrity of "universal suffrage," of which such good use has been made by M. DE RÉMUSAT'S canvassers. Of all the changes which the majority in the Assembly are anxious to see effected before a dissolution, some modification of the suffrage is the most pressing. The creation of a Second Chamber can wait. The question who is to administer the Government between the dissolution of the present and the meeting of the next Assembly will probably settle itself. But upon the modification of the electoral law rests the one chance that the majority have of being a majority in the new Chamber. If the suffrage can be restricted, the elections may possibly go in their favour. If the suffrage remains unaltered, they are certain to be defeated all along the line. In the present condition of public feeling, the Conservatives do not think it prudent to advocate the abolition of universal suffrage; they content themselves with a proposal to regulate it. If by regulation were meant the adoption of additional precautions to prevent personation, there would be no objection to the proposal. The most impassioned advocate of the right of every man to vote will not maintain that it includes the right of every man to vote more than once. But with the French Conservatives regulation means more than this. It stands for restrictions in the way of age and length of residence which would have the effect of greatly reducing the number of the electors, and of reducing it by the excision of the classes among whom Radical opinions are, as a rule, most prevalent. M. DE RÉMUSAT'S promise to respect the integrity of universal suffrage finally dissociates the Government from these views. If the word integrity means anything, it means that no man who has a legal right to vote under the law as it stands shall be deprived of that right by the promised Reform Bill.

The statement of M. BARODET'S Committee, that he is put forward with the view, not of opposing M. THIERS, but of enabling him to withstand the pressure of Monarchical conspirators, must be taken as a conventional tribute to their own character for consistency. That it can really impose upon a single elector is impossible. Every man who votes for M. BARODET will know that he votes against the Government, and ought to know that by doing so he helps to make it more difficult for the Government to continue to work with the Republican party. M. DE RÉMUSAT'S defeat would not necessitate any immediate change of policy; but it would dispose many of M. THIERS'S habitual supporters to welcome any disposition he might show to treat the establishment of the Republic as a question still undecided. It might not alter M. THIERS'S own conviction on this point, but it would paralyse his efforts to get that conviction accepted by that great body of French Conservatives who would like a Republic as well as, or even better than, a Monarchy, provided that they could feel equally secure under either. If M. BARODET is returned, the occurrence of such a reaction seems inevitable, and it is this prospect that makes the issue of to-morrow's contest a matter of such grave moment.

THE DEBATE ON CENTRAL ASIA.

THE discussion of Tuesday last on the question of Central Asia was interesting and instructive, though it had little practical bearing. Oriental subjects, if they sometimes fail to attract general attention, have the advantage of being almost exclusively treated in Parliament by competent and well-informed speakers; but the result of the debate is to confirm popular impressions which may have been originally founded on imperfect information. The progress of Russia may be regarded either with the solicitude which inspired Mr. EASTWICK'S motion, or with the cheerful confidence of Sir C. WINGFIELD and Mr. GRANT DUFF; but there is no serious difference of opinion either about the facts of the case, or on the expediency of maintaining an expectant and vigilant policy. Mr. EASTWICK suggested the occupation of certain military positions which might be useful in the contingency of a war, and it will be universally admitted that the fortifications of Peshawur ought, if necessary, to be rendered defensible, and that it would be desirable by degrees to reduce to permanent submission the predatory tribes of the Northern frontier. Measures of this kind would be useful even if Russia had been stationary; and the increased possibility of foreign complications furnishes additional reason for all prudent precautions. The recent negotiations with Russia meet with but faint approval from persons of Indian experience, on the ground that it is undesirable to limit in any way the freedom of future action. The counter engagements of Russia are probably of little value, inasmuch as reasons or excuses for interfering with Afghanistan, in spite of the recent correspondence, may readily be found. Official journals at St. Petersburg and Moscow have already explained away Count SCHOUVALOFF'S undertaking to abstain from a permanent occupation of Khiva. The EMPEROR, it is said, only announced his actual intentions, without pledging himself in any way to a foreign Power. It would be not less easy to contend that the occupation of Badakshan had been rendered permissible and necessary by a change of circumstances. Lord GRANVILLE can scarcely be blamed for completing a negotiation which was voluntarily commenced by his predecessor; and possibly Lord CLARENDON may have judged rightly in placing on record the right and intention of England to resist any operation which might be thought dangerous to India. It is scarcely probable that any more solid concession could be obtained without a menace of war; and the most anxious alarmist would not maintain that the time has come for opposing the further advance of Russia by force. When action is necessarily renounced or adjourned, it is rather an intellectual pastime than a political proceeding to inquire whether the possible civilization of barbarous tribes compensates for the unwelcome vicinity to India of a formidable rival. It is certain that Russia will both extend and consolidate her dominion in Central Asia, without regard to the prudent fears of Mr. EASTWICK or to the sanguine anticipations of Sir C. WINGFIELD. The conquests which have been made within the last twenty years probably affect English interests less directly than the establishment of Russian influence over Persia, which it is nevertheless impossible to prevent. Since the recent commencement of the campaign, Russian troops have traversed Persian territory as if it were their own; and there is no reason to suppose that the encroachment has been resented.

It matters little whether a steady and consistent policy of

aggression is the result of perpetually recurring causes or of a deliberate purpose. Mr. GRANT DUFF may perhaps be justified in regarding the legendary will of PETER the GREAT as a fiction; but the traditions and the tendencies which are embodied in the imaginary document are living forces. The real or pretended disobedience of ambitious generals, the provocations which are offered by barbarous neighbours, and the consequent vengeance which, as if by accident, assumes the form of conquest, all contribute in their turn to the extension of the limits of the Empire. As long as Russian ambition confines itself to the remote regions of Central Asia, England has neither the right nor the power to oppose it; and projects for interference with the English rule in India, though they may have been occasionally entertained, have rarely assumed a definite form. During the Crimean War Russia would have been fully justified in attempting a diversion in India; but the plan of invasion which was at that time proposed was hopelessly chimerical. It would have been far easier to organize an insurrection in Poland than to send a Russian force to operate in India. From time to time there may have been some secret or unauthorised intrigues; but during the mutiny no suspicion ever arose that Russian agents were tampering with the army or with native princes. It is of course possible that Afghan refugees who are now under Russian protection may form plots against the reigning AMEER, nor would it be easy to prove that their designs might not have been directly or indirectly countenanced by Russian officers; but the Russian Government has disavowed any intention of interfering in Afghan affairs, and Mr. GLADSTONE's statement that no liability has been incurred on the part of England will remain on record as the English interpretation of the recent correspondence. It seems, unless Mr. GLADSTONE has been misled by his love of ambiguity, that the term "neutral zone" was understood on both sides to have no special meaning; and in the later communications other phrases were substituted. It will be the duty and the policy of the Indian Government to restrain the rulers of Cabul by advice and by influence from encroachments on the territory of their Northern neighbours. According to Mr. GLADSTONE, moral force only is to be used; and, if diplomacy failed, the Russians would perhaps not greatly regret a violation of the frontier which would practically relieve them from the obligation of their recent pledges.

The most definite conclusion which can be drawn from the debate is that the appointment to the Persian Mission ought once more and finally to be transferred to the Secretary of State for India. The Foreign Office has hitherto prevailed in the contest between the departments because the Foreign Minister has for the most part been superior in official influence to his Indian colleague. Lord PALMERSTON's long supremacy was far beyond the reach of rivalry; and Presidents of the Board of Control of the rank of Sir JOHN HOBHOUSE or Mr. VERNON SMITH would, however their official attributes might have been nominally defined, have been merely his subordinates. As Prime Minister, he naturally supported the claims of his former office, and Lord CLARENDON's experience and reputation rendered it difficult for his colleagues to question his authority. The Duke of ARGYLL is equal in capacity to Lord GRANVILLE, and he had, even before his accession to his present office, acquired extensive knowledge of Indian affairs; but it is difficult to alter an established practice; and the Foreign Office has always clung with excessive tenacity to the control of Persian affairs. One of the results of the actual distribution of patronage and business was the resignation by Sir HENRY RAWLINSON of a post which he was eminently qualified to fill. A Secretary of State for Foreign Affairs has but little choice of qualified candidates; and it is generally thought that the latest appointment was in a high degree inexpedient. The excuse for the present arrangement is that the affairs of Persia are mixed up with those of Turkey and Russia, which belong to the sphere of European politics; but it might on similar grounds be contended that Afghanistan or Khelat ought to be placed under the superintendence of the Foreign Office. The diplomatic and territorial encroachments of Russia on Persia are only important to England as they may affect the security or the policy of the States which lie between Persia and India; and only Anglo-Indian statesmen hold the key of complicated Oriental intrigues, and understand the character of the princes and Ministers with whom an Envoy in Persia has to deal. Mr. GRANT DUFF oddly appealed to Mr. EASTWICK to exercise his own personal influence at the Court of Teheran in favour of peace and moderation; nor is it impossible that an Indian civilian of long experience may obtain a more favourable hearing than an agent of the Foreign Office. The absurdity of the existing system was still more clearly illustrated by the judicious selection of Mr. GRANT DUFF to represent the Government in a debate on the affairs of Central Asia which necessarily included frequent reference to Persian politics. With the exception of his chief, no other member of the Government is equally familiar with the relations between India and Persia; yet, when instructions are sent to the Minister at Teheran, the despatches are not communicated, except perhaps as a matter of courtesy, to the Duke of ARGYLL and Mr. GRANT DUFF. An Indian resident at the Court of Teheran would watch with unceasing vigilance any measure which might even remotely be dangerous to India, and in many cases he would probably, like Sir JOHN MALCOLM and Sir H. RAWLINSON, acquire an influence which would be equally beneficial to Persian and to Indian interests. When the power of Russia in Central Asia becomes more fully consolidated, it will often be necessary to conduct informal negotiations directly between Calcutta and St. Petersburg, although, as a great European Power, Russia will of course continue to communicate with the Foreign Office.

Notwithstanding his characteristic optimism, Mr. GRANT DUFF commented severely on the false commercial policy which involves a possible risk of collision between Russia and England. In conquering markets and sources of supply the Russian Government interferes with the commercial interests of England. NAPOLEON's Continental system would alone have justified the perseverance of England in the war, because his extensions of territory, and the treaties which he imposed on neighbouring States, were in a great measure directed to the exclusion of English commerce. The trade which passes through India into Central Asia is at present comparatively limited, but it will inevitably extend as long as the local Governments are not sufficiently civilized to devise systems of protection. At the Russian frontier line, wherever it may be drawn, commercial intercourse ceases. It is to prevent such exclusion that the Indian Mission will proceed to Eastern Turkestan in the hope of concluding a commercial treaty. If that country should be afterwards subdued by Russia, it would be reasonable to stipulate for the maintenance of the relations which may have been established with the present ruler. One of the numerous reasons against precipitating a conflict with Russia is the certainty that within a longer or shorter time the demonstrable principles of free trade will be generally adopted. Russia, like England, will find that it is possible to deal with a shop without first serving an ejectment on its owner; and conquest will become at the same time less tempting and more harmless to peaceable neighbours.

MR. FAWCETT'S BILL.

THE opponents of Mr. FAWCETT's Bill wisely contented themselves on Monday with slaying the slain. Mr. MITCHELL HENRY's amendment would have been relevant to the half of the Bill which had been withdrawn, but it was altogether irrelevant to the half which had been retained. Even on the hypothesis that a satisfactory settlement of the question of University Education in Ireland cannot be arrived at without the appointment of a Royal Commission to take evidence as to "the opinions and wishes of the Irish people generally," there is no special reason for appointing such a Commission at this moment. The Dublin University Tests Bill does not profess to settle the question of University Education in Ireland. Its appearance in its latest form is an admission that, in the opinion of all parties, the question must for the present be left where it is. In the natural course of legislation, the abolition of tests in Trinity College, Dublin would have been included in the Act which disestablished the Irish Church. For more than three years the position of the College has been anomalous to an extent unexampled even in Ireland. As Mr. GLADSTONE pointed out, while it has been thought undurable that the endowments of English and Scotch Universities should be confined to members of Established Churches, the endowments of the principal Irish University have been confined to members of a Church which is no longer Established. The justification of this anomaly was the intention of the Government to make the question of University Education a separate feature of their Irish policy; and so long as that intention was still unfulfilled and still entertained, it was convenient to defer legislation upon the cognate subject of tests in Trinity College. This justification exists no longer. The policy of the Government upon University Education in Ireland has been declared and rejected. In the words of the PRIME MINISTER, the Ministry are out of the way, and

their business is to give place to others who may be more fortunate than they have been. There can be no excuse for maintaining tests in Trinity College until such time as another Government is prepared to try its luck with another policy. Even if a Royal Commission had already collected and digested the multifarious information of which Mr. MITCHELL HENRY desires to see Parliament put in possession, there is no one in a position to make use of it. Those who are really anxious to consult the wishes of the Irish Catholic laity in the matter of University Education have been prevented from doing so by the very persons whom they wish to gratify. Unless Home Rule is to be conceded in substance while denied in form, the opinions of the people of England and Scotland must in some measure be consulted in the action of the Imperial Legislature. The Irish laity have chosen to put their cause into the hands of the bishops, and it serves the turn of the bishops to mix up a grievance which admits of a remedy with a grievance which does not admit of a remedy. It would have been difficult in the present state of English feeling to affiliate a Roman Catholic College to a mixed University, but if the Irish Catholic laity had been satisfied with this concession, it might not have been beyond the power of the Government to induce Parliament to grant it. By declaring that nothing will content them short of the endowment of a Roman Catholic College, if not of a Roman Catholic University, they have made the Government helpless. There is no chance that a Conservative Ministry will succeed in carrying what a Liberal Ministry has not ventured to propose. Concurrent endowment in Ireland might have been swallowed by the Conservatives if they had seen in it an additional bulwark to the Established Church. It cannot possibly be made palatable to them now that they would regard it merely as an additional insult to the disestablished Church. Yet the most sanguine Irish member cannot imagine that a Bill endowing a Roman Catholic College can be passed except by the Government of the day. That the bishops should have no desire to part with the last Irish grievance over which they will have any control is intelligible; but the readiness of Irish Catholic parents to reject a Bill which would have enabled them to send their sons to the University of Dublin without sacrificing denominational education can only be explained by the supposition that those whom Mr. MITCHELL HENRY describes as the "classes "practically interested in the question" are in their hearts comfortably careless about it.

It is possible that the Irish members have been misled by a belief that, though concurrent endowment can no longer be regarded as a bulwark to the Established Church, it would still have a claim on the Conservative party, as making it possible to preserve the denominational character of Trinity College. If the Conservative trumpet sounded the same note in Ireland as in England, this might not have been a wrong calculation. But the debate on the Irish University Bill made it abundantly clear that the Conservative belief in the importance of combining education with religion is not sufficiently fortified to stand a sea voyage. Even Mr. HARDY, who is the accredited prophet of this faith in England, gives it up when he is asked to apply it to Ireland. A very slight observation of Irish Conservatism might have satisfied a candid observer that this would be the case. Even in the best disciplined party, denominational education is too big a morsel to be thrust down unwilling throats; and in Ireland the persons who, in the nature of things, might have been expected to be Denominationalists, have one and all come forward as Secularists. The authorities of Trinity College, who have the right to be first heard upon this question, are among the foremost supporters of a Bill which leaves them their revenues, and only deprives them of their religion. The disestablished Church is too busy in altering its theological standards to have any thought to spare for the maintenance of theological teaching. The great body of Irish Protestants would at any time see a pound taken out of their own pockets if by that means they could prevent a pound from going into Roman Catholic pockets. Any Bill, therefore, which proposed to open the University of Dublin to Roman Catholics on terms consistent with their subjection during the period of their residence to the teaching and discipline of their own religion, would be unpopular with the majority of Irish Conservatives, and on an Irish question the policy of the Conservative party is naturally determined by the views of the Irish section of it. Such a Bill must be taken up by the Liberal party if it is to succeed, and at present its chance of being taken up by the Liberal party is exceedingly small. After the Irish Catholics have overthrown a Liberal Ministry, and brought a dissolution perceptibly nearer, rather than accept a scheme of which the affiliation of a Roman Catholic College was an integral part, they can hardly expect either the Government which they have weakened or the party which they have inconvenienced to go out of the way to satisfy them.

For this, as well as for other reasons, there is little probability that Mr. SMYTH's motion to provide for the establishment, as a College of the University of Dublin, of the institution known as the Catholic University will be taken into serious consideration. In itself the proposal is just and reasonable; but a less appropriate time for making it could hardly have been chosen. In the first place, it is in direct antagonism to the known views of the framers of the measure into which it is to be introduced, and its adoption by the Committee would reduce Mr. FAWCETT to the necessity of voting against the third reading of his own Bill. Its acceptance by the Government would consequently be little short of a direct breach of faith. The agreement with Mr. FAWCETT is that, in consideration of his abandoning the constructive part of his Bill, the part which deals with the abolition of tests shall have the full advantage of Government support. It cannot be maintained that this agreement would be carried out by the addition of a new constructive part to which Mr. FAWCETT is altogether opposed. Nor are the Government under any temptation to be guilty of this sharp practice. It would reflect no credit on them to accept from the hands of a private member a settlement which they had failed to get adopted as an integral part of their own programme; and even if the Irish vote could be counted upon, there would probably be a very large defection of English Liberals from a division in which the Ministerial Whip could play but a subordinate part. There is no reason, however, to suppose that the Irish vote could be counted upon. Mr. SMYTH's motion is as obnoxious to the objections of the Irish bishops as the Government Bill was. It makes no mention of any endowment for the Roman Catholic College; it leaves the teaching of the University in Protestant hands; it does not contain even the guarantee which would have been afforded by the provisional nomination of the University Council by Parliament, that the Catholic element in the University will be fairly dealt with. It is hard to see how the Roman Catholic bishops could show any greater favour to this proposal than to the one which they have so lately rejected, and there has not yet been time for the development of any lay opinion independent of the bishops.

THE EVIDENCE PROVISIONS OF THE JUDICATURE BILL.

WHEN the real matter in dispute between a plaintiff and defendant is ascertained by some such method of pleading as we indicated in a former article, the next step in the cause must be to ascertain the truth as between the conflicting statements of the opposing parties. It is strange that there should have been any divergence of practice in this respect, and still stranger that there should be any substantial difference of opinion. Bring witnesses face to face, cross-examine them when necessary, and then employ the acutest and most practised minds at your disposal to draw a sound conclusion from the testimony given, and you will not often fail in arriving at a satisfactory result. Instead of this, we have two rival methods in use, neither of which satisfies these obvious requirements.

In Chancery, affidavit evidence is used, with liberty to cross-examine under conditions which often render the privilege nugatory. The plaintiff has a choice—and it is hard to say why plaintiffs any more than defendants should have such an option—between two methods of procedure almost equally objectionable. Either he may have the case tried by alternate affidavits, with the right to cross-examine before an official who has nothing to do with the hearing, or else he may insist on cross-examining in Court, subject to the condition, that each side shall adduce his evidence in chief in ignorance of what the other is saying, and without any power of recalling a witness to contradict statements which may be made in cross-examination. These methods do not work at all well, and it is impossible that they should do so; but the most obvious remedy—to require *viva voce* examination in Court—would render it necessary largely to increase the numerical strength of the Equity Bench, and for some reason or other it seems to be a settled political maxim that additional Equity judges shall not be appointed, however much they may be required; and accordingly the Judicature Bill, while recognizing the imperfection of affidavit evidence in really contested cases, proposes to render the resort to *viva voce* evidence more impracticable than ever, by re-

ducing the number of the judges of the Court of Chancery. We do not pretend to understand the motive of this singular course, but we notice it as showing how hopeless it would be, under the provisions of this Bill, to attempt any reform of the Chancery methods of ascertaining facts.

At Common Law the practice diverges, though to a less extent, from what seems to us the only sound ideal. Questions involving mixed considerations of fact and law are constantly submitted to twelve unprofessional men in preference to one or more judges with far more intellect and experience than the whole twelve put together. This seems to us as great an abuse of the jury system as the Chancery procedure is of the methods of investigating facts, and we propose to consider the principles which should determine when a jury ought to be resorted to, and to what extent (if any) the costly but effective process of *viva voce* examination may be safely replaced by the more economical procedure on affidavit evidence.

It is impossible to deal with the jury question without paying some deference to existing habits and opinions, and even perhaps to prevailing prejudices. One must go a long way back to find a time when a British subject needed special protection against the subserviency of the Bench to the Crown; but the old notion that in criminal and quasi-criminal proceedings the defendant is entitled to have his case tried by his so-called peers has outlived the reason of it, and ever since the time of the truculent author of the Letters of JUNIUS it has been a popular superstition that trial by jury is the palladium of English liberty. No one, we believe, has suggested that in cases of this description the old and somewhat barbarous contrivance of a jury should be abolished, and we shall not attempt the vain task of ejecting so grand an idea as a palladium from the popular imagination. Keep juries by all means in every case where there is supposed to be a possibility of evidence being strained in favour of the constituted authorities. But Mr. JONES, when he is sued by Mr. SMITH on the common money counts, does not seem to stand in need of any special palladium, and the suitability of this mode of trial must be determined on other grounds. The questions to be considered are not only whether a judge sitting alone is more likely to arrive at a correct conclusion than a jury guided by a judge, but also which method may be expected to foster the greater respect for the decision arrived at, and which is the more consistent with the maintenance of the dignity and high repute of the Bench.

It was once said by a very brilliant judge that there were many cases which could only be decided by tossing up, and that it was more seemly that a jury should toss up than a judge. No one can really, for instance, appraise at its true pecuniary value a broken limb or a damaged reputation, and it seems desirable that all assessments of damages in such cases should be made by juries. Then, again, it has been said that suitors are more satisfied with the unreasoned verdict of a jury than with the reasoned decision of a judge; and if this were true, it would be a ground for extending the employment of juries even to cases not specially unfit for judicial decision. But it is as certain as such a matter can well be that this notion that suitors—or at any rate that honest suitors—like juries is an utter delusion. In the County Courts a jury is seldom asked for, and in the Divorce Court, where the judge has a certain discretion, it is observed that petitioners almost always desire a trial without jury, while respondents for the most part prefer twelve untrained laymen to one acute and experienced judge. Now this occurs in a kind of litigation where the fiercest conflict of evidence may be looked for, where the least scrupulous and most strongly tempted witnesses are put into the box, and where, therefore, the supposed instinct of juries in discriminating truth and falsehood ought to be of inestimable value. The inference is obvious. A petitioner generally believes that he has a good case. A respondent, at least as often as not, knows that he has a bad one. It would seem therefore that, as a rule, suitors who think that they have the truth on their side prefer a judge, while suitors with doubtful or desperate defences are anxious to take the chance of misleading a jury. We conclude, therefore, that there is, to say the least, no respectable prejudice in the minds of ordinary suitors in favour of juries, and that the resort to them may (subject to the exceptions we have noticed) be safely governed by the consideration whether they are likely to promote or obstruct the success of the party who is in the right.

It is quite clear, in the first place, that no mixed question of law and fact should ever be submitted to a jury. The temptation to assume legislative power and override the law under pretence of determining facts is often irresistible. It is seldom that a Company can get justice from juries, they have shown themselves quite incapable of holding an even hand between parties of different sex, and many other prejudices notoriously affect their decisions. Bearing in mind these and the like consequences of the indiscriminate use of juries, we think that some such rules as the following might well be laid down:—

1. Juries to be employed in the trial of all criminal and quasi-criminal cases, in estimating damages whenever their amount is necessarily of an uncertain character, and in the trial of such other specific questions as the Court may consider unfit for judicial determination.

2. Juries never to be allowed to decide on mixed issues of fact and law; in other words, all verdicts to be special verdicts in answer to distinct questions previously settled by the Court or propounded by the judge at the trial.

3. These rules to be departed from only with the consent of both sides.

With such modifications the jury system would cease to be a reproach to a civilized and rational nation.

Let us now consider in what form evidence ought to be adduced, whether it be taken before one or more judges or before a judge and jury. The advantages of *viva voce* evidence are so obvious, and the absurdity of the Chancery system has been so abundantly confirmed by experience, that we shall assume that, in some shape or other, witnesses must as a general rule be produced and examined before the tribunal which is to decide the issues. It still remains, however, to be considered how far it may be practicable, either generally or in exceptional cases, to modify with advantage the ordinary course of a Nisi Prius trial. Two objections (and two only, so far as we know) have been urged against this mode of investigation—one that a party with a good case may sometimes be defeated by surprise for which no satisfactory redress can be given, and the other that the process is unreasonably expensive. The danger of surprise would, we believe, be obviated almost entirely if the system of open pleading of actual facts, as distinguished from legal inferences, with sworn answers, were substituted for the vague and often false pleadings by which Common Law procedure is embarrassed. With really effective pleadings both plaintiff and defendant will be tied down to proof of the facts on which the bill and answer are based, and no evidence can well be called which the opposite party ought not to be prepared to meet. The only weighty objection to *viva voce* trials is the expense (sometimes enormous) which they involve. Witnesses cannot be kept waiting in attendance on a Court day after day and preserved in a proper frame of mind without very considerable outlay, and no arrangements have yet been devised by which it can be known beforehand precisely, or even approximately, at what hour of what day a cause will be called on. Expense is a grave matter, and may sometimes involve an actual denial of justice to all but wealthy suitors. Still the interests of truth and justice must not be sacrificed altogether to economy, and the inexpensive method of proving facts by affidavit ought not to be admitted, except in cases where it can be ascertained with reasonable confidence that no serious conflict of testimony will occur. To sort causes at an early stage, with the object of applying different modes of procedure to different cases would be somewhat difficult; but with full open pleadings it would not be impracticable; and we think that power should be given to the Court, immediately after the pleadings are complete, to direct whether the mode of trial should be by *viva voce* evidence before the Court, with or without jury, or by affidavit. This was the idea on which the Report of the Chancery Commission of 1852 was based; but the recommendation broke down in practice, because, the number of judges being insufficient to do the work, the oral examination was relegated to examiners out of Court, a process almost more futile than the pure affidavit system. Various attempts to patch up the evidence machinery of the Court of Chancery were subsequently made from time to time, but all came to nothing, because the Legislature would not supply a sufficient staff of judges to allow oral examination in Court to be made the rule. We assume that a measure which is meant to be sweeping and comprehensive will not be suffered to fail by a continuance of the parsimony which has already done so much mischief, and that Equity judges as well as Common Law judges will be allowed in future to ascertain facts in the only satisfactory way. The substitution of the cheaper affidavit procedure in appropriate cases, if guarded by very careful restrictions, would, however, be a great boon to suitors. Probably it might be found safe to admit affidavit evidence subject to some such rules as these:—

1. Affidavits to be admissible in all cases where neither side asks for a *viva voce* trial.

2. Affidavits to be filed alternately as on motion for decree, and not sprung upon the other side as they are when issue is joined by replication.

3. When affidavits are allowed, each party to be at liberty to cross-examine in Court (on reasonable notice of such intention), with the privilege, where the Court thinks it right, of recalling a witness to meet statements made on cross-examination—a privilege the want of which has often proved fatal on the cross-examination, in Chancery, of stubborn witnesses who know that their assertions cannot be displaced.

4. In all cases where affidavit evidence is not directed, the procedure to be by *viva voce* evidence as at Nisi Prius, and, if before a judge and jury, specific issues to be settled by the Court on which the jury are to find their verdict.

A scheme of this character would, we believe, combine in the best possible way the efficiency of *viva voce* examination with the economy of affidavit evidence. It would require an addition to the judicial staff, and that (if an objection) is the only objection which, so far as we can see, can possibly be urged against it.

Some such idea as ours seems to have been floating in the mind of the draftsman of the Government Bill, but to have been unfortunately overmastered by his dread of disturbing any jurisdiction or procedure except that of the Court of Chancery. The Schedule does give the Court a discretion to say whether a trial shall take place before a judge with or without assessors, or before a judge and jury, and adds the rather dangerous authority of handing over the judge's work to a referee. It also gives some discretionary power of using affidavit evidence. But the Bill itself provides that, if either party desires a jury, the Court shall have no power to deprive him of it, unless it also deprives him of his judge and sends the whole question to a referee. If the right to a jury (though, as we have seen, not generally prized by *bonâ fide* suitors) is too sacred to be touched without consent when the hearing is to be before a judge, it is difficult to understand why the substitution of a referee should remove the difficulty. This otherwise unintelligible arrangement may possibly have been suggested by the fact that the existing Common Law procedure does recognize trials without juries before arbitrators forced on the parties, though it is not the practice to hold such trials before a judge alone. This consideration, however, loses some of its weight when it is remembered that the Judicature Bill is, or ought to be, something more than a servile reproduction of existing Common Law practice. If our views are right, it would not be difficult to modify the Bill so as to bring it into harmony with the principles which we have dwelt upon, and which the Bill itself is probably not intended to subvert.

SCOTCH AND IRISH PEERS.

AN illustrious Assembly which often complains of want of employment might do worse than in providing a remedy for an undoubted grievance. The House of Lords consists of hereditary members, of members for life, and of elected members who must possess an hereditary qualification. There is for the moment no active agitation either against spiritual peers or in favour of the appointment of temporal peers with a similar tenure of their dignity; but several Irish peers have lately revived the well-known objections to their anomalous position. One of them pathetically complains that he is disfranchised, having neither the seat in the Irish House of Lords which induced, as he says, his ancestor to accept the burden of an earldom, nor the right to apply to the priests for permission to enter the House of Commons as member for an Irish constituency. The Scotch peers, though they have borne their misfortunes in silence, might justly point to their own more pitiable condition. Their Irish brethren often profit by the right of representing English constituencies, but the Scotch peer is absolutely excluded from Parliament, unless he has the fortune to be elected by his equals to sit in the House of Lords. The disability was first created by the Scottish Act of Union. Lord FALKLAND, who, according to Mr. CARLYLE, has acquired immortal fame by being killed in a clean shirt, was a Scotch peer and a member of the English House of Commons; and probably there were other instances in which the same persons held seats in the two neighbouring Parliaments. The restriction imposed in 1707 was probably due to English jealousy, though it might have been supposed that the competition of Scotch peers could, as a general rule, not have been formidable to English candidates. Irish peers occupied in some respects a different position; for every Scotch peerage is held by a family of Scotch descent, while many Irish peerages were, both before and after the Union, conferred on Englishmen who were supposed not to be sufficiently powerful or sufficiently meritorious to claim a seat in the English House of Lords. GEORGE III., in one of his letters to Lord NORTH, intimates his determination to make no more Irish marquises, because he has too much respect for English earls to squander a title ostensibly higher than their own. There are several Irish peers who have not an acre of land in Ireland, and who have perhaps never even visited the country. The political JOE MILLER records the offer of PITT to give one of his supporters an Irish peerage in preference to granting his request for permission to drive through the Horse Guards. It was often convenient to gratify a faithful follower with a title and at the same time to retain his services in the House of Commons. Other Irish peerages were bestowed on diplomatists who may perhaps have turned their rank to the public advantage in foreign Courts. Two younger sons of a Durham baronet were decorated in this manner, within a few years, as a reward for their diplomatic services. Mr. WILLIAM EDEN, afterwards a peer of the United Kingdom, became Lord AUCKLAND in the Irish peerage, after he had negotiated the French Commercial Treaty, and while he was Ambassador at Madrid. Mr. MORTON EDEN'S descendant still sits, under the title of Lord HENLEY, for an English constituency.

Tears of compassion provoked by the pitiful story of Irish peers must be easily elicited. The nobleman who complains that faith was not kept with his ancestor forgets that services to the Irish Government of the day would probably not have been recognized by the gift of an earldom if the title had been as valuable as in England. The disfranchised Irish peer has a vote for twenty-eight representative members of the House of Lords; and, if he is in a minority, he is no worse off than a Conservative commoner who happens to live in Scotland. His chance of being selected by his party to contest an English seat is considerably increased by his possession of a title. Lord PALMERSTON, who was an Irish peer, may be thought to have enjoyed during sixty years a fair share in political life. The late Lord MAYO would not have been Viceroy of India if he had been an English or Irish commoner. An Irish peer and his son at this moment represent two important districts in a midland county. One, if not more, of the leading members of the House of Lords would probably be well content to return to the House of Commons, if accident had reduced them to the unhappy state of Irish peers. The social advantages of the peerage are equally shared by the titled Pariahs from Ireland. Their wives and their children bear titles not less sounding than those of their English equals, and they take precedence according to priority of creation. Scores of peers of the United Kingdom, some of them pure-bred Englishmen, are only known to the world by older or higher Irish titles; and an English marquis thought it worth while a few years ago to accept an Irish dukedom. Even Scotch peers, who are subject to heavier disabilities, would seldom be content to subside, if they had the choice, into the rank of commoners. CHAUCER thought that a woman was quite right in wishing her husband to be made an alderman, because

> It is full fair to be y-cleped "Madame,"
> And go to church the neighbours all before.

It is still fairer to be called "My Lady," and to take precedence of greater personages than even the wives of aldermen; and a Scotch peerage has, in addition to its other attractions, the advantages of a tontine. By the Scotch Act of Union creations of Scotch peers were prohibited, and consequently the most recent Scotch peerage must be a hundred and seventy years old. By the Irish Act of Union the Crown was restricted to the creation of one peerage for every three peerages which might become extinct, but of late years the prerogative has seldom been exercised, and it is scarcely probable that any further creations will take place. Many Irish peerages have, to the benefit of surviving families, died out since the first year of the present century. Scotch peers are more tenacious of family vitality, because their creation was ordinarily limited to heirs general, and there is a strong probability that some remote ancestor may still be represented through sons or daughters.

Although the grievances of the oppressed peers may not urgently demand a remedy, an inconvenience which affects the country at large rather than the excluded peers or the parts of the kingdom from which they derive their dignities might be advantageously removed. It would have been much better to provide for the election of the repre-

sentative peers by drawing lots than to allow the whole number to elect sixteen peers for Scotland and twenty-eight for Ireland. It was easy to foresee that only the majority would be represented, and the actual operation of the arrangement has been flagrantly unjust and absurd. The Duke of WELLINGTON and the late Lord DERBY successively appointed the Irish representative peers as often as occasion occurred; and if the exercise of Parliamentary patronage by a Minister is objectionable, it is still more anomalous that a leader of Opposition should be able to secure through his nominees a permanent majority in the House of Lords. To Lord MILLTOWN'S complaint that the Conservative majority now refuses to elect a Liberal representative peer, it is perhaps a sufficient answer that, as a general rule, it is unusual to vote for a political opponent; but there is no electoral system in the kingdom to which the modern device of representation of a minority could be more fairly applied. There is no risk that peers, even of the Liberal party, will choose exponents of revolutionary doctrines; and at the worst a Jacobin peer, of which type there were formerly one or two specimens, would be as innocuous in the House of Lords as a wild elephant lashed on either side to a dozen tame companions. When an innovation in the constitution of the House of Lords of a much more questionable kind was proposed three or four years ago, Mr. BRIGHT, then a Cabinet Minister, remarked with characteristic good taste that there was no use in tinkering an incurable institution. The peers themselves probably hold a different opinion; and if they were to pass a Bill enabling the minorities of Scotch and Irish peers to have a share in the representation, the House of Commons could scarcely refuse to assent to the improvement. The Government cannot be expected to propose a measure which might perhaps not satisfy the Conservative peers; but the more prudent members of the House of Lords would not unwillingly see the diminution of their own numerical preponderance, especially as an invidious scandal would be simultaneously abated. It would often be less disagreeable to be outvoted than to choose between the acceptance and the rejection of an unavoidable and unpalatable measure; and it may even be conjectured that the best means of preserving what remains of the power of the Upper House would be to afford facilities for the introduction and adoption of Ministerial measures. The House of Lords has never sunk into the state of political incapacity which is proverbially expressed by the phrase *non possumus*; but *nolumus*, which is understood, though it may not be uttered, deprives statesmanlike concessions of much of their utility and grace. An amendment of the two Acts of Union would present no serious constitutional difficulty, and the introduction of a truer representation of the Scotch and Irish peerages would be only temporarily necessary. If the House of Lords lasts so long, many of the exceptional peerages would either become extinct or be absorbed in ordinary peerages within fifty years. If Lord PORTARLINGTON'S figures are correct, there are now 41 Scotch peers and 107 Irish peers who are not peers of the United Kingdom. Of these, 44 sit in the House of Lords as representatives, leaving 104 to be provided for, or pitied, according to the measure of their sufferings. Only two or three weeks ago Lord NORMANTON was made a peer of the United Kingdom, and both political parties are likely in turn to summon partisans of their own into the higher circle. When only fifty are left outside, it would be at the same time humane and harmless to remove their provincial disqualification; and, with the necessity for electing representatives, the existing abuse and the provisions by which it might be mitigated would equally disappear. A visible hole in a vessel or in an institution is more objectionable than the blemish which may possibly result from the process of tinkering.

WHAT NEXT?

MR. CAWLEY has not succeeded in persuading the House of Commons to pass his little Bill for allowing steam-engines and trains of trucks free course over all the roads and highways of the country; but there is to be a Select Committee on the subject, and the proposal will no doubt be renewed, and there is no saying but what Mr. CAWLEY, if he has only perseverance enough, may have his way in the end. It may occur to some people that England will be rather a lively country when steam-engines are careering wildly in all directions up and down the public roads. Horses still play an important part in English life, but of course if locomotives are coming into general use, horses must be prepared to retire from the field, and be replaced by steam-machinery. We would merely venture to suggest that it might be as well to make sure of the machinery being available for every purpose before horses are finally dispensed with. At least it is difficult to see how the two will get on together. The only hope for the public would seem to be a free fight between tramways, road-steamers, and the rest of the invaders. They cannot very well all have the roads, and when they have run each other down, the public may have a chance of coming by its own. Perhaps it is only natural that the success of the tramway speculators should have encouraged the road-steamer fanatics. Everybody knows the old story of the ship captain who thought that land was rather useful in its way, as something you could stick an anchor into and get provisions from; and it is almost amusing to observe the calm way in which different sets of people assume that the public highways were constructed simply to serve certain private purposes of their own, and that the public should be thankful if any room is left for it at all. Not long since we found ourselves in one of the chief suburban thoroughfares of London, with the whole of the pavement on one side occupied by droves of sheep and cattle, and the roadway by a quick succession of tramway-cars filling both lines of rails, the pavement on the other side being graciously left for pedestrians, in so far as it was not wanted for perambulators. For vehicles which were not tramway-cars there could hardly be said to be any room at all; they were compelled to dodge about in nooks and angles of the way, making a spurt when the road was clear for a moment, and then taking shelter in a side opening till the rush of cars and cattle had again somewhat subsided. One of the drovers explained that it was impossible for him to turn his animals into the road, as they would there be cut to pieces by the tramway-cars. He took for granted that this circumstance conferred either a statutory or Common Law right on drovers and cattle to take possession of the pavements. If steam-engines are added to the tramways, it will certainly be time to ask the Duke of ARGYLL, who is, we believe, President of the Aëronautic Society, how he and his friends are getting on with flying-machines.

Mr. CAWLEY appears to be of opinion that the time has come when steam-engines should be turned loose upon the world on their own responsibility. Parliament ought to assume that they are quite capable of knowing right from wrong, and behaving properly, and should be content with enforcing penalties for misconduct. His Bill proposed that any locomotive which did not emit smoke, and which when working did not produce any noise by steam, or discharge steam into the air, should have the freedom of all the roads in the kingdom, on paying tolls if it came to a bar. It would of course be at liberty to cut up the highways without incurring even this trifling expense. Locomotives which did not conform to these conditions as to smoke and noise were to be required to obtain a licence from the Board of Trade before setting out on their travels. Of course, if the Bill had passed, locomotives of every kind would have taken to the road indiscriminately, and the responsibility of objecting to them and of proving that they smoked or snorted would have been thrown on public-spirited persons who were willing to spend time and money in a law-suit. Each locomotive would of course be provided with a set of attendants, who might not know very well how to drive it, but who would be warranted to swear against any odds that it never smoked and never snorted. Another provision was that in towns locomotives were not to go faster than five miles an hour, or in the country faster than eight miles; but here, again, there would be an obvious difficulty in determining at what rate an engine was going. Eight miles an hour is a pace which would rather make country people wink, and it would be hard to say whether the engine might not be going at ten or twelve miles an hour. It is a nice question whether an engine that makes a noise or an engine that does not make a noise is more dangerous. In the first case, your horse may be frightened, but at least you have a warning of the approaching monster; in the other case, it is down on you, dashing along at ten miles an hour, before you know where you are. Under the Bill, country districts, including many populous hamlets and villages, with children playing in the road, carts and gigs standing at doors or driving along, would have been provided with a fair share of the perils and excitements of Mugby Junction. One of the supporters of the Bill remarked that locomotive engines ought not to be placed in a worse position than other vehicles of a similar size travelling along the high road; but pace, to say nothing of noise, fire, and smoke, has

surely something to do with the question of public safety. This member was disposed to put horses out of account. They are not represented in Parliament, and besides, as he said, what will not horses shy at? People who ride or drive horses may perhaps, however, be disposed to think that the feelings of horses are entitled to some consideration, if only for the sake of the limbs and lives of those who use them. Mr. CAWLEY said the time had come when those interested in the use of these locomotives ought to know what the law was, but he might have satisfied this modest desire by a reference to the statutes in the library of the House of Commons. We have occasionally met a procession composed of a man carrying a red flag with a road-steamer following slowly, in his wake, and perhaps horses are trying to get accustomed to this apparition. But it may reasonably be doubted whether either men or horses are quite ripe as yet for locomotives, with perhaps a long train of trucks behind them, rushing along at ten or twelve miles an hour, blowing off smoke, snorting, shrieking, and scattering red-hot cinders in all directions, and then perhaps exploding in the middle of the road as a pretty climax. One member who gave his experiences in the course of the debate stated that a road-steamer which visited his neighbourhood first broke up the highway for a mile or so into holes and pits, and then smashed itself in despair. There is no reason to suppose that the drivers of locomotives are likely to be men of a very superior class, and we have some experience in towns of the perils to which the public is exposed from wild waggoners and homicidal cabmen. There is certainly something more exciting than pleasant in the idea of having men of this sort turned loose on steam-engines all over the country, whirling through narrow, twisting country lanes, and racing along highways.

It would perhaps have hardly been worth while to notice this happily abortive Bill, if it had not been a measure of a class which seems to be growing more numerous every year, and in regard to which, we are afraid, public opinion is not so resolute as it should be. The old sort of freedom which consisted in the enjoyment of common and equal rights, on the principle of mutual accommodation and give and take, some making way here and others there, so that all might move smoothly along and share alike, would seem to be less appreciated than it used to be. Nowadays each clique and faction has its own pet contrivance, and everything must give way to it. The question is not how all can get along together, but who is to have absolute possession of the public ways to the exclusion of the rest. Mr. CAWLEY's huge locomotive, snorting, fuming, crashing over the roads, and sweeping everything before it, may almost be regarded as an emblem of the rude intolerance and arrogant pretensions of the modern spirit. Now the tramway, now the locomotive, claims the highway as its own, and all other traffic, horse and foot, carts and carriages, is expected to retire before it. Nobody will deny that in their proper sphere tramways and road-steamers may be exceedingly useful and valuable. We have nothing to say against them except that they do not seem to us to supply all the wants and objects of life, and that it is rather hard that the use of the public highways, which are supposed to be maintained for the benefit of all classes in common, should be handed over for the purposes of a minority, to the serious inconvenience, if not exclusion, of the rest of the community. The only comfort is that, when the public has been beaten off, the tramways and locomotives will begin to prey upon each other, and in this way public rights may in time be restored. From this point of view there might be a good deal to be said in favour of Mr. CAWLEY's Bill.

SOCIAL BARRIERS.

THE immortal Dr. Johnson once applied what he supposed to be a crucial test to the sincerity of Mrs. Macaulay's republican principles by proposing that she should invite her footman to sit down with them at dinner. If a willingness to meet social inferiors on equal terms be a fair test of republicanism, it must be granted that the number of genuine republicans in the world is singularly small. Indeed, as is often enough remarked, the effect of democratic political institutions is very often to make the social barriers more impassable than ever. The reason is obvious enough. An American gentleman can less afford to put himself into familiar relations with an Irish labourer in New York than an English nobleman to talk easily to a man of the same class at home, because there is a much greater risk that the free and enlightened citizen will take unpleasant liberties. The absence of any recognized difference makes the protection of a certain reserve more necessary. Invisible barriers have to be thrown up to supply the place of the old tangible distinctions. In a first-class railway carriage in England each passenger knows that his fellow-travellers belong, within certain limits, to the same social stratum with himself, and have therefore a certain common understanding upon various matters. In an American car he can only say that his companions are not niggers; but they may be capable of eating with their knives, of chewing tobacco, and of using language which is not strictly in accordance with conventional usage. You can speak with much more freedom to a fellow-traveller if you have a well-founded confidence that he will not reply by devoting your eyes to eternal perdition. In short, the simple process of shuffling together people who are at the very opposite ends of the scale of civilization does not tend to promote familiarity. Its first effect is to cause the more sensitive units to surround themselves with an imperceptible atmosphere of general repulsion. In the long run possibly the constant intermixture may bring about a closer assimilation; but the immediate consequences—and "immediate" may be interpreted with considerable latitude—are very often the reverse of what they are sometimes hastily assumed to be.

Part of that phenomenon which is generally described as the widening of the gulf between different classes is obviously due to this simple fact. The destruction of a political privilege is tacitly compensated by an increase of social exclusiveness. When we have reached Utopia, the existing awkwardness will be removed. Man will meet man on equal terms; there will be no jealousy on the part of the superior, and no envy from the inferior. Every one will take his place naturally, conscious that it is that for which he is best adapted, and there will be no attempt to create artificial distinctions when those actually existing are felt to repose upon absolute justice. Meanwhile amiable young reformers are apt to attempt to precipitate the process. They fret against the barriers which have sprung up at the very moment of their supposed destruction. They are shocked to discover that their work is only half done, and try to translate the political into social reforms. They give to working-men the right hand of fellowship, sit down to tea with them, and elaborately lay aside the prestige of superior rank and education. They try to talk to their servants as if they were fellow-creatures, and as if the stairs which separate the kitchen from the parlour were not more difficult of ascent—except in a merely physical sense—than the cliffs of the Matterhorn. That such efforts are well meant would be denied by nobody. They are directed against a real evil; for one can hardly consider it as part of the eternal order of things that people whose bodies inhabit the same tenement should be separated from each other in spirit as widely as though they were denizens of different planets. It may even be admitted further that some people have the happy art of really conciliating by condescension; that they can lay aside their robes of state without becoming more imposing in their incognito than in their official costume; and that for them the phrase of putting people at their ease does not really mean producing a general sense of extreme awkwardness, and a forced air of familiarity which is at the very antipodes of the genuine article. A man, however, and even a woman, must be possessed not only of singular benevolence, but of a singularly felicitous manner, if success is to be obtained in such an enterprise. For the great majority, the fetters of custom have penetrated far too deeply into their souls to permit really free action when they voluntarily leave their accustomed sphere. Angels' visits are proverbially rare, and most angels would probably find it hard to lay aside their wings and talk to any mere mortal as to one of themselves. More frequently they come like the "blessed Glendoveer," declaring only too distinctly "'Tis mine to speak and yours to hear," and conferences conducted on such terms may be improving, but scarcely diminish the sense of constraint.

Without denying, therefore, the good which may possibly be effected by crossing the gulf when the innovator has the happy disposition necessary to ensure success, it is more expedient for persons of colder temperament to ask what are the real difficulties to be surmounted. When we appreciate the nature of the obstacles which retard the advent of the millennium, we may expect to aid in removing them by judicious effort, though we cannot hope to overleap them at a bound. The obstacle of which we have already spoken is the most palpable, and is the inevitable result of an unsettled state of society. When nobody is quite certain of his position, and everybody is trying to tread on his neighbour's toes, the result must be a widespread feeling of awkwardness. Vulgarity, in the most general sense, is the product of an attempt to assume habits of thought, or dress, or manner, not as the spontaneous expression of our own taste, but as a conscious imitation of other people's taste. When a servant tries to adopt her mistress's fashions, or an upstart tries to ape an old aristocracy, or an Indian wears Manchester prints instead of his native costume, the same sense of incongruity is produced. Perfect manners, it is said, are to be found only in the uncontaminated East, because there everybody has a traditional code of behaviour from which he never thinks of deviating, and which has become a second nature to him; and therefore, as long as an incessant struggle of classes continues, we shall all feel more or less uncomfortable in each other's presence. But, even assuming this difficulty to be removed in a few centuries, another threatens to be more permanent. We cannot look forward to any time at which cultivation will be uniformly diffused. So far as we can see, the differences are likely to grow rather wider than narrower. In spite of all that has been said about the levelling tendencies of democracy, the differences of fortune increase most rapidly in the

most democratic countries. Millionaires on a scale hitherto unprecedented become daily commoner in New York, whilst the workman's wages, if they rise at all, rise only by imperceptible degrees. Intellectual differences seem to follow the same law. The more science extends, for example, the greater are the exertions required to be decently familiar with its results. It takes the study of many years to be an accomplished chemist or mathematician; and therefore it becomes daily more hopeless for the bulk of mankind who have to live by manual labour to acquire any knowledge worth having upon such subjects. The self-taught genius has daily a harder task before him; for the condition of making additions to our knowledge is familiarity with the vast masses of knowledge accumulated by the labours of preceding generations.

There must thus remain a fundamental difference, tending rather to increase than to diminish, between people at opposite ends of the social scale. For really easy intercourse something like a community of interests is requisite. In order to enjoy a man's society, you must be capable at least of sympathizing with his favourite pursuits. If your whole knowledge, for example, of natural history is confined to recognizing an empirical distinction between a horse and a cow, how can you profitably talk upon such subjects to a man whose mind is a walking British Museum? The region in which he habitually dwells is for you closed by doors which it is impossible to pass. This difficulty is of course merely suggested by way of illustration. As a matter of fact, a tolerably intelligent person who has never got beyond the asses' bridge may converse profitably with a person whose mathematical speculations are so profound as to be intelligible to only half a dozen persons in Europe. But that is because mathematics, however deeply immersed a man may be in the study, fills only one division of his intellect. Even the deepest of mathematicians can take a keen interest in the cooking of a mutton chop, to say nothing of such subjects as poetry, or politics, or theology, which may be said to have a universal human interest. Extend, however, the same principle to other departments of intellectual activity. Take a man who is thoroughly conversant with the great currents of European speculation, and place him in contact with an ordinary ploughman, whose whole intellectual apparatus has been provided at a village school. How can they find real pleasure in each other's society? The ploughman can of course traverse only an infinitesimal part of the philosopher's sphere of thought, and the philosopher, however amiable, will in time grow weary of talk about petty parish gossip, or even reflections upon agriculture from a purely bucolic point of view. The answer, indeed, may be easily given. Such a difference need not cause any sense of awkwardness. If the ploughman is intelligent enough to admit the value of a philosophy which he cannot understand, and therefore to pay due respect to philosophers; and if, on the other hand, the philosopher is not too pedantic to take an interest in simple human passions and troubles, they have a common ground upon which each may give and take some useful information. Unluckily it is just on this ground that the discord is likely to be most complete. The ploughman probably takes an interest in the rate of wages, and attributes his bad pay to a certain inherent meanness on the part of the nearest farmer; the philosopher can only reply by statements about the wages-fund and Malthus, which to his interlocutor are as consoling as a text in Hebrew. The ploughman finds consolation in the doctrines of a Methodist preacher; and the philosopher, if he belongs to a certain class of thinkers, is unable even to conceive how anybody should regard a Methodist as anything but a curious survival of archaic forms of belief. It is not merely that one man knows a certain list of facts of which the other has never heard, but that their whole methods of thought are jarring and mutually exclusive. Add to this that the philosopher feels that his prosperity in a democratic state of society depends very much on the ploughman's good will; while the ploughman is much inclined to class the philosopher with the numerous blood-suckers whom he considers to be living on the fruits of his labour, and it is obvious that there are a good many obstacles, even if all political differences were levelled, to a comfortable intercourse between different classes. Our ploughmen and philosophers, however, are merely special instances of a want of harmony which might be illustrated in a thousand different ways. The misfortune is that the old definition of contemporaries has practically ceased to be true. Of people alive at this moment, many are really living in remote periods of the past; others are really living in the nineteenth century; and not a few are aspiring at least to live in the twentieth. When all people who inhabit the same planet at the same time are truly contemporary, the barriers which now divide them may disappear; for, though not at the same level, they may be in the same scale of thinking beings; but the process of effecting the change is likely to be something of the slowest.

CATHEDRAL LEGISLATION.

THE Cathedral legislation of thirty years ago is one of the great blots of the Statute Book, and may well serve as a standing beacon to reformers of all kinds. It is hard to say which were the worst and most discreditable, the abuses or the remedies; and, considering what the abuses were, this is saying a good deal. The men who undertook to purge and reform the cathedrals found a great and historical organization, enormous resources, and vast and pressing popular wants; they found the wants not attended to nor even recognized, the resources scandalously misappropriated and wasted, the organization—in itself a perfect and admirable machine capable of infinite applications and untold work—at a dead standstill for want of adequate objects, and of zeal and intelligence to find them. These were the abuses, heavy and serious enough. How were they dealt with by the politicians who professed to be filled with righteous indignation at the uselessness of the cathedrals, at their failure to fulfil public duties and to benefit the nation? Not venturing to destroy, they damaged and maimed the machine, so as to make it as useless as possible—quite as useless as it ever had been in its worst days; they alienated, and for a long while frittered away, resources which they did not know how to apply; and as to the popular wants of the country, they had but one idea as to the way in which they were to be met—namely, by multiplying livings with starvation incomes. Filled with the narrowness and conceit of a period singularly shallow in its political doctrines and meagre in its practical measures of policy, they did not choose to take the trouble to master the rationale of the cathedral system. The Chapters certainly did not come before the nation or the Church with clean hands, but they did not want able and learned spokesmen, who, if the reformers had chosen to listen, made it abundantly clear what cathedrals were meant to be, and might still be made. But, for the hasty and priggish legislation of the time, learning was too cumbrous, and real intelligence, with its largeness and its depth, too troublesome. The Cathedral Act of 1840 broke down the cathedral system with axes and hammers. Cathedrals, various in history and in circumstances as they varied in form and size, were all condemned to a pinched and dull uniformity of staff and function. Throughout the Act there is not a trace to be found of any design or even indirect endeavour to stimulate and improve the efficiency of the cathedrals, either as places of solemn popular worship or as centres of ecclesiastical action. The one idea was reduction; reduction stringent and indiscriminate, so as to leave as large a balance as could be gathered from the vast capitular estates for the new fund which was to be administered by the new Commission. The framers of the Act had not the faintest understanding of what a cathedral was intended to be; it never entered their minds that it ever could be made of any use, except to provide places of reward and easy work for exactly the same class of clergymen as those under whom the cathedral system had become a great system of sinecures. That it could be a popular institution, a connecting link between the Church and the masses, a sphere for high enthusiasm and effective work, evidently never crossed the minds of those who drew up the clauses of the Act. That it left deans and canons, with diminished incomes indeed, but also to their old-fashioned poorness of thought as to the duties and services for which they existed, did not trouble the cathedral reformers. They had done enough by cutting down the number of canons to the number of the four seasons; the reform was effected by their being made few, and as to what was to be done by these shrunk-up Chapters, with their magnificent fabrics and their pitiable and unworthy resources for divine worship within them, the Act left that alone. Personally, it was very indulgent to the convenience and the interests of the deans and canons; but in their public capacity it did nothing to remove their difficulties if they should be minded to infuse new vigour into a system hampered and paralysed at every turn with the growth of vested interests, and the claims of chartered and privileged indolence. No important change has perhaps ever been made in England marked by so great ignorance, such vexatious carelessness, and such discreditable want of sympathy with the higher purposes of the institution supposed to be reformed, as the Cathedral Act of 1840. That the cathedrals have survived its mischievous and deadening effects is due to the rise of a spirit in the Church and in the people which the policy of that Act did its best to stifle and defeat by anticipation.

As long as the cathedrals, taking the hint given them by the Act, confined themselves to their old groove and simply went on in the received way, doing very little and venturing on nothing new, the Act appeared merely to be one of rough and hasty spoliation, of which the gains were not very satisfactorily administered. But as soon as the cathedrals began to wake into something like life, and uses were found for them which had not been thought of before, it became clear how recklessly and unskilfully the legislators of 1840 had dealt with the grave interests with which they had meddled. One result soon showed itself. The cathedral reformers had taken care that a Chapter should be reduced to the smallest possible number. Probably assuming that they never could have anything serious to do, the Act had made no provision that they should be efficient. Deans and canons necessarily grow old, and there was nothing to prevent a great and magnificent cathedral, the ornament and central shrine, it might be, of some great city, falling under the management of a body of sick and worn-out old men, past all real work—perhaps past even the outward pretence of it. No margin being allowed, no provision being made for retirement, and human infirmity doing its natural work, it is no wonder that in many instances the slender staff of the cathedrals broke down. In these splendid and costly palaces of religion there were not men to represent it, and cathedral services became a proverb for the meanness and slovenliness of their arrangement. The want of strength, the want of men, the want of relays of workers, have been felt wherever a cathedral has tried to rise to what may be expected from its place and opportunities. It is undermanned for all the various functions which more intelligent thought and greater religious earnestness have found for it; it is undermanned anyhow; but it is further undermanned, because it

is served by men on whose time and work it has not an exclusive, scarcely even a prior, claim; and it is still as much encumbered as ever with exhausted and useless members, for whom no fair mode of retirement was ever thought of till the partial and make-shift Act of two years ago. No cathedral ever begins to stir without feeling itself crippled, without becoming another example of the fatal improvidence which thirty years ago threw away an invaluable inheritance, and upset and deranged and half destroyed a great machinery, instead of patiently and wisely trying to make it fulfil its purpose.

The Act, besides the radical fault of its sweeping and undistinguishing uniformity of cathedral constitution, is full of instances of blundering and short-sighted arrangements, which, in spite of subsequent corrections and amendments, still cause embarrassment to those who have to be guided by it, or to carry it out. But it does in one point profess to look forward, and provide the possibility of mitigating its inconveniences. It actually provides for the possible re-endowment of suspended canonries. There is a kind of grim cynicism about the clause which gives this liberty of re-endowment; for the re-endowment which it mainly contemplates, and which it empowers Chapters to make, is supposed to be out of the "divisible corporate revenues *remaining to the said Chapters, after paying to the Ecclesiastical Commissioners the profits from the suspended canonry.*" The Chapters have leave given to mulct themselves out of their diminished corporate revenues, to fill up the gaps made by the Act, and to restore new canonries in place of others which are "suspended" in the same breath. It is hardly necessary to say that the power has not been put in action, either by the Chapters, or, as the Act also seems, according to the Attorney-General, to permit, by private gifts, although the present Bishop of Lichfield endeavoured to give it vitality. The conditions were not inviting, and the provision has remained a dead letter. But at least it affords a ground for further action. If the Act of 1840, professedly at least, looked not unfavourably on the restoration of places in cathedrals, and on a possible increase of their clergy, it cannot be said, at a time when cathedrals have begun to show something of what they may do for the Church, that it is too late, or too great a departure from the established order of things, to propose practical measures for reinforcing the cathedral body. Mr. Beresford Hope's Bill, which was read a second time on Wednesday, really goes not a step beyond the principle accepted in the Act of 1840; but it regards this principle as one which may seriously be carried into effect, and relieves it of the absurdity thrown round it by the terms and conditions under which the Act of 1840 lets it in. It puts aside the suppositions that it is Chapters who, in the first instance, should re-endow the canonries just taken from them, and that it should be only allowable to revive suspended canonries, but not to create fresh stalls. It simply lays down, broadly and generally, that plans may be laid before the Ecclesiastical Commission by the Chapters, with the sanction of their visitors, for establishing by restoration or creation additional canonries, and accepting endowment for them. It merely enlarges a liberty already given; but it gives it free from the ambiguities, difficulties, and restrictions which have hindered the exercise of this liberty. And when the prospect is considered of the enlarging and unsuspected possibilities of usefulness in the cathedrals, and account is taken of the growing demands of religion, of the increased importance of concentration and joint action, and of the advantage of attaching to places full of every kind of interest, such as the cathedrals, the sympathies of all classes and orders of Church people, the liberty asked for is not too great, and may reasonably be expected to be used with important benefit to the Church.

The Bill rightly leaves as open as possible all the details and conditions of any arrangements that may be made for increasing the staff of the cathedrals. But, in giving facilities for these arrangements, it indicates one special reason why this liberty of establishing new canonries is asked for, and it gives prominence to one very important provision which should accompany them, the pressing need of which is becoming more and more recognized throughout the Church. One chief reason why new canonries are felt to be so desirable is that they would afford the means of connecting with the cathedrals, as diocesan centres, definite offices and functions belonging to the organization of the diocese. Working heads of the Church Societies, inspectors of religious instruction, itinerating preachers, and other clearly defined officers of superintendence, administration, and organized teaching which are likely more and more to grow as the Church extends its work and finds new duties to be done, may with the greatest advantage be joined in membership with the great central church of the diocese. The provision which we refer to is one which speaks of limiting the tenure of the canonry to a term of years, and making this tenure dependent on the performance of the duties assigned to the holder. The embodiment of this idea is a most valuable and original part of the Bill. In truth, the efficiency of the service of the Church, compared with other public services, depends on the degree in which we become familiar with this idea of a man retiring from its responsibilities and duties when he can no longer discharge them. It is obvious that the correlative of such an obligation is a system of pensions in some form or other. It is also obvious that there are great difficulties in the application of this idea, and in the establishment of a pension or retiring fund. There are great departments of Church ministration and service where it would be vain, and perhaps mischievous, to apply it. But there are others where, with fairness and justice, it might be, partially at least, brought into play; and cathedral offices, with the calls on them for special aptitudes, and for full vigour and efficiency if the work of the cathedral is to be properly carried on, seem specially fitted to receive the salutary action of a fair retiring system. A man may do priceless service in a parish long after he is too old to do the work which deans and canons, in their special positions, ought to be equal to doing. The more the idea takes hold of the public mind and the public imagination that great Church functions are no more than great military or civil functions freeholds for life, but depend on the necessary qualifications for their discharge, the better for the service of the Church, and the more hopeful for its prospects in the future.

SCHOOLMASTERS ON SPELLING.

THREATENED men are said to live long; we therefore have some hopes of the English tongue. Otherwise we should begin to fear when we see the enemies who are arrayed against it. We cannot say that we ever before heard either of the National Union of Elementary Teachers or of the Educational Institute of Scotland; but we conceive that education, especially in the form of "elementary teaching," includes the art of spelling—that is, the art of using the "elements" or A B C. When, therefore, Elementary Teachers and Educational Institutes conspire to teach people to spell wrongly, it is something like a betrayal of the citadel by its defenders. What is to be said to people who "desire to secure the maximum of advantage with the minimum of change," and who go and propose to write *sity* for *city*, and at the same time to write *cir*, *cervice*, and *celf* for *sir*, *service*, and *self*? Perhaps, however, it is not to be at the same time, but we are to be sent backwards and forwards and round, round, round. Anyhow, *sir* is to be spelt *cir*—whether all words beginning with *s* are to be so served (*ço cerved?*) we are not told. But *city* is to be spelled *sity* only "if the changes are to be carried further," in which case *g* and *c* soft are to be "abolished altogether." This is beyond us; but it would seem as if *c* soft was to be treated like a victim for sacrifice, to be cockered and pampered for a season and then to be abolished altogether. After being allowed for a while to annex *sir* and *service*, it is in the end to be driven out of *city* and *centre*. But we mark that it is only the "perfervidum ingenium" of the Educational Institute of Scotland which goes so far as this. The Scotch Committee, "convened" by Mr. J. Macarthur, was appointed "to co-operate with the English Committee in the endeavour to devise some practical scheme of lessening the anomalies of our present orthography"; but the English Committee did not look on these special vagaries of their Scottish yokefellows as being "practical schemes." Both Committees, however, English and Scotch, agree in ruling that the history of the English language is a matter of no importance. We are told in a style so grand as to be almost beyond our understanding—

I. This Committee having considered the etymological objection, is of opinion that any disadvantage in this respect would be more than counterbalanced by the educational advantages to be derived from a simplification of spelling.

Perhaps we are not so fully alive as we ought to be to educational advantages; perhaps our own education may have been neglected in those matters. To us it seems that an anomaly here and there is cheaply purchased, so long as we are able by its means to trace out the history of a word or class of words. Thus for instance in the group of which we spoke in a former article, *candle*, *chandler*, *chandelier*, in their somewhat inconsistent spelling and pronunciation, preserve the history of the several stages of the English language at which they crept into it. Arguments like these however, "the etymological objection," the Committee has considered and cast aside. Perhaps we ought to feel abashed, perhaps we ought to cast aside our old-world difficulties on the spot, when we are told in this lordly fashion that they are nothing worth. But we confess that we should be more inclined to bow down if we had the faintest notion who it is that is ordering us in this fashion to forsake the error of our ways. We have said that our darkness is such that we never before heard either of the English Union or of the Scottish Institute in their corporate character. And we are sorry to say that we are no wiser when we read over the names of their leading members. We do not know what may be the claims of Mr. W. Osborne, the English President, or of Mr. J. Macarthur, the Scottish Convener, to be listened to on such a matter; all we can say is that, of the list of names which follow theirs, there is not one of which we ever before heard, and that we mark that, among those whose names are followed by any letters denoting a degree, that of B.A. seems to be the most usual. It is perhaps our own fault, but, as things stand, to us the grand language of the Resolutions seems perhaps just a trifle too grand for those who put it forth.

The second resolution runs thus:—

II. The Committee having also considered the cases of certain words similar in sound but different in meaning, is of opinion that as there is no difficulty in perceiving the meaning of such words, in the spoken language, there need be no difficulty in the written language.

Here again we are a little puzzled by the lofty style of our instructors, but by looking through the list of words which are to be altered, we think we have got a glimmering of its meaning. *Write* is to be spelt *rite*, while *rite* is still to be spelt *rite*—what is to become of *right* and *wright* we are not told; that is to say, the Elementary Teachers think that people may be left to find out

from the context whether *rite* stands for *scribere* or for *ritus*. Our argument of course is that four wholly distinct words, to which, through mere idleness, we have got to give the same sound, are still distinguished, and the history of each is pointed out, as long as each keeps its distinct and appropriate spelling. But the Committee, who are not troubled at *rite* being used both for *scribere* and for *ritus*, become offended at certain other cases of supposed ambiguity:—

The ambiguity in such sentences as the following would be removed by a change of spelling. "I read a book," may mean, "I *am* reading," or, "I *did* read a book." The Present Tense would be "I reed," Past Tense "I red."

"The boy made a bow" may mean, "the boy made obeisance," or, "the boy made an instrument for shooting arrows." The latter should be, "The boy made a bo".

The latter of these two cases is a thoroughly good instance of the reckless way in which these innovators set to work. It is plain that they do not see that the two meanings of the word *bow* are really the same. *Bow, arcus*, and *bow, obeisance* are simply different shades of meaning of the same word. Each means something which is *bowed* (*búgan, beágan*). We have known people who made no difference in the pronunciation, and though *bow*=*arcus* is commonly sounded *bo*, yet the *bow* of a ship, which is essentially the same word, is always sounded in the same way as *bow*=*obeisance*. If we made the distinction in spelling which the Elementary Teachers want us to make, we should be making a distinction where there really is none, and we should be wiping out a piece of history by getting rid of the proofs of the original identity of the two words.

When we look through the proposed vocabulary for "optional spelling," it is plain that the whole thing goes on the principle of paying no regard whatever to the history of words, but of ruthlessly wiping out everything which shows from what quarter they have come, and every mark of earlier and fuller pronunciation. We need hardly go much further when *knight* and *night* are both to be written *nite*, when *knee, kneel*, and *knot* are cut down to *nee, neel*, and *not*, and when *one* is to be written *won*, while *won* seemingly stays as it is. As for the proposed beheading of *knee* and *kneel*, is not Mr. Trollope in some measure the guilty cause? Or was his MS. seized on by some one in the interest of the Elementary Teachers, and was the immortal breeches-maker, whose name in all reason ought to have been *Knevfit*, cut down to *Nevfit* according to some phonetic theory? Yet perhaps we ought not to use the word phonetic, for our Elementary Teachers, English and Scottish, are at least not phonetic in the worst sense. They are satisfied with the Roman alphabet; they ask us to make some very queer spellings out of the letters which we are used to, but they do not ask us to use any new letters, or to stick any of the old ones round about with dots or marks, above, below, or on both sides. And in one point they have lighted, though seemingly quite by chance, upon the right principle for reforming spelling, if spelling is to be reformed at all. They have got hold of the fact, though they do not seem to understand it, that in some of the old editions of the best English writers spellings are to be found which are decidedly to be preferred to those which are now in use. Thus they tell us:—

The following modes of spelling are found in the early editions of Shakspeare, Milton, Spenser, Tyndale, Wichff, Chaucer, and other old authors:—tung—tongue; foren—foreign; plow—plough; yung—young; freud—friend; feeld—field; crumb—crum; delite—delight; dore—door; flud—flood.

And again, after giving a list of reprints of several older writers from Chaucer to Milton, they go on to say,

An examination of these reprints will show, that altho there was no fixt standard of spelling at the time, the same word being often spelt in several different ways on the same page, yet that in a very large number of words the most *common* mode of spelling many words used by the early writers was more simple and more in accordance with the pronunciation than the current spelling.

Thus in the editions referred to, we seldom or never meet with the *b* in *debt, doubt*; the *g* in *sovereign, foreign*; the *e* in *head, heart*; *gh* in *delight*; *c* in *scent, scion*; *w* in *whole*; *s* in *isle, island*; *b* in *lamb, crumb*; the *e* in *believe, field*, &c., and so of many other instances.

With regard to other anomalous words, such as *flood, blood, prove, move, shoe*, &c., altho the present spelling of these words was common at the time referred to, still the simpler forms of spelling them is often met with as *flud, blud, proov, moov, shoo*, &c.

In fact there is scarcely an instance of a difficult or anomalous spelling for which a simpler form may not be found in the editions of the old Authors given above.

All this is perfectly true, and in a great many cases it is much to be regretted that the spelling has been changed, and it would be a great gain if there were any reasonable chance of getting back the older spelling. But why? Not simply because a particular spelling comes nearer to modern pronunciation, but because the older spelling is in most cases—we do not say in all—the most etymologically correct. In many of these words the later spellings wipe out some part of the history of the word or suggest a wrong notion as to its origin. We have already said that, if anybody, English or Scotch, Elementary Teacher or anything else, can persuade the world to write *tung* instead of *tongue*, we shall be ready to rejoice in his triumph, though we are not daring enough to offer to bear the heat of the battle along with him. So it will be well if he can get rid of the *g* in *foreign*, which has crept in where it has no business from some fancied analogy with *reign*, just as printers turn "connexion" into "connection," from some fancied analogy with *affection*. As between *plow* and *plough* we rather prefer the more usual form, as a better memorial of the old final guttural. The *w* in *whole*, and above all the *s* in *island*, it would be a great gain to get rid of, as they too have crept in through misconceptions of the origin of the words. But we cannot, not even to please Chaucer and Milton themselves, agree to give up the *a* in *head* and the *e* in *heart*, because they are survivals, if nothing more, of *heafod* and *heort*. *Hed* is of course accounted for by such an intermediate form as *hoved*, which we find in Sir John Mandeville. Still, however, the *a* came back again, and it is a good thing to have it there. We believe that *crumb* may be harmlessly written *crum*, but to shear the *lamb* of the last letter of his tail, so to speak, would be, not to shear, nor even to flay, but to cut off a limb, or rather a *lim*, as in that word the *b* has no part or lot. But the Elementary Teachers, with charming simplicity, turn these facts to the following purpose. Here is another list:—

C. Modes of Spelling suggested by the analogy of other words of similar formation.

EXAMPLES.

In former times, quite, spite; brisk, risk; told, summer, &c.: were spelt thus—Quight, spight; brisque, risque; tould, sommer. In the same manner, bright, light, opaque, shoulder, world, might be changed into brite, lite, opake, sholder, wurld, with many similar words.

Now the spelling of *quight* was "a mode of spelling (wrongly) suggested by the analogy of other words of (seemingly) similar formation." The *gh* has no business in *quite*, because it is a word of Latin origin, in which the Teutonic guttural never had any place. It was stuck in from a false analogy with *bright, night*, &c. So *sprite* used to be written *spright*, and *sprightly* is still written. But "*delight*" and *spight* are another matter; to change the *c* in "delectare" and "despectus" into our *gh* is a kind of ἀντιπεπονθός for such Latin spellings as "Ædilberctus." But good English *bright* and *light* must stay as they are, if for no other cause, yet for this. Who that believes English history from one end to the other to be all one thing would wish to wipe out the identity of name between the Right Honourable John Bright in the nineteenth century and Beorht Ealdorman in the eighth?

The Elementary Teachers put at the end a collection of extracts headed "Approval of Eminent Persons." But the eminent persons, Mr. Mill, Professor Müller, and others, are so cautious that we think that we have just as much claim to their approval as the Elementary Teachers have. The most cautious of all is Mr. John Morley, who writes thus:—

I think the notion of improving and harmonizing English spelling by recurrence to old forms, wherever they give a spelling more phonetic than that now in use, is excellent, and on this principle within due bounds, much practical service can be done in the way of Spelling Reform. To any Spelling Reform that would re-shape English into arbitrary phonetic forms, I am strongly opposed.

To our mind this is just the right thing. But the Elementary Teachers seem to think it is the right thing too. On the whole we think that reasonable spelling will survive the resolutions of the Elementary Teachers.

INNKEEPERS AND TRAVELLERS.

WE are always supposed to be a great commercial people, and we rather pride ourselves on our practical notions and business-like habits. And, no doubt, in the higher regions of business this self-complacency is sufficiently justified. Nothing can be more thoroughly practical and business-like than the way in which men of business meet each other in strictly commercial affairs. But, on the other hand, how strangely uncommercial we often are in the ordinary, everyday business of life! It would almost seem as if tradesmen when they had to deal, not with each other, but with the general public, threw aside all thought about their customers, and considered themselves entitled to conduct their business in any way that happened to please themselves. Just think, for example, of the retail shopkeepers setting their faces resolutely and ferociously against cash payments, and quarrelling with people who go to them with ready money in their hands rather than break off with the people who seldom, if ever, pay at all. The old-standing grievance about hotels is another illustration of the oddly uncommercial ways of this great commercial community. It might be imagined that it would be the object of hotelkeepers to try to encourage people to come and stay with them, that they would set themselves to consider what their guests would be likely to want, and would do their best to supply those wants, and to make their houses as comfortable and agreeable as possible. If one could banish from the mind all actual experience on the subject, one might even fancy that an innkeeper would be rather pleased than otherwise to see a customer arrive, and would greet him with a propitiatory smile. In real life, of course, we know how little these expectations are realized. Everybody is familiar with the sullen scowl, expressive at its mildest of supercilious indifference, with which the landlord of an inn, on those rare occasions when he condescends to show himself at all, receives his guests, and which is imitated with admirable fidelity by most of his retainers. A nervous visitor can hardly help feeling that he is terribly in the way, that he is putting all these worthy people to a great deal of inconvenience, and that perhaps the best thing he can do will be to apologize for the liberty he has taken and slip away. It is difficult at first sight to see why stopping at an hotel should be an outrage on the host. His open doors appear to invite strangers to enter, and it is on their payments that he depends

for a livelihood. Yet he certainly does his best to convey the impression that he would rather be without them. English hotelkeepers, as a rule, have an air of rather resenting the fate that has put them in this position; and they seem to fancy that their noblest revenge is to let all the world see how very much they are above their work by doing it as badly as possible. In France, in Germany, in Italy, you find landlords and waiters who are still primitive enough to take a pride in their business, and who regard the satisfaction of their customers as the test of success. Compare the sulky, slovenly movements of an ordinary English waiter with the triumphant alacrity of a Frenchman balancing a pile of dishes and covers, and distributing them on every side with the briskness of a conjuror. After all, there is an art in handing plates and pulling corks, and Alphonse looks upon himself as quite an artist in his own way, and his self-esteem would alone compel him to do his best. The old race of English innkeepers and waiters had something of this spirit about them. Many of the innkeepers had risen from being waiters, and the waiters had their chance of some day rising too; but the new system of great hotels has produced a change in this respect. The experience of a waiter is, as a rule, not quite wide enough for the management of one of these vast caravanserais; but the companies can hardly be congratulated on their success in discovering the right sort of people for the work. The choice of gentlemen and ladies of genteel aspirations who have broken down in some other sphere, and who have no practical knowledge of hotel life, does not strike one as particularly promising. The old custom of the landlord bringing in the soup with his own hands survives, we imagine, only in secluded districts; but nobody wants menial attentions of that kind. All that is required is that a landlord should take the trouble to see for himself that things are being managed properly, and should move about among his guests, in order to ascertain their wants and give the necessary orders. As it is, the great man dwells like a star apart, and makes all his arrangements without the slightest regard to the convenience or requirements of visitors. They find a hard and fast system which has been planned from a point of view just the opposite of their own, and to which they have to adapt themselves as best they can.

An American "Victim" wrote to the *Times* the other day, apparently under the impression that there is a general conspiracy on the part of Englishmen to recover the *Alabama* damages by plundering American travellers in detail. If it were only Americans who suffered we might bear it with more equanimity. Unfortunately the idea that an exception is made in favour of natives is a pure delusion. Britons or Americans, natives or aliens, all suffer alike at the hands of the remorseless innkeeper. Of course the "Victim's" letter has provoked replies. We are assured that American hotels are much more extravagant than our own; and the soundness of some of the "Victim's" complaints is sharply challenged. His assertion that English hotels are not only ruinously extravagant, but that in accommodation, food, and service they are miserably deficient, is certainly too sweeping; but if the innkeepers were wise, they would derive much instruction from his letter. If travellers were questioned on their return from a trip, we believe it would usually be found that what exasperated them most was not so much the general charges of the hotels where they had put up, as particular items, often trifling in amount, but outrageously out of proportion to the real cost of the articles supplied. They had asked perhaps for a cup of tea and a biscuit, or a slice of bread and butter, and had been charged as if for a full meal. They had ordered an egg or some other trifle as an addition to the ordinary breakfast, or as a substitute for supper, and found that eggs were reckoned at famine prices. The wine-card is, of course, a continual source of grumbling, for everybody knows something of wine nowadays, both as regards quality and price, and is naturally disgusted to find himself charged twice or thrice as much at an inn as he pays when at home. The American "Victim" resented a demand of 3*s.* 6*d.* or 4*s.* a head for a couple of diminutive soles, a couple of stale eggs, some tea, and bread and butter, as an obvious overcharge; but nothing seems to have really revolted him so much as a charge of 8*d.* for washing a shirt. We should say that, as a rule, the tariff of most English hotels, as far as lodgings are concerned, is not unreasonable; nor is it out of the way in other respects—always excepting the wine list—for a man with a very good appetite who takes his meals just at those hours which the host chooses to appoint. The fault of the system is that the charges are all framed on an estimate of the wants of a person of this kind, and that they are not adapted to the diversity of individual tastes and requirements. Nothing, for example, can be more exorbitant in its way than a charge of 3*s.* for a lady's breakfast, considering what a lady usually eats. Lunch is hardly recognized as a meal by itself, and if you happen to go beyond a simple chop or bread and cheese, you are charged as if for an ample dinner. In France you can always get a dish or series of dishes suitable for any kind of appetite, from a mere snack to a substantial meal, and you pay accordingly. But the English bill of fare lacks this elasticity and variety. Two classes of people frequent hotels—people who are travelling on business, and people who are travelling for pleasure—and the engagements of both classes render fixed arrangements as to meals irksome and disagreeable. If you are very hungry and can eat a great deal, and choose to breakfast or dine at the landlord's hour, you may do very well; but once wander from the prescribed arrangements, and attempt to indulge any little caprice or convenience of your own, and you are sure to find exasperating traces of it in the bill. The only way in which the extremely various wants of travellers can be fairly met is by charging, not for meals as a whole, but for the different articles which a traveller chooses to order according to a fixed tariff. An hotelkeeper who has undertaken to answer the "Victim" declares that fixed tariffs are now common in English hotels; but if they are, they would seem to be chiefly reserved for the host's private use. To be of any service, they should of course be freely exhibited in all parts of the hotel, in the bed-rooms and sitting-rooms as well as in the coffee-room. There can be no doubt that innkeepers commit a great mistake as regards their own interests in not allowing their guests more freedom in the choice of refreshments during the day, and in slipping in exorbitant charges for little things which irritate and rankle far more than the total of the bill.

Political economists assure us that everything is settled by supply and demand. Now there is certainly a demand, and a very strong demand, for comfortable hotels, and there is no artificial monopoly of the trade—for the licensing system hardly operates to that extent, except in isolated cases—yet everywhere we hear the same complaints of the deficiencies of hotel accommodation, and of the excessive charges with which they are associated. Instead of encouraging people to travel, the innkeepers might almost be supposed to have bound themselves in a solemn league and covenant to do all they can to keep people at home. The country is prosperous and flush of money. All classes have been learning to spend freely, to take more recreation, to run about more than they used to do. There is an evident inclination to supplement the regular summer holiday by an occasional little trip of three or four days. Saturday to Monday in the country is becoming almost a domestic institution. But the great drawback to this indulgence is the discomfort and expense of living at hotels. And it may be remarked, as another instance of the extraordinary way in which the business of pleasure is conducted, that the railways on their part certainly do not neglect to do what they can to promote the discouragement of travelling. What can be more wantonly absurd and disgraceful than the ordinary arrangements of the ticket-office? You are kept hanging about in a bare and cheerless hall, with draughts of air in every direction, until it is near the hour at which your train is to start. There is a general rush to the wicket, a struggle past the barrier, and then you are pushed out at the other end by an impatient crowd almost before you have had time to pick up, let alone counting, your change. The rules of most Companies are inexorable on this point. No tickets are to be issued until a quarter of an hour before the train starts. Yet it is difficult to see what harm would happen to the Companies if a traveller could go or send to the station and get his ticket whenever it suited his own convenience. The Scotch Railway Companies are decidedly ahead in this respect. In Edinburgh or Glasgow you can go into a bookseller's or confectioner's shop and purchase a railway ticket, or bundle of railway tickets, which you can use whenever you please. In this way the Companies encourage railway travelling, or at least the sale of railway tickets. Probably the tickets thus bought are not all used, but it is tolerably certain that more tickets are sold than if the purchaser had to make up his mind on each occasion, and to pay separate fares. If the railways were managed on sound commercial principles, they would naturally push the sale of their tickets in every direction, and might even allow a discount on taking a quantity. As for railway refreshment rooms, it is of course impossible to imagine anything more fanatically uncommercial, but the subject is too painful to be dwelt upon.

It is an old story that the English take their pleasure sadly, but if they do so still, it is mainly due to the perversity and stupidity of those who undertake to minister to their pleasure. In almost every direction we find the same eagerness to discourage and repel. The series of miserable experiences involved in going to the play are tolerably familiar—the choice of bad back seats at the box office if you take places beforehand, the good seats being reserved for the sake of the boxkeeper's tips at nights; the fees for the bill, for opening the door, and for attendants here and attendants there; the uncomfortable seats, hard and narrow; the poisonous atmosphere; the exorbitant charges for simple refreshments; the gang of roughs and thieves who are allowed to hang about the entrance under the pretence of calling carriages. It may be imagined that one must be a very passionate playgoer to care to run the gauntlet of these amenities very often in a year. There is nothing perhaps that irritates strangers so much in this country as the incessant demand for fees and tips to which they are subjected on every hand; but natives are probably too much accustomed to it to feel it so keenly. It may be questioned whether the late Mr. Peabody's philanthropy ever took a more practical or useful form than in strenuously resisting all demands of this kind.

Since the siege of Paris, London has been taking up an important position as the resort of foreign travellers, and there can be no doubt that those who have charge of the business of pleasure in its various forms would find it eminently profitable to make the capital more agreeable to strangers. The French just now do not care to go to Germany, and the Germans are not made particularly welcome at Paris. The Americans who pass through London would be glad to spend more time here if an attempt were made to meet their wants. In itself London has now considerable attractions as a pleasure city. In the last few years it has gained in brightness and ar-

chitectural dignity. The Parks have been greatly improved, and the surrounding country within easy reach has always been renowned for its natural beauty. It has probably the best operatic companies in Europe, and its theatres are capable of improvement. The headquarters of business have naturally an attraction for the votaries of pleasure, who often wish to combine both; and all that is wanted to make London the great meeting-place of the world is that those whose duty it is to entertain strangers should, if only for their own sake, endeavour to turn their opportunities to good account by thinking a little less about their own convenience and stereotyped ways, and a little more about what their guests are likely to want.

THE POPE'S ILLNESS.

IT has been almost as difficult during the last fortnight to arrive at any satisfactory conclusion about the real condition of the health of Pius IX. as to decide, amid the mass of conflicting evidence, whether Clement XIV. was or was not poisoned a century ago. So eagerly were the rival journals of Italy and the Vatican engaged in contradicting one another, that one might have imagined it was a point of faith with the Clericals that his present Holiness is immortal, and with the Liberals that his end is come. If the *Fanfulla* asserted that the Pope was confined to his bed and could see nobody, the *Voce della Verità* was sure to reply, with much bubbling indignation at so audacious a falsehood, that he had got up for half an hour and received a deputation with Peter's pence; if the *Osservatore Romano* asserted that he was decidedly better, the *Italia* would rejoin next morning that his physicians considered the disease to be chronic, and that, at his advanced age, it could only have the most serious results. According to one report, His Holiness was forced by his Ultramontane attendants to get up and hear mass on Holy Thursday, against the urgent remonstrances of the doctors and of his most attached personal friends, in order that it might not be supposed he was too ill to do so. On the other hand, it seems to be allowed by the clerical organs that Cardinal Antonelli has written to foreign Governments to express a hope that, in the event of the Pope's death, no difficulty will be made about acknowledging whomsoever the Sacred College may elect as successor. For the present, however, it is pretty generally admitted that all immediate danger is over. But even Popes are mortal, and at the age of eighty-two it is impossible not to remember that Pius IX., though he comes of a very long-lived family, cannot hope to live for ever. We have indeed heard on good authority of a venerable lady who was visited with a severe illness at ninety-two, which, as she remarked in confidence to her more intimate friends, 'had always been a critical time of life with her family," but who recovered, and lived to be ninety-nine. If Pius IX. should attain to the same green old age, he will have almost succeeded in doubling "the years of Peter," which no previous Pontiff has presumed to equal; and he is reported the other day to have told an aged French priest, who came to pay his respects at the Vatican and apologized for his deafness on the ground of his old age, that he "was much older himself, and meant to live a good while yet." Perhaps he may; we are far from grudging him his full tale of years. But it is only natural that his recent illness should lead both statesmen and ecclesiastics to speculate on the possible chances of a vacancy of the Holy See, and how it is likely to be filled. Even the easy-going people who are in the habit of putting aside all difficulties with the selfish consolation that the system will last their day, may be excused for feeling some anxiety in the prospect of a change of *personnel* in the claimants of official infallibility. The *status quo* may be expected to continue during the lifetime of Pius IX., but what then?

In the first place, it must be remembered that, if the Papacy is immortal, it cannot be said that the Pope never dies. The proud proclamation, "Le roi est mort, vive le roi!" does not apply here. An interval of some days there must always be, and there has sometimes been an interval of years, between the death of one Pope and the election of another. There was a two years' vacancy, for instance, between the death of Celestine IV. and the election of Innocent IV., and three years intervened between Clement IV. and Gregory X., who succeeded him. In the next century, again, the See was vacant for two years after the death of Clement V., who removed the Papal Court to Avignon. No such interregnum certainly has occurred of late years, or is likely to occur, but some break there necessarily must be, nor can there be any guarantee for the new Pope carrying out the policy of his predecessor. The Prime Minister, as well as all the Monsignori—who are supposed to be the Pope's domestic chamberlains—go out of office as a matter of course on his death, and it is against all received usage for the Prime Minister to be elected Pope, or to resume his former functions. Lambruschini, it is true, devoted all his energies to securing his own election after the death of Gregory XVI., but only with the result of splitting up the Conservative party among the Cardinals, and paving the way for the election, after an unusually brief Conclave, of a Pope credited at the time with Liberal sentiments, though the great majority of his electors were of the opposite school of thought. Not unfrequently indeed there has been a sharp contrast between the line and character of successive Popes. Thus, in the critical sixteenth century, to the polished and sensual unbeliever Leo X. succeeded the strict ascetic Adrian VI., and to him again the easy-going and worldly Clement VII., who was in turn followed by the stern Paul III., the founder of the Roman Inquisition, and he by Julius III., whose conciliatory policy towards England was summarily reversed by Paul IV. Pius IV. openly complained that his predecessor's uncompromising haughtiness "had lost England to the faith"; while Pius V., whose zeal for "crushing" heretics is commemorated in the collect for his festival, brought matters to a crisis by excommunicating Elizabeth, and publishing the Bull *In Cœnâ Domini*. This is but an illustration, drawn from the middle of the sixteenth century, of the abrupt contrasts so often presented by successive pontificates. Nor is there any reason for assuming that the successor of Pius IX. will be more like-minded with himself than was the successor of Pius IV.

In saying this we have not the least intention of adding one more to the various conjectures, each as trustworthy, or rather as worthless, as another, which have been hazarded as to the results of the next Papal election. What truth there may be in the current rumour of a Brief having been drawn up by the present Pope, dispensing with the prescribed interval of nine days after his death before summoning the Conclave for the election of a successor, we are unable to say. Nor is it at all clear that such a Brief, if it exists, would be held valid after the death of the Pontiff who sanctioned it. But at all events the process of election, when the Conclave does meet, is so studiously complicated that no previous calculations can be worth the paper they are written on. The overwhelming majority of the present College of Cardinals are the nominees of Pius IX.; but so, too, were the great majority of the Conclave which elected him nominees of Gregory XVI., who was as narrow a Conservative as Mastai Ferretti was then believed to be a pronounced Liberal. And for some reason or other, not easy to an outsider to understand, more than a third of the places in the Sacred College are suffered to remain vacant.

It would no doubt be a matter of considerable interest in itself to speculate on what might be accomplished by a Pope of commanding genius, and fully alive to the exigencies of the Church under the social and religious conditions of the present day. A Pontiff as completely master of the possibilities of the situation in the nineteenth century as was Gregory VII. in the eleventh, might, we do not say achieve as brilliant a triumph as Hildebrand—for the entire relations of secular and ecclesiastical life are changed since then—but might do much, not only to make himself a permanent name in history, but to remould the whole future of Catholicism in its influence on the world. But the practical importance of all such speculations is limited by the fact that there is no commanding genius, and indeed no man of any but the most ordinary capacities and attainments, among the Cardinals, still less among the Italian Cardinals. And although in the time of Gregory VII. the franchise, formerly in the hands of the Roman clergy and people, had just been restricted by a decree of Nicholas II. to the Sacred College, there was no rule or tradition to limit their choice to members of their own body. Hildebrand was simply a deacon, without name or dignity in the Church. But the uninterrupted etiquette of three centuries and a half, stronger for practical purposes than any written law, confines the electors of our own day, not only to Cardinals, but to Italian Cardinals. It must be a very urgent sense of necessity that could induce a close corporation, whose habits and instincts and most cherished beliefs must alike constrain them to look with suspicion on any semblance of novelty, to break through the time-honoured prescription and look beyond the limits of their own charmed circle for the future father of Christendom. Least of all could they be expected to elect one who is not an Italian, when to do so would look like a virtual acquiescence in the loss of the temporal sovereignty. One change of detail must of course be accepted as inevitable; the next Conclave can hardly assemble in the Quirinal. According to the famous prophecy of St. Malachi, the next Pope is to be *Lumen de Cœlo*: but it requires a prophetic eye to discern from what quarter of the heavens the promised light is to dawn upon the world.

CRIMINAL CONSPIRACIES.

WE are glad to see that the present state of the law of conspiracy is to be discussed in the House of Commons. Nobody can say that the law as it stands is altogether satisfactory, but there would seem to be a good deal of misapprehension both as to its scope and objects and the principles on which it is based, and it will be as well that people should understand distinctly what the law really amounts to, and what purposes it is intended to serve, before any changes are introduced. It may possibly be found on examination that some of the defects attributed to the law are rather in the nature of merits, while others are only such as belong to almost every branch of jurisprudence. Those who desire to know what the law is, and how it gradually developed into its present shape, cannot do better than refer to a very interesting little work on the subject which has just been published by Mr. R. S. Wright (*The Law of Criminal Conspiracies and Agreements*. Butterworths). The earliest definition of criminal conspiracy—but the crime must of course have been previously recognized—is given in the Ordinance of Conspirators, 33 Edw. I. (1305), in which it is set forth that "conspirators be they that do confeder or bind themselves by oath, covenant, or other alliance, that every of them shall aid and bear the other falsely and maliciously to indite, or cause to indite, or falsely to move or maintain pleas." This Ordinance seems to have been specially

directed against great lords who "retain men in the countries with liveries or fees for to maintain their malicious enterprises." The history of the law of conspiracy from that period down to the present time is a very good illustration of the power of growth in the Common Law, and of the manner in which it adapts itself to the varying circumstances and necessities of each age, as well as of its relations to the Statute law. It will be observed that the law which in our own day has attracted most attention as being directed against dangerous combinations of working-men was originally used as a weapon against confederations of powerful and unscrupulous nobles. The law of conspiracy has at different times been narrowed and expanded by legislation, but it would appear to have derived much of its force from the discretionary authority of the Common Law Courts to prohibit and punish whatever is *contra bonos mores et decorum*. In 1616 the Court of Queen's Bench, asserting itself as the rival of the Star Chamber, declared that it had power "not only to correct errors in judicial proceedings, but other errors and misdemeanours extra-judicial . . . so that no wrong or injury, either public or private, can be done but that it shall be repaired or punished in due course of law." And after the Star Chamber was abolished, Sir C. Sedley, who was charged with acts of gross indecency and profanity, was informed that, "although there was not now a Star Chamber, still they would have him know that this Court is *custos morum* of all subjects of the King." Lord Mansfield also upheld the right of the Court to act as "the general censor and guardian of the public manners." On various points there may be some doubt as to the precise effect of decisions of the courts in regard to criminal conspiracies, but there can at least be no question as to the authority which they have uniformly claimed to determine, with reference to the general interests of society, what practices shall be deemed criminal when a number of men combine and agree to execute them. Criminal conspiracies may be divided into eight categories:—(1) Combinations to commit crimes; (2) combinations against the Government; (3) to pervert or defeat justice; (4) to do anything against public morals or decency; (5) to defraud; (6) to injure individuals otherwise than by fraud; (7) in restraint of trade; (8) to coerce individuals. At an early date we find two principles clearly and firmly developed—first, that a combination to commit a crime is a crime; and, secondly, that the essence of the crime of conspiracy lies in the agreement, and is independent of the execution of the conspirators' design. So far, as Mr. Wright points out, the law of conspiracy may be regarded as practically an extension of the law of attempts to commit crimes. But, beyond this, there are cases which tend to establish the principle that it may be criminal to combine to do an act which in itself would not be regarded as criminal apart from the conspiracy. Before going into this question, however, it may be worth while to glance at one or two of the leading cases on the general law of conspiracy.

In 1611 the Poulterers' case settled the question of the essence of a criminal conspiracy. A number of poulterers in London, who had a spite against a man who had married the widow of a poulterer, combined in order to bring a false charge of robbery against him, and to procure him to be arraigned, indicted, adjudged, and hanged. Happily the poor fellow was able to prove that on the day on which the robbery was alleged to have been committed in Essex he was in London, and the Grand Jury threw out the Bill against him. Upon this the poulterers pleaded that, even if they had combined against the man, yet the matter had not gone far enough to render them liable to punishment for conspiracy. But the court held that "a false conspiracy between divers persons shall be punished, although nothing be put in execution." In 1663 (Timberley) it was laid down that a combination to charge a man with heresy with intent to extort money from him, or to defame or disgrace him, was indictable; and Lord Mansfield (1762) held it sufficient that there should be a combination to obtain money from a man by charging him with "a false fact," "whether it be criminal acts, or such only as may affect his reputation." In 1825 the King's Bench decided that, if the purpose was to extort money by indictment, it was immaterial whether the charge was true or false; but in a subsequent case the Recorder of London (1845) permitted inquiry as to the truth or falsity of charges as material in determining the question of intent. In regard to combinations to defraud, it has been held in Warburton's case (1870) that a merely equitable wrong will suffice. "It is not necessary," said Cockburn, C.J., "in order to constitute a conspiracy that the acts agreed to be done should be acts which, if done, would be criminal. It is enough if the acts agreed to be done, although not criminal, are wrongful—*i.e.* amount to a civil wrong." In this case Warburton was partner with L., and conspired with P. by means of false accounts to pretend that the firm owed money to P., with intent that such money when paid to P. should be divided between P. and Warburton, and that L. should so be defrauded; and it was held that this was a conspiracy, as it was a combination to commit a civil wrong. In 1833 (Levi) a "Knock-out" at an auction—that is, a combination of men to bid against other people, in order to drive them away—was held to be indictable, and Mr. Wright suggests that this decision may be explained on the ground that, if the auctioneer had known of the combination, he would not have knocked down the goods to any of the persons concerned in it, and thus his consent to the transfer of the property was obtained by a false appearance of competition. With few exceptions, the cases of combinations by workmen to regulate the conditions of their labour have been combinations expressly prohibited by statutes (now repealed), or combinations to do what it would have been punishable for one man to do without combination. The exceptions will be considered hereafter.

O'Connell's case may be taken as the modern leading case on seditious conspiracy. In that case Chief Justice Tindal, in delivering the opinion of the Judges upon writ of error in the House of Lords, ruled that "the agreement of divers persons together to raise discontent and disaffection amongst the liege subjects of the Queen, to stir up jealousies, hatred, and ill-will between different classes of Her Majesty's subjects, and especially to promote amongst Her Majesty's subjects in Ireland feelings of ill-will and hostility towards Her Majesty's subjects in other parts of the United Kingdom, and especially in England," is an illegal act. He added that the judges thought it unnecessary to state reasons in support of the opinion "that an agreement between the defendants to diminish the confidence of Her Majesty's subjects in Ireland in the general administration of the law therein, or an agreement to bring into hatred and disrepute the tribunals by law established in Ireland for the administration of justice, are each and every of them agreements to effect purposes in manifest violation of the law." Lord Denman suggested a doubt as to "whether there was anything illegal in exciting disapprobation of the courts of law for the purpose of having other courts substituted more cheap, efficient, and satisfactory." Lord Campbell held that "any person who deliberately attempts to promote feelings of ill-will and hostility between different classes of Her Majesty's subjects—to make the English be hated by the Irish, and the Irish hated by the English—is guilty of a most culpable proceeding; and that, if several combine to do so, they commit a misdemeanour." He shared Mr. Justice Denman's doubt as to the attacks on the courts of law, but said that "a conspiracy generally to bring into discredit the administration of justice in the country, with a view to alienate the people from the Government, would certainly be a misdemeanour." The judges were of course agreed that the crime of conspiracy was complete even though the conspirators had done nothing to carry their plot into execution.

These cases illustrate clearly enough the general operation of the law of conspiracy. It will be found on examination that in the great majority of reported cases the conspiracy has consisted in an agreement to do something which at the time was, apart from combination in itself, a crime, either by statute or Common Law. In other words, the act in question was a crime, whether committed by one or by a number of persons. The effect of applying the law of conspiracy in such a case is that, where there are a number of persons concerned, the law can lay hold of them at an earlier stage of the affair, and even, as it were, nip the intended crime in the bud, without allowing the conspirators to evade punishment. As Mr. Wright observes, the modern law of conspiracy has grown out of the application to cases of conspiracy of the doctrine that, since the gist of a crime is in the intent, a criminal intent manifested by any act done in furtherance of it ought to be punishable, although the act did not amount in law to an actual attempt. It is necessarily difficult, if not impossible, to prove a man's agreement with himself to commit a crime; but when several persons are concerned, the communications which take place between them in regard to the contemplated act are sufficient to bring it home to them. It has been said that, if the law of conspiracy is to be confined to combinations with a view to commit what if done by one man would be a crime, it might as well be abolished, since the offenders could be got at by an indictment for the crime itself. The value of the law of conspiracy, however, as affording an earlier opportunity of coming down on the intending criminals, and also greater facilities for proving the charge against them, ought not to be overlooked.

So far the law is clear and simple enough. A combination to commit a crime is in itself a substantive and distinct crime, and the essence of this crime lies in the agreement, and does not require any step to be actually taken, beyond agreement, towards the commission of the contemplated crime. The doubtful part of the law relates to the question whether a combination will change the complexion of an act, so as to make that criminal when performed by a number of persons which would not be deemed criminal if performed by only one person. The first suggestion that a combination might be criminal, although that which it proposed to accomplish was not in itself criminal, would seem to have sprung from a misapprehension of the case of the Brewers (Starling) in 1665. This was an information against the brewers of London for conspiring "to put down the gallon trade by which the poor are supplied, and to cause the poor to mutiny against the farmers of the Excise," and thus to "depauperate" the latter. The King's Bench gave judgment against the brewers, but on the ground that "the Excise was parcel of the King's revenue, and to impoverish the farmers would be to make them incapable of rendering the King his revenue"—in other words, that the combination was levelled at the Government. Other decisions following in the same line were open to a similar remark. In the Cardmakers' case (Cope, 1719), where the defendants had bribed a cardmaker's apprentice to spoil his master's cards by putting grease into them, an act of this kind was then criminal, apart from conspiracy. In the well-known case of Leigh (1775), for hissing Macklin the actor, conspiracy is charged only in the first count, and there only in the inducements, and the substance of the indictment would seem to be, not con-

spiracy, but riot and obstruction of the play. The defendants were convicted, but no judgment was passed, the matter having been privately settled. In 1809, however, Sir J. Mansfield is reported to have said, that if any body of men were to go to a theatre with the settled intention of hissing an actor, or of damning a piece, such a deliberate and preconcerted scheme would amount to a conspiracy. And in 1853 Mr. Justice Crompton observed, in an action for maliciously inducing a singer to break her contract, that if two or more persons, with a mischievous intent to ruin a rival trader, went to a banker, or any one who owed money to the rival, and begged him not to pay the money, and by that means ruined or greatly prejudiced the man, an indictment for conspiracy might perhaps be maintained against them. In two important Trade-Union cases (Druitt and Brown), expressions were used by the judges which would certainly seem to point to the view that, in regard to coercion, a combination will invest with criminality an act which, without combination, would not have that character. In the former case, which related to picketing in the tailors' strike, Baron Bramwell ruled that, "if any set of men agreed among themselves to coerce a man's liberty of mind and will to say how he should bestow himself and his means, his talents and his industry, they would be guilty of a criminal offence"; and he explained coercion to mean "something that was unpleasant and annoying to the mind operated upon." And in the recent gas-makers' case, Mr. Justice Brett said that there would be "improper molestation"—amounting to a criminal offence—"if anything were done to cause annoyance in the way of unjustifiable interference which, in the judgment of the jury, would have the effect of annoying or interfering with the minds of ordinary persons carrying on such a business as that of a gas company." It should be observed that the jury acquitted the gas-stokers on this charge, and convicted them on the count for a combination to prevent the Company, by a simultaneous breach of contract, from carrying on their business. The explanation of Baron Bramwell's observation is probably that he had then specially in his mind some such form of violence as picketing—the offence charged against the tailors. Mr. Justice Brett's language obviously requires definition. To tell a jury that improper molestation consists in unjustifiable interference is simply to leave them to settle the law of conspiracy for themselves. To some extent a similar objection might be made to the definitions of seditious conspiracy in O'Connell's case. But it is obvious that offences such as sedition and improper coercion must always turn very much on question of circumstance and degree, and that it is neither possible nor perhaps desirable to define them with great precision.

A review of the cases brought together by Mr. Wright would seem to show that the law of conspiracy is mainly an extension of the law of attempts, but that, in the case of agreements of a public nature and levelled at the Government, and perhaps in the case of agreements to pervert or defeat justice, or to injure private persons, combinations to do something which if done by an individual would not be criminal may be brought within the category of criminal conspiracies. That the law of conspiracy has its uses cannot be denied. Mr. Wright enumerates several advantages derived from it in dealing with combinations to commit crimes; it enables the conspirators to be punished for agreement without any other overt act, and it is useful in founding jurisdiction, and as a ground for the admission of evidence which might not be relevant to a charge of actual attempt or commission. It is clear that a combination to execute a criminal design is in every way a much more serious affair than a similar enterprise on the part of an individual. It implies deliberation, careful preparation, a settled purpose; the evil effects of the act are naturally increased by the scale upon which it is to be executed; and in proportion to its force and efficiency is the temptation to commit it. It ought, therefore, to be punished with the utmost severity. As to the question whether acts which would not be criminal if performed by an individual should be converted into crimes when taken in hand by several persons acting together, we are disposed to think that the principle is sound in itself, but of course great caution and discretion are necessarily required in applying it. It is easy to conceive acts which are inoffensive or trifling when performed by an individual, but which would become very serious if performed by a body of people simultaneously and in concert. It would certainly seem to be desirable that the courts should retain the power of dealing with such cases on their merits, but of course it would be well that the limits of discretion should be clearly defined. This would no doubt be done by the courts if cases raising the points at issue happened to come before them, but this is a mere matter of accident, and it would therefore seem to be the duty of Parliament to take up the question. A Committee of the House of Lords could hardly be more usefully engaged than in endeavouring to supply the necessary definitions. The political atmosphere of the House of Commons on the eve of a general election is perhaps hardly favourable to calmness and impartiality in dealing with such a matter, even if that body cared to commit itself to legislation at such a moment.

THE ALLIANCE AT EXETER HALL.

THE leaders of the Alliance are always hopeful. They have persuaded themselves, and are endeavouring to persuade others, that their prospect is improving. They admit that during last year there was a large increase in the consumption of beer and spirits; and they even argue that, if restrictions had not been imposed upon the sale of liquors, the consumption would have been larger still, and yet they expect to impose a measure of prohibition. They have held a meeting at Exeter Hall, which they will doubtless declare to have been a great success, and whatever be the exact result of the next debate on the Permissive Bill, they are prepared to prove that that result is a triumph to their cause. The speeches at their meetings are usually very dreary reading, but it is interesting to know that even the Alliance feels the need of a comic performer. There is one of their speakers, evidently a great favourite, who, having to speak of pauperism, doubled himself up and hobbled to and fro on the platform as if to imitate the movements of a crippled and infirm pauper. One feels considerable relief at having thus got to the comic side of the Alliance. Its supporters are, after all, human creatures like ourselves. They are not so devoted to great principles and a lofty mission but that they like to hear their leaders poking a little mild fun at the brewers. Those leaders for the most part are respectable dull men, whose most valuable quality is perseverance, and who are better at action than at speech. It would be invidious to mention names, but we may say that if all the oratory at Exeter Hall had been as bad as some of it, the meeting could hardly have lasted the appointed time. But the managers discreetly kept their funny man to the end, and the bulk of the audience remained to hear an established favourite, although they scarcely concealed their impatience of an earlier speaker whom we will venture to describe as an unmitigated bore. One of the longest-winded of the leaders of the Alliance claimed indulgence for loss of voice, upon which it was obvious to remark that a beneficent design of nature appears even in the prevalent east wind. Lest, however, an enemy should connect hoarseness with teetotalism, it was mentioned, and doubtless with truth, that colds are by no means confined to water-drinkers.

The great gun of the evening appeared to be Mr. Neal Dow, who once more repeated his account of the effects of prohibition in his native State of Maine. He says that there is less drunkenness in that State now than when he was young, and he ascribes the increase of sobriety to prohibition. But it would be quite as reasonable to ascribe prohibition to the increase of sobriety. He of course denies that the Maine Liquor Law is evaded to the extent that has been alleged; but we can hardly accept statements of manifest partisans on either side. A pint of whisky bought in Portland was produced in the House of Commons by a member. Mr. Dow answers this imputation by saying that the whisky must have been sold as medicine, which is possible. In this country, if the public-houses were closed, the druggists would certainly do an increased business, particularly during an east wind, and therefore we prefer to keep the public-houses open. The want of stimulants in an inclement spring is like the demand for jokes at a meeting of the Alliance; it is a confession of the ordinary weakness of human nature. We are able, by way of comment on Mr. Dow's speech, to refer to the last number of the *Alliance News*, which reports a debate in the Canadian Senate on a Prohibitory Bill. The chief supporter of the Bill stated that he had travelled lately in Michigan, "where liquor was not seen, unless asked for." He believed this to be the case in other places where the law was in force; and even if nothing more than this were effected, he considered that a great work would be accomplished. We are happy to remember that our own law and practice are already, to a great extent, in harmony with this speaker's desire. The legal designation of a large class of drink-sellers in England is licensed victuallers, and it is the custom of this class in London to exhibit upon their counters biscuits and pork-pies, which, however, appear to be adapted rather for keeping than for eating. The publicans would probably be willing to compromise with the Alliance upon the terms that liquor should not be seen unless asked for. Messrs. Spiers and Pond would be obliged in that case to remove the decanters of liquor from their refreshment counters at railway stations, but they might continue to derive whatever advantage is now obtained from the adornment of those counters with coloured glass. Mr. Dow says that visitors to a new country are apt to generalize too hastily. He has heard lately of an incident which, in ignorance of the exact fact, and in disregard of the feelings of Nonconformist members of the Alliance, he described as a prize-fight in a Baptist chapel. The occurrence to which he referred took place in a building which had formerly been a chapel. Even if the information on which he spoke had been correct, it might have occurred to him that truth is sometimes inconvenient. This, however, is by the way. Our immediate concern is with the comment which he made upon the supposed fact which he had stated. If, he said, he were to go home and report that the English were a nation of prize-fighters, that would be an example of hasty generalization. But we should answer that, if he were to go home and say that the lower order of Englishmen are much addicted to fisticuffs, he would be near the truth. And if an Englishman were to return from America and report that in States where a prohibitory law exists large numbers of persons manage to get supplied with spirits, he would not probably be very far wrong. Mr. Dow glorifies himself and his friends on the persistence which compelled one of the great political parties in the State of Maine to adopt the prohibitory law into its "platform." But even this story is capable of being told two ways. We have heard that ingenious politicians have contrived to conciliate fanatical support without producing popular discontent. In other words, they have arranged that the law should say

what it pleases, and the people should do what they please. Principle is asserted, and practice remains undisturbed; or, as the Canadian Senator puts it, liquor is not seen till asked for.

The elasticity of spirit of the leaders of the Alliance is indeed admirable. Their organ quotes from the charge of the Chairman of the Quarter Sessions of the North Riding of York to the Grand Jury. He says that in the corresponding quarter of last year the number of cases of assault arising from drunkenness was forty-one, but in this year there were seventy-six. "The increase of drunkenness was to be attributed to the great rise in the wages paid for labour throughout the country, especially in mining operations, and also those relating to the manufacture of iron." It is difficult to understand how this undeniably true statement helps the cause of the Alliance. They assume, for rhetorical purposes, that the Permissive Bill will pass this year. Let us assume, for the purpose of argument, that it had passed last year, and that an attempt had been made to enforce it in a mining or iron-working district of Yorkshire. Is it necessary to ask a Chairman of Quarter Sessions or a Chief Constable of the County what the consequence would have been? Surely we can imagine it for ourselves. But why agitate for a measure which is manifestly incapable of practical application? The Alliance might seriously apply to the Permissive Bill what Dogberry blunderingly says of writing and reading—"Let that appear when there is no need of such vanity." If all the persons present at Exeter Hall lived in a district by themselves, they might adopt and enforce a prohibitory ordinance to their own entire satisfaction, and amid the plaudits of an admiring universe. But if these respectable and rather feeble people were only a majority, and there were a minority of colliers and miners, an attempt at prohibition would produce an awful riot which police, or perhaps soldiers, must be employed to quell. We should not complain much of the Alliance if it were simply useless, but its pretence of work may prevent real work being done. It is lamentable to find that the earners of increased wages can make no better use of their prosperity than to eat and drink more plentifully. It is still more lamentable that Parliament, in presence of a grave evil, should be bewildered with impracticable suggestions, and denounced if it declines to listen to them. Almost the only words of sense that were uttered at Exeter Hall came from the Liberal candidate at the late Liverpool election. If he was selected because he supports the Permissive Bill, the result of the experiment can hardly, we think, be encouraging even to the irrepressibly sanguine leaders of the Alliance. He told the meeting that he was Chairman of a Company established for supplying Liverpool with public-houses without intoxicating drink. The Company owns eight such houses, and it pays dividends of forty per cent. Here is an example worth imitating. You cannot do away with the ordinary public-house unless you offer something in its place. The *Alliance News* is very severe upon the Railway Companies for allowing spirits to be sold to their own servants on their own premises. The Railway Companies generally arrange that tea and coffee, as well as gin and brandy, shall be supplied at their principal stations; but we believe that an engine-driver, if he takes coffee, usually likes a little brandy in it. That which has been done at Liverpool might be done with advantage to the community, and perhaps with profit to the undertakers, at other places. Such an experiment appears hopeful where the programme of the Alliance is simply hopeless. Its leaders demand, for the present, merely the Permissive Bill; but they announce their intention to proceed, when they have got that, to total prohibition. The years in which they will labour to this end will probably be like that which has just elapsed. There may be fluctuations of prosperity; but, on the whole, the wages of labour are likely rather to increase than to diminish. It is difficult, under such circumstances, to understand how any rational man can put himself forward as a leader of the Alliance. No doubt a meeting at Exeter Hall is pleasant to those concerned, and does little harm to anybody else. It is tolerably well seen now that the publicans can take care of themselves. The speakers at Exeter Hall gain a useful notoriety, and the listeners probably persuade themselves that they are enjoying a moral and intellectual benefit. If the Dean of Canterbury, who presided, was able to persuade himself that he was usefully engaged, so much the better. We observe that the *Alliance News* remarks that the season for indoor meetings is nearly over—a remark which requires qualification with reference to the east wind. But as summer evenings are likely to arrive ultimately, it may be useful to consider what is to be done with them. Supporters of the Alliance are recommended to "mission" their neighbourhoods on its behalf. The verb "to mission" comes for the first time under our notice, and we cannot help thinking that the Alliance has enough to do in the department of morals, and would do well to abstain, at least for the present, from attempts to improve the English language. We will venture, however, to say that we think missioning in summer must be thirsty work.

SKETCHES OF CENTRAL ASIA.

THE Crystal Palace has on loan a collection of pictures and sketches which claim special attention at the present moment when Khiva and Central Asia generally are assuming a new political importance. These remarkable works, which reveal the character of the country as well as of its inhabitants, come before us as the vivid and veracious testimony of an eyewitness. The painter, M. Basil Wereschagin, a Russian by birth, seems to combine in his own person the enterprise of a pioneer, the valour of a soldier, and the skill of an artist. During the years 1868, 1869, and 1870 he traversed, pencil and sword in hand, the wild districts which range east of the Ural and stretch onward between Siberia, India, and China. Having been first educated in the Naval School of St. Petersburg, the adventurous painter was qualified to join the Russian military detachment, the exploits of which he witnessed and portrayed. "The Unexpected Attack," "Surrounded and Pursued," and "The Presentation," as trophies, of human heads cut off from the vanquished, are terrific scenes of hot slaughter and of cold-blooded brutality. This guerilla warfare, whether conducted by the French in Algeria or by the Russians in Central Asia, and whether chronicled by Horace Vernet or by M. Wereschagin, can scarcely fail to be eminently picturesque. Across a wide plain without boundary, save a circuit of wild hills, a savage horde of "barbarians" rushes onward as a fierce wind bearing a storm cloud. Attila, "the Curse of God," led such fiends to plunder and to slaughter. In vain a firm front is made and a compact square formed; the men fall thickly and heavily; the foreground of the picture is strewn with the dead weltering in blood. The skill which the artist has at command is not out of keeping with these thrilling incidents; the style is vivid and realistic, and a certain savagery, or "devil," brings the painter and his subjects into close accord.

M. Basil Wereschagin, before he entered seriously on art as a profession, had studied, as we have seen, the tactics of war. In Russia military men have shown an exceptional aptitude and affection for the arts. A Russian officer who lost his right arm at Leipzig forthwith took up a brush with his remaining hand. The battle painter, M. Kotzebue, was dabbling in paint while he studied the arts of war. Also the famous Russian marine artist, M. Bogoluboff, served on board ship before he proved his talent in depicting a naval engagement. In Russia the practice of art has crept into the highest classes; even statesmen are known to have gained almost professional proficiency. Intolerable tedium is supposed to drive Russians to painting or to drink. But M. Wereschagin at any rate has long since passed from the ranks of the dilettanti. Before he entered on his art campaign in Central Asia he had studied for five years in the Imperial Academy of St. Petersburg. He has also had the advantage of three years' residence in Paris, where the studio of M. Gérôme was open to him. Indeed the style of the illustrious Frenchman and the manner of this Russian, who, if we mistake not, will make for himself a name in Europe, have much in common. M. Wereschagin seems to have travelled thousands of miles as if for the express purpose of opening here in the Crystal Palace a chamber of horrors; hundreds of dry blanched skulls and of gory grinning heads, fresh severed from the trunks, are heaped life-size upon canvas. Russians are known for an enterprise which carries them far and wide over the surface of the earth in search of knowledge. Russian painters are pensioned as pioneers to penetrate remote regions, in order to bring back whatever may be most new and strange in nature and in art; and certainly in the present instance the pictorial products can scarcely disappoint, either for sensational intensity or trenchant truth. M. Wereschagin claims to be a pupil of M. Gérôme, and yet he does not admit himself to be under any obligation to his master, as most people might suppose, for the callous cynicism, the cool-blooded cruelty, which in these works appal the spectator. The confession which the painter himself makes is that he was compelled to paint the horrors he saw, that he could not shrink from his duty as a faithful chronicler. M. Gérôme, it is said, in pursuit of art goes out of his way to seek sensations; while the more innocent-minded Russian, we are left to infer, would willingly escape from a painful duty if he could. We confess, however, that we do not see in the present instance any ground for exception to the all but universal rule that a painter chooses his subjects according to his tastes.

The large oil pictures are scarcely so trustworthy as the smaller studies. They do not pretend to have been painted on the spot; in fact they come from Munich, where a spacious studio was specially arranged so as to favour the artist's endeavour to gain the effect of outdoor daylight and sunshine. Accordingly the manipulation, the heavy impasto of pigments, and especially the dramatic method of composition, with scenic contrast of light, shade, and colour, pertain to the Munich school. And yet neither Director Kaulbach nor Professor Piloty would care to be held responsible for a certain rude vigour which is not Bavarian, but semi-barbaric and Russian. It will thus be readily understood that these startling revelations from the far East will be regarded with amazement as unaccustomed phenomena, rather than as works of art, subtle, refined, or complete. Perhaps the painter's strongest point is the power with which he seizes on action and situation; the actual scenes live before the eye, the country is made familiar, its inhabitants we are ready to greet as personal acquaintances. And yet we would feign hope that some of these tableaux are too highly coloured. "Within" is on the confines of a walled town. The turbaned soldiers, dressed, as in mockery, in gay costumes of green, red, and blue, lie scattered on the ground in the agony of death; the living carry away the dead on stretchers, and range them with military precision in one long row beneath the wall of the lofty fort. Now are we to believe that the composition thus deliberately arranged with an eye to effect

was one of "the numerous actions and other events" at which "M. Wereschagin was present"? Again, "Forgotten on the Field" is almost too striking as a picture to be literally true; a corpse is cast prostrate on the ground, a gun and a bayonet by the side, and the painter throws in as many birds as may suit his purpose; no less than sixty are here brought together to devour one man. And, in like manner, almost too good to be true is "The Apotheosis of War," dedicated, we are told, "to all great conquerors—past, present, and future." The picture is a pyramid, in which 8,000 skulls, at a rough estimate, are piled together. We do not object to ravenous birds being again called in to assist wherever they can be of service, neither do we deny the artist the liberty of making each skull a cleanly chiselled form rather than the wreck of war or of the elements. A poet's license is the painter's privilege. Yet we do think the following announcement, though printed on authority, needs to be received with caution:—

> This picture is historically true; Tamerlane, who drenched the whole of Asia and part of Europe with blood, erected everywhere such monuments of his greatness. In comparatively recent times the head of a learned German traveller (Schlagintweit) found its way into a similar heap.

In this remarkable historical announcement we direct special attention to the words, "erected everywhere such monuments of his greatness." How, we would venture to ask, could it be thus easy, in a region where inhabitants are scanty, and where, in consequence, heads must be scarce, to erect everywhere a monument of 8,000 skulls? And yet the painter speaks of "these faithful sketches" as a means of "dispelling the distrust of the English public towards their natural friends and neighbours in Central Asia." We should rather have imagined that thousands of skulls erected into monuments everywhere would have had an opposite effect, even on an "English public."

The numerous "studies" on the spot in oil and in pencil are of real value, not only from their art merit, but as veritable records of the physical geography of countries comparatively unknown, and of the physiognomies and costumes of peoples who have seldom come within reach of a painter's pencil. The scenery may be summed up under the categories of wide plains, high mountains, long and perilous passes. There are four views of "The Pass of Bars-Kaun," directly Alpine in character; a torrent rushes through the midst and the rocks on either side bristle with firtrees. There are also four "Views in the Alatau Mountains," which might easily be mistaken for the Alps. A lake at the foot of these mountains is tranquil and grey, and another lake, of which there are three sketches, is environed by snowy mountains. Few of the sketches on the South-East frontiers of Asiatic Russia indicate a barren land. Here and there, it is true, we may come upon a ruined fortress, standing on the border of a desert, such as travellers find in the Turkish Empire. Also there are picturesque specimens of mosques, or rather of saints' tombs, such as throng the sandy desert outside the city of Cairo. But, for the most part, the artist has chosen a land which, though left wholly in the hands of nature, shows capacity for culture and a sphere for future civilization. Perhaps some surprise may be felt that these untrodden hills, ravines, and plains do not contrast more strongly with territories which lie within the ordinary traveller's track; but experience seems to teach that the great geographical divisions of the globe, so long as they fall within the same latitudes, offer to the landscape artist pretty much the same pictorial elements. One obvious difference, however, lies in the contrast between cultivated and uncultivated regions, with the usual concomitants of civilized and stationary or uncivilized and migratory inhabitants. Almost without exception the territories here delineated belong to the latter category. The people do not so much inhabit as run over these open tracts; the whole continent is without a hedgerow or other artificial boundary; the only divisions are nature's barriers of rivers and mountains; private property has little more basis than when at the falling of the Tower of Babel men wondered where best they might find a way or the means of sustenance. These studies, in fact, do not reveal a state of things materially different in Asiatic Russia from Asiatic Turkey. In Siberia, in fact, the sketcher would appear to find himself in about the same plight as in Syria. We have travelled on horseback in Samaria, the Lebanon, and along the shores of the Sea of Galilee, and, pictorially speaking, the difference is but slight between such epitomes of Eastern scenery and the vast tracts which have been compassed by this Russian adventurer. In fact, simply for art purposes it is seldom worth while to go far afield, though the world has much to gain in knowledge when a bold wayfarer happens to be a well-trained draughtsman. In the present instance, however, little new can be learnt save the apparent fact that Central Asia is much the same as the centre of European Russia or as the open tracts of the Turkish Empire.

Important to the ethnologist are the studies of all the strange people whom the artist encountered. Here are "Kalmuck Women," a perfect picture of ugliness, stupidity, and dirt; then there are Dervishes, an order of beggar monks, bundles of rags, and yet gay in Oriental colour; "Solone Men and Women," savage, stern, indolent; and "Kalmuck Lamas," cunning knaves, degraded monsters, "but also, with God's help, consulting physicians." The painter's strength lies in the delineation of character. Some months ago we took occasion to speak in warm praise of a faithful study of "Opium Eaters," a work which attracted attention in the last International Exhibition. There is perhaps just a suspicion that these and other characters may be overdrawn; yet we place faith in their general fidelity, and especially do the pencil drawings of individual heads prove that power of literal transcription which peculiarly distinguishes the painters of Russia. Such capacity for copyism has also enabled M. Wereschagin to make faithful records of the architectural structures and the decorative details which belong to Central Asia. The domes, the minarets, and the geometric surface ornaments are those which in Eastern Europe and in Egypt have been associated with the Mahommedan religion and the Saracenic race. Indeed these interiors of mosques and tombs, ornate with cast stucco, cut stone, and carved or mosaic-wrought wood, from Central Asia, are all but identical with architectural structures and decorations in Cairo and Constantinople. And yet what has sometimes been termed "the ethnology of art" receives in these sketches important illustration.

EUGENE ARAM AT THE LYCEUM.

WE can do no injustice by adopting the manager's description of this play, although we should like to know whether that description is approved by the author. The playbill, which we presume may be regarded as an official announcement, states that the author has invested "this well-known personage" with a halo of romantic incident based neither upon the popular novel of Lord Lytton, nor on the poem of Hood, but mainly upon tradition. "It will be dramatically created by Mr. Henry Irving." A manager is almost a king, and we are not therefore surprised that a playbill should use pronouns with the looseness of a Royal Speech. We are uncertain what "it" is which will be dramatically created by Mr. Irving, but if the manager means that the character of Eugene Aram will be dramatically created, we will remark that this promise has been fulfilled in exactly the same sense in which the character of Jack Sheppard was dramatically created soon after the publication of Mr. Harrison Ainsworth's story. A play which invests a notorious criminal with "a halo of romantic incident" is in some danger of incurring the censure of the Lord Chamberlain; but fortunately it is not easy for the public to forget that Eugene Aram was hanged at York for a particularly atrocious murder. We by no means complain of the success which this piece has attained. On the contrary, we congratulate Mr. Irving on the boundless field which Mr. Wills has opened for the exercise of his talent. His range of parts will henceforth be coextensive with the Newgate Calendar. There is no limit to the process of palliating crime and obliterating the memory of punishment. The statement that "the halo of romantic incident" is "based" upon tradition shows a cool audacity which deserves success. Jack Sheppard became a burglar because he was crossed in love, and Eugene Aram committed, not a murder, but an act of irregular justice, upon a villain. The death of Eugene Aram is required as a tragic termination of the drama; but he dies in a churchyard in the arms of a young and pretty girl, "whose affections he had won, and who assures him of his innocence in her regard." We quote these words from a laudatory notice of this play, as showing how it is generally understood. The author first does his utmost to depict the horror of Eugene Aram at the recollection of a hideous crime, and then represents that this crime was not so very shocking after all. No doubt there have been criminals who have enjoyed the sympathy of young and pretty women. The famous Captain Macheath was supplied with more of this commodity than he well knew how to do with. But, although several ladies would have been ready to assure the handsome highwayman of his innocence in their regard, or at least that they liked him better for what the law called his crimes, we do not remember that any scene of the *Beggar's Opera* is transacted in a churchyard or assisted by an anthem. No quantity of fine writing can conceal the weakness of this drama. The prettiness of the first act, and the power of the second, only show more forcibly the absurdity of the third. The critic from whom we have quoted admits that the public on the first night expected something different from what they saw; but he explains that they ought not to be disappointed. The author has taken an "idyllic view" of his subject. His theme is human guilt and retributive suffering, "tenderly relieved by hovering glimpses of the all-embracing amnesty that awaits repentance." We entirely object to the "idyllic" view of murder, and we think that tenderness is wholly out of place in the case of Eugene Aram. Probably the audience on the first night expected to see the murderer in the condemned cell, and were rather disappointed at the death of Eugene Aram from no apparent cause, unless he caught cold by sleeping in a damp churchyard. The "all-embracing amnesty that awaits repentance" is a difficult subject for the stage; and it is, to say the least, doubtful whether Heaven would be as easily satisfied as the parson's daughter with the explanation that Eugene Aram gives of the motive of his crime. The critic is on surer ground in praising the scenery of the play. The vicarage, with its gravel walks and flower beds, looks as real as such things are ever likely to look upon the stage; and the interior of the same vicarage is only too handsome for the manners of the time. The acting deserves all the praise that has been bestowed upon it. The tendency of the age is towards what may be called speciality in art, and Mr. Irving would perhaps gratify his admirers by playing undetected murderers during the remainder of his career. It is difficult to maintain dignity while sitting or lying upon the ground, and Mr. Irving probably con-

tends as well as possible against the absurdity of his position in the last act.

It is difficult to understand why the author of this play deviated so widely from history. The entire action of the play passes at Knaresborough, whereas in truth Eugene Aram quitted that place after the death of Clarke, and was living at Lynn in Norfolk at the time of his apprehension. Lord Lytton in his novel has adhered closely to fact, and, as often happens, fact is more picturesque than invention. In the play Houseman comes to the vicarage at Knaresborough and borrows spade and pick with the avowed object of exploring St. Robert's Cave. His object is to possess himself of Aram's share of the plunder, which is buried with Clarke's body. He is watched by a suspicious gardener, and thus the murder is discovered. But, according to the story which Lord Lytton has adopted, Houseman having been impelled by circumstances to revisit Knaresborough, happens to pass a spot where a skeleton has been discovered, and people are exclaiming that they are the bones of Clarke. Houseman takes up a thigh bone and says, "That is no more Dan Clarke's bone than it is mine." Thereupon he is questioned, points out where Clarke's bones really lie, and charges Aram with the murder, to which he admits that he was accessary. This incident impresses every mind on first hearing the story, and with the assistance of Lord Lytton it might be effectively represented. We do not of course attach importance to mere accuracy of adherence to fact in a drama, but an author invites criticism by attempts to improve on history. The removal of Aram to Lynn, which was much more distant from Knaresborough at that time than it is now, is an important fact alike for history, romance, and drama. The attempt to begin a new life could hardly be expected to succeed at the actual scene of crime, where Aram's strange behaviour would necessarily connect itself with any suspicion that might have been entertained. Lord Lytton represents Aram as engaged to marry a squire's daughter at his new abode, and the play represents him as engaged to marry a parson's daughter at Knaresborough. It is permissible to both novelist and dramatist to make up any deficiency in the private history of the time, and we have only to remark that the novelist has, in our judgment, shown more skill than the dramatist in this operation. Lord Lytton thought that the hero of a novel ought not to die upon the gallows, and therefore he treats the attempt which Aram did make upon his own life in the prison as successful to this extent, that he dies at the gallows' foot. It would have been easy for Mr. Wills to follow this precedent, upon which we must say he has not improved. Aram might have given his own account of his share in the murder to a sympathizing friend of either sex, or in soliloquy, and then he might have taken poison, and laid himself down to die as the curtain fell. Here would have been an easy way to escape the ridiculous business which is transacted in the churchyard, and neither the cross nor the anthem need have been introduced, which would have been, we think, an advantage. Lord Lytton has put into Aram's mouth a very good apology for his life, and if Mr. Wills would have condescended to turn this into blank verse, with embellishments at discretion, his third act would have been a much more workmanlike performance than it is. In fact, Aram did make an attempt at suicide, which was unsuccessful. He was carried to the gallows, and the hand of the law at least helped to take his life. He wrote a paper justifying his attempt at self-destruction, and that which he wrote was much more in harmony, as might be expected, with his character than that which Mr. Wills has written. The dramatist, like the novelist, seems to have considered that he must not hang his hero, and he further imposed upon himself the difficult condition of bringing that hero to what is called a good end without abatement of his heroism. In fact, Aram dies in the odour of sanctity, but we cannot help thinking that Christianity is able to do tolerably well without such Christians as Aram. Differing from the critic from whom we have already quoted, we have no desire to obtain at a theatre "hovering glimpses" of the forgiveness which is promised to repentance. The English public has not yet arrived at the point of regarding Christianity as a mere machinery for producing stage effects. It has been said that religion was not designed to make our pleasures less, but it certainly was not designed to make them greater at the theatre. Mr. Wills apparently considered that it was his duty to vindicate the ways of Heaven to man, but on this point we differ from Mr. Wills. Mr. Spurgeon, when he was young and gushing, preached a wonderful sermon, in which he described Satan as watching for a murderer's soul, and fearing that the murderer would deprive him by repentance of his expected prey. Mr. Spurgeon is wiser and less pictorial than of yore, and he would probably now agree with us in the opinion that the destiny of the souls of murderers is not a subject well adapted for public discussion. There is a grandeur in the figure of the real Aram, "equal to either fortune," as he said in the last words of his defence, which impresses the mind of every reader of his trial. A dramatist might easily be tempted to produce this figure on the stage. But Mr. Wills either was unable to do this, or deemed that such a figure would make his play unsuitable for family use. He has written a nice play called *Charles I.*, in which there is a good king, who is acted by Mr. Irving, and a wicked rebel, who is acted by a low comedian. Perhaps it has become a speciality of Mr. Irving to make good endings upon the stage, and he may have felt that his character required him to abstain from the immorality of cheating the gallows as the real Aram tried to do. If the actual history of Aram is unsuitable for dramatic treatment, it need not be treated. Mr. Irving is a clever actor, who has probably many years of professional life before him. His talent will be likely to improve by variety of exercise, and his favourite part of conscience-stricken criminal might, by constant repetition, become tedious.

Lord Lytton was a better artist than Mr. Wills, and he has given an account of the motive which impelled Aram to murder Clarke which is not inconsistent with history, although probably an exaggeration of it. The ability and the acquirements of Aram have perhaps been overrated by writers whom Lord Lytton followed. The written defence of Aram has been often described as a miracle of skill and learning, but Lord Lytton had sufficient shrewdness to see that it did not meet all the points of the case against him. It seems a reasonable supposition that he wanted money to help him to rise to a place in the world equal to his abilities, that he was tempted to join Houseman in robbing Clarke as a means of supplying that want, and that the murder was an unforeseen adjunct of the robbery, and was the act, not of Aram, but of Houseman. Immediately after the fatal night a relation of Aram's died and left him enough money to supply the want which had urged him to an irrevocable step of crime. Surely, if the dramatist desired to handle this story at all, he might take it as it stands. He should be a great as well as a bold artist who undertakes to improve on nature, and it is to be observed that Lord Lytton only attempts such improvement very cautiously, while Hood in his poem takes the story exactly as it came to him.

NEWMARKET CRAVEN MEETING.

MISERABLY small fields were the order of the day at the first of the Newmarket meetings, which was, to all intents and purposes, a festival to the honour and glory of M. Lefèvre. There were thirty-one races, including walks over, during the week, in twenty-two of which M. Lefèvre had one or more than one representative, and fourteen of which he won. The whole of England only supplied eighty-five horses for the various events of the week. As it is not very likely that we shall always have the luck to meet with a French gentleman who cares to keep a hundred and fifty race-horses in training in England, and who enters them and runs them in every possible race, without any regard to pecuniary considerations, the retrospect of last week's racing cannot prove very agreeable to upholders of a sport which it is almost difficult now to call national. The representatives of English stables were not numerous enough to supply an average of three starters for each race of the meeting, and, but for the accidental support of a rich foreigner with a strong taste for racing, the time-honoured Craven Meeting would have dwindled to ridiculously small dimensions. Nor can we see that there is much hope for improvement, so long as there is not the slightest appearance of any new racing men coming forward to supply the places of those who, year by year, are withdrawing from active association with the Turf. Two more eminent breeders of racing stock, Sir Joseph Hawley and Lord Portsmouth, have announced their intention of disposing of the whole of their studs this summer; others of our most honoured sportsmen are far advanced in life, and, according to present probabilities, in another half dozen years there will hardly be as many gentlemen of rank and position who will breed, own, or run racehorses. The sad disasters which have crippled the resources of many families of note, and for which, perhaps with some exaggeration, the Turf has been held responsible, have deterred the rising generation from embarking in what, at any rate, is the most unpromising of speculations. Tastes change also from time to time; and just as four-mile heats and matches have given way to handicaps and half-mile scurries, so these in turn may be replaced by other varieties of sport. Of late years, for instance, steeplechasing has advanced in popular favour as steadily as flat racing has declined.

Small as were the fields on the opening day of the Craven Meeting, it was worth going to Newmarket to witness the meeting of Prince Charlie and Vulcan, and the *début* of Hochstapler. The Craven Stakes were left to the first-named pair, who were brought to the post in splendid condition. Despite all the hard work that Vulcan has done during his chequered career, he looked well enough to suggest the probability that he may keep on running as long as Reindeer, while time has done what might have been expected to improve a horse of such magnificent frame as Prince Charlie. Fordham brought Vulcan along the Rowley mile as hard as he could, but the pace was not good enough to trouble his gigantic opponent, who never shows to greater advantage than on this course, and after one moment of doubt at the foot of the hill, Prince Charlie won cleverly. He required some rousing before he finally shook off Vulcan, whose gallant struggle was worthy of his fame. Then came the long-expected first public appearance of Hochstapler, whose name was in everybody's mouth last autumn, and whom rumour had described as a second Gladiateur. Hochstapler is, however, a horse of pure English breed, being by Savernake out of La Traviata, and is, we need hardly say, the property of Count Renard, the owner of Adonis, Bauernfänger, and other well-known horses. Being engaged in the English Derby, he has been trained since last summer at Newmarket, and this was his public trial. His opponents were Hurlingham, The Colonel, and Planète. Hurlingham, by Trumpeter out of Convent, came out at Warwick last autumn with a great reputation as the coming Derby horse, but he was signally beaten in his first essay. The excuse was then made that he could not act in the dirt, and during the winter he gradually re-

covered his position among the Derby candidates. The Colonel, it will be remembered, acquired some reputation by winning the Spencer Plate this year at Northampton. Hochstapler, who is very backward in preparation as yet, there being a good five weeks before the Derby, is a commanding-looking horse, nearly sixteen hands high, and of great power and substance. Such an exhibition as he made of his three antagonists has rarely been witnessed. From the top of the Abingdon hill he came away by himself, and left Hurlingham and The Colonel to fight together as they pleased for the second place. Nothing could be more satisfactory than this maiden performance of Hochstapler, and the best horse in the world could have done no more, or won with more in hand. Whether Hurlingham and The Colonel are good enough to extend a first-class horse is another matter. Hurlingham, we should say, both from his looks and his running, is an impostor; and if he has any merits, he certainly does not show them in public. A Spencer Plate winner like The Colonel is by no means certain to show to advantage over a longer course; and, on the whole, Hochstapler's grand appearance, fine style of galloping, evident willingness to run generously, and room for improvement between now and the end of May, are better guarantees that he will distinguish himself on the Derby day than his defeat by any number of lengths of Hurlingham and The Colonel.

The Brethy Plate brought out a dozen runners, the most noteworthy being Azalea, Chopette, and Roquefort. The race fell, however, to Chandos, who ran into a forward position in the Middle Park Plate last year. Chopette has apparently lost all her form, for she was throughout conspicuous in the rear. The Fifteenth Biennial had not the importance of former years, for none of the leading favourites for the Two Thousand or the Derby put in an appearance. Gang Forward, Paladin, and Kaiser were all engaged, but all declined the contest. An attempt to get a line was, however, made by starting stable companions, Claudianus representing Mr. Crawford; Andred, Lord Falmouth; and the Harlequin's dam colt, Mr. Savile. Negro did battle for M. Lefèvre and Copernicus also; His Grace represented Baron Rothschild; The Preacher, Lord Lonsdale; and Cheveley made the field up to eight. On public form Andred was undoubtedly the best of the lot, he having beaten Flageolet, Surinam, and the Harlequin's dam colt, and having been beaten only half a length from Gang Forward. Negro's best performance was his defeat of Silver Ring, who was conceding 4 lbs. and sex allowance, by a neck; and the form of the remainder was not good enough to repay examination. The race resulted in a match between Negro and Andred, and the former, who stayed the longest, and climbed the hill with much greater power, won by two lengths from Lord Falmouth's horse. M. Lefèvre obtained by this victory a good line for Flageolet in the Two Thousand; and, in addition, can form a fair idea as to the part Negro is likely to take in the Derby. Negro, who is by Saccharometer out of Honey, is a black, like his sire, and possesses much of his quality. He is built on a somewhat small scale, but he is powerful all over, and looks well adapted to encounter the ups and downs of the Derby course.

M. Lefèvre only won three races on the first day of the meeting; but on the following day he carried off five, though four out of the five were only plating affairs. The fifth was the Newmarket Handicap, for which fourteen started. M. Lefèvre was represented by Houghton and La Méprisée, and among the field were Corisande, Moorlands, Enfield, Falkland, and Protomartyr. There was an unusual amount of swerving, cannoning, and jostling in this race, and for the last quarter of a mile Houghton and Moorlands, by dint of hard riding and hard flogging, alternately headed each other. Ultimately Houghton won, and an objection raised against him by the rider of Moorlands was very properly overruled, because it was obvious that both horses were equally in fault, and that they equally interfered with each other. Houghton is a most moderate horse, though two years ago he won a long race, ending also at the top of the town, and Corisande, with all her weight, must have sadly deteriorated to be unable to get near the front. Falkland and Enfield were knocked clean out of the race by the waywardness of Moorlands—always a coarse-grained animal; and La Méprisée, who was supposed to be better than her stable companion Houghton, had to be content with the third place. There was nothing else worthy of note on the second day, except the first appearance of Mr. Bowles's Gratinska, a very promising daughter of Macaroni and Klarinska, who won the Column Stakes with great ease from Victoria Alexandra and the Lady Augusta gelding, and will take her own part in the One Thousand and the Oaks.

Thursday's racing would have been beneath contempt but for Laburnum, already a prominent favourite for the Chester Cup, being brought out for a public trial over the two miles from the Ditch-in against Bethnal Green and Alava. This he succeeded in accomplishing in the most satisfactory manner, for, though Alava attempted to force the running to serve Bethnal Green, he could not get out of Laburnum's way, nor could Bethnal Green make an effort when his stable companion was done with. A hollower victory could not be seen, and after Baron Rothschild's horse had passed the judge's chair thirty lengths in advance of Sir Joseph Hawley's pair, he was forthwith made first favourite for the Chester Cup. But Laburnum is a horse of very queer temper. He has run all his best races at Newmarket, especially up the hill to the top of the town. He dislikes a crowd of horses hanging on him, and it is not at all certain that he likes a crowd of spectators shouting at him. Nor is it clear that he will relish the sharp and continued turns on the Chester course, or that it will be his pleasure to learn the "circus" business which is so necessary for a Chester Cup winner to acquire. Therefore there is yet a good deal of uncertainty about how he will acquit himself on the Roodee; but then to lovers of racing the uncertainty of the thing is half the pleasure. The Hundred Sovereigns Sweepstakes over the Ditch Mile was carried off by Andred, but he had only the wretched Pantomime to beat, and it was hardly worth while to send the latter all the way from Russley, seeing that he has little chance of winning any one of his numerous engagements unless he should happen to be indulged with a walk over. Then Victoria Alexandra beat Wild Aggie just as easily as she was beaten herself the day before by Gratinska, and renewed attention was directed to the claims of Mr. Bowes's filly. Plating races occupied the rest of the afternoon, and the uncertain Croxteth managed to beat Trombone, and Angela just snatched a race from Borély, the French stable running, for a change, second instead of first three times in succession. The wind-up of the week was the very climax of dulness. Out of eight races on the card, four ended in walks over, and the only one of the four which deserves mention was the Queen's Plate, which was easily won by Lilian, Mr. Feeder not being able to live with her at the finish, and Shannon being beaten a quarter of a mile from home.

The chief results then of this meagre week's racing, so far as the future is concerned, were the establishment of the French and German horses, Flageolet and Hochstapler, in the first, or very nearly the first, place in the quotations for the Two Thousand and Derby respectively. And the general impression left on the minds of racegoers was one of fervent hope that the first meeting of the year at Newmarket was not a sample of the six that are to follow. The Craven and First Spring Meetings have already been cut down from five days to four; but so far from the sport being improved thereby, there was not enough racing last week to fill up even three days. We may hope for better things next week, particularly as on the last two days two-year-old races will be permissible; but it is an ill sign when, with nearly a thousand horses in training at Newmarket, there is such a disinclination to bring them out. Apparently the form of different stables is so well known that one owner hardly cares to oppose another, unless he is pretty certain of the result; always excepting M. Lefèvre, who is ever ready to oppose anybody and everybody, and would, we dare say, if he could, start two horses of his own to oppose one another sooner than see a walk over. This state of things is not encouraging. Matches have died out; the old-fashioned rich sweepstakes no longer attract subscribers; the Pott and the Claret end in nothing; no human being cares a farthing about the Cup or the Whip, or Eclipse's tail or head, or anything that was his. Even the new style of handicaps fails to meet with the accustomed support, and Newmarket plates have been multiplied till they have become a byword. Clearly it is impossible, because it is so obviously ridiculous, to attempt to continue seven meetings during the year at Newmarket on their present footing. Even the Jockey Club cannot care to perpetuate stakes that invariably end in nothing, and to issue programmes that are never realized. Either racing must be carried on at Newmarket on quite a different basis, or not only the number of days at each meeting must again be curtailed, but there must also be a diminution in the number of meetings themselves. At present Newmarket is kept going pretty much by one person, who is a Frenchman, and by his horses, most of which are French bred. This does not say much for the position of the national sport of England.

REVIEWS.

ANDREW MARVELL.*

THE Rev. Mr. Grosart, the indefatigable editor and publisher of the Fuller Worthies' Library, has come to Andrew Marvell, and has produced the first volume, a comely one, of an edition of his works, which is to fill four volumes. The work is in three sizes, and published by subscription. There are a hundred copies of quarto size, at a guinea and a half a copy; a hundred and six of octavo size, at a guinea; and a hundred and fifty-six of twelvemo size, at half-a-guinea; in all three hundred and sixty-two copies. A publication by subscription is not the same as a printing for private circulation. This edition of Marvell is public property, subject to public criticism. It behoves us to say that the notes and illustrations, more especially of the political poems, require much revision and improvement. But all who feel an interest in the memory of Milton's friend and of a genuine poet will thank Mr. Grosart for his zealous labours on Marvell.

An able biographer and critic of Marvell, in the pages of the *Cornhill Magazine* (July 1869), demonstrated that Marvell could

* *The Complete Works in Verse and Prose of Andrew Marvell, M.P.* For the first time Collected and Collated with the Original and Early Editions, and considerably Enlarged, with hitherto inedited Prose and Poems, and a Translation of the Greek and Latin Poetry, and in the quarto form an Original Portrait on Steel, and other Portraits, Facsimiles, and Illustrations. Edited, with Memorial, Introduction, and Notes, by the Rev. Alexander B. Grosart, St. George's, Blackburn, Lancashire. 4 vols. Vol. I.—Verse. Printed for Private Circulation. 1872.

The Poetical Works of Andrew Marvell, M.P. for Hull; with Memoir of the Author. Reprint of the American Edition. London: Alexander Murray. 1870.

not have been the author of two political satires which, on the bad authority of a bookseller's compilation—the "Poems on Affairs of State"—have been continually ascribed to him. These are "Hodge's Vision from the Monument," and "Oceana and Britannia." Both refer to events subsequent to Marvell's death. Mr. Grosart, on similar grounds, has exploded a third, "Royal Resolutions." Mr. Grosart does not explain why he denies or doubts the authenticity of three other poems—"Upon the Cutting of Sir John Coventry's Nose," or "The Haymarket Hectors," "The Chequers Inn," and "The Doctor turned Justice." There is no anachronism in any of these three poems. The first two, and the same may be said of "Royal Resolutions," are exceedingly witty, not coarser than many of the pieces not denied or doubted to be Marvell's, and superior in style to some of which Marvell's authorship is not disputed. Mr. Grosart is wrong in the date which he assigns to Marvell's "Britannia and Raleigh." He gives the date "1670, or but little later." But the poem contains this couplet:—

> Her creature Osborne the revenue steals,
> False Finch, knave Anglesey, misguide the Seals.

Her is the King's mistress, Madame de Querouaille, vulgarly called Carwell, ennobled as Duchess of Portsmouth. Osborne was made Lord Treasurer in June 1673; Finch, Lord Keeper in November 1673; Anglesey, Lord Privy Seal in May 1673; The poem, then, could not have been written much, if at all, before 1674. Of a poem called "Advice to a Painter," Mr. Grosart is right in saying that, if Danby is the correct word in a couplet put into the Duke of York's mouth—

> Most holy father, being joined in league
> With Father Patrick, Danby, and with Teague—

it must have been written in or after 1674, in which year Osborne was created Earl of Danby. But *Danby* is doubtless the wrong word. Darby, which Mr. Grosart is inclined to substitute, is unmeaning and impossible. Talbot, which he records as a various reading, is doubtless the proper name to be joined with Patrick and with Teague; either Colonel Dick Talbot, afterwards successively Earl and Duke of Tyrconnel, or his brother, Peter Talbot, a Roman Catholic ecclesiastic. The contents of this poem make it clear that it was written while the Duke of York's marriage with the Princess Mary of Modena was in preparation, in the autumn of 1673.

It would be better for Marvell's fame if it could be proved that he had written none of the political satires ascribed to him. None of them were printed in the widow's edition of his poetry of 1681, three years after his death. But his political satires and lampoons were necessarily anonymous, and it would have been then too soon to disclose the secret of his authorship. As it is, the fact of any poem being published among the "Poems on Affairs of State," with Marvell's name attached to it, is no sufficient proof of his authorship. But, without being able generally to be positive as to any one particular poem, common fame and general contemporary belief amply justify us in assuming that many, if not most, of the political satires ascribed to him are his. His rabid enemy, Bishop Parker, describes him as the lewdest of lewd revilers, a "satirist for the faction," a "vagabond, ragged, hungry poetaster." Bishop Parker's language and tone about his witty antagonist who conquered him are unseemly enough; but there must exist underneath the fact that Marvell, the member of Parliament for Hull, was an habitual pamphleteer and satirist; and the truth must be added that he who was Milton's friend and a sweet poet of nature and of sentiment has been the accredited author of many satires full of loathsome obscenity and virulent malice. The anonymous is full of danger for men of warm feelings and strong antipathies, as Marvell's were. He was the author of a remarkable political tract, anonymously published, on the growth of Popery and arbitrary government, which incensed the courtier majority of the House of Commons; and the following passage of a letter of his to Mr. William Ramsden of Hull shows how he was careful to avoid acknowledgment of authorship to an intimate friend, while he also abstained from denial:—

> There came out about Christmas last a large book concerning the growth of Popery and arbitrary government. There have been great rewards offered in private and considerable in the *Gazette* to any one who could inform of the author or printer; but not yet discovered. Three or four printed books since have described, as near as it was proper to go (the man being a member of Parliament) Mr. Marvell to have been the author; but if he had, surely he should not have escaped being questioned in Parliament, or some other place.

This letter was written June 10, 1678. About two months after he suddenly died. The widow may well have been afraid to avow his political satires, full of scurrilous personality, in 1681. We do not quarrel with Mr. Grosart for publishing all Marvell's poems, or all believed to be his, whether disfigured or not by indecencies, for Marvell is an English classic and celebrity, and posterity, to judge him truly, must have all before them. "I will not castrate John Dryden" was Sir Walter Scott's defiant announcement when he undertook his edition of Dryden's works. But it is well to warn fathers of families that the political poems imputed to Marvell contain extreme grossness and unmitigated filth. The virulent personality of these poems is another great blot in Marvell's character. His political animosity against the Duke of York carried him into unmanly and loathsome war against the Duchess. Anne Hyde, who in youthful weakness had yielded to the Duke's dishonourable overtures, and whom he had married by compulsion wholesomely exercised on him, was by general testimony an amiable, and, ever after her early fault, a virtuous woman, much to be pitied for her husband's indiscriminate and unconcealed amours, and bearing her unhappiness with calm dignity. The sinning Duke aggravated against his poor wife the innocent attentions of two gentlemen of their household—Henry Sydney and Henry Jermyn—who probably pitied the Duchess, and in whose sympathetic courtesies she might be excused for finding some solace of her woes. Marvell, with the utmost unmanliness, rips up her early history, charges her over and over again with profligacy, and over and over again accuses her, against authority and against probability, of poisoning one of her husband's mistresses, Lady Denham. No well-conditioned man can do less than grieve over this style of anonymous satire. One of the most likely of these political poems to be really Marvell's is "The Last Instructions to a Painter," written in 1667. It contains a description of the Duchess of York, of which the two following lines, bad enough, are a tame sample; most of the rest it is not possible for us to print:—

> Paint her with oyster lip, and breath of fame,
> Wide mouth that asparagus may well proclaim.

Marvell then charges her with the foulest vices. Crimes, misdemeanours, and vices are constantly charged in the coarsest language against high officials and members of Parliament; this could only be done anonymously. There is a prose tract, always ascribed to Marvell, being a list of the members of the House of Commons who supported the Court, published at Amsterdam in 1677, which is rampant with personal scurrility. Here is a mild specimen:—Sir Solomon Swale, member for Aldborough, "one whose word will not pass for threepence where he is known, an old Papist, if not priest, but his bald pate excuses his tonsure; a forger of wills." Sir Robert Carr, member for Lincolnshire, brother-in-law of Earl of Arlington, is said to have "two wives living at this hour, one Arlington's sister." We are forced to assume that Marvell was the author of these scurrilous libels. We have no sympathy with Bishop Parker, his vindictive and virulent enemy, but there is some justice in his foul language. The Bishop calls Marvell also a "drunken buffoon"; there is truth here also. His admiring friend Aubrey says of him that "he kept bottles of wine at his lodging, and many times he would drink liberally by himself to refresh his spirits and exalt his muse." It is idle and worse to ignore the truth; Marvell's faults must not be denied or cloaked. The biographer who sees nothing to blame, everything indeed apparently to worship, in the filth and scurrility of his satires, and will admit no truth in Bishop Parker's invective, is afflicted with the *lues Boswelliana* in a very aggravated form. Mr. Grosart describes the satires and political poems as "noble, profound, prescient, wise as witty and witty as wise, penetrating and burning." We cannot go with him here. We refer for our justification to the accounts of Lady Castlemaine (lines 80-104), and of Colonel Birch (142-6), to a passage on Clarendon (473), and another on the Speaker Turner (831-6), in "The Last Instructions to a Painter," besides the abominable description of the Duchess of York, already noticed. We further refer to the account of the Duke of York's vices and diseases (37-54) in "Advice to a Painter," to lines 17-20 of "Nostradamus's Prophecy," to lines 19-22 and 43, 44 of "An Historical Poem," and to the fourth stanza of "Clarendon's House-Warming," on which—for it is a foul reference to Clarendon's daughter, the Duchess of York—Mr. Grosart contents himself with directing his readers to the vile account of her in "The Last Instructions to a Painter," for, he says, "the grossness of this stanza will bear no further explanation." We refer to these passages for proof of our assertion of the filthy indecency of Marvell's political satires.

It is quite clear from what is otherwise known of Marvell's career in Parliament, that Bishop Parker is substantially right in describing him as having there no influence or consideration. We do not sympathize with the fine gentlemen and cormorant courtiers who despised the poor private tutor, the scholar and poet unknown to the world of aristocracy, whom connexion with burgess families of the place had made member for Hull, and who received a stipend from his constituents. Bishop Parker writes in his History of his own Time:—

> The King being restored, this wretched man, falling into his former poverty, did for the sake of a livelihood procure himself to be chosen member of Parliament for a borough in which his father had exercised the office of a Presbyterian teacher, and done notable service in the rebellion; for there was an ancient custom, that the expenses of those that were elected into Parliament should be borne by the borough for which they were chosen, at the rate of five shillings a day. This custom had a long time been antiquated and out of date, gentlemen despising so vile a stipend that was given like alms to the poor; yet he required it for the sake of a bare subsistence, although in this mean poverty he was nevertheless haughty and insolent. . . . . But such men had little weight in that assembly, being looked upon with shame and disgrace, so that if they would do no good, they could do no hurt; for they were hardly ever suffered to speak without being hissed at; and our poet could not speak without a sound hasting; wherefore, having frequently undergone this discipline, he learned at length to hold his tongue. But out of the House, when he could do it with impunity, he vented himself with the greater bitterness, and daily spewed infamous libels out of his filthy mouth against the King himself.

Here speaks worldly prosperous gentility against poor honesty and talent. Allow Marvell his faults, that he wrote anonymous libels, and drank intemperately in secret; still he was a brilliant scholar, and had great attainments, and was in poverty an honest, incorruptible man. Was not the Bishop a furious bigot and unchristianly implacable foe? What were not the demerits of the fine courtiers and personages who huffed and hooted Marvell? The few notices on record of Marvell in the House of Commons show that he was not in his element there, and was not a favourite.

Grey, the reporter, unusually mentions on one occasion that he spoke "somewhat transportedly." He was called to explain. There was a curious long debate on one occasion (March 29, 1677) on the Speaker Seymour's calling Marvell to order for giving a blow to Sir Philip Harcourt, when much feeling was shown by many members against Marvell; and either ill feeling aggravated a trifle against him, or he committed an indecorum under the influence of wine. Marvell spoke very seldom in the House. There are not more than seven speeches in all attributed to him, most of them very short; one speech only of any length, March 27, 1677, on the second reading of a Bill for educating the children of the Royal Family in the Protestant religion, which he vehemently opposed. He is reported as then saying that "he is not used to speak here, and therefore speaks with abruptness." In one of Marvell's letters to his friend William Ramsden, at Hull, he speaks of the probability of his having an employment in Ireland; the idea was not realized. This would have been probably some place under the Lord-Lieutenant, Lord Berkeley of Stratton, a patriot peer. We are not accustomed to think of Marvell as a placeman, but we may be sure of his honesty. "I think it will be my lot," he wrote in February, 1671, "to go on an honest fair employment into Ireland; some have smelt the Court of Rome at that distance: there I hope I shall be out of the smell of ours." He had in 1663 gone as secretary to the Earl of Carlisle, Ambassador to Muscovy, Sweden, and Denmark, and had been absent from the House of Commons more than a year. Deferentially consulting his constituents, he then wrote to the Mayor of Hull:—"It is no new thing for members of our House to be dispensed with for the service of the King and the nation in foreign parts." There still exists, and has in recent times been acted on, a special provision, under a resolution of 1575, by which diplomatic functionaries may continue members of the House of Commons:—"Any person being a member and in service as an Ambassador shall not be amoved during that service."

We have not loved to dwell on Marvell's faults and shortcomings. He is associated in general memory with Milton, who has reflected light on him; but it cannot be said that his soul was, as his illustrious friend's, like "a star and dwelt apart." Wordsworth's praise of Marvell may be turned to exaggerated use, and results only from remembrance of him as Milton's friend:—

> Great men have been among us; hands that penned
> And tongues that uttered wisdom, better none;
> The later Sydney, Marvell, Harrington,
> Young Vane, and others who called Milton friend.

To Wordsworth we are sure that Marvell's satires were unknown. Treating Marvell as an erring mortal, we turn with satisfaction from weakness and sin to his better nature. He had two natures.

> Enough of sin and shame and blight,
> This is rather of those moments bright
> When to the consciousness of right
> His heart was true;
> When virtue prospered in his sight,
> And wisdom grew.

We gladly believe that it must have been an ineffable relief to him to exchange malicious satire and debasing thoughts for the study of his loved classics and the composition of that sweet poetry which has made him famous in after-time. His scholarship was of the first order. Many Latin poems of his are before the world. Milton highly commended his scholarship, writing to President Bradshaw to beg his appointment to be an assistant to himself as Latin secretary, "laying aside," he grandly said, "those jealousies and that emulation, which mine own condition might suggest to me by bringing in such a coadjutor." Aubrey says of him:—"He was a great master of the Latin tongue; an excellent poet in Latin or English; for Latin verses there was no man could come into competition with him." We are spared the need of large quotation from Marvell's sweet and serious poetry. There is a recent cheap edition of his poems. Gems of his poetry are encased in favourite collections, in Palgrave's *Golden Treasury*, and in the *Household Book of English Poetry* of Archbishop Trench, a poet of merit who has set the stamp of his high authority on Marvell's poetry. We make an exception by quoting some lines, of dignity suitable to the subject, from Marvell's "Poem on Paradise Lost," which has done much to unite his name with Milton's:—

> When I behold the poet blind, yet bold,
> In slender book his vast design unfold;
> Messiah crowned, God's reconciled decree,
> Rebelling angels, the Forbidden Tree;
> Heav'n, Hell, Earth, Chaos, All; the Argument
> Held me awhile, misdoubting his intent
> That he would ruin (for I saw him strong)
> The sacred truths to fable and old song
> (So Samson groped the Temple's posts in spite),
> The world o'erwhelming to revenge his sight.
>
> * * * *
>
> That majesty which through thy work doth reign
> Draws the devout, deterring the profane;
> And things divine thou treat'st of in such state
> As them preserves, and thee, inviolate.
> At once delight and horror on us seize,
> Thou sing'st with so much gravity and ease,
> And above human flight dost soar aloft
> With plume so strong, so equal, and so soft;
> The Bird named from that Paradise you sing
> So never flags, but always keeps on wing.
> Where couldst thou words of such a compass find?
> Whence furnish such a vast expanse of mind?
> Just Heaven thee, like Tiresias, to requite
> Rewards with prophecy thy loss of sight.
>
> Well mightst thou scorn thy readers to allure
> With tinkling rhyme, of thy own sense secure;
> While the town-Bayes writes all the while and spells,
> And like a pack-horse tires without his bells:
> Their fancies like our bushy-points appear,
> The poets tag them, we for fashion wear.

Mr. Grosart's note on "town-Bayes" is unsatisfactory. "Is Bayes Bavius anglicized," he asks, "or is town-Bayes an ironical name for the town-Laureate, or, as Ben Jonson calls Munday, the city poet?" The town-Bayes is Dryden, the Poet-Laureate, not city poet, christened Bayes in the *Rehearsal*. There is probably more than a coincidence in the word *tag*. Marvell probably knew from Milton the story which Aubrey tells of Dryden's request for leave to adapt *Paradise Lost* to a play in rhyme, and of Milton's reply that he might tag his verses. This story gives point to the last lines of our extract. Dryden clearly had a grudge against Marvell, and this passage is probably the explanation.

Let us now contrast the poet Marvell, with all his faults, with the great Bishop Parker, his vindictive and railing enemy. Two centuries after both have disappeared from the earth, what are the relative fames of the names of the haughty Bishop and the poor poet and scholar and low-born faithful member of Parliament? Who cares for the Bishop's memory, and who does not value Marvell's? It would be well if transitory worldly greatness would take a lesson from such an instance. When Marvell remonstrated in the House of Commons against heavy fees imposed on Milton by the Sergeant-at-arms who had had him in custody, Sir Heneage Finch, the Solicitor-General, pronounced his opinion that Milton deserved hanging. Some years before a future Primate of Ireland, Bramhall, wrote that Milton had deserved to be turned, not only out of the University of Cambridge, but out of the society of men; and that if Salmasius knew as much of Milton as he did, he would make him go near to hang himself (*Rawdon Papers*, p. 109). Locke, whom all now revere as a philosopher, was ignominiously expelled by a truckling Bishop from a Christ Church studentship at Oxford, in obedience to the arbitrary mandate of a profligate Secretary of State, for alleged "factious and disloyal behaviour," which the Bishop disbelieved. Who would now care to exchange the places of Locke, Milton, and Marvell in the gallery of fame for those of Bishop Fell, Earl of Sunderland, Archbishop Bramhall, Sir Heneage Finch, afterwards Earl of Nottingham, and Bishop Parker?

TROLLOPE'S AUSTRALIA AND NEW ZEALAND.*

We have delayed for some time our notice of Mr. Trollope's book upon Australia; long enough, indeed, for it to have reached a second edition before we have rendered our account of the first. Our apology for the delay must be very simple. It is wrong, as a rule, to review a book without reading it; and reading Mr. Trollope's performance has been a work of time. Two portly volumes might be filled with the records of a year's stay in Australia, of which every line should be amusing; and Mr. Trollope in his ordinary vein certainly possesses the art of amusing his readers. On the present occasion, however, he has been ambitious of soaring above that humble aim. He has not so much written a story as compiled a blue-book. He appears in the character of a politician and an economist. He gives us disquisitions upon colonial institutions, upon land laws, upon the effect of the gold discoveries, upon the labour question, upon the fate of the aborigines, upon railways, upon preserved meat, upon ecclesiastical arrangements, and upon a number of other questions of the gravest, and occasionally of the driest, character. Now on all these subjects Mr. Trollope has much that is interesting to say. We cannot, indeed, profess to regard him as a great political theorist; he is not, and makes no pretensions to be, the Tocqueville of the Antipodes. He is a fine specimen of the true John Bull in politics, and possibly might be stigmatized by Mr. Arnold as a Philistine. But, though we do not anticipate much new light from his remarks, we willingly admit that he writes like a solid, sensible, and painstaking man, who is frequently commonplace, but never silly. We have therefore no disposition to complain of Mr. Trollope for indulging in disquisitions about matters of more serious importance than the love affairs of two or three imaginary couples. The misfortune is that he has carried into another province of literature the habits which are certainly excusable, and perhaps meritorious, in his peculiar style of fiction. One of the qualities to which Mr. Trollope owes his success—though by no means the highest—is his unwillingness ever to write above the capacity of his public. He is aware, or he instinctively assumes, that the ordinary English novel-reader is above all things a person of indolent mind; and that consequently he likes to have set down in plain black and white a number of facts which people of quicker understanding would be glad to take for granted. Hence Mr. Trollope is never afraid of boring us by explanations. He gives all the ins and outs of every little domestic complication, and repeats all the "says he's" and "says I's" at full length and in perfect reliance upon our sympathy. The result justifies his confidence; we are amused without being excited; and we follow the development of his plots as we make the acquaintance in real life of a set of ordinary but sociable and kindly people. This method, however, becomes not a little tiresome in political disquisitions. The habit of composing in perfectly simple sentences, each of them

* *Australia and New Zealand.* By Anthony Trollope. London: Chapman & Hall. 1873.

conveying one easy proposition, makes him intolerably diffuse. To take an example, pretty much at random, Mr. Trollope wishes to explain that it is very important to devise some means of preserving Australian meat. Most writers would credit their readers with sufficient acuteness for discovering the reasons of this circumstance for themselves. Mr. Trollope, however, begins, properly enough, by giving the figures which prove that meat is much cheaper in Australia than in England. Next he tells us that the price of other necessaries of life is equalized by the cost of transporting them. Thirdly, this is the case with wheat. Fourthly, the difference in price of tea, sugar, and other articles in different countries is due rather to the duties on import than to the cost of transport. Fifthly, "meat has hitherto been an exception to this rule, from a cause that is manifest to every one." Sixthly, this cause is the decomposition of meat exposed to the air. Hence, seventhly and lastly, it follows that it would be desirable to transport meat as securely and cheaply as other commodities. Nothing can be truer; but is it necessary to construct a chain of seven links in order to demonstrate this familiar truism? On the same principle, Mr. Trollope is given to indulge in little expositions of the theory of the British Constitution. He expends a page or two in pointing out that when a Minister has encountered an adverse vote under certain circumstances, he may either resign or ask for a dissolution. Once more we say, that is very true; but might you not for once take something for granted? Two and two most certainly make four; but a proof of the theorem need not be given every time it is used.

The diffuseness of Mr. Trollope's style is aggravated by the mode in which the book was composed. He tells us, with admirable frankness, that he wrote it as he went along. He finished off his account of Queensland before he had begun to work up Victoria; or, as he puts it, Queensland "had been, as it were, despatched and cleared out of his mind." Now this method of writing has its advantages. If Mr. Trollope had been giving an account of personal adventure, we should have been glad to have the story as set down whilst the events were still fresh in his mind. But when the object is to discuss political problems, the advantages of this system are exceedingly doubtful. There are many conditions which are common to each of the seven colonies visited by Mr. Trollope; and we have thus to listen to discussions substantially identical seven times over. The land questions, for example, are very important and very complicated. If Mr. Trollope had got up the subject as well as he could, if he had arrived at certain definite conclusions, and discussed them in logical order, pointing out how far the same principles had been applied in the different colonies, how far the systems differed, and what light was thrown upon each by the experience of the others, he might have given us a really useful dissertation. As it is, we are confused and worried. Mr. Trollope's method in this instance saves himself at the expense of his readers. He gives us a mass of amorphous pleadings, and does not take the trouble to sum up or compare. In order to arrive even at his own opinions upon the subject we should have to go through a considerable amount of labour; though, if we had noted all the various passages in which the topic is touched, and were to bestow a second or a third reading on some which have become rather dim in our memory, we might doubtless succeed in codifying Mr. Trollope, and drawing out a systematic profession of faith from his voluminous pages. We have not done so, for various reasons; and we are not therefore in a position to say with any confidence how much new light he may have thrown upon the matter.

Thus much, indeed, we dimly gather. Mr. Trollope, politically considered, is a good sturdy Whig. He believes in the British Constitution and in the advantages of the *via media*. He likes good, solid, substantial reasons for everything, and turns a deaf ear alike to sentimental loyalty and to democratic Buncombe. He holds that Government should be kept in order, and that the Colonial Office is much too fond of red tape. There is nothing, in his opinion, so good for a nation as letting it alone. Thus he looks forward t the gradual emancipation of the colonies. Their enthusiastic loyalty strikes him as, on the whole, a little absurd. It is impossible, he thinks, that this vast empire should really be ruled much longer from Downing Street, and the Australians should be encouraged to run alone as soon as possible. We are all the more likely, he considers, to part on friendly terms, when the inevitable parting comes, if we do not try to keep up an impracticably close connexion. On the other hand, Mr. Trollope is not by any means a rampant Radical. He watched, and has described with a good deal of humour, the proceedings at some of the miniature Parliaments of the antipodes. He admits that they are a good deal wanting in that decorum which we are accustomed to think essential in a legislative assembly. The members are in the habit of using extremely vigorous language about each other; the Speakers have very lax notions of enforcing order, and the newspapers are very ready to explain the little amenities which have passed by imputations on the sobriety of their representatives. He admits, too, that Cabinets have an unpleasantly short tenure of office as a general rule; and that political purity is by no means valued so highly as it ought to be. All this, however, does not materially disturb his complacent optimism; everything will come right in the long run, if only it is let alone. The scurrility and brutality of political life are at any rate a sign that people take an interest in politics; and the one thing to be dreaded is indifference. The ferment will gradually settle down as society becomes more organized; and a decent political order will be evolved out of the conflicting elements. To all this we need say nothing. Mr. Trollope may be right or wrong; but it is tolerably plain that we need not expect much new light from him; we have only to remark that, of ten ordinary members of the Cobden Club, probably nine would come to much the same conclusions, though they might express them rather more briefly. The subject upon which Mr. Trollope has much to say that seems to us really valuable is on the difficulty of obtaining a confederation of the colonies. There are many reasons for wishing that at least a customs union might be brought about as soon as possible upon the Australian continent; but politics there are still too much in the vestry stage. Petty local jealousies obscure wider views, and the centrifugal seem at present to be too strong for the centripetal forces. In fact, a federation has hitherto been produced only by some strong external pressure. The United States were forced into alliance under great difficulties by their common hostility to England; and Canada has been forced into unity only by fear of her overbearing neighbours. Australia is fortunately free from such motives, and is likely long to remain free from them; but as population extends, and the mutual relations of the colonies become more intimate, one would hope that more far-sighted views may prevail.

Mr. Trollope goes in so much for statistics and for politics that his lighter material is pushed into corners. It is a pity, for the lighter material is by far the most interesting, and is occasionally very good. Mr. Trollope, indeed, is hampered by a very natural difficulty. He cannot speak of individuals without offending against the laws of private confidence; and he most properly refrains from seasoning his pages with personalities. There is indeed one description of a member of a colonial Assembly to which we should fancy that there could be no great difficulty in assigning a name; and, if so, we hope that the person indicated may learn a lesson from the remarks which he has provoked; but elsewhere Mr. Trollope has most scrupulously avoided saying anything which can wound anybody. We applaud his discretion, but it also follows that his field of description is considerably narrowed. However, he describes with great animation many of the amusing incidents of his journeys. There is a really humorous and vivid account, for example, of some of the convicts whom he visited in Tasmania; in regard to which we only regret that its length prevents us from quoting it. There is a description, again, of hunting in Australia, given with all the vivacity which we might expect from the author of *Hunting Sketches;* and we may safely say that, by resolute skipping, a very amusing volume may be extracted from the two before us, which would occupy perhaps two hundred and fifty out of the thousand pages. In describing scenery Mr. Trollope is hardly successful, and he justifies himself by declaring rather broadly that nobody can describe scenery. Nobody, indeed, can set before us scenery totally different in kind from that with which we are familiar; but it is possible to describe the emotions which the scenery produces on the mind of the traveller, and we need hardly refer to cases in which this has been done. Mr. Trollope, to say the truth, seems to have had his mind rather too exclusively fixed upon questions about sheep-farming and land laws, and at times upon questions of dinner and comfort, to be very much moved by the scenery. However, he has given some good touches even of this kind, which may at least stimulate our curiosity; and we would hope that he may attract some members of the Alpine Club to the snowy peaks of New Zealand.

An innkeeper, overheard by Mr. Trollope through the partitions of corrugated iron, observed that Mr. Anthony Trollope "must be a damned fool to come travelling in this country in such weather as this"; and Mr. Trollope apparently agreed with him at the time. We entirely deny that Mr. Trollope is a fool—with or without any epithet prefixed—either for travelling or for publishing an account of his travels. He doubtless did well both in visiting Australia and in recording his impressions. But we wish that he had tried to form them into a book, instead of tumbling them out as an amorphous mass of writing.

FERGUSON'S DIALECT OF CUMBERLAND.*

TO deal with a local dialect is a much harder thing than most people seem to fancy. As a rule, people who sit down to make local dictionaries and glossaries appear to think that there is nothing to be done but to put down all words, forms of words, or meanings of words which at all differ from modern high-polite English. Those who go a little further than this stick on something by way of etymology, "derivations" from "Saxon," Danish, or sometimes things further off. The natural consequence is that the same word, form, or phrase is found over and over again in different local glossaries belonging to the most distant parts of the kingdom. A word or form or phrase which has vanished from high-polite English is perhaps in familiar use everywhere from Kent to Cumberland. It is perhaps in no way characteristic of one district more than another; it is an archaism; in delicate ears it is a vulgarism; but it is in no sense a localism. But, because it is in familiar use while it is not in high-polite use, every maker of a local glossary from Kent to Cumberland at once puts it in his book, as if it were characteristic of his own district. Words of this class have really no business in a local glossary at all; they have their place in the general history of the language,

* *The Dialect of Cumberland, with a Chapter on its Place-Names.* By Robert Ferguson. London: Williams & Norgate.

but they have nothing to do with the particular history of any of its local forms. Then there is another large class of words, which may be said to be accidentally local—words once common to the whole language, but which have lived on in particular districts only. Thus there are a vast multitude of words which are commonly called North-country, or, more commonly still, Scotch, which are simply words that are in themselves no more Northern than Southern, but that have lived on in Northern English while they have been lost in Southern. Words of this class belong equally to the general and to the local inquirer, but it is rather the business of the local inquirer to find out, if he can, why they have been preserved in one part of the country while they have been lost elsewhere. These of course ought to be found in a local glossary of the part of England to which they are now peculiar, but they ought to be carefully distinguished from words which are in themselves local, words or forms which, as far as we know, not only are not now, but never have been, in use in other parts of the country besides those of which they are now characteristic. When this last class has been really separated from the other two the work of the local etymologist begins. Take, for instance, a word or form or phrase which is in use in Yorkshire or Lincolnshire, but which is now unknown in Southern England. In a vast number of cases, far more than people commonly think, the fact simply is that the word has gone out of use in Southern England. To take a very familiar case, the word "bairn," which everybody would now call a North-country word, perhaps a Scotch word, is itself no more Northern than Southern. It has simply dropped out of use in the South. But it may be that the word or form is one which not only is not now in use in the South, but which there is no reason to think ever was in use in the South. Then comes the question of its origin. In the two counties which we spoke of, the question would be, Is it Anglian as opposed to Saxon, or is it Scandinavian as opposed to English in the wider sense? In some other districts, Cumberland among them, there is the further chance, stronger or fainter, that it may be British. These are the kind of facts which it is the business of a local inquirer to work out, and, as a rule, they fail to be thoroughly worked out from the difficulty which affects all local inquiries. A local subject can never be thoroughly worked out except by a man who is quite capable of dealing with the general subject, and a man who is capable of dealing with the general subject will not very often stoop to deal with the local subject. In fact, a local inquiry calls for such specially keen and minute kind of investigation, combined with a thoroughly wide view of the general subject, that it really seems as if greater powers were needed to deal with a local dialect or a local anything else than are needed for inquiries which seem to have a wider scope. A man cannot deal with the dialect of a particular district unless he thoroughly knows the history of that particular district, and he cannot thoroughly know the history of that particular district unless he is thoroughly master of its relations to other parts of the world. In short, a local work of any kind, if it goes beyond the barest collection of facts, is a somewhat more difficult task than people seem commonly to think it.

Let us take, for instance, the district whose dialect is treated in the little book before us. First of all, What is Cumberland? The word has more than one meaning; the Cumberland of the modern map takes in some districts which at the time of Domesday were part of Yorkshire; this we had occasion to point out at the time of those amazing letters in the *Times* about the omission of Cumberland in the Great Survey. That omission was something much more important than the mere change of the boundaries in the county. To be in Yorkshire was, then as now, to be in England, but to be in Cumberland was then distinctly not to be in England. Modern Cumberland is formed by adding piece of English Yorkshire to the old un-English Cumberland which is represented by the late diocese of Carlisle. Almost the first question which one would ask in inquiring into the Cumberland dialect is, whether there is any difference in dialect, or in anything else, to be perceived between that part of Cumberland which in Domesday is part of Yorkshire and that other part of Cumberland which became part of the kingdom of England only under William Rufus. Then, again, one would naturally ask what is the relation of Cumberland in either sense to the districts North and South of it, districts closely connected with its history, and its separation from which is one of the great puzzles of our early history? Then we have the remarkable phenomena of that whole region of which modern Cumberland forms a part, and the special phenomena of the special district added to England by William Rufus. Cumberland, in this sense, made no part of the English conquest of Britain. There is no reason to think that it was occupied by any settlements of Angles or Saxons in the time of the first invasions. It was a fragment of the great Welsh kingdom, call it Strathclyde or what we will, which was ruled by Scottish princes, which must have received a large Scandinavian colony, Norwegian rather than Danish, which further received a colony from Southern England under William Rufus, and at least a temporary Flemish colony under Henry the First. Now the great peculiarity of this Cumbrian history is that the Scandinavian settlement, which has left such important traces on the local dialect and nomenclature, is unrecorded. In Yorkshire, Lincolnshire, Norfolk, we know when the Scandinavian settlement took place, and under what leaders. In Cumberland, setting aside a dark passage of Henry of Huntingdon, we infer that there was a Scandinavian settlement because we see its still abiding effects; but we know not at all when or how it took place, and there certainly never could have been any Scandinavian dynasty in Cumberland such as we know reigned in Yorkshire. We hardly know what inferences to make or what kind of language we should expect from the presence of these various elements. The Scandinavian settlers, who did not even displace the reigning Celtic dynasty, cannot have made so thorough a sweep of the Celtic inhabitants as the Angles and Saxons made in England. We have no data for the proportions of Britons and Northmen to one another, or of the proportions of either to the English colony planted by Rufus. But we may fairly look for three elements, British, Scandinavian, and English; the Scandinavian being likely to be the greatest of the three. Mr. Ferguson's glossary now before us does not give us so much help as we should have liked in settling all these questions. Some of them he does not seem to have thought of at all. Thus he tells us:—

> In Cumberland a great part of these names date from the division of the soil among the followers of the Conqueror, of which Denton gives us many of the particulars. Thus Dovenly was called from Dolfin, the son of Ailward, while Ailward the father gave his name to Ailwardby, perhaps the present *Allerby*. *Gamelby* took its name from Gamel lord of Bothel; *Melmerby* and *Ousby* (formerly Ulfsby), from Melmor and Ulf, the sons of Halden or Halfden.

We do not know anything about Denton or the particulars which he may have given; but it is certain that he cannot have given any authentic particulars of "the division of the soil among the followers of the Conqueror" in any part of Cumberland except that which in the Conqueror's time was part of Yorkshire, and for that we should go to Domesday rather than to Denton. Dolfin and Ailward, Gamel and Ulf, are moreover strange names for "followers of the Conqueror," especially if the Dolfin here meant is the one whom William Rufus drove out of Cumberland. This kind of talk does not lead us to expect any very scientific treatment from Mr. Ferguson. He stands, however, on a much higher level than most writers on local subjects; it is plain that he understands the languages which he is writing about, though he does not seem to have grasped their historical relation to one another in the district with which he has to deal. The peculiarity of Cumberland is that the Low-Dutch element represented by the English and Flemish colonists of the days of the Conqueror's sons is in Cumberland a later stratum than the Scandinavian element; while in Yorkshire, or in any other part of England where the two come together, the English is the earlier and the Scandinavian the later stratum. We might therefore fairly expect the Scandinavian to be the main essence of the dialect, and the purely English element to be an infusion at the one end, like any traces of Welsh which may be found at the other end. This, however, depends largely upon the exact extent of the English colony in Rufus's time, a point about which we know very little, though we do know that it was a real colony, as they came with their wives and their cattle and sat down to dwell and to till the ground. In writing a book which is not a mere glossary, but which contains a good deal of philological and quasi-historical disquisition, Mr. Ferguson should not have left all these things wholly out of sight.

We need only open the Glossary to find in almost every page some words which really seem to be distinctive, and which probably are really Scandinavian, while there are plenty of others which are simply obsolete in modern English, or very often not obsolete at all, but in familiar use everywhere. We can see nothing distinctively Cumbrian in such common words as "afore," "ax" (in modern form ask), "bag" for a cow's udder, "bang" in the sense of *beat*—in the sense of *excel* or *surpass*, one would think it must be slang, like the kindred use of *beat*, *whip*, and *flog*—"barm," "baste," "batten," "bid," "bide," "boggle," "booze," "brand new," "brat," "bumble-bee" (ὥσπερ μέλιττ' ἢ βομβύλιος εἰσέρχεται), and a crowd of others, which, if they are used in Cumberland, are equally used in other places also. *Combe* or *Coomb*, meaning valley, on the other hand, is just the sort of word which ought to be in the Glossary. It is not peculiar to Cumberland, but it is distinctive and characteristic of Cumberland; it is found in Cumberland for the same reason for which it is found in Somerset; namely, that both were districts in which the British speech held out longer than usual. So again, "bannock," a cake, seems to be a real Celtic word. "Bain," on the other hand, meaning "*near, convenient*, applied to a road; *willing, handy*, applied to a person"; seems to be real Scandinavian. We are not aware that it is to be found either in ancient or modern English. So "gain" in the same sense, which has much the same meaning, is, as far as we know, peculiar to the Scandinavian parts of England. And Mr. Ferguson also gives us here and there some by no means bad bits of philology. For instance, he puts *bairn* in his list, though it is local only in the sense of having lived on in some parts, while it has dropped out of use in others; but he shows that he knows the fact:—

> Anglo-Saxon *bearn*, Old Norse *barn*. This word, originally common to all the Teutonic idioms, was superseded by *kind* in Germany as early as the thirteenth century, and by *child* also in an early period in Southern England. It is still in exclusive use throughout the whole of Scandinavia, as also throughout Scotland and Northern England.

So under the word *en*, meaning *than*, he raises a fair philological question:—

> May be derived from the Old Norse *enn* than—*meira enn athrir*, "mair *en* others." But we also find in Prov. Germ. (Hennoberg) *enn* for *den*—*nit mehr enn drei*, "nit mair *en* three." The Old Norse *enn* is formed by anacope from *thenn*, as is the Prov. Germ. *enn* from *denn*. Or, in other words, it may be said to be the result of defective pronunciation. "The

anacope," observes Cleasby, "is entirely Scandinavian"—which, if it means that it is not to be found in German, is to be qualified by the exception above quoted. Now the question is—is our word derived from the Scandinavian, or is it the result of similar phonetic tendencies within the dialect itself? To this we can give no certain answer; but in any case it is probable enough that these phonetic tendencies in our dialect (of which another instance is *er* for *nor*) may be of Scandinavian origin.

In this way there is a good deal of real philological matter to be gleaned from Mr. Ferguson's book; and it of course has the value that any collection of facts must have. But it would have been better if it had followed throughout the more strictly scientific method, and if the very remarkable history of the district had been more directly brought to bear upon its language.

ZINCKE'S MONTH IN SWITZERLAND.*

IT has become a recognized fashion for travellers who write books to expatiate on almost everything which may be nearly or remotely suggested by the course of their travels. Perhaps it is too late to protest against the fashion at all, though by the light of nature it is difficult to see why a man whose own observation has furnished him with materials for an essay on land tenure or education should not roundly put forth his essay, backed by his observed facts, rather than lead it in surreptitiously, parenthetically, or apologetically, under pretence of narrating the circumstances under which the facts were observed. It is easy enough, indeed, to see that this latter course may save the trouble of detaching one's thoughts from the transitory associations in which they first arose, and putting them into a more orderly shape. The trouble saved to the writer is made up, however, by the reader. It would save still more trouble, and with a result in the end of the same kind, though greater in degree, if authors never corrected their proofs. But at all events it would be unfair to blame any individual writer for following the common practice in the matter of using a holiday tour as a nucleus for the collection of miscellaneous notes. Therefore, when we say that Mr. Zincke's *Month in Switzerland* is a book of this miscellaneous kind, we do not mean to prejudice the reader against it. There are many excellent books, such as dictionaries, whose very nature it is to be incoherent and desultory. Only we are compelled to observe for our own protection that it is the duty of a reviewer to reflect as faithfully as may be the general character of the book reviewed: and that if our review appears desultory and incoherent, it will be because we could not otherwise give any adequate notion of the desultoriness and incoherence of this particular book.

Mr. Zincke is a traveller of a quick and intelligent, but we should say not very sympathetic, mind, who has set down the thoughts that were excited in him by the stimulus of novel aspects of man and nature, apparently without much deliberation or manipulation. As to manner, these thoughts are always expressed in fluent and readable language; as to matter, they are sometimes ingenious, generally sensible, and occasionally commonplace. Not that Mr. Zincke can be accused of egotism, for he is not less willing to preserve things which other people communicated to him. He goes so far as to give a chapter to a "Drama of the Mountains," written at Aigle, at the end of the tour, by the youngest member of his party, who is generally described as "the blue boy." The doings of a clever child are always interesting, and this is a curiosity in its way; but we think it was not quite fair to the boy to print it. It is only just to mention that the most material digression, of which more presently, is marked off in a chapter of its own, and introduced with a certain form and solemnity.

The first thing we naturally look to in a book of Swiss travel is what the writer has to say of the mountains. Mr. Zincke's tribute to the powers of the ice-world is decent and respectful, and perhaps it ought to satisfy any reasonable person; but it is hardly enough to satisfy a mountaineer. It is pretty clear that in this tour the mountains were not the primary object. At two critical points, both likely to call out any mountain enthusiasm which the visitor may have latent in his nature, the Rhone glacier and Grindelwald, nearly twice as much space is given to the hotels as to the glaciers; and we may remark by the way that Mr. Zincke's general estimate of Swiss hotels does not seem to us quite fair. Really it is no fault of an innkeeper's if his guest finds honey disagree with him, or gets tired of always having his breakfast served in solid white china. We are indeed glad to find that Mr Zincke duly appreciates the merits of the all but ideally perfect Alpine headquarters afforded by the "Eagle" at Grindelwald. Yet, from the mountaineer's point of view, one cannot but deem this a meagre account of one of the most splendid and impressive scenes of the Oberland:—"Two great glaciers come down into the village from the two sides of the Mettenberg, which here has the Eiger on its [*i.e.* the spectator's] right, and the Wetterhorn on its left." Not a word of that marvellous precipice of the Wetterhorn plunging straight down into the valley; nor of the dazzling amphitheatre of the Viescher Grat that closes in the basin of the Eismeer; nor of that exquisite undulating crest of the Eiger which perfectly realizes Mr. Kingsley's simile of a leaping wave frozen before it falls. We gather incidentally that the day was fine, and we presume that the travellers were rewarded for their journey over the Wengern Alp by seeing a clear sunset at Grindelwald. And the glory of a September sunset on those mountains is assuredly a thing not to be forgotten. But of this too there is never a word. After the merely topographical statement we have quoted comes a note of the number of hours the party had been "on the tramp," and the journal quietly proceeds:—"*September* 14.—Returned early to our *voiture* to Interlaken." It is a mystery to us how anybody can be content to spend only some fraction of a day at such a place as Grindelwald, and return early the next morning to Interlaken. But so it is, that many come and go, scarcely knowing what marvels they have seen; they gaze in wondering curiosity, or approve with discreet and distant admiration; and the divine madness of mountaineering is a gift not to be received by all men. And a comparative indifference, for such we must think it, to the peculiar influences of the higher regions is the less matter for surprise in a traveller who has other purposes, and who is bent on observing many other things besides the mountains. Certainly we are not such fanatics as to suppose that in Switzerland, or even at Grindelwald, the mountains are everything; and we do not speak as criticising, much less as blaming, Mr. Zincke on account of his attitude of mind in this respect, but only as giving notice of what is not to be expected from him. If he does not meet us with any very active sympathy, yet he is in no way against us. Indeed the thanks of Alpine climbers are due to him for some very judicious and sensible words of approval, which are the more valuable as coming from a disinterested witness. It is pleasant to turn from the random moralizings of the daily press on the folly of mountaineers, repeated with the same confidence and the same ignorance almost every season, to the opinion of a cultivated and observant traveller, who, having been in many lands and seen many forms of human activity, concludes that mountain climbing is, on the whole, "the most rational and stirring" of all athletic pursuits. And Mr. Zincke does in one place express a hope of making the better acquaintance of the ice-world at some future time:—

> We had now completed the circuit of the great ice-field of the Bernese Oberland. . . . We had had a near or more distant view of all its chief snowy peaks, but had nowhere crossed any part of the snow-field itself. That, perhaps, may be the work of another day, when the blue boy will be old enough, and the rest of the party not yet too old, for such work; for those who are not up to Peaks, either of the first or second class, may still graduate as Pass-men by crossing the ice-fields between the Peaks.

One might cavil, if so disposed, at such a loose way of speaking of "*the* snow-field" of the Bernese Oberland, when a glance at the Federal map would show at once that this form of words corresponds to nothing in nature; and one might observe that it is not true as a general proposition that all passes are easier than all peaks. It is true that the easiest of all glacier expeditions are to be found in a few well-known passes; but it is also true that less frequented passes (without counting one or two so-called passes made by mistake, and, as Mr. Ball puts it, "not recommended for general adoption") afford some of the very hardest. But we commend the intention, and will not quarrel with details.

Our attention must now be turned to some of the miscellaneous contents of Mr. Zincke's volume. We take the oddest thing first. There is a little æsthetic discussion about the peculiar effect of moonlight, and incidentally to this Mr. Zincke translates a celebrated passage of Homer, with this apologetic remark:—

> I have essayed a rendering of this famous simile, not because I hope to succeed where so many are supposed to have failed, but because, as may be believed of a country parsonage, I have not a single translation at hand.

Now the passage in question is the very same which has been translated by Mr. Tennyson. Thus we are driven to a puzzling choice between improbable conjectures. Either Mr. Zincke has not a copy of *Enoch Arden* and its companion pieces in his parsonage; or he has the volume and has never read it; or he has read it and forgotten all about the very interesting "Experiments" collected at the end; none of which alternatives would commend itself to our reason in the case of any parson, not to say a parson of Mr. Zincke's culture and abilities. The only guess left is that the book was there once, and that some friend, not exempt from the communistic leanings in the matter of books and umbrellas which are found in the most respectable society, borrowed it and carried it off past recovery. But we confess ourselves at a loss.

The most considerable digression is a chapter on peasant proprietorship, suggested by the observation of that system as established in the valley of the Visp. Mr. Zincke handles the subject with much ingenuity, and in the main with sound reason. His general conclusion as to the life of peasant owners is that, while it is independent and blameless, yet, "after all, it is the moral life rather of an ant-hill or of a bee-hive than of this rich and complex world to which we belong." Accordingly the system is unsuited to an advanced industrial and mercantile community like ours. After some acute discussion of our own existing state of things, and the reasons which make it unsatisfactory, Mr. Zincke gives his own view of the land question. He considers the true question to be, What is the best way of bringing the resources of capital to bear upon land? And the solution he propounds is the owning and working of agricultural land on a large scale by companies. Reasons are given for supposing that such joint-stock enterprises would yield considerable profit, and would, indeed, be the only way of developing the resources of the land to the best advantage. Any one who could afford to take a share or two in one of these land-owning companies might thus acquire a substantial interest in the land. The idea is novel and striking, and we should like to see a serious attempt to work it out. Of course the advocates of peasant proprietorship would object to it that it does not provide for satisfying the desire, assumed by them

---

* *A Month in Switzerland.* By F. Barham Zincke, Vicar of Wherstead, Chaplain in Ordinary to the Queen. London: Smith, Elder, & Co. 1873.

to be a necessary and universal part of human nature, to call a specific bit of land one's very own. But Mr. Zincke has very little opinion of them, holding that "we shall never in this country see anything approximating to peasant proprietorship. That is simply inconceivable in the era of capital." In the course of this discussion on land-owning there are some good observations on the different moral effects of possessing different kinds of property, especially the negative moral effect, as it may be called, of property which gives its possessor no trouble. Mr. Zincke goes so far as to say that "the simplicity and gentility of a large fortune in Three per Cent. Consols" is likely to educate the holder in refined selfishness.

The copious water supply of Swiss towns and villages gives occasion for a strong protest against our own shortcomings in this respect, and a prediction of the day when "a public, free, inexhaustible supply of the purest possible water will be the first care of every community, great and small." We hope we may soon take example by the Swiss, and realize Mr. Zincke's hope. Pure air and pure water are not in themselves virtue and happiness; but it is of little use bidding the people of our towns be happy or virtuous without them.

We may finally say in commendation of this book that it is not overloaded with small travel talk and incidents. Such things as the writer does relate have some point and individuality to justify them. Here is a piece of grim American humour, gathered at Meiringen:—

> A practical man—I took him for one who had struck oil—was leaving the hotel. A porter, assuming an expectant air, takes up a position at the door of the hotel. The practical man addresses him in a firm tone, "Now, sir, tell me every thing that you have done for me beyond your duty to the hotel." A look of blankness comes over the porter's face, and he steps aside. The practical man, with the look of one who has discharged a lofty duty, steps into his carriage.

But it is time for us, too, to step aside, and leave Mr. Zincke's volume to pursue its journey in the world. If the duty we have discharged in telling the reader what he may expect to find in it can hardly be called lofty, it has at least been agreeable; and we part from these results of a month in Switzerland with imperfect sympathy, indeed, in some points, but with satisfaction in most, and with respect in all.

LIFE OF H. T. COLEBROOKE.*

HENRY THOMAS COLEBROOKE, the greatest Sanskrit scholar of his day, and probably inferior in this one line to very few, if any, now living, was the son of Sir George Colebrooke, some time member for Arundel, and formerly Chairman of the East India Company. That a magnate of Leadenhall Street should endeavour to provide for his family by appointments in the Civil Service was quite natural, and when the father became involved in difficulties owing to unfortunate speculations, his two sons went to India as "writers" on the Bengal establishment. Sir George Colebrooke was himself a man of literary tastes, and his wife is described as a person of unusual force of character. Young Colebrooke was never sent to any school at all, but he was evidently a lad of quick perceptions and studious habits, and, after a home education, he landed in India at the early age of seventeen, well grounded in classics and mathematics, with a considerable command of French, and with some knowledge of German. The position of the servants of the old Company was at that time peculiar. Clive had, some years before, given the death-blow to the gigantic system of plunder and corruption which enriched individuals and disgraced the English name. Cornwallis had not yet placed the whole civil, criminal, and revenue administration of the country under an official hierarchy nobly remunerated and yet properly supervised. Things were in a state of transition. Senior merchants who had good appointments at Calcutta, or who were Chiefs of the provincial Councils of Patna, Dacca, or Moorshedabad, lived generously, dispensed profuse hospitality, and saved fortunes. Writers and factors were glad to get unimportant situations at the Board of Accounts or the Court of Requests, or were starved and discontented on 80*l.* or 100*l.* a year. The general tone of society was not exactly edifying. Gambling, drinking, and duels were the amusements or excitements of the community, and a fine old lady, deceased only fifteen years ago, used to declare how she herself had seen Lord Wellesley, who had officially prohibited horse-racing on a Sunday, setting the fashion of an outward morality by attending divine service in his full official robes. Young Colebrooke appears to have spent about three years in Calcutta, hunting, shooting, and studying the languages. In 1786 he was appointed Assistant to the Collector of Tirhoot, a rich and populous district of Behar, and in 1789 he was transferred to the next district of Purneah. The inquiries which terminated in the Perpetual Settlement of Lord Cornwallis were then in full progress; and, doubtless, in these districts Colebrooke laid the foundation of that intimate familiarity with Hindu usages and modes of thought which secured him an early elevation to the Bench, and eventually a seat in Council. In 1793, the year of the said Perpetual Settlement, Colebrooke was placed in charge of the huge district of Rajshahye. In mapping out the country for official purposes, our early administrators selected as stations or local capitals the residences of modern Nawabs or ancient Rajas. Such selections were sometimes singularly infelicitous. Nattore, the head station of Rajshahye, was some thirty miles from the left bank of the Ganges, and for five months of the year it was a mere island in a vast sea of rice. The station was abandoned subsequent to Colebrooke's time, and a second fatality characterized the new choice of a centre. Civilians who had been struck down by malarious fever at Nattore were transplanted to Rampore Baulia, on the crumbling banks of the Ganges; and in the space of the last thirty years, court-houses have vanished and alleys lined with splendid trees have been eaten up by the simple process of diluvion and erosion. From this swampy and feverish district of Bengal Colebrooke was transferred to the drier climate and more congenial society of Mirzapore and Benares. By this time his character and attainments received their due reward and recognition, and he was sent by Wellesley on a diplomatic mission to the Raja of Berar, which enlarged his experience and occupied him for more than two years. On his return he was appointed Judge of the Highest Court of Appeal, known for seventy years as the Sudder Adawlut, and some time afterwards he was made Chief Judge of the same tribunal—a position which he had practically filled in the estimation of suitors and of colleagues from the time of his appointment. In 1807 he became member of the Supreme Council. In 1810 he married; and, his wife dying after four years of what appears to have been unalloyed domestic happiness, he finally quitted the service in 1814. Previously to his departure he had been President of the Asiatic Society of Bengal. In his retirement he continued the same course of laborious research and scientific inquiry which had illustrated his Indian career. Though in 1823 he declined the offer of the first Presidentship of the Royal Asiatic Society, he accepted a similar post in the Astronomical Society in the next year. His later life was tried by failing health, by loss of sight, by domestic sorrows, and by some family annoyances; and he gradually sank, and died on March 10, 1837, in his seventy-second year.

The above is a record of a life not wholly uneventful, and yet not passed in scenes of stirring interest or importance; of faculties naturally acute and developed by assiduous culture to the highest point of perfection; of attainments which, if exceeded in point of versatility, have in one branch of study not been surpassed; and of a character upright, honourable, unblemished, and pure. It now remains for us to take a short survey of some of his acquirements, and to estimate, as far as possible, his place in the republic of letters and in the Indian oligarchy. We do not gather from the memoir the precise nature of the influences which set Colebrooke to explore the mines of Oriental literature, and to separate their ore from their dross. Something was obviously due to the necessity of mastering at least two of the Oriental languages as a condition precedent to success in his profession. But we suspect that the main incentive came from Sir William Jones, who about the year 1790 was at the zenith of his reputation, and of whom his more illustrious contemporary Gibbon could truly say, in one of his pithy notes, that he was "perhaps the only lawyer equally conversant with the year-books of Westminster, the Commentaries of Ulpian, the Attic pleadings of Isæus, and the sentences of Arabian and Persian Cadhis." It is curious, by the way, that to this list of attainments the historian should not have added Jones's unquestioned proficiency in Sanskrit. But, whatever the motive power in the case of Colebrooke, it is certain that he must have commenced his Sanskrit studies under difficulties and obstructions which it is scarcely possible to exaggerate. Elementary works did not exist. Grammars and dictionaries were composed in the very language itself; and the former, whatever may be said for their depth and comprehensiveness, were clearly compiled on the sacred principle of locking up knowledge from the eyes of the vulgar and of turning a fine vehicle of thought into a series of philological conundrums. Then it is also certain that Brahmans were at first unwilling to display their occult science for the curiosity of *Mlechhas*, or outward barbarians; and though Colebrooke could not conceive "how it came to be asserted that Brahmans were ever averse to instruct strangers," it is thoroughly well established that difficulties were experienced by Jones and others. Some Pundits would not read except on particular days; others feared the reproaches of their fellow-countrymen; and even those who were willing to teach Hindu epics, law, and divinity for a consideration, had little of the art of imparting what they knew. Colebrooke's industry and aptitude carried everything before him. He became a scholar erudite, accurate, and profound. Curiously, however, he chose for his first essay in literature the very practical subject of the Husbandry and Commerce of Bengal. Fully to discuss such a question familiarity with the dead languages of the East is not indispensable. Excellent Reports on land tenures, ploughs, implements, and products have been written by civil and military officers of active habits and a liking for field sports, who knew nothing but the vernacular of their district. From specimens given in the memoir we see no reason to doubt that, had Colebrooke turned his attention to purely executive details, instead of to judicial work and to philological researches, he might have rivalled the reputation of Thomason or Munro. At another time he wrote a short paper on a peculiar sect of the Mohammedans. We are told that he was a good Arabic scholar. But his main pursuits were Hindu law, theology, and literature, and, incidentally, science. And with these two great subjects before his eyes, he was almost always translating some learned work, conducting some lengthy correspondence, or publishing some thoughtful essay. He compiled a grammar and edited a

---

* *The Life of H. T. Colebrooke.* By his Son, Sir T. E. Colebrooke. London: Trübner & Co. 1873.

lexicon, he translated treatises on law, he expounded Hindu philosophy, he deciphered ancient monuments and inscriptions on rocks, and his inquiries extended from the precession of the equinoxes, as observed by native astronomers, to the exact heights of those magnificent snowy ranges which had first delighted his eyes while collecting revenue and shooting partridges in the plains of Purneah. We think that he might have attained to great eminence in the physical sciences had he not made Oriental literature his chief pursuit. Sanskrit scholars are under deep obligations to him. It is not that he facilitated the study of the language by the preparation of elementary works, or by annotated editions, for his grammar would probably be useless to any one not possessed of his extraordinary capacities. But he explored and illustrated some wholly unknown departments of Eastern philosophy; and, if not an unquestioned authority on canons of taste, he hazarded no conjectures, he ventilated no plausible theories, and he attempted nothing which he did not fathom. His translations of two well-known law books have never been superseded, and are used to this hour by lawyers bred in Westminster Hall and by native gentlemen who have taken academical honours in the University of Calcutta. The memoir gives us no details as to his judicial career, though we cannot but think that a research into the volumes of Select Reports of the Sudder Court would have brought to light curious cases in which questions of caste or social and religious rites were illustrated by his acquirements, and knotty points of inheritance solved by his legal lore. More than a quarter of a century ago, when a judge superior in ability to his colleagues was adorning the bench of the Sudder Court, it was said by old law practitioners that the days of Harington and Colebrooke had returned. The portrait of the former, known for his excellent Analysis of the Laws and Regulations of Bengal, now adorns the walls of the new High Court of Calcutta. The fine bust of the latter may be seen in the rooms of the Asiatic Society in the same city.

While admitting the depth and extensiveness of Colebrooke's erudition, we cannot avoid the conclusion that he belongs to that class of scholars whose talent for communicating truths, as remarked of Niebuhr by Macaulay, by no means equals their talent for investigation. He never could have been a popular writer; and the extracts given in the memoir are marked by a somewhat unwieldy diction and a heavy style. It was possibly a consciousness of these defects which induced him to refuse an invitation to contribute to the *Edinburgh Review*. Something is no doubt due to the character of the subjects on which he wrote. But examples are not wanting of other Eastern scholars who have handled such topics with gracefulness and ease. Classic elegance was wanting to Colebrooke. We may be quite certain that he could never have written anything approaching to the imitation of Alcæus by Sir William Jones. Nor could he have transferred glowing Oriental imagery and feeling to heroic English verse with the success attained by the late Professor Wilson in his poem of the *Cloud Messenger*. But the Sanskrit reading of Jones scarcely extended beyond the epic poets, a few plays, and the Laws of Manu; and Horace Hayman Wilson, with all his talent and originality, was not to be compared to Colebrooke in accuracy and depth.

Those who have been accustomed to regard Colebrooke as a laborious student and a man of a reserved, thoughtful, and unimaginative disposition, will be surprised to find him occasionally the slave of ardent and impulsive feelings. But they break out on more than one occasion. He inveighs, in his early letters, against the crooked policy of Hastings, at the time when that remarkable man had the sympathy of the whole Settlement. He advocated Free-trade and attacked the monopoly of the East India Company, when such views were unpopular in high places, and when they might have injured his own prospects. At another time he bought some land in America, and he invested a considerable sum in the purchase of real property at the Cape. He wrote a pamphlet pleading for a relaxation of the Corn-laws; he recommended emigrants from Great Britain to turn their attention to the Cape; and he fancied that he had discovered a solution for some difficult Indian problems when he desired to people the plains with what he calls creoles, or half-castes. Some of his early opinions strike us as rather crude. The Persian language with him is "too dry to entice," though it is not very easy to conceive what epithet we ought to select for his favourite Sanskrit, if dryness is held to be a characteristic of the Persian language, with its simple grammar, its admirable moral tales, its ornate poetry, and its historical narratives not paralleled by anything in the whole range of Sanskrit literature. At a later period he did not seem to care much for the *Edinburgh Review;* he observed that it had "declined in excellence," and he anticipated its "cessation." At the same time he seems to have devoured all kinds of writers, and while at Nagpore he read through a complete edition of the British Poets. His son, not unaptly, compares his father to Cato, as Cicero describes his friend, immersed in books, and yet attending to the business of State. Another classical prototype is suggested to us by the elder Pliny, who read in his litter, pretty much as Colebrooke may at times have read in his palanquin. Private correspondence with distinguished scholars was carried on by him unremittingly in the intervals of business, and he appears to have written regularly to his father. During a journey in tents at the hottest season of the year, he kept a diary of his tour. We are bound to say, however, that his letters reflect, in most instances, the severe character of his studies. With the exception of a few notices of birds and beasts, to which he was attracted as much by his love of natural history as of sport, the correspondence is taken up with requests for books, literary jottings and plans, and even astronomical calculations; and his letters to Sir Thomas Strange, H. H. Wilson, and other native and English scholars, must, we think, have resembled the celebrated interchange of epistles between the Antiquary and Dr. Dryasdust, which went on for six years and then only settled the first line of an inscription.

His political opinions were occasionally in advance of his age. We have already spoken of his views on commerce and Free-trade, and he incurred the displeasure of the Court by the part he took in certain financial measures of the Supreme Council. But we have only space for a notice of one other topic, and that is the long and now half-forgotten controversy on the rite of Suttee. It is admitted in the memoir that when the Government of India first took up this question in earnest, and endeavoured to regulate and control the practice, the opinion of Mr. Colebrooke was allowed great weight, and the rules for the guidance of officials were always considered to have been mainly drawn up by him. The biographer states that his father used to vindicate the course taken by Government on the ground that direct suppression would have been met by resistance, and that it would become a point of honour with natives to persevere. We should vindicate Colebrooke's character on other grounds. The rules were not practically enforced until the year 1814, nor were regular statistics collected until the following year. From that date until the abolition of the rite in December 1829, statistics of burnt widows were supplied with the regularity of Poor-law returns, and one of the most tremendous of controversies raged during that period between those who recommended perseverance in attempts to control the practice and those who saw no remedy but entire abolition. The official literature of Suttee, between 1815 and 1830, is one of the most curious and instructive in the voluminous Indian archives; and those who may ever explore our Blue-books will be amazed at the perverted doctrines of the priesthood, the curious and suggestive facts showing how the practice had increased under British supervision, the growing demoralization of the populace, the fierceness of the paper warfare, and the apathy and timidity of two long Administrations. Colebrooke, who had drawn up the rules, left India for good without having any opportunity whatever of seeing their effect. We venture to think that if, either on the bench of the Court or at the Council Board, he had seen the unexpected result of the half measure, a man of his humane, courageous, and thoughtful disposition would soon have been ranged on the side of the abolitionists. It is one thing to hear the echo of a controversy in retirement in England, and another to discuss it with a true sense of responsibility and with accumulated facts, while the pyres were lit up in the very suburbs of Calcutta, literally, at the average of one every week.

We have endeavoured to do justice to a life and a memoir which, though by no means light reading, and only attractive to a certain class, may have yet a sterling value for all who take interest in Oriental researches, or who wish to trace the various roads to eminence opened by an Indian career. The biographer, we should mention, has performed his task with judgment and good taste. There are some few misprints, arising out of the inevitable employment of a copious Oriental phraseology; but Sir Edward Colebrooke is evidently a man of no inconsiderable acquirements, and his early training in the Bengal Civil Service has enabled him to pick his way skilfully amidst laws and Regulations, treatises and titles, unfamiliar regions and strange castes. In the eyes of ordinary Asiatics Colebrooke will never hold the same place as those early pioneers and civilizers whose appearance is hailed by them as an incarnation of equity and order. And many an Englishman will tell us that he had far rather have "settled" a province than have deciphered an Edict of Asoka, and that he would prefer the gratitude of a million of agriculturists to enrolment in all the learned Societies and Academies in the world. But there is no need of any such invidious comparison. The foremost of English and Continental scholars at this day bow in reverence at the name of Colebrooke, while hard-working and less learned civilians ought to look on him as one of whose attainments, writings, and character any service might be proud.

TIMBS'S DOCTORS AND PATIENTS.*

IF irrelevance is the art of straying from your subject, Mr. Timbs may be said to have mastered it in the present compilation; unless he pleads that his title is a happily exhaustive one, embracing all the conditions of humanity and everything in which human beings can find concern. It is certainly true that, taking a sufficiently wide view, all things are included in it. All men are doctors or they are not, and, if not doctors, they must be patients in fact or in possibility; even those who resolve to be neither one nor the other finding a legitimate place as exceptions to the rule. Moreover, every position, pursuit, circumstance, or accident in life has its medical aspect, and may be treated as beneficial or adverse to health. Nor does death sever the indissoluble chain. Patients die; therefore funerals are in place; or they only seem to die, so the fascinating horror of being buried alive may claim at least a chapter. And where the link is less obvious ingenuity need never be at fault. Thus patients dream; therefore the theory of dreams is in place, and how some dreams come true. Some

* *Doctors and Patients; or, Anecdotes of the Medical World and Curiosities of Medicine.* By John Timbs, F.S.A. London: Bentley & Sons. 1873.

patients are fat, so Daniel Lambert's epitaph hits their case; music pleases or displeases in sickness, so we have Luther's defence of harmony as a weapon against the Devil. Superstition is connected with anatomy by the child's caul, discussed in poetry and prose. Scepticism is an affair of liver or digestion. Sympathies and antipathies, poisonings, phrenology, intoxication, gardening, pastry and Shrewsbury cakes, magic, travelling, cookery, botany, the North Pole—the material body politic appropriates them all.

These two volumes probably constitute the residuum of a long life's commonplace or rather scrap book. After more than one gleaning, what was reducible under no other head is thrown together here, and left to place itself very much by accident, the same facts not seldom appearing under different headings; and the most enormous numbers and statistics being given with an audacity of trust very fortunate for the reader with an appetite for wonders. Of course, if there had been a great deal to say about doctors, or patients either, there would not have been room for all these offshoots from the main subjects; but there is little about them viewed apart, and scarcely anything in conjunction. It is remarkable indeed, considering the universality of sickness and the crowd of doctors in every age who come in contact with it, how slowly the store of anecdote grows—of the anecdote at least that finds its way into print. The good stories here told are mostly so old and familiar to the corners of newspapers that we must not venture to repeat them. The epigram on Dr. Lettsom, the repartees of Ratcliffe and the saviour, and Ratcliffe and Sir Godfrey Kneller, the drunken Dr. Fordyce and his unconscious diagnosis "Drunk, by Jove!" the ingenious artifice by which the nobleman is taught that his fee of three guineas ought to have been five, the bearishness of Abernethy, and a good thing about wooden legs—all these take their place by a sort of natural right, but there are few additions to the floating stock of anecdote, and we look in vain for the graver contribution of the subject which books, especially of biography, give. Except where passages are extracted from works with a similar title and design, the material for the present work is borrowed almost entirely from magazines, reports, and newspapers. We searched at once, but in vain, for some of our old friends—for some mention, for example, of Dr. Willis, "the most famous physician of his time, whose Latin style for its natural sweetness, pure elegancy, delightful unaffected neatness, none scarce hath equalled, much less outdone," who in pursuit of his calling "kept Abingdon market every Monday," and who won such fame in it as to be buried in Westminster Abbey; and, again, for his contemporary George Bates, whose successful career is quaintly condensed by his chronicler. His practice lay at first among precise and puritanical people, who took him for one of themselves; but when Charles I. came to Oxford and appointed him his chief physician, his views took a different colour, which, however, changed when the Royal cause declined; and, retiring to London, he managed his interests so well as to be appointed to the same office to Oliver while General and at length Protector, whom he flattered to an extreme degree. Nor could the turns of fortune take him by surprise. At the Restoration he got on again with the Royal party, "by his friends' report *that he had, by a dose given to Oliver, hastened his end*"; and we lose sight of him as Chief Physician to Charles II. and member of the Royal Society. Nor is the name and credit of more recent doctors set forth by Mr. Timbs as we should have looked for. It would seem as if the medical faculty could only attain to vulgar fame by some touch of eccentricity or absurdity allying it with the earliest practitioners of the art, some quaintness or precision of dress, roughness of manner, or deliberate affectation adopted for the purpose of notoriety. There are no instances in these volumes of skill in its highest exercise, of that sagacity of insight which constitutes the true physician—the faculty for which Dr. Baillie was distinguished, and of which biography records some examples; as when Francis Horner consulted him in illness, and he gave it as his opinion that his disease was one or other of two so rare as to be almost without example in pathological science, and on a post-mortem examination it appeared he had been suffering from both of them.

However, as these volumes are beyond the province of criticism, and are only compiled by the author, we will not dwell further on omissions. They have elements of popularity. Desultoriness is not an insuperable objection, else books of anecdotes would not be such favourite reading; and scraps of science or fragments of information are interesting to a good many people who shrink from a larger dose of either, and yet are willing to believe that they read to some purpose. To such readers the following advice is scarcely applicable, yet, as a useful hint to those whom it may concern, we extract it:—

> Dr. Anderson was often heard to say that clergymen, authors, teachers, and other men of reflective habits lose much health by losing sleep, and this because they carry their trains of thought to bed with them. In my earlier years I greatly injured myself by studying my sermons in bed. The best thing one can do is to take care of *the last half hour before retiring*. Devotion being ended, something may be done to quiet the strings of the harp, which otherwise would go on to vibrate. Let me commend to you this maxim which I somewhere learnt from Dr. Watts, who says that in his boyhood he received it from the lips of Dr. John Owen, a very good pedigree for a maxim—*Break the chain of thought at bed-time by something at once serious and agreeable.*

The faculties of medicine and divinity do not always agree, as they must do here, in the duty of promoting bodily comfort and efficiency. Certainly no moral teacher would sanction the advice of Sir Theodore Mayerne, the prescriber to so many crowned heads, who recommended, we are told, a monthly excess of wine and food as a fine stimulant to the system; and the mention of chloroform and Sir James Simpson's use of it in these pages recalls the objections that were raised to his efforts to lighten the primæval curse upon Eve and her daughters. Asceticism has often, and with some force of logic, opposed surgical alleviations; for why, it is said, take pains to rid yourself of heaven-sent ailments and inflict at the same time self-chosen torments? So we read that St. Cyran, when Director to Agnes Arnauld, set his face against the lancet which was to open her abscess, though the lancet merely as an instrument for letting blood was at its height of favour. "La mère Angélique," who took nothing else away with her when she left Port Royal, carried her lancet, which had already caused torrents to flow—she sharing in the popular idea so long prevalent (as here quoted from the *Edinburgh Review*), and accepted alike by doctors and patients, that people could not have too much of a good thing, and that they required a periodical hand at the pump to keep them from foundering.

Mr. Timbs, though not severe generally in his dietetics, is an alarmist on the subject of cucumbers. He extracts from the *Medical Circular* a reminder that this vegetable, from the mode of forcing—being shut up close in a hot atmosphere and the solar action excluded by blinds—acquires certain acrid and purgative principles not unfrequently in a state of concentration, accounting for the sufferings sometimes resulting from a "surfeit of this fruit." We offer the view for the consideration of the "immoderately fond" who indulge in surfeits:—

> We consider before using the cucumber it should in every instance be sliced and purged of the preponderance of its acrid and purgative elements by treating with a little salt and then saturated with vinegar for some hours previously—never eaten without, in fact—otherwise it is very apt to produce choleraic diarrhœa. . . It is related that Dr. Glynn of Cambridge, being in attendance on a lady patient, pointed out to her the impropriety of eating cucumber, of which she was immoderately fond; when he gave her the following humorous receipt for dressing cucumber. "Peel it with great care, then cut it into very thin slices, pepper and salt it well, *and then throw it away.*"

We make no apology for changing the subject to the bedside of the so-called dying; for sudden transitions are of the nature of the book. One of its topics is "Helping the Dying," and a story is quoted of a clergyman inquiring of the parish doctor how he had left his patient:—

> He told me the room was full of friends and neighbours, all telling her she could not last long; and, said he, "I make no doubt she will not; she is sinking, because she thinks she is dying; yet I see no other reason why she should, and I could not get one to leave the room." I entered, and my authority had a better effect. I turned all but one out of the room, and addressed the woman who was apparently exhausted and speechless. I told her exactly what the surgeon had said, and that she would not die, but be restored to her husband and children. The woman positively started, raised herself in bed, and said with an energy of which I did not think her capable, "What, am I not dying? Shan't I die? No! Then, thank the Lord, I shan't die." I gave strict orders that none should be admitted, and the woman did recover and has often thanked me for saving her life.

None are kinder to their neighbours than the poor so long as there is hope, but when hope is—as they judge—over, they have a sense of something being due to themselves; and a quick summary end that shall not keep everybody in suspense for no good is a blessing to all parties. A nurse who had done her duty well in a lingering case of dropsy and sustained a cheerful mien through it all, when she considered the case unreasonably protracted, said, with an air of pleasantry, which the sufferer did not take amiss, "One would think nobody had ever died before, you make such a fuss about dying!" We find ourselves concluding with a "patient" who is not one of Mr. Timbs's commemorating, but it is one of the effects of a rambling book to set the reader rambling on his own account.

THE ATHANASIAN CREED AND THE UTRECHT PSALTER.*

WE have frequently taken upon ourselves the office of finding fault with the defects of the Catalogue of the Cotton MSS. But it is undoubtedly no fault of the Catalogue or of its compiler that the volume Claudius A. VII. is described as wanting. There are so many other *lacunæ* which are partly due to the fire which injured so many of the books that still exist in a more or less mutilated condition, and partly to accidental causes which it is needless to particularize, that it would have been quite hopeless to guess at what the contents of this particular volume might be. The missing book has, however, happily been identified. A book in the Utrecht Library, now known as the Utrecht Psalter, has the press mark Claudius A. VII. stamped upon it, and has the usual marks of having once belonged to Sir Robert Cotton's collections. It is one of the remarkable results produced by the last few months' controversy about the Athanasian Creed that this splendid volume, the existence of which had been entirely unknown in England, has been brought to light. All that is known of its history is that Archbishop Ussher had seen it in Sir R. Cotton's library in 1646, and that when Waterland wrote his *Critical History of the Athanasian Creed* in 172., it had disappeared. From that time to this no English scholar had any knowledge of what had become of it, and we now know that, just six years before Waterland published his work, this Gallican Psalter had been presented to the University Library at Utrecht.

* *The Athanasian Creed in Connexion with the Utrecht Psalter.* Being a Report to the Right Honourable Lord Romilly, Master of the Rolls, on a Manuscript in the University of Utrecht, by Sir Thomas Duffus Hardy, D.C.L., Deputy-Keeper of the Public Records. 1873.

by Monsieur D. de Ridder. The Deputy-Keeper of the Record says it had *happily* become the property of the Library because by this means it escaped the fire which destroyed so many precious volumes in the Cottonian Library. But, though there are two or three other volumes lost out of the fifty or sixty which are marked by the name of the Emperor Claudius, it does not appear that this part of the Library suffered much from fire, so that we fear we have not even that poor consolation for the loss which the Deputy-Keeper considerately suggests. We have no means of guessing whether the book was stolen or whether it has accidentally strayed from its proper home; neither is it of much consequence now. It is a great satisfaction that it has been found, because it has settled for ever the lately vexed question as to the antiquity of the Athanasian Creed in the exact words in which it is still used in the Breviaries of the Western Church.

Into the theological question of the date of the composition of this document it is neither our province nor our intention to inquire. It rests entirely upon internal evidence; but we may at once say that we make no doubt that Waterland is correct in assigning it to the first half of the fifth century, though he has spoiled what appears to us a very complete argument by the baseless suggestion of the name of Hilary Bishop of Arles as its author. But, whatever be the truth of this conclusion, or the cogency of the arguments by which it is established, probably few people have learning or ability enough to master the question; and such persons as are in this predicament will hail with satisfaction an argument the force of which is irresistible, that the Creed must have existed at least as early as the sixth century, because the handwriting of a manuscript in which it is found at full length is beyond all question of a date not later than that century.

And this is what the Deputy-Keeper has established beyond —as it appears to us—any possibility of gainsaying. We have had an opportunity of examining the four beautiful pages which he has had photographed from the original, and of reading the luminous Report upon the Utrecht Psalter which he has presented to the Master of the Rolls, and we much regret that the latter has not been printed and published in a smaller form, and so rendered accessible to students in general. We hope that this may still be done. Meanwhile, for the benefit of others who have not had the advantage of seeing this privately printed volume, we may give some information about its contents.

The Deputy-Keeper speaks with the utmost confidence of the date of the handwriting as being not later than the sixth century; and certainly there is a striking resemblance between the character of the handwriting of the Utrecht MS. and that of the MS. at Paris which is known as No. 8,064, specimens of which are given in Astle's work on handwriting, and which is generally pronounced to be at least as early as the sixth century. The Deputy-Keeper even thinks that the two may have been written by the same scribe. That would perhaps be more than we should like to assert, especially as we have seen another specimen which more closely resembles it. It is that of the Ambrosian palimpsest, from which Angelo Mai edited the fragments of Cicero's oration in defence of Scaurus. The editor of these fragments was of opinion that the handwriting was as ancient as the time of the Antonines, but this certainly cannot be maintained. The character of the writing of all these MSS. is what is called Roman rusticated, and, what has some weight in estimating the antiquity of the palimpsest, the writing which covers the original in the Ambrosian MS. is itself of the seventh century.

Our readers are aware that a theory has lately been propounded by Mr. Ffoulkes to the effect that this Creed is a forgery of the ninth century committed by the saintly Paulinus, Patriarch of Aquileia. In the present article we only profess to deal with the question as Sir Thomas Duffus Hardy has treated it, as a question of palæography. We need only, therefore, say that Mr. Ffoulkes's theory has been entirely crushed by Father Jones and by Professor Brewer. But, as we observed before when speaking of the date of the composition of the Creed as ascertained from internal evidence, few persons will care to enter upon the subject. A reasonable exception, however, may be taken to the Deputy-Keeper's assertion of its antiquity, on the ground that Professor Westwood, who once ascribed it to the same period, has, though without assigning any reasons, changed his opinion, and now speaks of it as possibly of the ninth century, the character of the sixth with its rustic capitals having been copied. Unquestionably this argument will hardly suit the views of those who maintain a late origin for the Creed, as, if it were good, it would show that another copy of the document exactly like this copy of the ninth century had been executed in the sixth. This, however, we are not concerned with now. The character is admitted on all hands to be that of the sixth century. Those who assign to the document a later date ought of course to be able to show good reason for their opinion. It will be admitted that the *onus probandi* rests with them.

Nevertheless the Deputy-Keeper of the Records has in his elaborate and most conclusive preface anticipated every objection that he could conceive to be alleged against the date he has assigned to the document. Perhaps the most plausible objection yet urged against it is the allegation that in the Apostles' Creed, which as well as the Athanasian is appended to the Psalter, there occurs the article *Descendit ad infernu*. Now it is said, and truly said, that this article did not exist in the Roman Creed till the latter end of the eighth or the beginning of the ninth century. But the objection in reality proves nothing more than the fact, which is otherwise incontestable, that this document was not written at Rome, but in some other place, possibly in the patriarchate of Aquileia, where this article was acknowledged as an article of the Creed—and it is well known that it existed in an Arian version of the Apostles' Creed as early as the year 359 A.D. This article is also found in other undated MSS. of the Creed which have been assigned to the sixth and seventh centuries by eminent palæographers. In attestation of this assertion, Sir T. Duffus Hardy has printed in parallel columns the Apostles' Creed as it appears in the Utrecht MS. and in another ancient Gallican Psalter of the year 560 A.D. They resemble each other, with a few very slight differences, in all respects, and they both have the descent into hell expressed in the words *descendit ad infernu*, a form of expression which exactly corresponds to the Greek word *καταχθόνια*, but which had subsided before the eighth century into the form which has ever since prevailed in the church—namely, *descendit ad inferos*.

Perhaps, however, the most important argument in vindication of the early date assigned to this particular document is derived from the fact that the Psalter to which it is annexed is a Gallican, and not a Roman, one. The use of the Gallican Psalter, as distinguished from the Roman, is known to have prevailed in Britain before the mission of Augustine; and, from the answer that Gregory I. gave to Augustine in A.D. 597, it is plain that this version of the Psalms was permitted by the Pope, and was actually used in this country for about a century, after which time it was gradually superseded by the Roman Psalter. The whole argument stated briefly is this:—Here is a most costly volume, carefully written in a hand of the sixth century, containing a Psalter according to a version which was in common use in the sixth century, though almost entirely obsolete in the eighth century, containing besides the Psalter the Athanasian Creed, the Apostles' Creed, and other Church offices, such as were at that time, as they are still, in use; the handwriting throughout the volume being that of the same scribe, with the exception of the headings, which are in Roman uncials of the same period. Upon examining the text of the Creeds minutely to ascertain what indications of antiquity the spelling of the words presents, we observe that the contractions are very few in number, and that the same word is occasionally written at length and sometimes in a contracted form. Now it is well known that the later the writing of the first four centuries, the more does it exhibit contractions. Again, we find such words as *immensus* and *compellimur* written in the forms *immensus* and *compellimur*, and in another part of the manuscript *Lucan* for *Lucam*, a characteristic of the fifth, sixth, and seventh centuries. Another mark of great antiquity is the want of a separating space between the words, and there are very few such in the Utrecht MS. Further, the manuscript is illustrated throughout by drawings, the style of which is Roman as regards the dress and the armour of the figures and the shape of the buildings. With regard to the punctuation nothing need be said. It has plainly nothing to do with the original handwriting, but has been added in most capricious style at some later period. The original was, in all probability, entirely without stops. Again, the letter Y is formed so as very much to resemble the V, yet nevertheless it has in a very few places the superscribed dot which served to distinguish it from the V. Of this the Deputy-Keeper observes, "the less frequently the letter Y is found surmounted by a point, the more ancient have we a right to consider the MS. in which such letters occur." Again, the absence of ornamented initial capitals is a strong argument for a MS. being not later than the fifth, or at the very latest the sixth, century, and the Utrecht Psalter has only one ornamental letter throughout its 220 pages. This is the initial letter of the first Psalm, which is a beautifully illuminated B. Here we must confess we were at first a little at fault. Professor Westwood speaks of it as an Anglo-Saxon letter. Sir T. Duffus Hardy is as decidedly of opinion that it is of Irish character, and in this opinion he is supported by Irish antiquaries, of whom he quotes Mr. Brian O'Looney as describing it as a true Irish letter of a very old type. Now the handwriting of the MS., which is certainly not that of an Anglo-Saxon scribe, destroys the theory that this initial letter is Anglo-Saxon, unless indeed it was added at a later period, after this Gallican Psalter had found its way into this country. That it should be the composition of an Irish artist is by no means improbable, when it is remembered that artists from Ireland travelled into Greece and Rome as early as the fifth century, introducing a new style of art quite distinct from that of any other part of the civilized world, and which in time superseded the ornamental writings previously in vogue in those countries. The hypothesis is perfectly adequate to account for the initial B of the Psalter, and there is therefore no occasion to fall back upon the supposition that it may have been added at a later period.

The initial B is, however, the strong point which the impugners of the antiquity of the MS. allege. But the difficulties of any theory which assigns it to a later century than the sixth rest on the fact that it is a Gallican Psalter which was not in use; whereas this volume must have been intended for the use of some royal or noble personage, if we may judge from the costly mode of its production; and, as the Deputy-Keeper forcibly argues, there is no conceivable reason why any one who wanted to palm off a forgery of the Athanasian Creed in a handwriting three centuries earlier than his own time should have taken the trouble to copy the whole of a Gallican Psalter in the same handwriting. Moreover, if a scribe is imitating handwriting, it is absolutely inconceivable that he should have been so careful as never to have made a mistake in his imitation and there is evidence enough in the

photogram of the four pages in this volume that the scribe was somewhat careless, for he has written *saluta* for *salute*, *Virgine* for *Virgine*, and *misera* for *miserere*. What other mistakes there may be in the remainder, which we have not had the advantage of seeing, it is impossible for us to say; but we do not hesitate to say that three mistakes within so short a compass plainly show a very unusual carelessness in the writer, and would lead us to expect an occasional carelessness in the formation of the letters which he was copying. On the contrary, the letters are almost as exactly like each other respectively as if the document had been printed. We have detected only one letter which has two forms. It is the letter G, which is sometimes written in a fashion resembling our present capital G, and sometimes more like a C with a comma joined to it thus, Ꞓ.

There is one argument which has been used by those who maintain a later date for this manuscript, which, if the assertion on which it is grounded could be established, would be fatal. Opposite to Psalms 150 and 151 are drawings of two organs with arrangements for the organist to play with his hand, of a kind which, it is said, did not exist till after the time of Charlemagne. This, we will admit, appeared to us a plausible objection; but the Deputy-Keeper states that, though the method of making such organs might not be known on this side of the Alps till the ninth or tenth century, "the question against this objection is settled by the fact that there is an excellent representation of an organ not very unlike that in the Utrecht Psalter carved on one of the early catacomb stones now inserted in the upper corridor leading to the library in the monastery of San Paolo Fuorimuri, near Rome, in which the player is depicted with outstretched fingers" (p. 27).

One of the most interesting features of the Report is the conjectural history of the document with which it closes. The author thinks the volume may have been brought over by Bertha, daughter of Chariberet, King of France, who was married to Athelberet, King of Kent, and was accompanied by Bishop Luithard, who was her spiritual adviser. If the book had been intended for an Anglo-Saxon personage, the Latin would have had an interlinear translation. An additional conjecture is given. The Deputy-Keeper suggests that it may have been bequeathed by Bertha to the monastery of Reculver, where Athelberet built a palace. In support of this conjecture it is observed that the charter of this monastery appears formerly to have been annexed to the Utrecht Psalter, and to have been detached from it when the volume was rebound in the time of Sir Robert Cotton. This charter is now in the Cottonian Library (Augustus II. 2). The monastery was dissolved in 999, and its effects were removed to Canterbury, and amongst them probably was this MS., unless it had been previously removed by Bercuald, who was promoted from this abbacy to the Archbishopric of Canterbury. And at Canterbury in all probability the numerous existing copies of the drawings of this Psalter were executed.

And here we close our notice of this interesting Report with the remark that it seems to us entirely unanswerable, and to have proved to little short of mathematical demonstration that Bishop Ussher was right in ascribing this MS. to the sixth century.

JOHN'S INDIAN AFFAIRS.*

THE author of this contribution to the discussion on the principles of Indian administration appears to be under the impression that he has conceived his essays in a vein of humour. The subtle character of this may be inferred when we say that it is chiefly manifested by his invariably speaking of Mr. Grant Duff as "Duff," and by his having thrown his speculations into the form of an imaginary conversation between the author and a personage whom he styles Mr. John Bull. This idea, which is as playful as it is original, opens up expectations of a store of amusement for the reader which are hardly realized when we find that the joke is sustained throughout the whole of the essay which forms the bulk of the volume. And when we are told that My dear John will remember how the author opened the conversation by remarking, &c., and how My dear John here took breath and wiped his forehead, and fretted and fumed at the facts and figures relating to the mismanagement of John's estates—for by this ingenious disguise the author would be understood to refer to British India—and so on through the greater part of an octavo volume, the pleasantry becomes a little fatiguing. A clumsier machinery for introducing a discussion upon Indian affairs it would have been difficult to hit upon; but it has been so far successful as conveying the impression very faithfully that "John"—Mr. Elliot meaning thereby John Bull—found himself desperately bored by the conversation, as well he might be. Nor can we say honestly that the matter of the book redeems the manner. Mr. Elliot is no doubt thoroughly in earnest in believing that he is the only person with sound views on the nature of the reforms required in Indian administration. This point is pressed with the same *naïve* pertinacity as the witticism about "Duff" and "My dear John"; but we are bound to say that Mr. Elliot's notions on the subject appear to the last degree unpractical, not to say flabby, while he labours under misconception as to the facts of the subject-matter under discussion to an extent which must render his opinions hardly deserving of sober consideration. Thus at p. 35 My dear John is told that there is no absurdity in the shape of taxation that his agents do not seem equal to proposing, and the wilder the scheme the better they seem to like it; after which remark, by the way, the author with commendable candour makes his dear John reply that, though in conversation a good deal of latitude is allowed, he would rather that Mr. Elliot stuck closely to the point; which strikes us as being about the most sensible observation in the book. Now it is probable enough that a lot of foolish proposals about taxation have been put forward at various times by writers in the Indian press and other irresponsible persons, but that the Government of India has ever proposed any extraordinary schemes for taxation is not true. And what is still more to the point, no additional taxation has been levied. An impression prevails in some quarters, and is not confined to Mr. Elliot, whose book implies it as a matter of fact, that the course of recent government in India has been to impose a great deal of additional taxation, thereby causing widespread discontent among the population. Far be it from us to praise the financial administration of India, which has usually been, and still is, the weakest part of it; but Indian financiers of late years have at least displayed the negative merit of leaving things alone. The only additional impost raised which could be directly felt by the people of India has been the Income-tax, and this is paid by only an infinitesimally small portion of the community. It has indeed been the subject of loudly expressed discontent; but it would be a curious misconception to take the Anglo-Indian press, which represents unreservedly the interests of the small European community, as in any way expressing the sentiments of the people of India. That press has denounced the Income-tax violently, and that press is the only manifestation of opinion which reaches us from India; but it is, we believe, no exaggeration to say, not only that the great bulk of the indigenous population are not affected by the tax, but that they have never even heard of the agitation which has been carried on against it.

But, indeed, Mr. Elliot's utterances on the subject of finance hardly admit of serious treatment. He regards it (p. 49), for example, as very ominous that, of the two hundred millions of Indian general and railway debt, only about nine per cent. is held by natives, although he himself explains it in the very next page by the fact that the natives can always invest their money at twelve per cent., and therefore do not care to invest it in railway shares. He seems not to be aware of the advantage to a poor country—where, owing to the absence of capital, interest is high—of being able to obtain money from richer countries on cheaper terms. A still more extraordinary blunder is contained in the statement (p. 191) that "India is suffering from an enormous annual depletion of cash to this country (variously estimated at from twelve to sixteen millions a year)." Who may be the wiseacres who have framed these sagacious estimates we know not, but, without crediting Mr. Elliot with any great depth of information on the subject, he ought at least to have known that the fact is precisely the reverse, and that it is Europe, and not India, which undergoes "the enormous depletion of cash" to pay for the large excess of exports over imports in the trade of the latter. Whether that is a good thing for India is another matter, but a person who professes to enlighten the English public about that country should at least have mastered this elementary fact.

After these specimens of our author's critical faculties, it will hardly be expected that the constructive portion of his contribution to the subject will bear much examination. The way to govern India properly, according to Mr. Elliot, would be to follow the system pursued by Hyder Ali:—

> We see him seated in full durbar surrounded by a number of his people, and he starts a subject on which he wishes to have the general opinion. Cautiously concealing his own views, he allows the fullest discussion, which was always the more free as it was always doubtful to which side he might be inclined. At the end he announced his own judgment, which he never allowed to be questioned.

Persons who have had experience of political discussions with the natives of India will smile at the notion of a free discussion by councillors, whether of native or European rulers, on any subject on which the ruler's opinion was kept back. But the point is not of practical importance, since Mr. Elliot is careful to tell us a page or two further on that he does not recommend Hyder Ali's example for adoption; for he proposes a system of councils—village councils, county councils, and provincial councils—whose opinions, assuming that they could be educated up to the point of offering any, are apparently not to be overruled by superior authority after the fashion of Hyder Ali or other despot. No taxes are to be levied except with the advice and concurrence of these councils, save only in the case of war; and as this is the only case in which additional taxes are likely to be raised, the reservation is a very safe one. The only objection we have to Mr. Elliot's scheme, which he claims to be a development of one proposed by Sir Bartle Frere, is that it is simply impracticable. According to our author's views, the first thing to be done is to settle how much revenue is to be raised; the spending of it is a secondary consideration. Most persons, however, are of opinion that the first duty of a Government in regard to finance is to determine what is the needful expenditure of a country; and next to provide the ways and means for meeting it. The greatest item of expenditure in India has always been, and is always likely to be, the army; and for regulating this and the other great branches of expenditure any sort of consultative councils, whether

---

* *Concerning John's Indian Affairs.* By Robert H. Elliot, Author of "Experiences of a Planter in the Jungles of Mysore." London: Chapman & Hall.

by villages or provinces, would have as much useful effect as the bird which sits on the wire has over the course of the telegrams passing through it. The highest functions such councils could be adapted to perform might be the supervision of the village schools in their respective districts, and perhaps the construction of petty village roads; the probable result of entrusting them with which latter duty would be that the roads in each district would be laid out in utter disregard of the direction taken by those of the neighbouring ones. Find out the opinions and feelings of the people by all means, if it is possible to do so, and act in accordance with them so far as may be practicable; but it is not necessary to set agoing an enormous machinery of sham councils for this purpose.

As to the general notion which seems to be floating in our author's mind, that financial economy is to be found in some indefinite plan of decentralization, the truth seems to be that such a scheme would be one simply provocative of extravagance. The limited plan of decentralization which has been carried out by the Indian Government, of making over certain local revenues to the provincial governments to be spent by them on local purposes, is no doubt a sound and proper measure; but that any useful result would arise from creating a number of semi-independent governments in place of one central authority, we take leave to denounce as a perfect delusion. The quasi-independent position at present occupied by the Madras and Bombay Governments is distinctly a source of needless expense, although the independence is rather sentimental than real, being the relic still remaining of a state of things when England was represented in India by three separate Powers, operating from different and widely separated bases. But so far as it is still maintained, it simply leads to waste of money in many ways; notably in the continuance of three separate armies, with separate establishments and departments kept up for the two smaller ones and absurdly overdone. The amalgamation of these three armies into one, and the reorganization of the Madras and Bombay Governments on the more reasonable footing of that provided for the much larger and more important province of Bengal, would be a far more effectual move in the direction of economy than the formation of any number of consultative councils.

OAKSHOTT CASTLE.*

MR. HENRY KINGSLEY in writing *Oakshott Castle* must, we should think, have been engaged in a feat somewhat similar to that of those great chess-players who, without seeing the boards, play half-a-dozen games at the same time. For no other explanation can we give of the utter confusion and absurdity of his latest novel, save the supposition that when he was writing it he had a good many others on hand also, while his memory was not powerful enough to keep the several plots from getting jumbled up together. It may, however, be the case that the present story, like many of its predecessors, has come out in parts, and was moreover written in parts. If this be the case, a certain indulgence should be shown for the hopeless confusion of the plot; for we should be sorry for any one, even if he were Mr. Henry Kingsley, who should in the way of business be compelled to read any portion of *Oakshott Castle* twice over. But without a second reading, and a most careful annotation of the opening chapters, even the author himself would be utterly unable to form any conception of the drift of the tale. At the end of the first volume we felt as bewildered as if we had been riding at an Easter Monday fair in a merry-go-round, and even by the end of the book all the characters seemed to be still spinning round us. With all this bewilderment there is an arrogance about Mr. Henry Kingsley's style of writing which is most provoking. In every sentence he tacitly lays claim to a kind of infallibility which we should scarcely expect to find even if the Pope were to turn novelist. On this account he is the most irritating of all authors. We will not go so far as to say that *Oakshott Castle* is the worst novel ever written; but, on the other hand, it lacks that one merit which saves many a bad novel, that it puts its readers to sleep. It keeps them awake, not to any enjoyment or good end, but as a gnat or a mosquito keeps one awake. We have read it because it was our duty to read it, but we read it almost in a passion. Mr. Henry Kingsley tells us that a case he saw in Bedlam was a great puzzle to him, as "it seemed to arraign the justice of God." A scarcely smaller puzzle, though it is one out of Bedlam, is the appearance of such a novel as this. It is surely at first sight contrary to all the doctrine of probabilities that at the same age there should be living one man capable of writing *Oakshott Castle* and another man capable of reading it. Even if they are both to be found together, yet one man—enthusiastic admirer though he may be—can scarcely want a whole edition to himself. We rather incline to the belief that Mr. Kingsley's supporters may be found in those University gentlemen whose weights are carefully recorded from day to day in the newspapers before the great boat-race, and those other University gentlemen whose reputation is gained, not by their heads, but their heels. No doubt while they are in training they have to be careful what they read, lest if they were to think at all they might unduly increase the weight of their brain, and so spoil the balance which should exist between the different parts of the body. Now Mr. Henry Kingsley's story is confusing enough to render thinking useless, while it has an athleticism running through it which would suit very well with a training diet. We believe that raw beefsteaks are no longer consumed by our boating men. If they were, and if at the time when they were being eaten *Oakshott Castle* were read aloud, there would be a remarkable harmony between the physical and the intellectual diet. There is, too, in most of Mr. Henry Kingsley's characters that readiness to fight which is the delight of young readers and the distinguishing mark of the muscular Christian. There is a certain moderation, however, in the present work; for his hero, Lord Oakshott, only once asserts his willingness "to hit any man between the eyes," while "the deltoid" is only once shot through and only once clutched. Mr. Kingsley would not do amiss if he were to extend his knowledge of pugilistic anatomy, and in his next novel introduce a fresh muscle or two; for of the deltoid, old favourite though it is, we have had almost enough. The man who is shot recovers, but the unfortunate gipsy whose "naked deltoid with the hair is clutched" gets killed in the struggle. As, however, he was running away with the heroine's little boy, the hero's adopted son, and chose to fight an Irishman who took the lad's part, the reader does not regret him. The gipsy had shown all his skill in trying to avoid death, for when he felt himself clutched, and felt moreover the point of the Irishman's elbow pressed on his nose, down he judiciously went, "to avoid that horrible click in the neck which tells you that your man is dead." Unfortunately for him, the Irishman "Mr. Dennis made a grand mistake. He turned out his heels, consequently drew in his knees, and fell on his man." The natural result was "rupture of the colon and liver," and Mr. Dennis was tried for manslaughter and "relegated to twenty years' penal servitude." Had not Mr. Dennis drawn in his knees, two results would have followed. In the first place, the child would have been carried back to Oakshott Castle, and so a great deal of nonsense about him would not, at least in the particular form it takes, have been written; and in the second place, we should have been spared some further nonsense on the subject of England and Ireland. Mr. Kingsley must indeed have no sense of humour if he can end such an incident as this of the stealing of the child with anything but a grin, and the Irish must have lost all the humour they ever had if they receive his flattery with anything but a roar of laughter. It is no doubt pleasant for a nation to be praised, but to be praised at the end of a scene which would be hissed off the stage of the most melodramatic of the London theatres is a different matter. Mr. Boucicault will go a great way, but even he would not insult the "gods" by such a scene as this. He would not have the adopted son of a nobleman, the only son of the heir to his great estates, at the instigation of the child's grandmother, drugged first with chloroform, next with opium, carried off by gipsies, and made the subject of a grand fight between an Irishman and a gipsy. Or, if he had been guilty of such folly, he most certainly would not, before the curtain dropped, —as the dead man was being carried off on one side, and the conqueror was being "relegated" on the other side—have ventured on such a sentiment as Mr. Kingsley indulges in:—

> Why can't we make Dennis, and such men as he, love us? I fear they are not permitted to do so. At the day of judgment it will go hard with those who separate Great Britain and Ireland. Every nation has found them out. We found them out centuries ago, and called them sinners; now they are saints, though their language is not exactly saintly.

It is almost impossible to explain the plot of such a story as this; for not only is it in itself as difficult to unravel as a tangled ball of string, but moreover it has a confusion superadded which is peculiar to Mr. Henry Kingsley's writings. For, beyond all writers we have ever come across, he is wanting in dramatic power. He introduces certainly a great number of characters; but then his characters, whether good or bad, whether they are heroes or murderers, or, as some of them are, now one, now the other, all talk exactly alike. If a man is going to save life, he talks like Mr. Henry Kingsley; or if a man is going to take life, he talks like Mr. Henry Kingsley. Since the days when the village schoolmistress used to tell her pupils whenever they came to a hard name in the Bible to say Jerusalem and pass on, there surely has never been such a confusion in literature. People who have in a high degree the power of remembering names may possibly in reading *Oakshott Castle* keep the characters separate in their own minds. But those who do not easily remember names—especially the names of people in whom they have not the slightest interest—will do well either not to read the story at all, or else to draw up as they go on a kind of biographical dictionary. For want of some such help as this we became utterly bewildered in a very few chapters, and even now that we have in some way got through the whole book we do not in the least know what it was all about. The hero himself is as great a puzzle as any one. For the first two volumes he is a highly honourable English nobleman, who is always ready to hit any one between the eyes or to plunge into the waves to rescue a drowning man, but who unfortunately has incurred the hatred of the mother and of the husband of the lady with whom he had been in love. He returns good for evil, pays down 60,000*l.* to save the husband, his cousin and heir, from a charge of forgery, and puts the wicked mother in the way of making a great deal of money by speculations in stocks. All to no purpose, however, as the mother sets "the Carbonari and Camorristi" to assassinate him, and the gipsies to drug and steal his adopted child, while the wicked husband is ready for any number of crimes, and, though our memory here fails us, does, if we are not deceived, commit a good many. But in Lord Oakshott there

* *Oakshott Castle; being the Memoir of an Eccentric Nobleman.* Written by Mr. Granby Dixon, and Edited by Henry Kingsley. 3 vols. London: Macmillan & Co. 1873.

was "a substratum of potential ferocity." When the wicked husband takes to beating his wife, whom Oakshott had wished to marry, and still wished to marry if she were once a widow, the owner of the substratum first takes to a course of swindling, and then determines, like a model and most muscular English nobleman of the present time, to murder his enemy. Happily for him the stolen boy turns up—a fine young man by this time, though his earliest memories had been wiped out by chloroform and opium—drops a primrose, and Oakshott is saved. At the same time, too, in a Sister of Mercy, Camilla Borichi turns up, though who she was and why she turned up we never made out. She, however, shared in a great degree with the white primrose the merit of the conversion. To make matters still more interesting, a day or two after in a dark room at the castle, her brother Borichi, the tenor, turns up also—his first appearance likewise—and fires a pistol at the hero. The bullet only passes through the wall, but in the struggle that follows a lamp is overset which served as a light for ships at sea. As there was a dreadful storm brewing, the wicked husband was of course at sea, and was straightway blown on to the rocks. His lordship, hearing the signal guns, and remembering that Borichi was "the finest swimmer in Naples," offers him his life if he will swim for it. "Lord Oakshott, Dickie (the boy of the chloroform), Borichi, and two fishermen were in the water at once." As every one might have expected, the good lord—for good he was, in spite of his slight errors as a financial swindler and a would-be murderer—saves the wicked husband, though only for a short while. He lives long enough by his confession to make the story still more confusing than ever, and then dies of an old wound. "The wound," the author observes, "was a singular one, but I cannot give the details. I can only say that I saw it, and would give the details to the doctor." His wife, who was a most model wife, it would seem, had tried to murder him. But there was some excuse for her, poor creature, as she was clearly mad. She did not, indeed, talk such nonsense as the sane characters, but then she indulged occasionally in "a sharp double movement in staccato, probably in C, but ending with the wild wail of the Coyote. It was the Apache war-cry."

The absurdities of this book are so many and so varied that it is impossible in the space that we can waste on it to give our readers any but the slightest notion of them. Whenever Lord Oakshott has nothing better to do he rushes off to the House of Lords, and makes speeches which, though they lead to an invitation from the Prime Minister to him to join the Government, would disgrace Bedlam. Those readers who take no interest in politics—or what Mr. Kingsley calls politics—will find an account, if not interesting, at all events new, of a presentation at Court. "The most august person in the world," to quote our author, "if I humbly dare say such a thing, knows nearly everything in English society." Not only did she know that "Lord Oakshott was an extremely talented" (Heaven defend the Queen's English!) "and fantastic person," but also she knew that he had a most fascinating adopted daughter. But here Mr. Kingsley shall tell his own story:—

> The most august person in the world was not only eager to receive her, but was very anxious to do so. The greatest Personage in the world had her wish.
>
> The great Lady looked steadily as she saw the mass of maiden beauty and jewellery which came before her. It is a way which the greatest Lady in the world has.

What the most august person would have thought had she heard this mass of maiden beauty and jewelry talking a few minutes later to "a round foreign princess," we cannot pretend to say. Vulgar though her talk was with this distinguished lady, it did not quite come up to her talk with her adopted father, of which we will now give a specimen:—

> "Dixie!" said Lord Oakshott.
> "Well, hoss," said Dixie.
> "You said you would not."
> "Well, then, I won't; only if you don't go up and rag out, I will kick up the most immortal old tar river Jerusalem breakdown ever you heard. Molasses to a pine-apple! I'll burst the railings of your lot."

A story is told how some years ago a Government official in the country, having a quarrel with a man who was in the same office, wrote up to his superior in London to complain that his comrade's conduct "was not only blasphemous, but ostensible"! What he meant neither he was ever able to explain nor was any one else ever able to find out. Not a little of Mr. Henry Kingsley's writing is equally eccentric in its defiance of all known canons of interpretation.

AMERICAN LITERATURE

THE second volume of the United States' Census for 1870* is less interesting than its predecessor, from the character, the limits, and the imperfection of the figures it contains. These are confined to what are called Vital Statistics, and chiefly to tables of mortality, which do less than most statistics to illustrate the condition and progress of such a people as the Americans. They are derived, not like ours from a strict registration of births and deaths, but from a collection of reported deaths during the twelve months preceding the commencement of the Census. It will easily be understood by those who have had any experience in such matters, whether as collectors or students of figures, how very unsatisfactory and untrustworthy such a mode of reporting on the mortality of a country must necessarily be. The Superintendent points out several special causes for its failure. First, as the collection of the Census figures occupies some months, the deaths may have to be enumerated long after they occurred—perhaps as much as eighteen months—and after the lapse of so long a time many persons very imperfectly remember the date even of so important an event as a death in their house. Secondly, however imperfectly family memories may serve on such a point, they are far better than any others; and of the deaths which occur in boarding-houses, hotels, lodgings, and the like, of the deaths of travellers, loafers, and persons of unsettled habits or without family ties, scarcely any record is kept. Thirdly, in not a few cases death breaks up and disperses the family in which it occurs, so that nobody is left to be asked for a return: and, finally, the officials themselves are apt to neglect so troublesome and ungratisfactory a part of their functions. Altogether we need not be greatly surprised to learn that, according to the best conjecture that can be formed by experienced officials, the proportion of deaths returned to those occurring is very nearly as six to ten. Therefore, in making up the comparative tables, it is the practice of the Census compilers to add 41 per cent. to the numbers shown by the returns. On the face of the matter, figures so purely conjectural can be of little value for any but the broadest uses. The Report seems to suggest that, for purposes of internal comparison, the average deficiencies being generally the same, the figures may be treated as practically sufficient—that is, as showing the ratio, though not the numbers, of deaths in different places, and from different causes. We doubt whether there will not be such variations in the accuracy of the reports between wild and settled districts, and between deaths by slow and lingering disease, generally taking place at home, and those by sudden sickness, such as may overtake men anywhere, as will much affect the certainty of even comparative statistics. Still we can believe that, in the main, the broad and general comparisons are correct. If so, it is curious and satisfactory to note that, with our excellent registration, ensuring a fuller return of mortality than in many other countries, the health of England stands so high. The numbers surviving at different ages are much higher with us than in the United States for the years of infancy, indicating either better constitutions in the mothers, or more rational and careful rearing of the offspring—perhaps both. After infancy is past, the difference dwindles rapidly; but the advantage is still on the side of England till we reach the "allotted period" of human life. It would seem that there are more men of eighty and upwards in America than here; but we know how liable to exaggeration is the age of very old people; and, considering how many of the American specimens of extreme age are found among the negroes, who would be particularly liable to such an error, we suspect that our more accurate registries, rather than our inferior condition or climate, are answerable for the apparent disadvantage. Looking at the excellent and most convenient maps which indicate the comparative effects of different causes of death in different districts, we are struck by some unexpected peculiarities. Consumption is, as might be anticipated chiefly prevalent in the North. But it is not so easy to see why it should be in an especial degree the native scourge of New England and the eastern part of the Lake shores, of Wisconsin and Michigan, and of patches running down into Tennessee, while Pennsylvania and the region west of Wisconsin are comparatively little afflicted by it; or why in the South it reappears, though more mildly, at the mouths of the Mississippi and Alabama, and on the coast of Texas, while the miasmatic districts of the Atlantic seaboard seem to escape it. Malaria is the scourge of the non-consumptive regions, appearing at its worst in South Carolina and Florida, and ranging over all the South, with the exception of certain patches in the interior, and, to our surprise, on the coasts of Alabama and Louisiana. The consumptive districts are for the most part free from it. Typhus and its tribe are found most dangerous in the West and in the State of Georgia, including a portion of the latter, which appears almost blank in the Malaria map. The dark green patches which mark the worst ravages of intestinal disease are scattered apparently at random; but in a less severe degree they seem to spread in every direction from Lake Michigan, reaching southward as far as Kentucky. The Rain Chart of the United States makes its appearance in this volume. It is on too small a scale, but deserves attentive consideration. The statistics of lost senses and of idiocy are also to be found here, as well as those relating to births, ages, and so forth.

It is remarkable that a man of the political eminence and literary powers of the late Vice-President of the Confederacy should think it worth his while to write a school-book of the simplest kind, and designed, it would seem, only for the junior classes.* For, considering how large a place in American estimation is filled by the history of the States, we can hardly imagine

* *Ninth Census of the United States.* Vol. II. Vital Statistics; embracing the Tables of Deaths, Births, Sex, and Age; to which are added the Statistics of the Blind, the Deaf and Dumb, the Insane, and the Idiotic. Under Direction of the Secretary of the Interior, by Francis A. Walker, Superintendent of the Census. Washington: Government Printing Office. London: Trübner & Co. 1872.

* *A Compendium of the History of the United States from the Earliest Settlements to 1872.* Designed to answer the purpose of a Text-book in Schools, &c. By Alex. H. Stephens, Author of "A Constitutional View of the Late War between the States," &c. &c. New York: E. J. Hale. London: Trübner & Co. 1873.

that a mere compendium of that history, hardly exceeding in size one of those volumes of Mrs. Markham so familiar to our childhood, should be intended as a text-book in any but the elementary classes of an American school; and the very poor woodcuts by which it is defaced appear to indicate pretensions equally humble. We turned of course with especial interest to Mr. Stephens's treatment of the late Civil War. As we anticipated, he speaks in a thoroughly neutral tone, but he introduces one fact which, until the justice of the Federal cause was demonstrated by success, Northern sympathizers always decried with reckless vehemence—the fact that Mr. Seward promised to evacuate Fort Sumter, and implicitly repeated that promise after the fleet had sailed from New York to relieve it; so that the first blow was struck, and treacherously struck, by Mr. Lincoln's Cabinet, and the bombardment of Sumter was an act of pure self-defence absolutely forced on the South. Mr. Stephens avoids comment; but those who read this passage, and note at the same time the effect produced at the North by the bombardment, cannot well avoid seeing that the two sections were hurried into war by a faction which feared the peaceable achievement of secession.

The Report of the Controller of the Currency for the year 1872* is not one of the most interesting of that series. It brings out, however, one or two noteworthy incidents; such as the attempt of Congress to distribute the currency, by the medium of the banks, not according to the demand made upon the Treasury (which, in the case of an inconvertible currency, would of course incur the risk of over-issues), but according to the supposed necessities of each State, as inferred from its wealth and population; the adoption of the principle of the English Bank Act, in forcing banks of issue to maintain an adequate reserve, though this reserve is in America a security for depositors only, the currency being secured by the public credit; and the unfairly heavy special taxation imposed on the banks generally, both by the States and by the Federal power, under the mistaken impression that they were making enormous gains and could afford to be victimized.

The first part of the *Bibliographia Catholica Americana* † contains what is intended and professes to be a complete list of all Catholic works published or republished in the United States from the Revolution down to 1820. The works published from 1820 to 1873 will be separately classified in subsequent publications as original, translations, and republications. The author gives us something more than a mere catalogue—a description, often careful and sufficient, of the character and purpose of each important work, and here and there some curious bits of literary or bibliographic information.

We have received this month a number of treatises and journals on Education ‡ in various countries and under different aspects, which, if better arranged, might be described as going far to constitute a cyclopædia of educational systems. It is not yet complete; but, so far as it goes, it is wonderfully full, and is one of those masterpieces of official compilation which we have so often noticed as the principal purpose of the existence of many American departments, and the peculiar boast of many more. On nearly every subject treated in these volumes the author has collected the completest accounts that could be obtained from every civilized country of its own method or methods, school or schools; he has brought together into solid volumes the educational disquisitions of eminent pedagogues, philosophers, and practical statesmen, from Roger Ascham and Sir Thomas More down to the present Bishop of Exeter; from Lord Bacon and Milton down to Mr. Lowe. He reports upon Cornell College and the Ecole Polytechnique; on the National School systems of Anhalt and of Schwyz, of Hesse and of France. Of course, though all these volumes have been recently published, we have in them the fruits of years of official labour and official opportunities, beginning so long ago as 1836; but it is no small credit to a man, even in so long a life, to have amassed so much useful information, and to have rendered it so thoroughly available to the public. In most cases, too, it seems to be well kept up to the latest times, and we have notes of changes produced by the war between Germany and France. The first part of the series before us consists of the sixth and seventh volumes of the National Series of the *American Journal of Education*, which is less a journal than a periodical issue of papers on all manner of educational subjects. We find, for instance, in the beginning of the first volume an elaborate collection of papers on Special Education in Great Britain, which would fill an ordinary octavo volume; and subsequently papers of portentous length, in that trying small type of which Americans are as tolerant as if eyesight were either worthless or imperishable, upon the Universities of the Middle Ages, and the Primary Schools of Germany. The latter subject is taken up again in another volume entirely devoted to the National Education of the German States. Here we find not only a full account of the schools as they are, of their different grades, of the course of study in each, and the connexion between them, with notes on the strength or weakness of particular points in the system, but, in the more important cases, a history of the politics of education which would in itself form a valuable treatise. In a word, there is in the volume the substance of several interesting Reports, two or three good treatises, and half a score of excellent review articles. Another and still more solid volume deals at almost equal length with the education of the remainder of the Continent; with the school organization and schooling, Universities and colleges, learning and studies, not only of France, Russia, and Italy, but of Sweden, Denmark, Spain, and Holland, Belgium, Portugal, and Greece. Another volume is promised which shall do for England and America what these have done for Continental Europe. In the meantime we have a volume, somewhat misentitled, for it has not much to do with English pedagogy, or with English schools as they are or ever were, but is rather a collection of all the most remarkable utterances on educational and cognate questions, of Ascham, Bacon, Milton, Wotton, Locke, and Herbert Spencer, as well as of Cowper and Shenstone; a reprint of articles written for the educational journal we have already described, or of old treatises, among the most curious and interesting of which is an anonymous "Plan of an Industrial School," which some quiet thinker, undisturbed by the passion and clamour of civil discord, found leisure to write and print in or about 1647. To this we must add a collection of essays and extracts, old and new, clerical and lay, on "Studies and Conduct" and on Female Education; among the authors of which miscellany are St. Jerome and Mgr. Dupanloup, Burleigh and Gladstone, Sidney and Bulwer, Newman, Huxley, Mill, Froude, and Carlyle, as well as Franklin and Lalor, Humboldt and Raumer. Finally, we have two volumes which deal with Technical and with Military Education respectively. As an example of the completeness and minuteness of treatment in these, let us look at the account of the Ecole Polytechnique, the first of the military schools described in the latter volume. It begins by condensing into fifty closely printed octavo pages the 440 quarto pages in which M. Leverrier, as Reporter of a Commission of Inquiry, discussed the initiatory studies and examination, and the method and manner of teaching the principal branches of mathematical science, which abridgment forms in itself about as striking a treatise on the latter subject as we could wish to read. Six pages are then given to the history of the institution; twenty to a full description of its objects, management, method, and system of discipline and examination, and forty to a minute analysis of the programme of instruction. From this account we can learn almost everything relative to the system of the Polytechnic School that can be understood without actual inspection. Other military colleges are described almost as fully, and the entire system of military education pursued by the great military Powers is traced through the regimental school, the *lycée*, the general military institute, the special schools of the staff, engineers, and artillery; and not a point is omitted that can help Americans to understand how the soldiers of other countries are trained to their duties, and how their education is made to subserve their promotion. Of course the greater part of this matter is not original; but even to compile, arrange, and digest the immense body of materials needed to produce these eight solid volumes must have required labour so great that we cannot be surprised if here and there the arrangement appears clumsy and defective.

Connected with the *Educational Journal*, as having been written at the suggestion of the editor and intended for publication therein, are Mr. William Russell's Lectures on Normal Training*, addressed to young men intended for the scholastic profession. As so intended, there is an independence and novelty in their suggestions as to the subjects and method of instruction, and the mode of developing the mental and moral faculties by other means than the ordinary routine of grammar and abstract mathematics, such as we are accustomed to find in attacks on the whole existing system of school training, but rarely in counsels addressed to teachers by those who take part, as administrators and directors, in the working of that system. Some of these lectures well deserve the notice of young men who go, fresh from fifteen years of Latin, Greek, and Euclid at college, to teach Latin, Greek, and Euclid to a new generation of boys, with attention as concentrated on those particular subjects as if the world held nothing else worth knowing or knowable.

What will be the tone and topics of a work entitled *The Religion of Humanity* †, the main purpose of which is to contrast an

imaginary "Christ of Humanity," spoken of as if he were a real personage, with the historic Author of Christianity, our readers can guess without needing our assistance. We shall not, therefore, say more than that Mr. Frothingham's book is—what might be expected.

A Manual of Gesture *, illustrated with woodcuts exemplifying the manual and bodily attitudes and movements proper to the expression of ideas and emotions, which in their turn are exemplified by phrases generally selected from Scripture, may find many readers in a country so given to rhetorical indulgence as America. It will tend, we fear, to teach some of them to make themselves more ridiculous than their natural gifts would have obliged them to appear, even when figuring on the stump or in the pulpit.

The *Wishing Cap Papers* † are mostly familiar to readers of the light literature of the last generation as among the more unpretentious and readable of Leigh Hunt's writings in various magazines. They are professedly here collected for the first time.

The authoress of *Woman in American Society* ‡ undertakes to demonstrate two points, against which the instinctive feeling of mankind will kick pretty vigorously. The first is that, as actually existing in the world, and particularly in America, women are sickly, senseless, soulless, heartless, useless creatures, inferior not only in intelligence and vigour of mind, but even in modesty and delicacy of spirit, to the stronger sex. The second is that this is all man's fault, and only to be remedied by elevating women to the rank, work, and dignity of manhood. How is it that it never occurs to such writers that, if nature had fitted women to be men, that fitness would have asserted itself long ere now in the sex generally, as it does in the very few women who have really masculine intellects? It is by women, moreover, not by men, that the social law which restrains the vagaries of "strong-minded" women is enforced. How is this, if the actual position of women is constrained and unnatural, and their real power equal to that of men? How come men to have enslaved the wills as well as the actions of equals?

Bits of Talk about Home Matters § is, on the other hand, a quiet, sensible, practical little work: a collection of short kindly papers on various topics of social and domestic interest, and notably on what the authoress considers common errors or shortcomings in the treatment of children.

Mr. Timrod, a Southern poet, politician, and journalist, among the many to whom the war brought ruin and misery, has left behind him a sufficient number of graceful and often spirited poems to fill, with a brief memoir of the author, a small unpretending volume.‖ Mr. Walt Whitman, on his part, has given the world another rhapsody¶ which has at least one recommendation as compared with some of its predecessors—that there is very much less of it.

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 913, APRIL 26, 1873:

The Claims of Whig Government. Spain.
The Budget Debate. The Paris Election. The Debate on Central Asia.
Mr. Fawcett's Bill. The Evidence Provisions of the Judicature Bill.
Scotch and Irish Peers. What Next?

Social Barriers. Cathedral Legislation.
Schoolmasters on Spelling. Innkeepers and Travellers.
The Pope's Illness. Criminal Conspiracies. The Alliance at Exeter Hall.
Sketches of Central Asia. *Eugene Aram* at the Lyceum.
Newmarket Craven Meeting.

Andrew Marvell.
Trollope's Australia and New Zealand. Ferguson's Dialect of Cumberland.
Zincke's Month in Switzerland. Life of H. T. Colebrooke.
Timbs's Doctors and Patients. The Athanasian Creed and the Utrecht Psalter.
John's Indian Affairs. Oakshott Castle.
American Literature.

CONTENTS OF No. 912, APRIL 19, 1873:

Home Politics—The Australian Colonies—Democracy at Newcastle—The Election for Paris—Bulgaram Young and Mormonism—Religious Corporations in Rome—The Amendment of the Education Act—The Kinsale Riots.

Social Changes—The Legend of Berkeley—Facilities of Worship—Trade-Unionist Heroes—The *Daily Telegraph* on Good Friday—The Americans and the Indians—The Prosecution of Mr. Arch—The Salmon Fisheries—Antiquities at the British Museum.

Stephen on Liberty, Equality, and Fraternity—Flammarion on the Atmosphere—The Bath Archives—Freeman's Historical Essays—Hindoo Tales—The Cheque-Book of the Chapel Royal—Thomson on Fruit Culture—Chesterleigh—German Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS.
THIS DAY and NEXT WEEK.
Saturday (April 26).—Mr. Manns's Benefit Concert, at 3.
Monday, Tuesday, Wednesday—Spectacular Extravaganza of "Blue Beard," at 3.
Thursday—Opera, the "Crown Diamonds," at 3.
Saturday—Production of Shakspeare's "Hamlet," at 3.
The Fine Arts Courts and Collections, including the Picture Gallery (the Works on Sale), the Technological and Natural History Collections, all the various Illustrations of Art, Science, and Nature, and the Gardens and Park always open.
Admission, Monday to Friday, 1s.; Saturdays, 2s. 6d.; Guinea Season Ticket free.

ALEXANDRA PALACE.—EXHIBITION of ART and INDUSTRY.
All Communications to be addressed to the MANAGER, at the Palace, Muswell Hill, N.

NOTICE.—Mr. SIMS REEVES'S ANNUAL BENEFIT CONCERT is POSTPONED from Thursday, May 1, until Tuesday, May 27. Tickets already purchased will be available for the latter date.

THE SOCIETY of PAINTERS in WATER-COLOURS.—The SIXTY-NINTH ANNUAL EXHIBITION will OPEN on Monday next, April 28, 5 Pall Mall East. Admittance, 1s.
ALFRED D. FRIPP, *Secretary.*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRAETORIUM," with "Triumph of Christianity," "Christian Martyrs," "Francesca da Rimini," "Neophyte," "Andromeda," &c., at the DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

ELIJAH WALTON'S PAINTINGS.—EXHIBITION, including "A Storm on the Sea" and "A Storm in the Desert," &c., &c., and a Number of new and important Drawings in the Burmese Highland, NOW OPEN at the Gallery, 4 Westminster Chambers, Victoria Street, from Ten to Six.—Admission, with Catalogue, 1s.

GUY'S HOSPITAL.—The SUMMER SESSION commences on Thursday, May 1.
MEDICAL OFFICERS.
Consulting Physician—Sir W. W. Gull, Bart., M.D., D.C.L., F.R.S.
Physicians—S. O. Habershon, M.D.; S. Wilks, M.D., F.R.S.; F. W. Pavy, M.D., F.R.S.; W. Moxon, M.D.
Assistant-Physicians—C. Hilton Fagge, M.D.; P. H. Pye-Smith, M.D.; F. Taylor, M.D.
Consulting Surgeons—John Hilton, Esq., F.R.S.; Edward Cock, Esq.
Surgeons—John Birkett, Esq.; Couper Forster, Esq.; Thomas Bryant, Esq.; Arthur E. Durham, Esq.
Assistant-Surgeons—H. G. Howse, M.S.; N. Davies-Colley, M.C.
Consulting Obstetric Physician—Henry Oldham, M.D.
Obstetric Physician—J. Braxton Hicks, M.D., F.R.S.
Assistant Obstetric Physician—J. J. Phillips, M.D.
Ophthalmic Surgeon—Charles Bader, Esq.
Surgeon-Dentist—J. Salter, M.B., F.R.S.
Assistant-Surgeon-Dentist—H. Moon, Esq.
Aural Surgeon—J. Hinton, Esq.
Medical Registrar—F. Taylor, M.D.
Surgical Registrar—J. F. Goodhart, M.B.
The Hospital now contains 715 Beds. Of these 221 are for Medical Cases; 250 for Surgical; 26 for Gynæcological; 48 for Syphilitic, and 50 for Ophthalmic Cases. There are also 70 Children's Cots and 64 Reserve Beds (8 in private rooms).
In connexion with the Lying-in-Charity, about 2,500 Cases are annually attended by the Students.
Number of Patients relieved during the last year, about 81,000.

LECTURES AND DEMONSTRATIONS.
Medical Jurisprudence—A. S. Taylor, M.D., F.R.S.
Materia Medica—S. O. Habershon, M.D.
Midwifery—J. Braxton Hicks, M.D., F.R.S.
Ophthalmic Surgery—C. Bader, Esq.
Pathology—W. Moxon, M.D.
Hygiene—C. Hilton Fagge, M.D.
Comparative Anatomy—P. H. Pye-Smith, M.D.
Morbid Histology—H. G. Howse, M.S.
Botany—G. Johnson, Esq.
Practical Chemistry—H. Debus, Ph.D., F.R.S.
Natural Philosophy—G. F. Rodwell, Esq.
Operative Surgery—A. E. Durham, Esq.
Cutaneous Diseases—C. Hilton Fagge, M.D.
Dental Surgery—H. Moon, Esq.
Mental Diseases—J. Thompson Dickson, M.D.

Clinical Lectures in Medicine, Surgery, and Gynæcology, Weekly—by the Assistant-Physicians, Assistant-Surgeons, and Assistant Obstetric Physician.
Special Classes are held in the Hospital for Students preparing for the Examinations of the University of London, and of the College of Surgeons.
The Museum of Anatomy, Pathology, and Comparative Anatomy—Curator, W. Moxon, M.D.—contains 10,000 Specimens, 4,000 Drawings and Diagrams, a unique collection of Anatomical Models, and a Series of 400 Models of Skin Diseases.

Gentlemen desirous of becoming Students must give satisfactory testimony as to their Education and Conduct. Fees: £40 for the first year; £40 for the second; £30 for the third; and £10 for succeeding years of attendance. One Hundred Guineas in one payment entitles a Student to a Perpetual Ticket.
The House-Surgeons and House-Physicians, the Clinical Assistants, Dressers, Clinical Clerks, Obstetric Residents, and Dressers in the Eye Wards, are selected from the Students according to merit.
Six Scholarships, varying in value from £25 to £40 each, are awarded at the close of each Summer Session for general proficiency.
Two Gold Medals are given by the Treasurer—one in Medicine, and one in Surgery.
A Voluntary Examination takes place at Entrance, in Elementary Classics and Mathematics. The First Three Candidates receive respectively £30, £20, and £10.
Several of the Lecturers have Vacancies for Resident Private Pupils.
For further information apply to Mr. STOCKER.
Guy's Hospital, April 1873.

ST. GEORGE'S HOSPITAL MEDICAL SCHOOL.—The SUMMER SESSION commences on Thursday, May 1. Prospectuses and full particulars may be obtained on application, personally or by letter, to the TREASURER or DEAN of the School, at the Hospital.

HOME CHARITY.—URGENT APPEAL.
THE ALEXANDRA ORPHANAGE for INFANTS, Hornsey Rise, at the present time is greatly in WANT of FUNDS. There are 116 Infants under care, and many applicants for admission. The Orphanage has ample accommodation for 200, and is intended for 400.
Contributions are very earnestly solicited, and will be thankfully received. The Charity has no endowment, no funded property, but entirely depends on voluntary support.
Office, 73 Cheapside, E.C. JOSEPH SOUL, *Hon. Secretary.*

PREPARATORY EDUCATION at SCARBOROUGH.—The Rev. JOHN BEDFORD (M.A., late Scholar of Linc. Coll., Oxon., Head Classical Assistant-Master at Cheltenham School, 1860-1868, and Curate of Scarborough, 1868-1872) receives into his House a limited number of BOYS to prepare for Eton and the other Public Schools, for the Civil Service, &c. Having just annexed the House adjoining his own to accommodate some new Boys, he has some additional Vacancies.—For Terms, &c., address, Belgrave Crescent, Scarborough.

FRENCH.—Conversation, Reading, Special LESSONS on Pronunciation—Translation—Correspondence, by Dr. CLAUDON, Parisian, (a friend of Alexandre Dumas), (Opposite the Charing Cross Station). Dr. CLAUDON is M.D. of Paris, and M.R.C.P. of England, and has had ten years' successful experience in Teaching. List of references sent free.

No. 914, Vol. 35. May 3, 1873. [Registered for Transmission abroad.] Price 6d.

MR. SMITH'S MOTION.

THE Opposition attacked, through Mr. W. H. SMITH, the soundest, if not the least assailable, part of the Budget. A financial scheme which was neither the best nor the worst which could have been devised possessed the negative merit of exhausting the surplus without providing for the premature diversion of national funds to the relief of local burdens. It is true that the miscellaneous majority which last year supported Sir MASSEY LOPES's ill-advised motion had affirmed the expediency of substituting taxes for rates in certain branches of local expenditure. A year before Mr. LOWE himself had authorised Mr. GOSCHEN to offer the proceeds of the House-tax as a boon to the malcontent ratepayers; but Mr. LOWE, Mr. GOSCHEN, and Sir MASSEY LOPES, with his majority, were all in the wrong, for reasons which were forcibly urged on Monday last by Mr. FAWCETT and by Mr. GOSCHEN himself. The control of expenditure and administration is necessarily associated with liability to burdens; and it is not desirable that the parsimonious tendencies of local bodies should be obliterated or rendered useless. There is also an objection which applies to nearly all readjustments of taxation. Rateable property has been bought and sold on the assumption that it would be charged both with actual and prospective burdens for local purposes; and it is unnecessary to confer on owners or occupiers a gratuitous boon. It was a singular proof of blindness on the part of the country gentlemen to demand a redress of their supposed grievances from a Government which has uniformly displayed an unfriendly feeling to their class. Mr. GLADSTONE, Mr. GOSCHEN, and Mr. LOWE have lost no opportunity of warning landowners that they should be punished for the trouble which they have caused. The attempt to rally once more in support of Mr. SMITH's motion the majority of last year indicated but little skill in political or Parliamentary calculation. Sir MASSEY LOPES's temporary allies were professedly voting on a question which involved no party issue, while the success of Mr. SMITH's amendment to the Budget Resolution would necessarily have produced a political crisis. A further awkwardness arose from the special form of the motion; though it would have been impossible to devise an amendment which would have been carried. The leaders of the Opposition seems to have thought that an objection to the reduction of the Income-tax would be unpopular; and consequently they were reduced to the necessity of attacking one item in a Budget which had been partially adopted by the House. Although Mr. LOWE's theory of a necessary equilibrium of direct and indirect reductions is arbitrary and fallacious, it may be assumed that the parts of every financial scheme have a relation to one another and to the whole. If the proposal of retaining the sugar duties had been adopted, it is possible that the House of Commons might have wished to reconsider the question of the penny of Income-tax. If the entire Budget had been rejected or remodelled, the *Alabama* damages might have been paid in full out of income; and the moderate surplus which would have remained might either have provided for the removal of various detailed grievances, or have been reserved until the policy of contributing to local taxation had been finally determined.

The worst fault of Mr. SMITH's motion was that it rendered possible the delivery of a Ministerial speech for which it nevertheless furnished no sufficient excuse. Mr. LOWE only six or seven years ago acquired his great position in the House of Commons by a vigorous resistance to the increase of the political power of the lower classes. After his final defeat in consequence of the tergiversation of the Conservative party, Mr. LOWE announced, with double-edged and scornful irony, that now it had become expedient to educate our masters. His objection to democracy must have been that opportunities would be afforded for gratifying the envy of the poor towards the rich. He now thinks it not unworthy of his official rank and of his own intellectual powers to stimulate the prejudices and the passions of those whom he strove in vain to exclude from power. The latter part of his speech consisted of mischievous appeals to the jealousy felt by the working part of the population against the owners of property. They must, he said, be either saints or idiots if they would tolerate a measure which was exclusively beneficial to those whom the CHANCELLOR of the EXCHEQUER thought fit to describe as the rich. Every Budget, it seems, must henceforth take off an equal amount of duties on consumption for every penny of direct taxation which may be remitted. As Mr. FAWCETT appropriately remarked, Mr. LOWE has not been in the habit of maintaining the same steady balance when there was a question, not of taking off taxes, but of putting them on. Only three years ago the Income-tax was increased by fifty per cent., while not a single indirect duty was imposed or augmented. The whole tone of Mr. LOWE's speech was consistent with his reckless suggestion of an antagonism between the poor and the rich. In referring to certain alleged mis-statements about the sugar trade, he absurdly described as lies such propositions as that grocers derive no profit from the sale of sugar, or that the reduction of duty confers no advantage on the consumer. Sir STAFFORD NORTHCOTE fitly rebuked the overbearing tone in which Mr. LOWE referred to the possible results of Mr. SMITH's motion on the position of the Government. It was plain that the success of the Opposition must have led either to the resignation of Ministers, or more probably to the dissolution of Parliament; but it is highly inconvenient to dilute unnecessarily on the incidental results which may follow from a division. Sir S. NORTHCOTE's able speech contained a virtual admission that the motion was untenable. It was idle to demand from the Government a declaration of its future policy as a condition of adopting the Budget. Mr. GLADSTONE indeed had, a few days previously, injudiciously encouraged a deputation to hope for the possible abolition of the Income-tax; but it may be taken for granted that he will, as Mr. GOSCHEN promised on his behalf, abstain from repeating the prospective arrangements which formed a blot on his famous Budget of twenty years ago. If the House of Commons had decided that no indirect taxes should be repealed until Mr. LOWE announced his future intentions with respect to the Income-tax, there would have been little advantage in obtaining a promise from a Government which would be simultaneously turned out of office. Mr. LOWE's enumeration of the obstacles to a grant in aid of local taxation would have been more convincing if he and his colleagues had not on former occasions hastily promised to concede the principle of Sir MASSEY LOPES's demand. It may be true that the system of assessment is unsatisfactory, that the constitution of local governing bodies is various and confused, and generally that it would be premature to bestow a gift on recipients who can at present hardly be defined; but Mr. STANSFELD has undertaken the task of framing a new Social Constitution, and the Budget has, according to Mr. LOWE, been so framed as to ensure an applicable surplus for the ensuing year. After prudently taking care that there should be no balance available for local purposes, Mr. LOWE might have dispensed with additional reasons for refusing an immediate contribution. It is not certain that Mr. SMITH was wholly wrong in contending that the Budget contingently disposed of the next year's surplus. It had probably been assumed by most of those who have studied the Budget that the Exchequer Bonds which will be

issued if the revenue proves inadequate would be paid off in the following year. That the Bonds will form an indistinguishable portion of the unfunded Debt is the result of technical arrangements which Mr. SMITH may be excused for overlooking.

Although Mr. SMITH's motion was prudently withdrawn without a division, the debate was neither uninteresting nor useless. Some members of the Opposition recognized the inconsistency of affirming a proposition which would have precluded them from supporting a reduction of the Malt-tax. Sir STAFFORD NORTHCOTE, a pupil of Mr. GLADSTONE's, and the only scientific financier of his party, directly or tacitly disavowed nearly all the arguments which were adduced in support of the motion. Mr. DISRAELI condemned the tactics for which he was himself responsible by delivering, on a professedly financial question, a strictly political speech. Having all his life hankered after popularity with the multitude, Mr. DISRAELI addressed himself to the task of currying favour with the working classes somewhat less awkwardly than Mr. LOWE; but he perhaps forgot that he was defending a motion which he had himself inspired for confining the remissions of the year exclusively to the Income-tax. It would not have been difficult to find another opportunity of delivering a speech which in a Budget discussion only indicated an absence of any definite opinion on finance. Mr. GLADSTONE secured an easy triumph by exhibiting his own perfect familiarity with the whole subject of taxation. From the latter part of his speech it may be collected that the proposed relief of local taxation by the aid of Imperial funds will assume the smallest possible dimensions. Mr. GLADSTONE denounces as utterly inadmissible the proposal of affording any relief whatever to the owners of property, who will, on the contrary, probably have to thank Sir MASSEY LOPES for a large addition to their burdens. It appears that house-owners, including freeholders receiving ground rents, will be assessed to the rates. Mr. STANSFELD's statement of next week will remove all doubt as to the intentions of the Government, though it will not be practicable to deal with the whole question in the present year. The reorganization of the whole system of local government will, in accordance with the present tendency of legislation, probably increase the power of numbers to the detriment of property. It happens at present to suit the purpose of both political parties to exaggerate the defects of the existing system. Mr. STANSFELD will probably succeed in convincing the Conservatives that they have committed a mischievous blunder.

M. BARODET'S VICTORY.

THE return of M. BARODET for Paris is a very heavy blow to the Republic of M. THIERS. If the fortunes of no other Republic were involved, this fact need give little distress to Liberal politicians. The spectacle of M. THIERS balancing himself with infinite dexterity between two opposing parties, leaning over now towards one and now towards the other, has by this time become a little wearisome; and an event which forced him to take a more decided line himself, or to give place to a more decided successor, would not in itself be unwelcome. But courses of policy cannot be withdrawn like plays that have run several hundred nights, solely because they have ceased to amuse. The success of a reasonable and moderate Republic as much depends upon M. THIERS's power of keeping the peace between the extreme factions on either side as it did two years ago. Unhappily the forces at his disposal are weaker now than they were then, while the forces arrayed against him have gained strength and courage in the interval. In the spring of 1871 Conservatives and Radicals were alike smitten by a spirit of moderation. Both seemed to have learned that half a loaf is better than no bread. The Conservatives chose to suppress the Commune as Republicans rather than to be suppressed by it as Monarchists. The Radicals chose to accept a moderate Republic which was freely offered them rather than run the risks of fighting for a Republic more to their mind. In the spring of 1873 the Conservatives are found voting for a Bonapartist soldier put forward with the avowed object of preventing M. DE RÉMUSAT's election, while the Radicals have ignored all that M. THIERS has done for France, and consequently for the Republic, in order to give force to their indignation because he governs in the interests of the French people, and not of a particular section of it. All this seems like a return to the old impracticable state of things. We know what the Conservatives can do, acting alone. The Revolution of 1830, the Revolution of 1848, the Revolution of 1870, leave no doubt upon that head. We know what the Radicals can do, acting alone; successive Restorations give an equally unmistakable answer upon that head. If France is to see any better days than those which she has seen hitherto, it must be through the abandonment, alike by Conservatives and Radicals, of these pretensions to absolute dominion. M. DE RÉMUSAT presented himself as a candidate for Paris upon this principle of mutual concession. Himself a moderate Conservative, he was supported by moderate Radicals; and the policy which he recommended to the electors was a policy which moderate Conservatives and moderate Radicals could agree to defend. The verdict of Paris has been decisive. By a majority of 45,000 votes the electors have returned a candidate whose main claim to support was his repudiation of any alliance on the part of the Radicals with Conservatives, even of the most moderate shade. It is true, no doubt, that Paris has always voted for extreme candidates; but then the hopes of which France has recently been the object rested in a great measure upon the belief that the leopard had for once changed his spots. An attack of fever may not be worse than other attacks that have gone before, but if the patient's recovery depends upon his having no more attacks, the mere fact that they continue to come is sufficiently discouraging.

It will be well, however, if Frenchmen can bring themselves not to look too exclusively on the dark side of the prospect. It would be a foolish optimism to say that there is a bright one, but nevertheless the clouds are not altogether unrelieved. There is a gleam of sunshine visible in the fact that the Radicals have been divided to an unexampled degree. With the exception of M. GAMBETTA—a most important exception, it is true—the prominent leaders of the party have been on the side of M. DE RÉMUSAT. It has been objected that this only proves that, in proportion as the leaders become moderate, their hold on their followers becomes weak. There is an element of truth no doubt in this view, but it leaves out of sight the peculiar circumstances under which the election took place. To ask a Parisian Republican to vote for M. DE RÉMUSAT was to make a very great demand on his good sense. He has been accustomed to identify the Government with an Assembly which has exhibited towards Paris an intense and persistent hostility. Politicians know that M. THIERS does not share this hostility, that he would personally like to see the Assembly sitting at Paris instead of at Versailles, that he has yielded to the majority of the deputies simply because he could not help himself. But the average elector is not a politician; and if ever he understood anything of this, he has long since forgotten it. He regards the Government as an indivisible unit, and at present the action of this unit is unmistakably hostile to Paris. It was specially unfortunate that this sentiment of the Paris Republicans should have been strengthened, and to some extent justified, by the concurrence of the Government in the attack upon the municipal liberties of Lyons. The Republican leaders could see that even upon this point large allowances had to be made for M. THIERS; that the Lyons municipality had on several occasions acted with reckless folly and violence; that its suppression, if decreed by the Right, could hardly be resisted to much purpose; and that M. THIERS had made an important concession to Republican feeling by giving Lyons an opportunity of returning her former Mayor as a deputy. But these were not considerations which admitted of being reduced to a popular form. The plea of M. BARODET's supporters, that the Government had done gross wrong to Lyons, and that it was for Paris, herself the victim of a similar wrong, to avenge her sister in misfortune, came home far more easily. It does not necessarily follow therefore that the Radical leaders will find themselves equally deserted by the rank and file of the party the next time that they give their support to M. THIERS. The occasion will probably not have the same special interest for the Paris Republicans; and consequently they will not have the same special motive for acting with exceptional independence.

There is some comfort to be found in the reflection that, even in opposing the Government, the Paris Radicals have displayed unusual moderation. A few weeks back it seemed that one great danger of the contest between M. DE RÉMUSAT and M. BARODET would be the temptation to the use of violent language which such an election would naturally offer. The usual habit of Radical Committees in Paris has been to describe their opponents as malefactors of the worst order, and

when it is the Government that is thus characterised, it is difficult alike for assailants and assailed not to come out of the battle with their dislike of one another greatly intensified. In this case it has not happened so. M. BARODET's friends—at all events, his prominent and responsible friends—have steadily maintained that he was not put forward as an act of hostility to M. THIERS, but only for the purpose of strengthening the Republican element in his councils. The plea was almost ludicrous in its absurdity, but the fact that it was invented and adhered to is all the more significant for that reason. Why was it thought expedient to strip M. BARODET's candidature of any air of hostility to M. THIERS, if it were not that even the Radicals of Paris are not anxious to see his authority overthrown? When Paris genuinely desires to destroy a Government, the electors do not wrap up their wishes in polite phrases; they usually express their enmity with the most unflattering frankness. That an opposite course should have been pursued in the recent canvass goes a long way to show that among the 180,000 electors who voted for M. BARODET there must have been many, perhaps a majority, who may be set down as illogical well-wishers to the Government which they were doing their best to damage. It has now to be seen how M. THIERS will deal with this anomalous state of affairs. These wrongheaded and untrustworthy friends may be easily turned into declared enemies. If M. THIERS makes M. BARODET's election an excuse for allying himself with the Right, the probability is that at the next election for Paris the Radical candidates will be returned with the avowed intention of driving M. THIERS from power. If, on the other hand, he is ready to be taught by defeat, and proves his possession of this most valuable quality by resisting the undue influence of a party which has already caused him unnumbered embarrassments and is ready to cause him as many more, M. BARODET's victory may in the end prove a useful warning.

WOMEN VOTERS.

THE House of Commons is too practical an assembly and too averse to speculative changes to allow a Bill to make any way which proposes to give the Parliamentary suffrage to women, and a decisive majority has again doomed Mr. JACOB BRIGHT's measure to failure. There was nothing much to be said for or against the proposal that was new, and the debate was singularly vapid and lifeless. It may be candidly admitted that some of the arguments on either side were little calculated to inspire conviction. It is perfectly useless for a body like the House of Commons to pretend to examine whether the intellect of women is necessarily inferior to that of men. No one can seriously think that the precedents of JOAN of ARC, of ROSA BONHEUR, of MENDELSSOHN's sister, and of some lady who rode about with a Polish chief, can determine the issue whether Englishwomen who happen to be householders should be entitled to vote for members of Parliament. Mr. JACOB BRIGHT made the best use he could of the example of the QUEEN, and since his Bill of last year he has had the opportunity of finding a new illustration of the capacity of women in the admirable skill with which the QUEEN held an even balance between the claims of Mr. GLADSTONE and Mr. DISRAELI in the late Ministerial crisis. There are a million of male voters in England, and it is easy to show that the QUEEN, or ROSA BONHEUR, or possibly JOAN of ARC, might have been as competent to select a member of Parliament as some of these million males. Mr. JACOB BRIGHT estimated that, if his Bill passed, about a quarter of a million women would be added to the electoral roll, and out of this number there would be many who would use the franchise better than the dregs of the male electors. We may perhaps go further, and say that the whole quarter of a million would make as good a choice and on as good grounds as the fourth of the million men would make which was least fitted to exercise the franchise. It is quite true that men, even of the humblest class, have in their industrial and social gatherings a faint means of learning some of the rudiments of political knowledge which women have not. But women who are householders are perhaps better instructed, and learn more from books and papers, than the humblest rank of urban male householders. It is because they are women, and not because they are more utterly incapable of exercising the franchise wisely than the rudest of their male neighbours, that the House has declined to let women vote. Nor is there any insuperable difficulty in women voting now that order and decency have been introduced into elections. Possibly the presence of women as voters would tend still further to promote order at elections than has been done by the Ballot. Nor is the increase of the electoral body by one fourth a very alarming one, at a moment when proposals are being made to double this body by swamping it with new county voters. If Mr. JACOB BRIGHT's Bill were carried, the new electors would not vote worse than a great number of the old ones; they would vote in safety and without molestation, and they would not swamp the existing electoral bodies. So much may be conceded; and those who concede it may, we think, concede it without being brought a step nearer to the conclusion that Mr. JACOB BRIGHT's clients ought to be allowed to vote.

What, then, are the objections to allowing them to vote? The two principal reasons are, that their claim rests on a wrong conception of the value of the Parliamentary franchise, and that it rests on a wrong conception of the relative position of the sexes. Their advocates talk as if the quantity and kind of persons who vote for members of Parliament were a matter of pure indifference, and that the more voters there are, the merrier party they will make. They also speak as if any set of persons who cannot get all they fancy they want should be specially represented in Parliament, in order that they may get a legislative sanction for their crotchets. But the object of elections is not to give the greatest number of persons an opportunity of voting, but to get a good Government for the country. How shall we get the best House of Commons is the main question, and not who shall have the amusement of selecting members. In 1867 we tried a dangerous, although inevitable, experiment, by largely increasing the constituencies; the justification of the step being, that many members of the House of Commons sat for small, subservient, or corrupt boroughs, that there was not life or purpose enough in the House to make vigorous legislation possible. In order to remedy this defect, a great number of persons very little fitted to vote were allowed to vote. The enlargement of the constituencies was in some cases beneficial, but in others experience will probably show that it was not beneficial. There was, however, no other resource within the compass of practical statesmanship, and of two evils the smaller was chosen. Far, however, from its being true that, because the franchise has been extended largely and suddenly, it may be wisely extended to any degree, it is much more true to say that any sweeping addition to the franchise now would be to add an unnecessary to a necessary risk. If two drunken men may vote, it was said on Wednesday, why should not one sober woman also vote? The sober woman might certainly be as competent to vote as either of the drunken men, but if we have two bad voters already, it is unsatisfactory to mend matters by adding a third to them. It is true that persons who have political powers conferred on them, if they are tolerably fitted to exercise them, are raised by having wider interests added to their life. Although the main object of elections is to get together a good House of Commons, they fulfil the subsidiary object of educating the electors. But this can only be the result if the electors keep the main object in view, and set themselves to fulfil national aims, and think the franchise is something they ought to respect and value. If the electors despised the suffrage, and in exercising it thought only of very petty issues, they would be lowered rather than raised by being electors, while at the same time they would return a bad House of Commons. The argument which converted Mr. HENLEY from an opponent into a supporter of the Bill was that women who are householders are already allowed to vote for School Boards and municipal officers. They use their privilege eagerly, and, as no one not in a district knows anything about its School Boards or its municipal officials, it is impossible to say that they have not voted as well as any one else. But the Parliamentary franchise ought to be put before the body of the people as something much higher than the right to take part in the election of a little herd of persons wrangling over primary education or of town councillors. Nor ought the existing House of Commons to admit for a moment that, in order to get good legislation in favour of any particular class, it is necessary that this class should have votes. The reason why the present House does not legislate in favour of women is not that it is unwilling to do women justice, but that no proposals are made to it on behalf of women that will bear discussion. A very sensible lady informed Mr. JACOB BRIGHT that, if she did not know what her rights were, she at least knew that she had no wrongs. Mr. BRIGHT said that this might be true for her, but that it was quite untrue for her poorer sisters. What are the wrongs of poor women? There may possibly be some of a kind removable by legisla-

tion, but there is no need whatever to assume that the House of Commons would refuse to redress these grievances if their existence was proved, and apt remedies suggested. The course taken in regard to the franchise of women, or in regard to most proposals for extending the franchise to particular sets of people, is first to assume that they have wrongs; then to assume that Acts of Parliament would sweep these wrongs away; then to assume that the House of Commons, under the present electoral system, deliberately ignores these wrongs; and then to conclude that the electoral system must be altered. The house is to be always burnt down when we want roast pig. The Constitution is to be altered in order that an undefined change may be made to protect the property of women who are on bad terms with their husbands.

The first objection then, or rather set of objections, to giving votes to Mr. BRIGHT's quarter of a million of women is that it would form a useless addition to the constituency, that it would degrade the popular estimation of the Parliamentary franchise, and that it would foster the notion that people with alleged grievances must be specially represented in order to get justice from Parliament. The second objection is that the claim of these women really rests on the notion that the sexes are naturally equal, that it is nothing but bad institutions that has obscured this natural equality, and that Parliament ought to pave the way for the recognition of this equality by extending the franchise as suggested. Nor is it possible to suppose that those who wish that the franchise should be given to this quarter of a million of women would be satisfied if they got what they asked. It is for the most part the same set of people who ask that women, even when married, should be regarded as equal partners in a firm. The married partners are to contribute to a common stock of which they are to have the joint management, while each enjoys a special ownership over the share which he or she may have contributed. It is only in complete accordance with such notions of married life that the wife as well as the husband should be allowed to vote; for of the two partners one might be as well called the householder as the other, even if the qualification of household occupation could be long preserved after it had been settled that all human beings were equal. The main purposes, too, which Mr. JACOB BRIGHT's Bill is supposed to serve could not be accomplished unless women generally had votes. Mr. FAWCETT, for example, said that one of the great grievances of women was that Trade Unions did not behave handsomely to them, the true cause of this unhandsome conduct being that women are not considered the equals of men. It is obvious that the spirit of Trade Unions would not be greatly altered by the franchise being accorded to an eighth or a tenth part of the whole number of women who, if women were treated as equal with men, would vote. To teach the doctrine of this equality effectively women generally must be allowed to vote. The first thing to ask is whether there is any natural equality between men and women, and it is only because in the regions of abstract speculation everything is debatable, that this can be treated as a debatable question. The universal consent of the unnumbered generations of mankind is against the theory of the equality of the sexes, and there is one practical argument which may be treated as decisive of the question. If men choose to say that women are not their equals, women have nothing to do but to give in. Physical force, the ultimate basis of all society and government, must be on the side of the men, and those who have the key of the position will not permanently consent to abandon it. A Government in which women were on an equality with men would be a Government of perpetual revolution, even if one revolution was not enough to overturn it for ever. The happiness of domestic life depends on the subordination of the wife in all matters of public duty or interest; but even if we were willing to forego domestic happiness, and let women parade an artificial equality by voting at Parliamentary elections, we should make the sacrifice in vain, for men generally would be certain in the long run to take care that the sex which is physically weaker should feel its inferiority.

PROGRESS OF REVOLUTION IN SPAIN.

REVOLUTIONS always come in gusts and squalls; and for the moment there is a lull in Spain, because the extreme Republicans have had their way, and have not yet thought of any fresh demand. With natural inconsistency the fanatical devotees of provincial independence accept, when it suits their purpose, the decision of Madrid as readily as if they were French demagogues waiting for the latest news from Paris. The whole country acquiesces with helpless indifference in the suppression of constitutional authority; and it may be readily believed that, except in the centres of political agitation, life proceeds with little interruption in its ordinary course. Early experience will show whether public affairs will be equally manageable with private business. Even a Federal and Social Republic requires money, and a disciplined force to compel obedience to the Government. The whole financial system of Spain, never easy or prosperous, has since the beginning of the present Revolution become thoroughly disorganized. The disturbance of trade has reduced the scanty receipts from Customs duties; and one or two maritime towns have announced their intention of converting themselves into free ports. The usual resource of borrowing has for the present become impracticable; and it is difficult to conjecture how the Minister of Finance will provide for the most pressing necessities. There is no reason to suppose that the members of the Government are incapable or careless, and they enjoy the reputation of personal integrity; but it is impossible to dissolve the bonds of political society for one purpose, and at the same time to retain the advantages which belong to traditional order. Only a few weeks before the Revolution the present Ministers were denounced by the irreconcilable faction as traitors to the common cause. FIGUERAS and CASTELAR might have foreseen that when they established the Republic they would be compelled to rely on the support of the ferocious agitators with whom they had previously refused to act. Their error consisted, not in holding that a Republic was a possible or perhaps a desirable form of government, but in supposing that it meant to the most active partisans in Spain anything but the destruction of order and the confiscation of property. It may be admitted that the dissolution of military obedience, which is the greatest of many actual evils, could scarcely have been foreseen either by the Republicans or by their opponents.

The official narrative of the events of the 23rd of April is obviously one-sided, if not wholly untrue. The Alcalde of Madrid ordered some battalions of volunteers to meet for the purpose of protecting the Permanent Committee, but notwithstanding the sanction both of Parliamentary and municipal authority, they and their commander, General LETONA, are denounced as rebels. The MINISTER of WAR, by the orders of the Government, took measures to attack the so-called insurgents, and it is stated that the troops of the garrison sided with the Republican volunteers. Bloodshed was fortunately avoided by the timely discovery that the Government had the stronger force on its side, and the rebels, now proved by the event to have been in rebellion, dispersed or fled, as SATAN fled in *Paradise Lost* when he saw the heavenly balance inclining against him. Once certain of victory, the Ministers dissolved the Permanent Committee and the Cortes which it represented, and order reigned for the time in Madrid. One of the Committee, Señor FIGUEROLA, lately an advanced Radical, was put in prison, probably for the purpose of protecting him from the lawless violence of the mob. It is once more reported that SERRANO and SAGASTA have quitted Spain, and for some time past ZORRILLA has prudently withdrawn himself from public notice. As in all similar cases, the Spanish Revolution, which commenced four or five years ago, devours its own children with increased appetite as it acquires additional force. The time is probably not far distant when FIGUERAS and CASTELAR will have to defend themselves against the charge of treason to the Federal Republic. The politicians who invited AMADEO of Savoy to ascend the throne, and afterwards drove him to abdicate by political opposition and personal affronts, deserve but little compassion. The other Spanish parties in their reciprocal intolerance failed to perceive that the anarchical Republicans were the most resolute and unscrupulous of all the jarring factions. In a certain sense the winners have deserved their temporary success; but there is no symptom of political foresight or wisdom in their measures, and they will probably become more and more extravagant in their policy until they provoke a decisive reaction.

One of the oddest freaks of modern opinion is the favour with which the extreme Republican party is regarded by English politicians of strictly Conservative tendencies. In spite of his own professions, and of the statements of friends and opponents among his countrymen, GAMBETTA is constantly described as a uniformly prudent and practical statesman; and every attack on the French Assembly attracts unqualified sympathy. The Spanish Republic is not less fortunate in the indulgent construction which is placed on all the acts of its promoters. As soon as the Cortes had been frightened into proclaiming the Republic, it was

announced that a peaceful and successful revolution had been accomplished with the smallest possible departure from constitutional practice. The Cortes, as the only supreme authority remaining after the abdication of the KING, had, it was said, recognized the necessity of dispensing with the Monarchy, which indeed it had been elected to maintain, and all civil and military functionaries would continue to discharge their offices under a new and orderly Government. The illusion was apparently not dispelled when the rabble of Madrid, imitating the Sections of Paris during the French Revolution, had compelled those of the Ministers who represented the majority of the Assembly to make way for trustworthy Republicans; and the usurpation of provincial clubs and municipal delegations was conveniently overlooked. The mutinous proceedings of the army caused regret because they tended to weaken the Republic; but it was justly thought that the Ministers themselves were anxious as far as possible to maintain order. It has always been the inveterate habit of the shallower sort of English writers on current politics to sympathize with political movements abroad which would be regarded with horror if they occurred at home. Twenty years ago the candid admirers of the Federal Republic would have been zealous Imperialists in France, though not in England; not so much because any kind of institution is good enough for foreigners, but through the temptation of displaying an enlightened superiority to prejudice. The later stages of the Spanish Revolution have not disturbed the complacency of its apologists. The Cortes, elected under the Constitution by universal suffrage, have been formally dissolved by the Ministers whom they had themselves appointed; and it is at least possible that the Government may have provoked the riots which gave it an excuse for disposing of its rivals and opponents. At present the Republican Government has absolutely neither a legal basis nor a claim to the obedience of the nation, except that a loyal citizen will for the moment maintain any barrier which stands between social order and total anarchy. The exploit has nevertheless commanded approval in England. The Constitutionalists who, regretting too late their own weakness, had made an unsuccessful attempt to assert the supremacy of Parliament, are denounced as an obstructive faction, itself responsible for the violence which was rendered necessary by its encroachments. If the Spanish Correspondent of the *Times* is not a Red Republican, he can scarcely escape the imputation of childish imbecility. The growing laxity of political principle is illustrated by the events of Madrid and by the comments which the revolutionary act of the Ministers has produced. ROBESPIERRE and his accomplices in the Committee of Public Safety, while they exercised an unresisted tyranny, never ventured to supersede the nominal sovereignty of the Convention. In the Reign of Terror, as during the present Spanish Revolution, every gathering of the rabble assumed to represent the people, but nevertheless the Assembly which had been really elected by the constituencies was always regarded with a certain respect; and ultimately it survived to direct the reaction against the bloodthirsty dictators. FIGUERAS and CASTELAR may perhaps have acted to the best of their judgment for the public interest; but they at present exercise, as far as they are not themselves intimidated by the mob of the capital, a power which is altogether arbitrary and lawless. Their prospective appeal to the Constituent Cortes is an idle form. If such an Assembly were, in accordance with the probable opinion of the majority of the nation, to declare against the Federal Republic, the dispersion of its members by force would be neither more nor less an act of violence than the recent dissolution of the Assembly after the dismissal of the Permanent Committee.

The eloquent disciple of MAZZINI exercises for the time, perhaps with the purest intentions, an irregular tyranny which can only be excused by the tyrant's plea. The eulogists of the Spanish Ministry may perhaps be in the right when they contend that a measure which involved a deplorable usurpation was indispensably necessary. The constitutional party had all principle on its side in maintaining the superiority of the Cortes to the Executive Government; but the Assembly which had suffered the establishment of a Republican form of Government could not safely refuse to concede the conduct of affairs to the dominant Republican party. The error of submitting in the first instance to an active minority included in itself the consequence of an abdication of power by the Cortes after the example of the King. When the Constitutional party recovered from its first stupor, its efforts to resume its legitimate control over affairs proved to be too late. The Permanent Committee had no difficulty in proving that the condition of the country was miserable and alarming; nor can it be doubted that the mutinies of the army and the extravagances of the municipal deputations were distinctly traceable to the proclamation of the Republic; but a repentant Cortes ought, if any remedy was still possible, to have dismissed the Ministry, and to have undertaken to govern the country through nominees of its own. The Ministers, after actively destroying all the substantial securities of liberty, were perhaps compelled to disregard its elementary forms. The armed ruffians of the streets might have become their assailants instead of their allies if they had continued to recognize the only legal authority in Spain. The impending election will probably result in the return, by a large majority of voters, of a Jacobin Cortes; but it is not certain that the provincial separatists will allow the elections to be held unless the Cortes is deprived beforehand of any constituent power which might be exercised to the detriment of the Federal Republic. It is evident that to vest in an Assembly the power of framing a Constitution is inconsistent with the fundamental doctrine of federation. The American Constitution was in the nature of a treaty concluded by the authorised representatives of independent States. It has not yet been proposed that the deputies of Catalonia or of Andalusia should exercise a veto on the constituent legislation of the Cortes. The modern device of universal suffrage has proved itself a wretchedly inadequate substitute for the old-fashioned faith in the indefeasible sanctity of fundamental laws and traditional institutions. The nations which have in recent times most frequently returned Constituent Assemblies are the least disposed to abide by their decisions. No Cortes which will ever meet in Spain can claim higher authority than the Constituent Cortes whose work has now been summarily abolished.

THE JUDICATURE BILL.

THE amendments carried on Thursday by Lord CAIRNS will mitigate, but only mitigate, the tendency of the Judicature Bill to subordinate and disparage the Equity jurisprudence which the LORD CHANCELLOR, backed by every one who knows what Equity is, desires to make universally supreme. As Lord CAIRNS strongly urged, it would have been a fatal policy to weaken the Court of Chancery numerically and morally as a first step towards winning for its jurisprudence the prestige and predominance with which we all agree it ought to be invested. The amendments have saved the Courts of Equity and the principles which they apply from the humiliation which the desertion of the CHANCELLOR and the diminution of judicial strength would inevitably have involved.

But the debate in the House of Lords, and other not less remarkable incidents of the past week, will do far more to convert the Bill into a real, vigorous, and successful reform than the partial amendments to which Lord CAIRNS was unfortunately limited by the forms of the House. Those who candidly examine the different views which have been presented of this measure and its consequences will be astonished to find how nearly all are agreed. In principle and purpose there is no antagonism between the LORD CHANCELLOR on the one side and Lord CAIRNS and the Equity Bench and Bar on the other. All desire the same end. All, not excepting the LORD CHANCELLOR, agree that that end would be certainly attained by the method suggested by the Equity Bar. But the LORD CHANCELLOR thinks that there is another method of attaining the same end, not indeed quite so good—for even he does not say that—but in his opinion not much worse, and at the same time a trifle easier and cheaper. Whether the Legislature shall adopt the plan admitted to be the best, or the plan from which the whole profession anticipate nothing but disastrous failure, is the sole controversy which remains to be determined; and it is by bringing out this clear issue that the debate in the House of Lords, following the remonstrance of the Bar, has so largely contributed to the future settlement of this most important question.

The LORD CHANCELLOR in the course of his speech made an observation very true and very pertinent. He reminded the Equity Bar that the mass of the business under his Bill would flow into its old channels—as no doubt it would, because every plaintiff who was allowed to do so would bring his equities to be decided by Equity Judges; and he added that there was no occasion for alarm, for even in cases where equitable questions might have to be determined by Common Law Courts, the assistance of members of the Equity Bar would be called in. The LORD CHANCELLOR can hardly doubt that the Equity Bar must be fully sensible that their personal

interests will not suffer by the extension of equitable jurisdiction to the Common Law Courts, and some among them are even supposed to be rejoicing at the prospect of a new world to conquer. Their remonstrance was, we are sure, not dictated by selfish fear for themselves, but by a genuine and well founded apprehension that the spirit of Equity jurisprudence could not survive unimpaired unless administered by Courts habituated to grasp and sympathize with its doctrines. The Lord Chancellor at present doubts this, though we believe he will in the end be converted to the opinion of the Bar and the Bench. His reasons for the doubt deserve, and shall receive, our respectful examination; but before plunging into argument, we cannot help calling attention to another point on which the observation to which we have already referred is full of instruction. It is nothing less than an acknowledgment that suitors having equitable rights to try would rather submit them to Judges experienced in Equity than to any Court of Common Law. They at least are not expected to believe that any branch of jurisprudence will be administered best by those who have studied it least; and, after all, the suitors are the people who are most concerned in the matter, and whose wishes ought to command the greatest consideration.

It will, we think, tend ultimately to remove the startling divergence of opinion between the Lord Chancellor and the profession of which he is specially the head if we examine somewhat closely what the conflicting opinions really are. And, first, let there be no misconception of the obvious meaning of the protests of the Equity Bar. The Lord Chancellor discussed them very slightly, and we have *no* reason to suppose that he misapprehended them; but Lord Hatherley understood them in a sense entirely opposed to that which they were evidently intended to bear. Lord Hatherley considered it impossible to read those protests as expressing anything but a desire that the existing severance of the Courts of Law and Equity should be perpetuated. We confess we consider it impossible on the face of them to read them in any such sense. What they do insist upon is simply that Equity ought to be administered by Judges who know Equity, or at least by Courts leavened with an adequate proportion of such Judges. They refer to the paramount authority hitherto enjoyed by the Court of Chancery, not for the purpose of insisting that it should be continued, but for the sake of pointing out that when that safeguard of Equity is destroyed, another safeguard should be supplied by adding Equity Judges to every Court which is to exercise equitable jurisdiction.

We think this is a most reasonable demand. At any rate, this and no other is the demand, as we interpret it, preferred by the Bar. For ourselves, we cannot understand how their language could have been supposed to bear a different signification. We see no reason whatever to suppose that the letters were intended by those who framed them to have any such reactionary import as is supposed by Lord Hatherley; and we are convinced that they never would have been signed by the mass of those who did sign them unless they had frankly accepted the proposed fusion, and submitted what the Bar believe to be the essential conditions of success in that great undertaking. The Lord Chancellor must know that it is from the Equity side of the profession that the movement for fusion has received its chief impulse, and he at any rate will not think it possible that the whole Equity Bar should join in obstructing a great reform which it is known that very many of them have most cordially at heart. The plain and obvious purpose of the letters of the Bar is to strengthen the hands of the Lord Chancellor, and to make him launch his scheme in the shape which, if unfettered by existing arrangements and personal considerations, he would himself have given it—that is, with a due provision for the administration of every branch of the law by Judges who have already learned it. This being on the face of their letters the real meaning and purpose of the Bar, let us see how far the Lord Chancellor seriously differs from a conclusion apparently so obvious. So far as we can discover, he has never said that a scheme in which the Judges should be fused in every Court would not be a better scheme than his own. He has hinted that it would be more difficult, and he has no doubt been told by some one that it would—at first, at any rate—be a trifle more expensive. Nay, he has gone further than this; for, unless we misunderstood him, he plainly intimated on an earlier occasion his preference for the scheme which the Bar memorials advocate over the halting arrangements and concessions which, in the first instance, he felt himself compelled to submit to. We know well the obstacles with which Lord Hatherley and other reformers have had to contend. We do not altogether wonder that Lord Selborne shrank from facing them. But if he can estimate public opinion as a great politician should, he will see that no petty consideration of expense would be allowed for one moment to stand in the way of a measure which he could produce, not as he has produced this Bill, as the best he thinks he can venture upon under the circumstances, but as the very best which all his knowledge, experience, and skill can devise. We believe we correctly state the desire of that rapidly growing section of the lay public who have begun to take an interest in this subject, and notably of the great commercial class who know what the principles of Equity have done for them, and from what they have saved them, when we say that they would utterly ridicule the idea that the new edifice of justice should be constructed out of its due proportions because the country happens to have in stock four times as many Judges of one sort as of another. The finest site in London is deformed by a building which the unlucky architect was compelled to spoil in order to work in a dozen handsome but unsuitable columns which had been picked out of the ruins of another building which had just been destroyed. From that day to this the name of poor Wilkins has been a byword in art, and the economy of the miserable contrivance is exemplified by the fact that the building stands condemned, and has to be replaced at fifty times the cost of the original saving. Are not these things an allegory? Will not the Lord Chancellor be warned in time that the people of England are really not so poor or so sordid as to consent that a grand project for the reconstruction of the law shall be made less than perfect for the sake of working in a superabundant stock of old pillars of the law for whom appropriate places cannot be found in the projected edifice? Parsimony of this kind is not the bent either of the people or of Parliament, and it would be lamentable indeed if a man like the Lord Chancellor were compelled to build under conditions like those which proved fatal to poor Wilkins in the lower field of mere material architecture.

Nothing, as we have already intimated, will make us believe that the Lord Chancellor regards his Bill as anything more than a *pis-aller*. Both he and Lord Hatherley, in clever forensic speeches, made the most that could be made of the case for the defence. Neither quite went the length of saying that Equity jurisprudence would be improved by being administered by Courts without a single Judge who has enjoyed Equity training; but both of them urged strongly a sort of plea in mitigation of damages, and insisted that, after all, Common Law Judges would pick up Equity somehow, and tried to prove that experience justified the experiment. The Lord Chancellor mentioned the great names of Lord Hardwicke and Lord Eldon as having practised at Common Law. That is quite true, but Yorke had studied Equity with Salkeld in his youth, and before he was eight-and-twenty he became a Chancery barrister, and so continued during the Chancellorships of Lords Macclesfield and King. Lord Eldon's career was very similar. He also came into Equity practice at a very early age, and the great Equity case of Agroyd *v.* Smithson, which made young Scott's reputation, was argued before he was thirty. It is true that in those times Equity business only afforded occupation for about fifteen counsel for a part of the year, and that it was then the practice, now unfortunately impossible, for them to go circuit and keep up their Common Law knowledge. In this sense Hardwicke and Eldon were Common Law men. But they were great Chancellors because they knew Equity, and they cannot be cited in favour of such a project as the present Bill. Lord Hatherley also referred to the fact that half the Chancellors in recent times had been Common Law men in the strict modern sense—that is, men who had never studied Equity at all. That is true, and it shows that it is possible to make such appointments. But Lord Hatherley did not say that the Common Law half of his list of Chancellors were as good Equity Judges as the Chancery half, and as some of them still survive, we will be content with Lord Hatherley's silence, and reserve our own opinion. And there is this very material consideration to be borne in mind—that a man of great ability and self-command, even though rather ignorant of the special law which he has to administer, can get on very fairly as a Judge of Appeal if he is not hurried, though he would break down utterly as a Judge of first instance, especially with the mass of business which now is dealt with daily. The Lord Chancellor endeavoured to meet this by referring to the fact that both Lord Gifford and Lord Lyndhurst sat for some time in the Rolls Court. The Lord Chancellor did not add that Lord Gifford contributed much valuable matter

to Equity Jurisprudence, and the less said about his example the better. Lord LYNDHURST, it is true, was one of the giants of those days; and, even if he had been a successful Judge of first instance, it would not follow that every Common Law Judge on the Bench would be equally successful. But, in truth, LYNDHURST was not successful. If we may trust the historical statement of one, perhaps the strongest, of the Common Law Chancellors to whom Lord HATHERLEY referred, "COPLEY sat as seldom as possible, rose as early as "possible, and did as little as possible, while of his judicial "performances as Master of the Rolls hardly a vestige re-"mains." Probably Lord ROMILLY has often disposed of more business in a month than COPLEY did during his whole leisurely occupation of the same seat. And these are absolutely the only examples cited to justify the experiment of committing Equity Jurisprudence to a Bench informed with Common Law pure and simple. And why is the risk proposed to be run? Merely to save a few pensions by which the whole difficulty might be solved. Until we hear very clear evidence to the contrary, we shall believe that Lord CAIRNS was right when he said, "For years "you will have no Common Law Judges willing—and, "with deference, I will add competent—to administer in "the Court of Chancery a system in which they are en-"tirely untrained." This was said, no doubt, with reference to a suggestion that Common Law Judges might occasionally take the place of the Master of the Rolls; but, if correct, it applies equally to the experiment of an entire Common Law Bench deciding questions of pure Equity Jurisprudence.

There was much in the LORD CHANCELLOR'S speech bearing on incidental topics to which we should gladly refer, but for the present we must confine ourselves to the plain and simple issue which has been raised between the LORD CHANCELLOR and his own Bar.

THE EMPEROR'S WILL.

THE will of the Emperor NAPOLEON has been published, bearing date April 1865, and the only two points of interest connected with it are the language in which it is drawn up and the smallness of the sum passing by it. When the will was made the EMPEROR was still at the summit of fortune. The Mexican expedition was a military success, and it was still hoped that France might be repaid from the resources of the Empire of MAXIMILIAN some of the treasure lavished on founding a new Government in a Spanish Republic. It is true that the fading fortunes of the Southern Confederation must have suggested doubts to the EMPEROR'S mind whether he could make his new creation of a Transatlantic Empire enduring; but there was not enough at that time to cause him any very serious apprehension, and the Mexican Empire was certainly in as flourishing a condition in April 1865 as it ever was. The EMPEROR could not then have anticipated the frightful scene in which the Empress CHARLOTTE ran shrieking from his presence, laying at his door in her frenzy the betrayal and ruin of her unhappy husband. France otherwise was at peace, and apparently contented. There were no signs of the struggle between Prussia and Austria which made the next year notorious; or, if the EMPEROR might think that he discerned symptoms of the impending contest, he was well content that two Powers, neither of which was very friendly to him, should exhaust their strength in a quarrel between themselves. The contrast between the state of things in France when the will was made and that which prevails there now that the will has become operative is as complete as any contrast of the sort could be. Moralists may add a new example to enforce the vanity of human wishes; and if any one really found his sense of contentment increased by the perusal of didactic poetry, he might be encouraged by a fresh JUVENAL or JOHNSON to realize how much happier is the possessor of a modest competence than an EMPEROR whose will is made at the Tuileries and opened at Chiselhurst. It is perhaps better worth while to notice how naturally a Sovereign having family ties applies to the highest department of public life the feelings which inspire men in private stations when thinking of their families after they themselves are dead. The EMPEROR was a man who knew perfectly well by how strange a combination of accidents he had become EMPEROR, what thought and anxiety he had to bestow every day and every hour for years in order to make himself tolerably secure, and how very hard work he had found it to get things to go on at all as he wished during his reign. But when he came to think of what was to happen after he was gone, he forgot his own experience, and pictured the future and made his arrangements as if it were a farm, and not an Empire, with which his successors would have to deal. He his wife will think kindly of him, and forgive him anyt which she may have to forgive, and he is quite sure she do admirably as Regent. His boy of nine years old is sure to be worthy of his name, and to understand the secret of the NAPOLEONS, and to be truly pious. His conjugal and parental tenderness spared him from finding anything sad or alarming in the thought that he was handing over France to a woman and a child. This was perfectly natural, and is not a matter of much reproach to the EMPEROR, if once his position as EMPEROR is accepted. That everything should depend on the head of the State, and that the headship of the State should depend on the accidents of family life, was a part of Imperialism as of every other form of hereditary despotism. LOUIS NAPOLEON was, however, fortunate in being able to persuade himself that in his case everything was really for the best, that his wife would make the best of Regents, and that his son was sure to turn out admirably well.

But his son could not be expected to turn out admirably well unless he knew his special position, appreciated the inspiration that would be vouchsafed to him, and accepted with fond devotion the doctrines of his family. The EMPEROR wished his son to do as he himself had done; to meditate and ponder over every saying that had ever dropped from the lips of the great founder of their family; to study his life, to understand his aims. On the other hand he would not have to pursue this arduous task unassisted; for the soul of NAPOLEON the GREAT would specially co-operate with him, and bring its heavenly strength to aid his weakness. It would guide him into the right path, and teach him that the first duty of an Emperor is to do everything for his people, and that the cause of the peoples is the cause of France. No one can for a moment doubt that when the EMPEROR penned these words and laid this solemn injunction on his son he was perfectly sincere. In fact, he says that he is only expecting for his son what he has experienced for himself. He had found that the soul of his uncle had sustained and blessed him, and therefore he did not doubt that the vivifying influence would be prolonged in favour of his son. It is most extraordinary to outsiders to understand how any one not mad on other subjects could have felt as LOUIS NAPOLEON felt about the first BONAPARTE; but that he did feel it, and feel it keenly, is incontestable. When he talked about NAPOLEON and CÆSAR as MESSIAHS, he seemed to himself to be talking reasonably, and without any blasphemy at all. In fact, it is impossible not to notice that, perhaps unconsciously, and certainly without intentional irreverence, he applied the language and thoughts he had imbibed as a Christian to describe the emotions which his uncle's memory created in his mind. It was this state of mental exaltation on the subject of the first NAPOLEON that prevented the late EMPEROR from ever troubling himself as to what the doctrines of the founder of his family were, or as to how far the conduct of the great man corresponded to his theories, if they were good. That the Great NAPOLEON, of all men, should say that the cause of the peoples is the cause of France is wonderful, for he spent the last ten years of his life in crushing out every popular movement, and in sacrificing millions of human beings for no object at all except to gratify his own passing caprices. But when at St. Helena, he amused his declining years by picturing what were the best motives that he could be imagined to have had at different epochs of his past life, and quietly announcing that historically those were his motives. LOUIS NAPOLEON pieced together a sort of private gospel out of these fragments of heroic thought, and believed without the shadow of a doubt that the soul of the inspired teacher was ever present to guide and fortify him. It was a creed in which he was, and probably will be, the one believer. The gentle boy he has left behind him will not make much of such recondite sayings as that the cause of the peoples is the cause of France, and he certainly will not find the explanation in history. It is the future biographer of LOUIS NAPOLEON who will most profit by the EMPEROR'S will, for he will be able to use it as a convincing proof how profoundly the strange beliefs which LOUIS NAPOLEON entertained about his uncle were rooted in his mind.

The fortune passing by the EMPEROR'S will is not at all large. The amount is said to be about 120,000*l.*, which will be reduced by one-half after all claims are settled. This is not a large sum for a man to leave who has had twenty years at the Tuileries, and an enormous annual income at his disposal.
